For example, I pointed out in the first part of this article that in 1970, Medicare paid $202 per capita on behalf of beneficiaries cared for by Group Health Cooperative of Puget Sound, but paid $356 on behalf of similar beneficiaries in the same area who got their care from the fee-for-service sector. Nevertheless, as far as Medicare was concerned, the Group Health members were liable for the same deductibles and coinsurance and limitations on covered hospital days as their fee-for-service counterparts. They received no reward from Medicare for choosing a less costly system. If CCHP had been in effect, they would have been allowed to designate that $356 be paid by Medicare as a premium contribution on their behalf to Group Health or other qualified health plan. In a competitive situation, Group Health would have been able to pass on the extra $154 to the beneficiaries in the form of reduced or eliminated coinsurance and deductibles, removal of the limitation on hospital days covered, increased scope of benefits (e.g., outpatient drugs (or reduction in supplemental premium, as an inducement for those beneficiaries to join Group Health. In CCHP, this option would be available to Medicare beneficiaries not only with respect to HMO's, but with respect to any qualified health plan.

About 7.7 million aged, blind and disabled persons receive Medicaid supplements to assist with costs not covered by Medicare. (Medicare pays about 71 percent of hospital costs and 55 per cent of physician costs for aged beneficiaries.) Under CCHP, these supplements for acute care would be replaced by a voucher similar to that for the nonaged poor. This substitution would assure the ability of the poor Medicare beneficiary to pay the premiums for a policy to supplement Medicare. In 1978 the average per capita hospital and physician costs for the aged not covered by Medicare will be about $385. This would be an appropriate level for the full voucher.●

## SECRETARY SCHLESINGER OUTLINES ENERGY NEEDS

### HON. JOHN P. MURTHA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. MURTHA. Mr. Speaker, Energy Secretary James Schlesinger appeared recently before the Interior Appropriations Subcommittee and I believe his testimony is extremely important to the national energy debate.

I felt there were four key points in his remarks, and I would like to share them with the full House.

1. ECONOMY

In his prepared remarks, Secretary Schlesinger addressed the economic implications of the Government's energy decisions. He talked about the worldwide production and need for oil:

In the face of growing demand, these figures underscore the need for adaptation in American society before the early or mid-1980s, when the worldwide shortage in petroleum availability will make itself felt. At that time, the principal oil exporting nations are likely to have severe difficulties in supplying all the increases in demand expected to occur throughout the 1980s in the U.S. and other countries.

When this occurs, unless our Nation has planned wisely and well, it will face difficulties as severe as anything we have experienced since the 1930s. Avoiding these difficulties will demand the best of every American.

During questioning, I said to the Secretary, "We know the dollar is not stable. We know that the imports are part of the problem. I don't see any way we can avoid a massive disruption of our economy." He replied:

That is the threat, and that is the purpose that the President has laid these plans before the Congress. What we are trying to do is to push off that day of reckoning. Sooner or later, we are going to face that. If we conserve, if we get more fuel-efficient, if we move towards coal, we can push this point off to the later 1980s.

2. OIL

I also asked, "I understand the projections are that we will reduce the imports of oil this year by a small amount, but then it will go right back up again the following year. Is that accurate?"

The Secretary responded:

It depends on the action that the Congress takes. I think it will go up somewhat in 1979 and 1980, indeed. The longer term depends upon the incentives and regulations that the Congress establishes to move toward stationary sources, towards coal and coal-derived products.

3. ENVIRONMENT/PART I

A problem I have grown extremely concerned about is the uncertainty of

environmental laws and regulations which makes it difficult for industries to complete the type of long-range planning they must. "Now, the President said the other day to the Steel Caucus that we have to stabilize the environmental controls so that industry knows what it is doing," I said at the hearing, and asked the Secretary for his assessment.

I think that if we are to have industrial investment we are going to have to stabilize the rules of the game. There is no question about that.

Industry cannot make major investments with the prospect that each year they will be forced to make additional outlays as the rules are ratcheted.

4. ENVIRONMENT/PART II

It is extremely important to note that I do not equate a call for environmental stabilization with any rollback from the progress we have made in cleaning the Nation's air and water, or any reduction in the commitment we must make to future improvements. I just do not feel "we are getting enough emphasis on the fact that we have to have a stabilized situation so industry will be prepared to invest." I went on to ask, "Is this a priority with the President."

I don't think that in the past that has been one of the highest priorities, Mr. Murtha, but I shall have to review what the President and the Administration attitude is.

I think that all across the board if we are to have adequate levels of investment we must have stable rules of the game for industry.

I congratulate Secretary Schlesinger for his candor with the Interior Appropriations Subcommittee and for his efforts over the past year. I do not feel the year of debate over the President's energy proposals has been wasted; in fact, I feel it has been a constructive period. The key is to move from the debate to the implementation of a national energy plan that will set us on the right course for the remainder of this century.●

## COMBATING TERRORISM

### Hon. John E. "Jack" Cunningham

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. CUNNINGHAM. Mr. Speaker, the grim face of international terrorism appears to be a factor in international relations as never before. Mr. Michael Novak, syndicated columnist, commented in the April 16, 1978, edition of the Washington Star that "it is hard to see why anyone believes that terrorism can be appeased by surrendering to it."

Whether in Rhodesia, the Middle East, Italy, or South America, terrorists constantly kill and kidnap, making demands on legitimate governments of the world. The West responds slowly to the threat from international terror merchants. Occasionally, governments even pay the price demanded by the murderers and kidnapers.

In balancing U.S. response to terrorism, I am naturally fortunate that so little of their brutal disruption has landed here. I deeply regret that there are those who, in hoping for the best, believe that we can close our eyes to this worldwide reality. They believe that appeasement of terrorists may succeed, but as Mr. Novak points out, the goal of terrorists is "instability and disruption * * * when your goal is to bring down democracies, terrorism pays."

Mr. Speaker, we must make certain that terrorism does not pay. Joshua Nkoma and Robert Mugabe, Yasir Arafat, the Baader-Meinhof gang, the Red Brigades, the Japanese Red Army, and others must be stopped.

To this end, I have joined colleagues in sponsoring three pieces of legislation directly aimed at combating international terrorist warfare. House Concurrent Resolution 492, sponsored by Congressman LESTER WOLFF of New York, expresses the sense of the Congress that the President actively seek an international convention which has as its goal a multilateral treaty to deny sanctuary to international terrorists. Such sanctuary is currently available in parts of Lebanon, Iraq, Libya, Algeria, Mozambique, Zambia, Angola, Botswana, and elsewhere.

The second bill, H.R. 10804, is sponsored by Congressman JIM LLOYD of California, seeks to strengthen Federal programs and policies for combating international and domestic terrorism.

Finally, H.R. 10295, whose sponsor is DON CLAUSEN of California, would amend the Federal Aviation Act of 1958 relating to aircraft piracy and to provide a method of combating terrorism.

Passage of these three bills would go a long way toward making sure that the United States had a positive record regarding terror. Inexplicably, the policymakers of our country seem to be all too willing to treat the goals of terrorists as legitimate. We actually heard our President glowing about a Palestinian homeland in recent months. Again quoting Mr. Novak, "by rewarding the PLO for terrorism the United States is blowing life into the agents of its own sworn and resolute enemy."

Mr. Novak is referring to the Soviet Union. In fact, he refers to terrorism as "the number one weapon in the Soviet arsenal."

It is for this reason, Mr. Speaker, that I have joined ABNER MIKVA of Illinois in sponsoring H.R. 11747 which would reduce the U.S. contribution to the United Nations for the purpose of funding a division concerned with the "legitimate rights of the Palestinian people."

Immune from terrorism itself, the Soviets are ready to utilize any forum or procedure to assist terrorists if the goals are the same as their own. For, again according to Mr. Novak, "terrorism is a threat only to democratic states and to authoritarian states that are not yet totalitarian. Totalitarian states totally eliminate it, are impervious to it."

Mr. Speaker, I call upon this Congress and the administration to enact effective legislation to counteract the surge of international terrorism. The bills and resolutions I have mentioned are, I believe, constructive steps. I would also call upon the administration, in its conduct of foreign policy, to avoid cozy associations with known terrorists, such as those active in the PLO and in Southern Africa. Finally, I would call for a thorough study to determine the extent of Soviet funding, encouragement, and supplying of terrorist organizations worldwide.●

## PROF. ARTHUR LAFFER EXPLAINS HOW TAX POLICY AFFECTS ECONOMIC GROWTH

### HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. KEMP. Mr. Speaker, as most of my colleagues know I am a great supporter of reducing the tax and regulation barrier between individual effort and after tax rewards, that barrier is known as the wedge. The larger the wedge is, therefore, less opportunity there is for work and investment. Since taxes are going up daily, as inflation pushes people into higher tax brackets thus the wedge is growing as well. The result is stagflation, contraction and frustration.

The main academic proponent of supply side economics is Prof. Arthur Laffer of the University of Southern California. I am very happy to see that his work has come to the attention of Business Week magazine, which did a profile of Prof. Laffer and his views in its April 24 issue. I offer it to my colleagues in the hope that it will lead to an improvement in congressional tax policy.

The article follows:

HOW TAX POLICY DAMPENS ECONOMIC GROWTH

While the mid-April tax deadline will give millions of Americans the worst kind of Saturday night fever, signs are hinting at a refreshing new swing in tax policy. The House Democratic Caucus voted last week to defer next year's scheduled increases in Social Security taxes, passed only six months ago. And Congress is increasingly receptive to the evidence, now being marshaled by many economists, strongly supporting tax cuts but arguing that to spur economic growth and employment the Administration should pitch these cuts more heavily toward the business sector.

These economists are concerned about what they call "the wedge." They argue that over the years, increased taxes have driven a larger wedge between the cost of labor or capital—as measured by the price paid by the employer or borrower—and the aftertax receipts of the worker or investor. "The decision whether or not to work or invest depends on aftertax income," says the University of Southern California's Arthur B Laffer, a prominent spokesman for this new wave in public tax policy. "And more precisely, it's a matter of the effective marginal tax rate. That's the one people base their decisions on, the rate at the margin."

So the bigger the bite taken by taxes, the less incentive there is for working, saving, or investing. These reduced incentives result in slower economic growth and higher unemployment, Laffer argues.

EFFECT ON SAVINGS

The sheer magnitude of the federal sector's tax needs—amounting to some $400 billion in fiscal 1978—means that the impact of the wedge on total output could be enormous. Michael J. Boskin of Stanford University, in an analysis soon to be published in

the prestigious Journal of Political Economy, estimates that the tax wedge in capital markets alone—the difference between what it costs companies to raise capital and the after-tax income to those who save and provide the capital—cuts saving and capital accumulation by a mind-numbing $40 billion to $50 billion a year. Boskin's estimate of this wedge amounts to some 20% of business investment. "My model is the first to show that taxes have a significant effect on the saving rate," he notes. Since higher-income groups save more than lower-income groups, to the extent that the Administration's tax proposals emphasize taxing higher incomes, they could further magnify the nation's capital shortage. "The investment tax credit and accelerated depreciation are usually thought of as breaks for big business," Boskin says, "but that's drastically off the mark. They narrow the capital-market wedge, spurring productivity and employment."

Boskin is not alone in arguing that the tax wedge hits saving and capital formation hardest. "We've got to get productivity up, and that takes capital formation," says Washington consultant Charls E. Walker. "But in this country we've taxed savings, what with all the layers of corporate and personal taxation, as if it were a sin." Walker, a former Treasury Under Secretary, hopes that Congress can be persuaded to approximately double the four-percentage-point cut in corporate tax rates proposed over the next three years by the Carter Administration.

LONG-TERM GOALS

Congress may be open to persuasion because of a mounting body of evidence, derived from new data and improved statistical techniques, which indicates that many kinds of tax cuts would involve far smaller revenue losses to the government than had previously been thought. Indeed, in the case of tax cuts for capital, Walker suspects that it may be possible to produce that Nirvana of economic philosophy—the free lunch. "I think we may well be on the upper part of the curve, where tax cuts on saving would actually generate higher government revenues," he says. In other words, the higher rates of return to business that result from tax cuts could stimulate so much more investment and output that total government receipts would ultimately rise above the level obtainable at the higher tax rates. As chairman of the American Council for Capital Formation, Walker recently hired Laffer to construct a revenue-forecasting model to capture such long-run effects.

Laffer, for his part, will also be looking closely at the effects of the tax wedge in labor markets, where the entire spectrum of employer and employee contributions for such items as unemployment compensation workmen's compensation, and Social Security go hand-in-hand with income taxes to create a yawning gap between what it costs a company to employ a worker and what the worker actually gets in aftertax income. "I don't even want to say at this point that it's savings that are hit worst," Laffer says. "The disincentives for unemployed inner-city residents are really among the highest, because they often lose social welfare benefits by taking a job, as well as having to pay taxes on the earnings." Laffer maintains that jobs and output would receive a major direct stimulus if the employment wedge could be reduced, particularly for those currently receiving benefits and for teenagers, housewives, and others whose earnings are subject to high marginal rates because of the earnings of other family members.

But at least until midyear, when Laffer expects to obtain his preliminary results, the data seem clearest on taxation of investment income. Another model started by the University of Chicago's Arnold C. Harberger for the National Association of Manufacturers, and recently completed under contract by Washington consultant Norman Ture, estimates that corporate tax reduction would result in significantly higher federal revenues 10 years later. Presenting his results to a recent hearing of the House Ways & Means Committee, Ture said that an effective rate reduction averaging 5.5% would cost the Treasury $8 billion in direct loss during its 10th year—but by that time would have generated sufficient growth in sales, investment, and employment to account for $17 billion in "feedback" revenue gains, netting out to a plus of $9 billion for Treasury coffers.

SHORTSIGHTED ESTIMATES

Boskin, however, is not sure just how to interpret the gains claimed by Ture and anticipated by Walker and Laffer. "If 1988 revenues are higher," he asks, "how do you discount that back to 1978? How much is it worth right now?" But Boskin has no qualms about the fundamental message of the current reasearch: The estimates of revenue loss that are presented to Congress by the Treasury concerning each year's tax reduction proposals have been seriously overstated. The estimates have generally been limited to first-year impacts, Boskin explains, and they simply do not allow sufficient time for the full stimulative effects on the nation's economic activity and the size of the tax base to show up.

This is largely the result of a kind of limitation common to all of the major forecasting models now available for the U.S. economy, according to the new wave of federal tax theorists. As they see it, the models, from the oldest Wharton vintage to the latest from Chase Econometrics, have never outgrown their preoccupation with forecasting the next year or two of the current business cycle. This is no small challenge in itself, but it has led modelers to neglect longer-run interaction within the economy.

CONGRESS RESPONSE

Broad data on the overall economy that show little detail about how individuals behave have usually been adequate for short-run forecasting purposes. This contributed, the wedgers argue, to such mistaken views as the insensitivity of savings to the interest rate. "In fact, the saving rate has looked pretty stable a lot of the time," Boskin concedes. "But that was brought about by a great number of offsetting developments." Boskin maintains that data covering the savings, work, and consumption decisions of different age and sex groups within the total population make it clear that saving does respond significantly to changes in the after-tax rate of interest.

According to Walker, whose own experience at the Treasury should be a guide, the evidence from the new model will have a major effect on the legislative outlook "Congress puts a lot of weight in its tax decisions on the expected revenue effects," he says. "If the models show that past assumptions have been wrong, Congress will respond." ●

## HOLY TRINITY EVANGELICAL LUTHERAN CHURCH MARKS DIAMOND JUBILEE

### HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. McCLORY. Mr. Speaker, a most noteworthy event is taking place on Sunday, April 23 in Elgin, Ill., in my congressional district, when Holy Trinity Evangelical Lutheran Church celebrates its 75th anniversary.

Mr. Speaker, this great religious institution is commemorating this anniversary under the theme "To God alone be glory." Special events which are planned include Youth Sunday, Marriage Renewal Service, and special musical/choir programs—all under the general direction of Holy Trinity's Pastor, Glenn G. Gilbert and committees serving under him.

Mr. Speaker, the festive morning service will feature Rev. Paul E. Erickson, president of the Illinois Synod of this denomination and a former pastor of the church, Robert J. Schenck.

As part of the anniversary observance, an extensive property improvement program is planned, including repairs and renovation which should help prepare Holy Trinity for the next 25 years and beyond.

Mr. Speaker, it is my plan to attend Holy Trinity's Diamond Jubilee celebration and hopefully to join in the congregational dinner to follow.

Mr. Speaker, I am confident that my colleagues in this Chamber are grateful to know of this significant event and join with me in extending gratitude for the spiritual blessings which have been spread throughout the entire community as a result of Holy Trinity Church's influence and service. Also, we can all join in extending to Holy Trinity Evangelical Lutheran Church of Elgin our good wishes for many more years of service as this congregation is rededicated to a fulfillment of the jubilee theme "To God alone be glory."●

## JUSTICE FOR MEXICAN-AMERICANS

### HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. EDWARDS of California. Mr. Speaker, I would like to take this opportunity to commend the Justice Department for its decision to challenge the leniency of the sentences received by three former Houston police officers who were convicted of civil rights violations in the death of a young Mexican-American man named Joe Campos Torres.

U.S. District Court Judge Ross N. Sterling awarded the men suspended 10-year sentences on the felony conviction and placed them on 5 years probation.

In seeking a review of these sentences, the Justice Department rightfully takes the position that imposition of probation in a case such as this only further nutures the view that minorities, in general, and Hispanics, specifically, continue to be the victims of unequal application of the laws.

I concur with the view stated in a recent Christian Science Monitor editorial when it expressed the hope that the Justice Department's action, "signals the start of a new, more vigorous campaign to protect the civil rights of Hispanics, who too long have been forced to endure second class citizenship."

If we expect to foster respect for the laws by all segments of the community, then it is of paramount importance that

the laws be fully and unequivocally implemented, especially against those charged with their enforcement.

The editorial follows:

[From the Christian Science Monitor, Apr. 7, 1978]

JUSTICE FOR MEXICAN-AMERICANS

Let's hear it for the Justice Department. Americans of all races ought to welcome the refusal of government lawyers to quietly go along with a federal district judge's slap-on-the-wrist sentencing of former Houston police officers conviced of civil-rights violations in the death of a Mexican-American in their custody. In filing for a review, the Justice Department called the one-year sentences "entirely inappropriate" in light of the serious nature of the offenses involved. The three law enforcement officers, dismissed after their conviction, had been found guilty of physically abusing a young Mexican-American and forcing him to swim in a bayou where he drowned.

Hispanic leaders in the U.S. Southwest have complained of an "epidemic" of "official police violence" against members of their communities in recent years, and increasingly they have turned to the Justice Department for help. Until now, they feel, the government has largely been unresponsive. In the past year alone nine lawmen in Southwestern states have been tried, or are in the process of standing trial, on charges resulting from the deaths of Mexican-Americans. The Mexican-American Legal Defense and Education Fund cited 30 highly publicized cases of possible police misconduct in a recent plea to Attorney General Bell for assistance.

The Justice Department reaction to the sentences in Houston, it is to be hoped, signals the start of a new, more vigorous campaign to protect the civil rights of Hispanics, who too long have been forced to endure second-class citizenship. In its formal motion for a review of the sentences, the Justice Department stated, "The United States has grave concern that the imposition of probation in this case will cause citizens of all races and backgrounds to believe that the sentence was a result of the continuing inequality of treatment accorded to minorities. . . . The public perception of inequality and the belief that the life of a Mexican-American citizen has little value can only do damage to the respect for the laws and for the belief in justice." We wholeheartedly concur.●

## THOUGHTS ABOUT THE DEFENSE BUDGET

**HON. DONALD J. PEASE**

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. PEASE. Mr. Speaker, earlier this month the Christian Science Monitor carried a thought-proviking guest column by Sandy Gottlieb. The point of the article is to illustrate that heavy defense spending can, and does, distort our national economy.

The emphasis of the column is on the fact that Federal dollars spent on expensive weapons systems create fewer jobs than if equivalent amounts were spent in the civilian sector. This is a point that was raised 2 years ago by my predecessor, Charles Mosher, when he opposed development of the B–1 bomber.

Of course, I am not advocating that we disband the Defense Department or that we stop buying military equipment. But I do think that we must give greater consideration to the economic consequences of our defense policies.

As we will soon be debating the defense budget again, I commend to my colleagues' attention the article by Mr. Gottlieb. He is on the staff of the foreign policy citizens organization, New Directions. The text follows:

TURNING WARPLANES INTO HOUSES—AND JOBS

The summer of '43 I managed a Good Humor ice cream stand at Coney Island. The $50-a-week pay was almost princely at the time; the fringe benefits, including a swim after work, were attractive. I supervised five employees. How did an untrained teenager not yet 17 attain such a level of pay and responsibility?

World War II did it. Some 12 million citizens were in the armed forces. Millions more entered defense plants, among them the ex-housewives symbolized by Rosie the Riveter, precursor of today's working women. It was the war effort that cured the swollen unemployment of the Great Depression, and in the process, opened the jobs to young people like me.

To my generation it became an article of faith that war—or, failing that, a high military budget—wards off joblessness. We somehow overlooked the millions in uniform at meager pay, but our belief was firmly rooted in actual experience. Our faith has survived, unshaken, through three decades of swift-paced change.

How realistic is that certainty today? Not very. Study after study, private and governmental, has in recent years reached the conclusion that a variety of civilian activities would generate more jobs than the same dollar volume of military spending. For example:

2.1 million new jobs would result from a 30 percent cut in military spending, provided the savings were shifted to specific domestic programs.

A public housing program and a tax cut would each create more jobs than the equivalent sum spent on the B–1 bomber over a 10-year period.

Education revenue-sharing and state and local government projects both finish ahead of Pentagon programs in jobs created per billion dollars spent.

Something funny happened to Pentagon job-creation on the way to the cold war. In World War II General Motors could retool its assembly line to manufacture tanks, hire three shifts a day, seven days a week, and then retool again after V-J Day to manufacture Chevrolets. That work was labor-intensive, requiring lots of semi-skilled blue collar workers. But the research, development, testing and production of today's strategic weapons are in a different league. They require large amounts of raw materials, sophisticated laboratories and technology, relatively more scientists and engineers, and many fewer blue collar workers. Defense work today is capital-intensive. It costs a whole lot more but employs fewer hands.

Military spending is not only less of a boost to employment than in World War II, but it imposes an unnecessary burden on the economy through the Defense Department's procurement practices. Most of the big Pentagon contracts are let without benefit of advertised competitive bids. The large defense contractors get paid for what they spend, not what they produce. In the old days this was known as "cost plus." Today, it hides behind other names, but the effect is the same. These companies can usually count on the Pentagon to pick up the tab cost overruns and all. Cost-effectiveness thus becomes a rare commodity. Why cut costs when this also cuts your profits? And when a conscientious official like Ernest Fitzgerald blows the whistle on a hidden cost overrun, he, not Lockheed, is punished.

There's good news and bad news in this picture. The good news is that we can afford to stop fearing or worrying about the effect successful SALT agreements might have on the unemployment rolls. With advance planning, the federal government could produce new jobs by shifting funds to civilian programs, implementing a tax cut, or both.

How many and what kinds of jobs would depend on the precise combination of governmental actions and the economic conditions at the time. *New jobs stemming from civilian programs* would presumably be geared to meeting public needs such as health care, housing, transportation, education and environmental controls. New jobs that come from a tax cut would be determined by the decisions of millions of individual taxpayers about how to spend the bonanza. Although a tax cut might prove politically irresistible, as a job stimulant it would have certain limitations. The tax-cut option could not be directed at helping the specific regions most affected by a decrease in defense spending, as new civilian programs could, and it would take longer to have an impact.

The bad news is that the big defense firms are woefully unprepared to shift to civilian production. Many of them may also be unable to compete in civilian markets, after years of maximizing their costs and delivering their expensive products to one sure customer. The government should not continue subsidizing inefficiency. It should encourage and assist these firms to plan for the day when their defense contracts dip, and to provide help of various kinds to individuals who lose their jobs through defense shifts or arms reduction agreements.

Planning is best done at the local level, close to the work place. It should involve not just the management but also the unions, local government, and local business groups that function in the civilian sector. In short, planning should involve all the groups in the community that will be affected by cuts in military spending and stand to benefit if these cuts are converted into opportunities for economic development. Concerned citizens in defense-dependent communities—and elsewhere—can help the process by encouraging the creation of joint local committees to plan for new economic activities.

One model for helping laid-off workers is the aid offered by the Trade Expansion Act of 1962. To workers hurt by lowered tariffs, the legislation provides adjustment allowances, counseling and job placement services, retraining, and relocation to another area. It has not worked well, however. The federal and state bureaucracies have been slow to move, and workers often know nothing of the services available. Still, when a Rhode Island rubber plant gave one year's advance notice of a closing, the union in the plant applied for adjustment assistance and the state employment agency set up a retraining service. In that case the act worked well to ease the transition.

As Jimmy Carter said during the 1976 campaign, national security decisions should be made for national security reasons and economic decisions for economic reasons. It hasn't always worked that way. When Treasury Secretary John Connally testified before the Senate in 1971 on the federally guaranteed bank loan to Lockheed, manufacturer of the ill-fated C–5A cargo plane, he declared: "What do we care whether they perform? We are guaranteeing them basically a $250 million loan . . . so they can hopefully minimize their losses, so they can provide employment for 31,000 people. . . ."

The fear of job loss in the defense sector has been one of the engines driving an arms race that contributes nothing to our security. Now we know that mutual disarmament and higher employment could be achieved simultaneously. There's much work to be done in a nation groping for the moral equivalent of war.●

## TRIBUTE TO TORRANCE UNIFIED SCHOOL EMPLOYEES

### HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. ANDERSON of California. Mr. Speaker, our Nation and its democratic society have produced many testaments showing its strength, foresight, and responsiveness to the needs of its people. Yet nowhere are these attributes more evident—and more vitally necessary—than in our educational systems.

In schools across our country, the young men and women who will be the leaders of tomorrow are taking the first steps toward developing into productive members of our society. The men and women who serve in our educational systems—administrators, teachers, secretaries, custodians—collectively bear one of the greatest responsibilities possible. For it is they, more than any other segment of society, who work toward the future of our Nation.

On May 5, 1978, the Torrance Unified School District will honor those employees who are retiring after many years of dedicated service to their community. I would like to take this opportunity to congratulate them on making the Torrance Unified School District the outstanding educational system that it is today.

For an educational system is more than school buildings, books, and classrooms. It is the men and women who use those facilities—and the students who benefit from them—that make our educational systems vital, dynamic centers of human knowledge and experience.

The philosophical tenets of the Torrance Unified School District describe education as "* * * a dynamic, evolving relationship with subject matter the means, man the product, and society the result."

That is truly an eloquent—and accurate—assessment of our system of learning. For a society is shaped by the individuals who live, work, and contribute to it. Today's youth will determine, in the years to come, the direction our Nation will take during its third century of existence.

What they will become, and the extent to which they will influence the shape of future American society, will be influenced greatly by the knowledge and experience to be gained in our Nation's schools.

Mr. Speaker, the following men and women certainly deserve our gratitude as they retire after many years in education:

Mr. Kenneth J. Christofferson; Mrs. Mary P. Clark; Mr. Merlin R. Cook; Mr. Charles J. Duffy; Mr. William C. Fuller; Mr. Charles E. Cummins; Mr. Clarence A. Geringer; Mr. Rollins W. Harwell; and Mr. Alvin E. Koch.

Mr. Woodrow W. Krutsinger; Mrs. Katherine M. Ley; Mrs. Bernice M. Lowry; Mrs. Leonora M. Maxwell; Mr. Bernard W. Murray; Mr. Luke C. Nickol; Mr. Leroy D. Papa; Mrs. Winifred M. Parchen; Mr. David G. Paton; Mr. Gerald F. Pizer; Mr. Harold D. Rawnsley; Mrs. Nora S. Reese; Mrs. Beverly V. Sampson; Mr. Vernie T. Vanderpool; Mr. Alvin J. Watrin; Mrs. Mary G. Whitesel; and Mr. Herbert E. Whittle, Jr.

Mrs. Helen M. Clark; Mrs. Elinor C. Courtney; Mrs. Claire V. Crain; Mrs. Wealtha S. Godsell; Mrs. Alice B. Hammond; Miss Phyllis I. Kesselring; Mrs. Mary D. Ruckle; Mrs. Helen R. Ryan; Mr. John L. Tucker, Mrs. Margaret M. Bereskin; Mrs. Sunga K. Greisman; Miss Evelyn C. Hilden; Miss Elaine J. Nunnally; and Mr. Thomas I. Bray.

Mrs. Catherine S. Cason; Mr. Walter A. Cason; Dr. Lloyd G. Jones; Mrs. Ludmila N. Raisters; Mrs. Genevie M. Rosin; Mrs. Ernestine B. Dunlap; Mr. Melvin Grogitsky; Mrs. Carole M. Schmohl; Mr. John H. Wiegand; Miss Catherine G. Fitzgerald; Mrs. Josephine J. MacZuga; Mr. Henry B. Dolan; Mrs. Alice K. Jones; Mrs. Mary E. Golden; Mrs. Kathryn M. Dill; and Mrs. Martha J. Coburn.

Special mention should be given to the following four individuals for having completed 30 years of service with the Torrance Unified School District:

Mr. Robert E. Fulton; Mr. Charles F. Conze; Mrs. Lynn S. Bramhall; and Mr. Lester I. Foster.

Mr. Speaker, the contributions made by these men and women to our society cannot be measured. However, they will continue to be felt for many years to come, as the young people they served so well take their place as contributing members of our American way of life.

My wife, Lee, joins me in offering our heartiest congratulations to these individuals as they enter retirement, and in wishing them much happiness in the years ahead.●

## THE ENERGY CRISIS: VALUES IN CONFLICT

### HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. HAMILTON. Mr. Speaker, I recently participated as a panelist in the Energy Fair 78 Forum at Indiana University Southeast in New Albany, Ind. The text of my opening remarks, entitled "The Energy Crisis: Values in Conflict," is inserted into the CONGRESSIONAL RECORD for the benefit and use of my colleagues.

INTRODUCTION

It is a pleasure for me to be a panelist in this year's Energy Fair 78 Forum, The intended topic of discussion—is one of critical interest to everyone here.

Of course, I would like to *approach the topic from the point of view of a legislator* who must debate the broad issues of energy policy and cast votes on energy legislation. I hope that my remarks will be helpful in advancing the discussion. I know that many of you are more expert than I in the field of energy.

THE ENERGY CRISIS

What is the energy crisis? Although you will not find two people who describe it in exactly the same way, there are certain facts that most people agree on.

The days of readily available, cheap energy in the United States are drawing to a close. As a result, America faces a new energy reality. Proven domestic reserves of oil and natural gas, our nation's predominant energy sources since World War II, have been dwindling since 1970. Even if there are great undiscovered reserves to be found, these fuels and substitutes for them are expected to become increasingly costly. At the same time, demand for energy is surging ahead. This is something that we have come to accept. Our high standard of living—a standard enjoyed by so many people—is squarely based on the "energy-intensiveness" of industry and agriculture and can only be sustained with ever greater use of energy.

This imbalance between rising demand and limited domestic production lies at the heart of the energy crisis. Our temporary response has been to import the difference to correct the imbalance. Imports have bought us time. They have also cost us money.

ENERGY GOALS

Although it may seem like an elementary question to some, perhaps we should begin our discussion of values in conflict by asking what the goals of our energy policy should be.

It is clear that our energy problem could be managed if we were to implement Draconian conservation measures of the sort seen only in times of war. It has been estimated that such a radical conservation effort could trim 13 percent from our consumption of gasoline, 15 percent from our consumption of heating oil and 15 percent from our consumption of electricity, but the resulting social and economic dislocation would not be acceptable to us. A better energy policy would be one that combined conservation with a broad array of other measures to

Reduce dependence on foreign oil in the near term and minimize the potential effects of supply disruptions, thereby maintaining the security and independence of the nation;

Prepare the American economy to withstand the effects of higher energy prices while still providing an adequate and secure supply of energy at affordable prices;

Develop renewable and essentially inexhaustible sources of energy so that styles of life remain a matter of choice and are not limited by the unavailability of energy;

Assure that energy policies and programs are fair, equitable, and fiscally sound so that we can maintain a strong and healthy economy which provides adequate employment opportunities;

Contribute to world stability through a concerted attack on the energy problem with other nations; and

Protect and improve the quality of the environment.

I will be the first to admit that this is quite a "shopping list" of goals. The very number of goals is a genuine matter of concern. I sometimes think that our energy problem is like our economic problem. In the area of economy we have three basic targets: full employment, stable prices and sustained growth.

It is easy to hit anyone of the targets if we ignore the others: full employment could be achieved by a massive public jobs program, stable prices could be achieved by very restrictive money measures and sustained growth could be achieved by drastic tax cuts for business.

However, the pursuit of any of these policies would have unbearable consequences for us. The trick is to hit all the targets simultaneously. It is no easy matter to come up with a comprehensive economic policy "for all seasons." I do not see that energy policy is any different. In energy, just as in economy, there are values in conflict.

ENERGY POLICY

The six general goals just set out are fine in theory, but you may well ask what has been done to reach them in practice.

Regrettably, too little. Despite repeated warnings from the President, endless debates in Congress and volumes of public and private studies, a comprehensive national energy policy is not yet in place. I do not need to tell you that an attempt to put one in place is still floundering in a conference

room in the Capitol building. But I am not one of those to look only on the dark side of things. In energy, as in many other areas of public policy, the fervent desire to formulate quick but satisfactory solutions to problems can sometimes cloud our vision.

In a very real sense, we do have a national energy policy. Now—do not misconstrue what I say. We certainly have not prompted enough change, but we should not overlook the change that has already taken place. We have the rudiments—one might better say the foundations—of the energy policy we seek.

The politician, the private citizen and the press have found the change easy to neglect in the hoopla surrounding the National Energy Act. There is a further reason for the neglect: Part of the change has very little to do with legislation. It has rather to do with the much-maligned—and underestimated—free market.

What are the dimensions and features of the change I am referring to? Consider first the broad outline. Without any major energy law to require it, Americans already are well on the way toward accomplishing some of the major goals of the Carter energy proposal—from converting industry to coal-fired powerplants to cutting back automobile fuel consumption to insulating homes and factories. Indeed, the progress has been quite startling even to many critics.

Of course, the single most important force behind this progress has been the sharp rise in energy prices over the past 3½ years. Despite controls, average prices of domestic crude oil have risen 10% a year, while the average retail price of natural gas soared 88% in the three years ending last July. As a result, Americans have cut consumption significantly.

There are specific data to support the general claim:

The National Coal Association says that hundreds of utilities have shifted back to coal in the past two years, and 241 new coal boilers are now on the drawing boards. Boiler industry officials report that not one oil- or gas-fired boiler has been ordered since late 1975.

In the basic manufacturing industries, coal-fired boilers are now taking 60% of the market, as opposed to 20% in 1974. Industry leaders say that this trend is accelerating.

The auto industry has shifted to more fuel-efficient cars and buyers are more conscious of gasoline consumption. The major auto makers now offer a larger selection of small cars—a sure sign of a growing market.

Americans' push to insulate their homes has been so intense that there now is an acute shortage of insulation materials. In fact, the home insulation industry has asked Congress not to pass an insulation tax credit for fear of exacerbating the situation.

Conservation of electric power and other energy by industry and consumers has improved significantly in the past few years. Reports from around the country show that people and businesses are making significant savings by cutting consumption.

In spite of licensing and siting delays, industry projections reveal that nuclear is likely to triple its share of the electricity market by 1985.

Finally, new exploration for oil has been steadily increasing. Industry statistics show that new rigs are being brought into use at a high rate. Also, recent increases in natural gas prices have spurred new exploration in the gas fields. Experts think it unlikely either trend will taper off very soon.

The results of all this have been fairly dramatic. While the Nation's economy has grown by some 13 percent since 1973, demand for petroleum has increased at about half that pace—7.1 percent. On a day-to-day basis, petroleum demand is running at about 17.5 million barrels a day on a seasonally adjusted basis—virtually unchanged from its level in 1973. Oil imports are up 23 percent since 1975, but this year imports are running at about 8 million barrels a day compared with 9.9 million barrels a day in 1977, when the country was plagued with a severe winter. Increased outlays for oil are due as much to higher import unit prices as to higher import volume.

There can be no denying this simple fact: The free market can be a remarkable instrument for the futherance of public goals. It behooves us to learn more about it so that we can exploit its potential more fully.

Let me backtrack for a moment. I am not about to give all the credit for progress to private enterprise. Another much-maligned and underestimated institution—the United States Congress—has had some role. Many of us—myself included—are perturbed at the present "energy paralysis" on Capitol Hill. But we should not be blind to what Congress has done to better our energy posture:

Congress has passed the Federal-Aid Highway Act which authorizes $22.9 billion over three years for mass transit systems. Another measure, the Urban Mass Transportation Act, provides a direct operating subsidy from the Federal Assistance Program for mass transit. The Energy Supply and Environmental Coordination Act requires the Secretary of Transportation to submit a plan for expanding and improving mass transit systems and encouraging increased ridership as alternatives to automobile travel.

To increase efficiency in the use of gasoline, Congress has enacted a law which set a national speed limit of 55 miles per hour.

Congress has passed legislation requiring that all cars made in 1985 and subsequent years get 27.5 miles per gallon.

In the same bill, Congress mandated standards for the increased energy-efficiency of home appliances.

Congress has authorized $150 million to assist states in developing and administering energy conservation programs.

Congress has ordered all federal agencies to develop 10-year plans for energy conservation.

The Energy Conservation and Production Act provides a strong program to encourage conservation in residential and commercial buildings.

Congress has raised the composite price for old oil, established a high "second-tier" price for new oil and deregulated the price of "stripper" oil.

The Federal Coal Leasing Act Amendments are aiding states in the development of soil shale reserves. Under the amendments, states receive a substantial rebate for oil shale mining on federal lands.

The Solar Energy Research Development and Demonstration Act is providing the impetus for the establishment of a national solar energy program. It is the purpose of the law to set us on a vigorous course of solar energy research and development and to demonstrate the benefits of solar power to the public. The Solar Heating and Cooling Demonstration Act expresses a commitment to the economic viability of solar heating and cooling for buildings and establishes a program to demonstrate this viability by 1979. The increase in funding for solar energy development has been dramatic.

The most attractive sites for the exploitation of geothermal power are on Federal lands in the western United States. The sites are being made available for prospecting and development under the Geothermal Steam Act. Congressional interest in geothermal energy resources culminated in the Geothermal Energy Research, Development, and Demonstration Act of 1974. This measure placed an aggressive geothermal energy program under the jurisdiction of the Energy Research and Development Administration, now part of the Department of Energy.

Congress has passed a law authorizing increased production at the Elk Hills Naval Petroleum Reserve in California.

Congress has mandated the creation of a 500-million-barrel strategic petroleum reserve. The reserve is slowly but surely coming into being.

A bill to enable the careful development of our off-shore oil and gas reserves just recently passed the Congress. The new law will expedite off-shore production because it establishes the "legal ground-rules" necessary for the effort.

Congress recently passed a bill to consolidate the energy agencies of government into a single department. The consolidation of previously separate functions is bound to have positive effects.

The list of congressional energy initiatives is really quite remarkable when it is set out in full. I should add that my enumeration is not complete and that all the bills I have mentioned, with one or two exceptions, were passed subsequent to 1972. Contrary to popular belief, Congress has not been "sitting on its hands" in the area of energy.

THE NATIONAL ENERGY ACT

Notwithstanding such progress and congressional action, we are faced with the matter of the deadlocked National Energy Act. All private and public moves towards coherent energy production and use are appreciated, but we want to know what has happened to the measure that was, and still is, intended to be the keystone of our energy policy, A brief look at the bill—what it would do and where it is stalled—should bring us back to the topic of values in conflict in an energy crisis.

You are all well acquainted with the basic content of the President's proposal. As initially written, it provided for:

A crude oil equalization tax on existing domestic production to raise the price of petroleum products to their replacement value;

An industrial oil and natural gas consumption tax on certain industrial and utility use to accelerate the conversion to facilities that use coal and other nonpetroleum fuels and to stimulate greater conservation;

A new oil and natural gas pricing policy that would encourage the development of new domestic supplies and eliminate the distinction between interstate and intrastate natural gas markets;

An automobile fuel-efficiency tax to encourage fuel conservation;

A regulatory program to prohibit the use of new oil-and gas-burning equipment in certain industrial and utility facilities;

Individual tax credits for insulating residences and installing solar energy equipment;

Business tax credits to promote investment in more energy-efficient equipment;

New or more stringent energy-efficiency standards for buildings and appliances;

Reform of utility rates to promote more efficient use of electricity; and

Weatherization grants for schools, hospitals and low-income housing.

The President's proposal arrived in Congress on April 20 of last year. Its first days were cause for optimism. On August 5, the House of Representatives, by a vote of 244–177, passed the Carter energy plan. Aside from some minor modifications here and there, only on the issue of gasoline taxes did the House refuse to go along with the President.

There was no such smooth sailing in the Senate. The President's package was broken up into five separate bills and to avoid the possibility that a filibuster might hold up the whole measure. As things turned out, it was not worth the bother. The Senate weakened, and in some cases gutted, all but a few of the major provisions.

A very rough-and-tumble conference ensued. To date, agreement has been reached

except for natural gas pricing and the tax provisions. The real stumbling block is natural gas pricing—whether to extend controls or to deregulate. The tax conference is simply awaiting the final holding of its non-tax counterpart.

What are the prospects? The two natural gas pricing plans are not so far apart. Both envision a form of gradual price deregulation. However, the Senate coalition is so shaky that predictions are risky. We can say that there are two alternatives: either the conference agrees on natural gas pricing soon, or the pressure will mount, as it has already, to report out the three main parts of the energy plan that have been approved. This smaller piece of legislation is generally referred to as the "mini-package."

VALUES IN CONFLICT IN AN ENERGY CRISIS

It is apparent that Congress has had a difficult time with the National Energy Act. The American public has watched for almost a year as their national legislature has grappled with a politically explosive, technically complex and highly important bill. The struggle is not yet finished, but it already has some lessons for us. The lessons are that values are in conflict.

We have learned that there is nothing approaching a consensus in the nation on whether there is an energy crisis. In spite of the progress that has been made, too many Americans continue to act as if the energy crisis were a figment of someone's imagination. This conflict is between the believers and the disbelievers.

We have learned that there is nothing approaching unanimity of opinion on the nature of the energy crisis even among those who agree that it is real:

On the one hand, some experts say that supplies of fossil fuels, especially oil and natural gas, are dwindling and may be exhausted by the end of the century. They advocate research and development of alternative sources of energy which can eventually be used to take up the slack.

On the other hand, many economists believe that the primary problem is not one of supply but of price—the cost of getting oil and natural gas out of the ground and into the market. They argue for continued reliance on traditional sources of energy, with increased incentives for the oil and natural gas industries to supply customers at competitive prices.

This conflict is between the "soft technologists" and the "hard technologists."

We have learned that it is one thing for a President to propose an energy policy, but quite another for an independent, free-thinking Congress to accept it. The natures of the Presidency and the Congress are distinct: the former recommends and acts, the latter deliberates and permits. This conflict is between governmental institutions with different duties.

We have learned that Congress is a more representative body than most Americans generally acknowledge. With no consensus on energy in the country, there is no consensus on energy in the Congress. Things go slowly as members strive to convince one another of their points of view. This conflict is between the need to act and the need to allow differences of opinion to be represented.

We have learned that Congress can be hindered in its task by its own organization. The energy bill was handled by more than a dozen committees. Delay and jurisdictional squabbles were common. This conflict is between the traditional way of doing things and the need for reform.

We have learned that Congress can have difficulty when it attempts to deal with technically complex matters. Members of Congress tend to be generalists, not specialists. Like most of their constituents, they are stronger on broad issues and weaker on technical issues. This conflict is between democracy and technocracy.

Finally, we have learned that today's problems are impossible to solve in a way that satisfies everyone. In the matter of energy, consumers are pitted against producers, proponents of regulation stand against proponents of the free market, and residents of the northeast oppose residents of the southwest. In a democracy, solutions to problems are politically feasible—or else they are not solutions. This means that no one will get all of the things he wants. This is the conflict between adamancy and compromise.●

## FREE BOOKLET ON "ENERGY AND YOUR HOME"

### HON. WILLIAM F. GOODLING

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. GOODLING. Mr. Speaker, I want to take this opportunity to commend a firm in my district for taking the initiative in promoting energy conservation.

The York Division of Borg-Warner Corp. has just published a free booklet which gives detailed information on how each of us can conserve our precious energy resources in this time of scarce supplies.

I have found the brochure to be objective and thought provoking and would recommend "Energy and Your Home" to anyone interested in cutting energy costs. I also would like to encourage other businesses and individuals in my district, and for that matter nationwide, to undertake similar projects for public dissemination.

Mr. Speaker, I offer the press release from Borg-Warner which more fully details the booklet "Energy and Your Home" and which gives the address of where more copies of the same can be obtained:

FREE BOOKLET GIVES HOME ENERGY TIPS

What are the big energy guzzlers in a home? They are not the lights and small appliances, not even ranges, ovens and dryers. From 75 to 90 percent of all the energy used in the home goes for three essentials, heating, cooling and hot water.

This is one of the many facts and insights to be found in a new, free booklet, "Energy and Your Home," edited by noted science writer Isaac Asimov. It deals with basics, but also contains guidelines and tips for the homeowner interested in saving energy and money.

It says, for example, that if all of the air leaks in a poorly caulked and weatherstripped house were gathered in one spot they could equal a one-square-foot hole in the wall.

To find out if a window leaks, the booklet suggests that you take a piece of thin plastic over it on a windy day and see if it billows.

The booklet says that as much as one-quarter of our heating dollars can be carried off by heat escaping through windows and doors. Sealed double (insulating) glass reduces the loss by half, it says, and storm windows do somewhat better by trapping a deeper layer of insulating air and covering leaks in the frames.

With the rise in fuel prices, triple glazing—double panes plus storm windows—pays for itself in the colder areas.

The booklet calls insulation "the No. 1 priority" in saving energy and it gives basic rules and a zone map of the United States with the latest insulation recommendations for roofs, walls and floors.

Although published by a manufacturer, York Heating and Air Conditioning, the 28-page booklet is non-commercial excerpt for a listing of products at the end. It even emphasizes the importance of not buying a larger furnace or air conditioner than you need.

In the case of air conditioners, it says that an oversize one will have shorter "on" periods that will prevent it from doing its important job of removing humidity. An oversize furnace, the booklet says, will cost more to operate and give less comfort. That's because it will have short "on" and "off" periods, allowing too wide a temperature range and air stratification in the rooms.

Asimov, in his introduction, refers to the potential catastrophe of the fuel shortage in coming decades. "For every person who reads and acts," he says, "there will be a small extension of the deadly deadline that faces America and the world. And if enough people act, as a result of reading this booklet or for any other reason, the deadline may be lifted forever."

For a free copy of "Energy and Your Home," write to York Division of Borg-Warner Corp., Dept. 14, Box 1592, York, Pa. 17405.●

## LOBBY DISCLOSURE BILL'S IMPACT ON CONSTITUTIONAL RIGHTS

### HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. EDWARDS of California. Mr. Speaker, in the next few days the members of the House will be called upon to consider and vote on H.R. 8494, the "Public Disclosure of Lobbying Act of 1978". This measure has been the subject of extensive hearings by both the Subcommittee on Administrative Law and Governmental Relations as well as by the full Judiciary Committee in the 94th and the 95th Congress.

I think that the tremendous amount of controversy and debate which has surrounded the bill is a reflection of the fact that it seeks to force disclosure and reporting of activities which are protected by the Constitution. The first amendment guarantees to every American the right to petition the Government for a redress of grievances. Those who exercise this right by communicating with their Representative or Senator are sometimes referred to as lobbyists. However, regardless of the term applied to them, their activities are constitutionally protected and form a vital part of our political process.

I hope that my colleagues will keep in mind the constitutional aspect of this issue during the debate. It is extremely dangerous in my view, to tamper with this form of protected speech. The bill reported by the House Judiciary Committee meets minimal constitutional standards in this area and I support the measure in its present form. However, I urge my colleagues to resist efforts to tack on amendments which will expand the bill's coverage and thereby burden the right of all Americans to contact their Government.

The American Civil Liberties Union has prepared what I think is a fine anal-

ysis of the most important issues involved in this legislation. I hope that my colleagues will take a moment and review the ACLU views prior to the debate on the measure:

ANALYSIS OF H.R. 8494—PUBLIC DISCLOSURE OF LOBBYING ACT OF 1978

The House Judiciary Committee has reported out a lobbying disclosure bill, H.R. 8494. This memorandum will briefly summarize the Constitutional questions and public policy issues raised by this proposal.

THRESHOLDS FOR REGISTRATION AND REPORTING

Under H.R. 8494, organizations which spend $2500 on directly communicating with Congress and either retain an outside lobbyist or have at least one salaried employee who engages in lobbying communications on all or part of each of thirteen days in a quarterly filing period would have to register as lobbyists.

This threshold is a substantial improvement over prior thresholds and should not be lowered. The $2500 expenditure requirement means that small, local organizations, especially those heavily relying on volunteers, will not be forced to register under the Act. For those organizations compliance would be so burdensome that many would be deterred from lobbying.

For example, under H.R. 8494, each registered organization would have to file quarterly reports including information on approximately 25 separate items. Moreover, every registered organization would have to maintain extensive records and institute intricate accounting and internal reporting procedures in order to prove compliance. The need to centralize recordkeeping and to track expenditures on lobbying will be too intimidating and too costly for many organizations. The threat of criminal sanctions is even more intimidating, especially to small or inexperienced citizens groups venturing to lobbying.

The $2500 expenditure requirement assures that only groups that expend substantial sums of money for lobbying will have to register. Presumably these are organizations which are well enough organized so that the registration and reporting requirements are not so bewildering, intimidating or costly that they would consider refraining from lobbying. The thirteen days threshold insures that the organization employs at least one person whose regular duties include lobbying. Under a prior version of the threshold these contacts were aggregated from all employees. This would have placed an overwhelming burden on organizations to monitor the lobbying activities of employees.

REPORTING REQUIREMENTS

Any organization required to register under the Act will have to file quarterly reports on its lobbying activities and gift-giving to Members of Congress and staff. The reports will include a specific identification of the organization, the total expenditures on direct lobbying activities, an itemized listing of all gifts over $35 and all reception costs over $500 for Members of Congress or staff, specific identification of lobbyists and the total money spent to retain or employ them, a description of issues which the organization lobbied, and each known "direct business relationship" between the organization and a member of Congress or staff.

Although these reporting requirements will produce some burdens on organizations required to register, they are not so onerous as to deter the organizations from lobbying. The information disclosed will provide Congress and the public with the knowledge of those organizations which are engaging in substantial efforts to affect the legislative process and how much money they are spending to do so. Several reporting requirements which would have infringed on the privacy of the organization and its individual members have been eliminated from the bill.

DIRECT VS. INDIRECT LOBBYING

The House Judiciary Committee overwhelmingly adopted an amendment by Congressman Don Edwards (D–CA) deleting a requirement that activities known generally as "lobbying solicitations" be disclosed. This provision should not be reinstated. "Lobbying solicitations" typically include the efforts by organizations to require, encourage or solicit others to make direct contacts with Members of Congress and their staffs. Under the provision that was deleted any organization required to register under the Act would have had to provide on a quarterly basis a detailed description of all lobbying solicitations which were "reasonably expected" to reach 500 or more persons, 25 or more officers or directors, 100 or more employees or 12 or more affiliates. The description would have included (1) the means employed to make the solicitation, (2) the issue with which the solicitation was concerned, (3) an identification of any person retained to make the solicitation, (4) an indication whether the recipient was in turn asked to solicit others, and (5) the approximate number of individuals and organizations solicited or, if the solicitation was a paid advertisement, an identification of the publication or television or radio station, and the total amount expended on the advertisement if it exceeded $5000.

The Supreme Court has never permitted such extensive government regulation of indirect efforts to influence the legislative or elective process. Decisions of the present Court as well as a line of earlier cases over a twenty year period strongly indicate that the Court would strike down Congressional efforts to regulate lobbying solicitation.

In *United States* v. *Rumely*, 345 U.S. 41 (1953), the Court held that the authority of a Congressional committee investigating lobbying was limited to the investigation of direct efforts to influence legislation, that is, contacts with Members of Congress. Similarly, in *United States* v. *Harris*, 347 U.S. 612 (1954), the Supreme Court construed the Federal Regulation of Lobbying Act, in accordance with the First Amendment, to reach only "lobbying in its commonly accepted sense—direct communication with Members of Congress on pending or proposed federal legislation". Recently, in the Federal Election Campaign Act (FECA) litigation, the United States Court of Appeals for the District of Columbia Circuit invalidated a portion of FECA which would have required the disclosure of indirect efforts to affect the electoral process. The Supreme Court approved this aspect of the decision below in *Buckley* v. *Valeo*, 424 U.S. 1 (1976), and this implicity precluded compulsory disclosure of activities addressed to the general public covered by H.R. 8494.

As previously drafted, H.R. 8494 would have required citizen organizations to disclose and register with the Government their political literature and private communications with their own members if the literature or communication contained a request to write to Congress. Moreover, criminal sanctions would have attached for failure to do so. This type of government regulation and surveillance of lawful political activity would have been unprecedented. The Supreme Court has never permitted it, and Congress has never enacted legislation of this scope. Organizations which communicate their members regarding federal legislation are performing the vital function of encouraging citizen participation in the legislative process. The response to a lobbying solicitation is the purest form of the right to petition the government, and the regulation of lobbying solicitation dampens the free exercise of the right. Accordingly, the Judiciary Committee eliminated disclosure of lobbying solicitations from H.R. 8494.

CONTRIBUTOR DISCLOSURE

The Subcommittee on Administrative Law and Government Relations eliminated the contributor disclosure provision from H.R. 8494. The Judiciary Committee did not consider such a provision. It should not be reinstated, since, in our view, any contributor disclosure provision is unconstitutional.

The Supreme Court first recognized the right of associational privacy in *NAACP* v. *Alabama ex rel. Patterson*, 357 U.S. 449 (1958), where it reversed a conviction for contempt for failure to disclose the membership list of the NAACP. Speaking for a unanimous court, Justice Harlan said that the inviolability of privacy in group associations may in many circumstances be indispensable to the preservation of freedom of association.

The holding of *NAACP v. Alabama* has been consistently affirmed by the Supreme Court. In *Buckley* v. *Valeo*, the Court, narrowly construing the Federal Election Campaign Act in accordance with the First Amendment, made it clear that it would not tolerate a disclosure statute that affected the funding of every conceivable general interest organization engaged in political activities. (For a detailed case analysis, please refer to the enclosed supplemental memorandum on Contributor Disclosure, dated June 21, 1977.)

Finally, enforcement of any contributor disclosure provision presents additional constitutional problems. The Comptroller General is required to determine whether an organization is complying with these reporting provisions regardless of the figures involved in the contribution. To do so, he will have to have access to the entire membership list of an organization. The enforcement provisions, therefore, present the very constitutional problems encountered in the *NAACP* cases, and could not survive constitutional attack.

SANCTIONS

H.R. 8494 permits criminal sanctions to be imposed for a knowing and willful violation of the Act. We believe that a sentence of imprisonment is entirely inappropriate for this Act. In effect, violators would be incarcerated for exercising their constitutionally protected rights. If the purpose of the Act is "disclosure," then the sanctions should be related to that purpose. Accordingly, injunctive relief to compel reporting coupled with fines for not doing so are sufficient sanctions.

Another problem the sanctions provision of H.R. 8494 poses is that Sec. 11(a) of the Act permits a civil penalty of up to $10,000 to be imposed for a "knowing" violation of the Act or any rule or regulation promulgated thereunder. This would mean that an individual or organization could be penalized for a mere paperwork violation of the Act. For example, a small local organization, unfamiliar with the regulations, misinterprets the definition of expenditures and knowingly omits a certain expenditure. The organization could be subject to a $10,000 fine. This would cripple many smaller organizations. More importantly, the threat of being penalized for paperwork violations is very intimidating and might cause some organizations to forgo their lobbying. We submit that if a sanction is to be imposed, it must be only for a knowing and wilful violation of the Act.

LOBBYING DISCLOSURE GENERALLY

Requiring the public disclosure of lobbying affects a number of fundamental constitutional rights: Freedom of speech, freedom of association, privacy and the right to petition the government. The Supreme Court subject legislation affecting these rights to exacting scrutiny. It is well established constitutional law that Congress bears a heavy burden in enacting such legislation: there must be (1) a compelling governmental interest, (2) a substantial correlation be-

tween the compelling interest and the information sought to be disclosed, and (3) even if there is compelling interest and the information sought is substantially related to that interest, the legislation must employ the least drastic means.

In drafting H.R. 8494, Congress has not met this burden. In the voluminous testimony and record in both the House and the Senate, there is no evidence that Congress has investigated and identified an abuse in the lobbying process. The general view that people have a right to know about lobbyists and private organizations which spend money on lobbying is not a substitution for a factual record establishing a compelling governmental interest. Further, with no factual basis from which to proceed, Congress cannot prove that the legislation utilizes the least drastic means. Without this factual record, we submit that any public disclosure of lobbying bill cannot withstand the scrutiny of established constitutional tests. As presently drafted, H.R. 8494 has fewer constitutional problems but the chilling effect of this legislation has not been entirely eliminated.●

## OTHER HALF OF THE F-15 STORY

### HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. EILBERG. Mr. Speaker, as the Congress waits the submission of the administration's letter of intent to sell the F-15 fighter-bomber to Saudi Arabia, we are being told by the White House and State Department that the Saudis will use this aircraft as a defensive weapon.

But the following news account shows that this argument is seriously flawed.

On April 13, 1978, the Philadelphia Inquirer reported that the defensive aspect of the F-15 is "only half the story."

The Inquirer's article reinforces the view that this aircraft in Saudi hands will be a great destabilizing factor in the Middle East. The F-15 will be capable of striking deep into Israeli territory, and will mean the establishment of a fourth confrontational state on Israel's borders—on a front which up until now has been quiet.

The Inquirer reports that the Air Force's own fact sheet on the F-15 says that even though the aircraft was developed as an air fighter, "it contains the structural ruggedness, flight characteristics, survivability features, and equipment essential for the attack mission without modification."

Further, the story points out the ease with which the F-15 can be equipped with bomb racks and other necessities for ground attack:

"All the equipment could be bought on the open, commercial market in the United States," writes reporter James McCartney.

Finally, the Inquirer reports that according to Air Force pilots interviewed for this story, there is considerable doubt "that the capabilities of the F-15 could be limited to any notable extent by agreements to base it far from the Israel border."

I commend the following account to my colleagues, and suggest that we review it quite carefully as we prepare to consider the administration's proposal to embark on a new wave, selling sophisticated arms to Saudi Arabia:

F-15's DEFENSIVE, BUT THAT'S ONLY HALF THE STORY

(By James McCartney)

HAMPTON, VA.—Etched on the fuselage of an F-15 fighter plane parked on the tarmac at Langley Air Force Base there is the slogan, "The Meanest Man."

There is every indication that the description is apt.

The Carter Administration is trying to persuade members of Congress that the F-15 it plans to sell to Saudi Arabia is a "defensive" weapon and thus no direct threat to Israel.

But a close-up look at the sleek, silver craft and interviews with the men who fly it for the 27th Tactical Fighter Squadron tell a different story.

They present a graphic picture of the world's finest fighter plane, a plane that not only can "defend" if called on, but also can attack at blinding speed.

"It is blatantly obvious," said Maj. Steve DeMuth, a pilot and Vietnam veteran, "that it can be used for either offensive or defensive purposes.

"It is a political question. It depends on how it is used."

That is likely to be a key question in what may become one of the major battles of the year in Congress.

The proposal to sell 60 F-15s to the Saudis for $42 million each is the most controversial part of a $4.8 billion administration aircraft "package" for the Mideast. Other elements include 50 far less sophisticated F-5Es for Egypt and 15 F-15s and 75 smaller, but highly sophisticated, F-16s for Israel.

The F-15s for the Saudis, however, have touched the most sensitive nerve. Israel and its friends in Congress have mounted a major campaign against the sale on grounds that it would raise tensions and upset the military balance in the Mideast.

Israeli lobbyists, in a lengthy memorandum for members of Congress, state flatly: "The F-15s would enable Saudi Arabia to strike deeply into Israel."

The Saudi ambassador to Washington has insisted in reply that the F-15s will be used only defensively. The country "Must rely on sophisticated modern weapons such as the F-15 to defend itself," he has said.

U.S. Secretary of State Cyrus Vance has contended that the sale is necessary to maintain good relations with the oil-rich Saudis and that it would not disrupt the military balance of power. He called the Saudi request "reasonable and in our interest to fulfill."

Since this war of words has opened, few in Congress have stopped long enough to take a close look at the plane itself, at what it can and cannot do.

There are 72 F-15s at Langley, the only combat-ready base in the United States that has the plane. The men here know it well. They fly it every day.

Though the airmen have no desire to be dragged into political arguments, they are familiar with the issues that already have emerged:

What kind of plane is it? What was it designed for and what does it do best?

If the plane is sold for defensive use, how hard would it be to equip it to take the offense?

Does it make any difference where and how the plane is based? If planes were based far from Israel, for example, would that provide some guarantee that they could not be used against the Israelis?

The F-15, built by McDonnell Douglas Corp. of St. Louis, is a pilot's dream. "It drives like a Cadillac," says Capt. Don Waddell.

It was designed to be what the Air Force calls an "air superiority" fighter, which means, as Waddell puts it, "to fight and destroy any other aircraft, to control whatever air space you want to control."

It is fast, able to go 2½ times the speed of sound (approximately 1,800 miles an hour), and powerful, with two giant turbofan engines, each generating 25,000 pounds of thrust. It will fly straight up. It is highly maneuverable, capable of tight turns without losing air speed.

In modern aerial combat it is agility, not speed, that counts most. Therefore, the plane is designed for quick turns and rapid acceleration, because as was demonstrated in Vietnam, much dogfighting takes place at low to medium altitudes and at subsonic speeds.

The basic armament on the F-15 are guns and missiles to destroy other aircraft. The F-15s at Langley, which defend the East Coast of the United States, are equipped with air-to-air weapons.

State Department officials say the F-15s for Saudi Arabia would be for only this purpose: To defend air space over that country.

But in designing the F-15 as a highly maneuverable, powerful, air combat weapon, the Air Force also created a plane with superb capabilities as an attack aircraft, for air-to-ground strafing or bombing missions. The F-15 can carry 15,000 pounds of bombs and bullets for ground attack.

As the official Air Force fact sheet on the plane states it, even though the F-15 was developed "as an uncompromised air superiority fighter, . . . it contains the structural ruggedness, flight characteristics, survivability features, and equipment essential for the attack mission without modification."

Administration officials have suggested to some members of Congress that the United States might refuse to sell the Saudis gear that would enable the plane to go on ground attack missions.

But converting any F-15 for ground attack missions "would not be difficult if they decided they wanted to spend the money," said Col. Neil Eddins, commanding officer of the First Tactical Fighter Wing here. He and others explained that bomb racks are fairly simple in design and easily fabricated, as are other necessities for ground attack.

All the equipment could be bought on the open, commercial market in the United States.

Col. Eddins said that an F-15, if equipped to drop bombs and to strafe, "would be as good" as the F-4 "Phantom" and probably better.

In addition, pilots here doubt that the capabilities of the F-15 could be limited to any notable extent by agreements to base it far from the Israeli border.

A particular issue has been whether F-15s bought by the Saudis might be based at the Tabuk air base, about 125 miles from the southern Israel port city of Elat.

Israeli lobbyists have pointed out that this is only six minutes' flying time from Israel proper for an F-15, and that the Saudis have other air bases 10 and 12 minutes away.

Vance and the Saudis have sought to assure Congress that the Saudis would not want the planes at Tabuk, or other forward bases, for fear they would provide an inviting target for an Israeli pre-emptive strike.

But pilots here do not believe it would matter much if the planes were based as far away as Riyadh, the Saudi capital, which is more than 800 miles from Jerusalem, or in the oil fields at Dharan, about 900 miles away.

The F-15 has a flight range, without refueling, of 2,800 miles, and could be flown to a combat zone in a few hours, at most. The planes and all the necessary support

are easily redeployed for combat. Therefore, planes based at Riyadh could be moved to Tabuk and ready for battle within 24 hours.●

## WIFE ABUSE

### HON. WILLIAM R. COTTER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. COTTER. Mr. Speaker, the March 27 edition of the Hartford Courant carried a thought-provoking article on the societal attitudes and myths about wife abuse that up to this time have precluded effective action against this form of violence. The article provokes the reader to thoughtfully reexamine his or her own personal feelings about this issue, and offers another perspective from which to analyze the pervasive problem of domestic violence. I wish to take this opportunity to share this news item with my colleagues and the readers of the CONGRESSIONAL RECORD:

[From the Hartford Courant, Mar. 27, 1978]

WOMEN BEATEN, BATTERED, BRUISE US ALL

(By Betsey Karl)

Few people would come right out and say that a battered woman deserves to be beaten.

Many, however, feel that if a woman really wanted to leave she could do so.

I heard a judge recently who reasons that, if some women manage to leave their battering situations, then all women must somehow be able to get out rather than endure it. This kind of reasoning is tantamount to saying if you stay in the battering situation then you are getting what you deserve.

It demonstrates an unwillingness to look at the reasons a person can get locked into violence and an unwillingness to help the battered woman change these conditions and end violence happening to her and others in her family. It is not constructive to blame these women because it does nothing to help stop the violence that is occurring.

Recently when I spoke with a thoughtful and peace-loving group of people, I pointed out that "no one wants to be beaten." I was quite amazed to hear the difficulty they had accepting this. I was told stories about children who relished physical punishment because it was better than no attention at all. I heard stories about adults who had been raised in violent conditions and now demanded that they be handled violently. The intent of my statement is that battered women do not like or want to be hurt. I have to wonder when even the peaceful members of our society have to use such examples to support a sadomasochistic value that exists in our culture.

My involvement with victims of violence for the past four years has given me a sad realization. Most of us have adopted certain mental views that help us accept violence as it occurs in our culture rather than being truly appalled by it.

A study by Pagelow examines institutional responses to battered women through an in-depth interview process. The attitude toward battered women of those in marriage counseling, legal and medical systems was found to be closely similar to the description given by battered women of the treatment they received. The responses was not unlike that of family and friends who say "You made your bed now lie in it."

Pagelow's findings: Attorneys speak of the battered woman as a "greedy bitch." Marriage counselors attempt to get her to bring her spouse in so she can learn more effective ways to communicate with him. Religious counselors offer prayer as a solution. Physicians offer tranquilizers when she needs to be alert to possible siege at any moment. Emergency room staff reflect the attitude that the women are stupid. The police blame her for not pressing charges, don't even write up the calls and feel she is bringing on the attack. The prosecutor has his political career at stake—he is looking for a "win" record. The judge gives the husband a verbal slap at best with little thought to what the woman has experienced from this man. Battered women receive child support payments only 10 percent of the time.

Naturally, the people in this study never intended to sound this way, yet it came through to the interviewer (and to the battered women). Most people do view battered women in a negative light, yet don't think of themselves as doing so. Nine out of ten times when the subject is brought up in public, a joke is made about wife-beating.

It's time for everyone to examine his attitudes and attempt to face the realities of this disturbing concern. I have some suggestions about how to do this.

First. Chances are, there is a victim of some form of violence right in your family or close circle of friends. Talk to them about their experience, listen carefully to what they have to say about their fears, their choices, ways they could and could not handle the situation. They will probably be willing to talk to you if they know you are serious.

Second. Start to notice the number of times homemakers are put down or taken for granted for the housework they do. Or the number of times they are put down for being women.

Third. React to the violence you see on TV, in movies and in other graphic forms. Notice the effect it has on you, once you become aware of it as violence and not just as entertainment. Think about the multiple effects of all of this on millions of people.

Fourth. Learn facts about domestic abuse. There is ample information available to counteract the myths that exist. Fact: there is a large number of violence cases in affluent communities.

Wealthy Montgomery County, Md., received more than 650 calls in a one-year period. A 1970 study shows as many cases reported in Norwalk as in West Harlem, N.Y. Like child abuse, the battering of women is by no means a lower class phenomenon. Fact: abuse can involve severe physical harm. A study of 274 abused women in north central Connecticut found that 74 percent of the abuse described fell into the two most serious categories (kicking, punching, choking, hurt with weapon, broken bones, requiring stitches). Fact: women remain in the violent home because they have no other place to go. How is she realistically going to make a living for herself and her children? Fact: Hartford Interval House for Battered Women received 50 crisis calls last month from battered women requesting immediate assistance. In March the calls are already 25 percent higher in number than February, without advertising the hotline service. Fact: the police do not respond by arresting the assailant. Just ask them. Last week a Hartford police commander told a training group of shelter volunteers that "arrest never solves anything in a domestic case." Fact: the Hartford Salvation Army Shelter turns away several battered women every day.

Fifth. Be aware of the resources available to help deal with battering. Hartford Interval House is opening a shelter on April 15 to house 20 women and children. Four other shelters will be operating by April 1 in New Britain, Meriden, New Haven and Putnam. Legal referrals, support groups and other support services are available as well.

The shelters offer much more than just a safe haven with their child-care programs (children are harshly affected by a violent home even if they are not beaten—although they are, at least 40 percent of the time) share common support, job preparation, skills learning and advocacy.

A stay at such a refuge is designed to not only heal her wounds but to help the battered woman grow strong enough to leave behind the terrible nightmare that was her former life.

(Betsey Karl is a coauthor of the Connecticut Task Force On Abused Women Household Violence Study and is presently coordinator of the Connecticut Shelter Network.)●

## INNOVATION TO MEET AMERICA'S NEEDS

### HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. DORNAN. Mr. Speaker, recently, I had the opportunity to tour a fascinating new plant in my district that reflects the ultimate response to the free enterprise system: innovation to meet America's needs.

Reserve Synthetic Fuels, Inc., with the first plant of its kind in Palos Verdes, Calif., is making pipeline-quality methane gas from a Los Angeles County landfill.

The plant is amazing, the process technologically sophisticated, and the risks are great. It was explained to me by Mr. Robert Collins, president of Reserve Synthetic Fuels, and Mr. Frederick Rice, director of business development, that the process is possible because the refuse in urban sanitary landfills begins to decompose and generate contaminated methane gas from 6 months to 2 years after its placement on the site. The contaminated methane (approximately 55 percent methane, 44 percent carbon dioxide, 4 percent water, plus other trace contaminants) forms as a result of the decomposition of organic material. This gas can be collected through a series of underground wells and delivered to an innovative processing plant such as Reserve Synthetic Fuels, Inc., has developed, which separates the contaminants from the methane gas. The result is essentially pure methane available for sale to any natural gas user, normally a local gas company.

This process is not just an engineer's dream; it is a reality, right now, in my district. Reserve Synthetic Fuels, Inc., is producing gas equivalent to the amount required to heat 2,000 homes—and all from a previously untapped resource, a Los Angeles County landfill.

This process can be a reality near virtually every major city. Already, Reserve Synthetic Fuels, Inc., has examined site possibilities for development of this alternative energy source in the following States: Arizona, California, Colorado, Hawaii, Illinois, Kansas, Louisiana, Maryland, Massachusetts, Michigan, Missouri, North Carolina, New Jersey, New Mexico, New York, North Carolina, Ohio, Oregon, Pennsylvania, Washington, and Wisconsin. This list is just the beginning, because the resource is a manmade one and landfills are an in-

creasingly popular and necessary method of removing wastes without polluting our oceans, lakes, or air.

The Palos Verdes plant was totally developed with private capital. It is a clean industry and obviously has tremendous potential as an alternative energy source.

It is my purpose with these brief comments to suggest to the Congress that one of the best ways we can foster this alternative energy source is to allow it to develop free from unnecessary governmental restraints.

This opportunity exists now with the energy conferees' work on the natural gas bill which has, of course, been in conference for many months now. I am pleased to report that the conference committee's most knowledgeable members aware of this alternative energy source, agree that we should encourage the development of this new energy by avoiding any price controls on this unusual type of methane gas production.

The purpose of avoiding unnecessary price controls on this gas is to encourage the development of this high-cost landfill recovery. Avoiding price controls is highly desirable for several essential reasons. Importantly, there is no problem in justifying the cost involved, which far exceeds normal natural gas recovery. Rather, the cost is considerably higher because the capital investment for the underground pipeline system and the decontamination processing plant greatly exceeds the capital and technology required for normal natural gas production. A study by the Environmental Protection Agency, Pacific Gas & Electric, and the city of Mountain View, Calif., recently concluded, in testimony before the Public Utilities Commission of California, that the estimated cost for landfill gas recovery would be $2.79 per mm/BTU in 1977. (See application No. 57626, Pacific Gas & Electric Co., report on the impact of the decline in natural gas supplies and the need for and timing of supplemental supply projects, before the Public Utilities Commission of the State of California, December 20, 1977.)

The cost involved for these new facilities has also been recognized by the Joint Committee on Taxation, as they have stated:

The primary impediment to the full development and utilization of energy from biomass appears to be the enormous capital costs involved . . . *The primary obstacle of capital requirements for a successful bioconversion process is the cost of a facility for the conversion of biomass into methane.* Generally, such facilities would have to be newly constructed, and designed to produce, collect, and purify the gases generated, as well as provide for the recirculation of effluents, and the controls of pollution. (emphasis supplied)—Energy Tax Provisions, Committee Print No. 6, Joint Committee on Taxation, September 23, 1977 (p. 51).

In short, there is no dispute that pursuing this alternative energy source will be an expensive endeavor. The critical problem is to avoid any Federal controls on this type of gas which would impose unnecessary and significant delay in pursuing this resource.

I have been informed by the companies involved that Federal price controls would add anywhere from 1 year to 18 months to the development of any processing plant for the development of any processing plant for the recovery of methane gas from landfills. Avoiding price controls avoids this time loss, and avoids the unnecessary cost to the consumer that would be added because of the bureaucratic entanglements.

Are these reasons compelling enough to avoid delay? Normally, perhaps not. But in the case of recovery of landfill gas, the delay has disastrous consequences for three reasons:

First, every day the decomposition of the refuse into methane gas occurs whether or not that gas is recovered. That gas naturally diffuses through the ground and into the air. In short, every day landfill gas is not recovered, it is lost forever.

Second, every day, this diffused gas is a serious pollutant.

Third, every day, this contaminated methane gas can migrate underground into buildings, causing explosion and death. Only a few months ago, an AP wire story from Denver told of 2 deaths and 11 serious burns from explosions caused by methane gas seeping from buried garbage. This type of explosion periodically occurs throughout the United States.

These three reasons make it absolutely essential to avoid any unnecessary delay in pursuing the recovery of methane gas from urban sanitary landfills.

As I have mentioned, the benefits of methane recovery from landfills are many. Importantly, the Senate Finance Committee has also recognized that the benefits are significant:

Where municipal and other wastes are converted into energy, *disposal problems, particularly pollution, are diminished significantly* * * *. A 1971 EPA study estimated that bio-conversion of municipal wastes could generate the *energy equivalent of 248 million barrels of oil annually* by 1980 * * * Moreover, bio-conversion processes may yield valuable by-products suitable for use in various industrial, commercial, and food production processes. For example, biomass conversion may generate both methane and carbon dioxide. While the methane can be used as a natural gas substitute, the carbon dioxide can be used as refrigeration or in some petrochemical processes. (emphasis supplied)—Energy Tax Provisions, Committee Print No. 6, Joint Committee on Taxation, September 23, 1977 (p. 52).

The Carter administration, too, has supported the encouragement of alternative fuel sources. As stated in the President's national energy plan of April 1977:

The use of non-conventional sources of energy must be vigorously expanded * * *. A national energy plan cannot anticipate technological miracles. Even so, non-conventional technologies are not mere curiosities. Steady technological progress is likely, breakthroughs are possible, and the estimated potential of non-conventional energy sources can be expected to improve. Some non-conventional technologies are already being used, and with encouragement, their use will continue. Because non-conventional energy sources have great promise, the government should take all reasonable steps to foster and develop them. (emphasis supplied)—The National Energy Plan, April 29. 1977, Executive Office of the President, Energy Policy and Planning.

As these comments illustrate, there are many advocates for this unique alternative energy source. Certainly, now it is appropriate for all of us to be such advocates. I say this because for every barrel equivalent of a new energy source that we can develop domestically, we are one barrel closer to coming to grips with our energy problem.

If the energy conferees, and subsequently the Congress, ultimately adopt a natural gas bill, it is my strong hope that the Congress will foster the development of methane gas derived from sanitary landfills by wisely excluding such unique gas production from the jurisdiction of any price controlling governmental bodies such as FERC. It is my understanding that this is the conference committee's intention and I commend their judgment and join with them as an advocate of this alternative energy source.●

## SENATOR JOHNSTON'S CASE FOR CLINCH RIVER

### HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. TEAGUE. Mr. Speaker, I urge your attention, and the attention of all of our colleagues, to a very forceful letter addressed to Secretary James Schlesinger of the Department of Energy from Senator J. BENNETT JOHNSTON of Louisiana.

Senator JOHNSTON's letter states the case for continuing vigorously the Clinch River breeder reactor project.

UNITED STATES SENATE,
*Washington, D.C., March 24, 1978.*

The Hon. JAMES R. SCHLESINGER,
*Secretary of Energy,*
*Washington, D.C.*

DEAR JIM: Even though the Congress has repeatedly voted to continue the Clinch River Breeder Reactor (CRBR) Project, the President has reiterated his desire to terminate the Project. The Comptroller General, in a series of opinions dating from last June, has made it clear that the President does not have the statutory authority to terminate the CRBR Project. Thus, the Administration and the Congress appear to be at an impasse with regard to the future of the Clinch River reactor.

The completion of the CRBR Project would facilitate the possibility of future commercialization of breeder reactors should this technology become necessary. This could occur, for example, if the Nation's uranium resources are found to be less abundant than current estimates, or if electricity demands for the future are greater than the Administration projections.

While the design of the CRBR Project may not be the most optimal from a commercial standpoint, it appears that the design is adequate to provide the necessary information to build a full-scale commercial breeder facility, and a considerable investment in time and resources has already been made. In that sense, it serves the same purpose that the Shippingport Atomic Power Plant served for the light water reactor. The project is also extremely important in maintaining our technological leadership in the safe use of nuclear energy throughout the world since it would demonstrate our technological capabilities and provide the operational

experience from an actual facility rather than from paper studies. To stop the CRBR Project and to initiate a new project could result in a delay of ten years or more from the development schedule which Congress had planned in determining whether the breeder reactor option is viable in this country. Under this schedule, the Clinch River reactor would have been completed by the mid-1980s.

It appears to me that we have lost sight of the purpose and objectives of the CRBR Project; that is, to demonstrate the licensing, design, construction and operation and maintenance of the liquid metal breeder technology. Therefore, I am still convinced that the CRBR is the appropriate interim step, and I believe it should be continued.

On the other hand, it is very clear that any successful demonstration of a major and controversial technology will require the constructive and willing efforts of the Executive Branch. The situation brought about by the controversy over the Clinch River demonstration is not an encouraging climate for objective and effective technical evaluation.

I have been informed by Congressional staff that the Administration through you, Mr. Secretary, has entered into negotiations with the members of the House Committee on Science and Technology. Based upon the information I have thus received, it appears to me that your proposed compromise falls far short of the level of commitment to a breeder option that should be forthcoming if the Congress is realistically to consider an alternative to the CRBR.

The critical need to assure our future energy supply is the most important single issue in the Nation. The best information and expert testimony indicate that the contributions from alternative energy sources cannot be counted on to meet the growth in national energy needs in the foreseeable future. Thus, it is imperative that the Nation aggressively pursue its nuclear energy option, and this option must include a viable liquid metal breeder reactor.

I believe that, at a minimum, the following elements are essential to any alternative proposal to the CRBR:

(1) The Administration should commit itself to complete a number of major components of the CRBR project, including heat exchangers, pumps, steam generators and turbine generators for testing at either LMEC or FFTF. This effort becomes especially important if we should decide to undertake a new project significantly larger than the CRBR Project.

(2) A strong base program in breeder technology should be pursued (the FY 79 budget contains serious reductions in the base program). Without the CRBR Project, an aggressive base technology program becomes even more important. We should also proceed with many of the auxiliary facilities such as SAREF, LMEC modifications, HPFL, FMEF and other related projects.

(3) Finally, and most important, the President should make a public commitment to the construction of another fast breeder reactor demonstration project. The technology and size should be determined by the Administration, but the commitment should contain a target date for completion as soon as technically possible (but not later than the early 1990s). The Administration's commitment should establish a budgetary matrix, schedule, and a critical path for all of the studies, decision making and construction on an accelerated basis.

I am anxious to work with you and the Administration and to avoid another impasse with the Congress. I would appreciate having your comments on my suggestions at the earliest possible time to facilitate my participation in the decision on both the Appropriations Subcommittee on Public Works, which I chair, and on the Committee on Energy and Natural Resources.

Sincerely,

J. BENNETT JOHNSTON,
*United States Senator.*●

## CONGRESSMAN STUDDS' FINANCIAL STATEMENT

## HON. GERRY E. STUDDS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. STUDDS. Mr. Speaker, I wish to insert in the RECORD a copy of my 1977 financial statement, as follows:

CONGRESSMAN GERRY E. STUDDS' 1977 FINANCIAL STATEMENT

PART I—INCOME 1977 (SUMMARY)

| | |
|---|---|
| Salary | $54,275.00 |
| Rental income—apartment, Provincetown, Mass. | 1,575.00 |
| Dividends—see part II for detailed explanation | 980.33 |
| Interest—see part III for detailed explanation | 704.93 |
| Newspaper fees—Boston Globe, for columns written (given to Globe Santa) | 150.00 |
| Total income | 57,685.26 |

PART II—DIVIDEND INCOME 1977

*Security and shares*

| | |
|---|---|
| Burlington Industries (40) | 56.00 |
| Exxon (174) | 520.00 |
| Gulf Oil (80) | 148.00 |
| W. R. Grace (67) | 118.33 |
| Middle South Utilities (100) | 138.00 |
| Total income | 980.33 |

PART III—INTEREST INCOME 1977

*Security and bond value*

| | |
|---|---|
| Loew's Theater's 6⅞ debenture ($3,100) | 213.13 |
| A.T. & T. 7¾, 1982 ($3,333) | 258.33 |
| U.S. Treasury 7⅝, Feb. 15, 2007 ($1,666) | 125.00 |
| Savings: | |
| First National Bank of Cape Cod | 15.44 |
| Cape Cod Five Cents Savings Bank | 5.86 |
| First National Bank of Boston | 55.39 |
| C. Millicent Chatel, interest on real estate purchase deposit | 31.78 |
| Total | 704.93 |

PART IV—ASSETS

1. Beatrice Studds Irrevocable Trust.

My brother, Colin A. Studds, my sister, Mrs. Howard Babcock, and I have placed the following securities—owned jointly by the three of us—in an irrevocable trust for our mother, Beatrice Studds, with my brother as trustee. All income from these securities goes to our mother for as long as she shall live. My brother, my sister, and I each own one-third of the securities—and they will revert to us upon the dissolution of the trust at our mother's death. The following represents my one-third interest in the trust. (Colin A. Studds, III, Trustee, Beatrice Studds Irrevocable Trust, Under Agreement Dated August 1, 1973.)

*Security and market value as of 4–11–78*

Seaboard World Airlines cvt 5's, due 4–1–86 ($3,000), $2,295.

B. F. Goodrich 9¾% notes, due 1982 ($3,333), $3,467.

U.S. Treasury 7¾% note, due 6–30–79 ($3,333), $3,341.

*Common stocks*

West Point Pepperell (67) $2,300.
Chessie System (67) $2,025.
Liggett & Myers (92) $2,749.
Freeport Minerals (60) $1,245.
UMC Industries (100) $1,650.

2. *I own the following securities:*

*Security and market value as of 4–11–78*

Bonds

Loew's Theater 6⅞ Debenture ($3,100) $2,356.
AT&T 7¾, 1982 ($3,333) $3,312.
U.S. Treasury 7⅝, 2/15/2007 ($1,666) $1,537.

Common Stocks:

*Security and shares (market value) as of 4–11–78)*

Burlington Industries (40) $760.
Exxon (174) $7,800.
Gulf Oil (80) $1,920.
Middle South Utilities (100) $1,600.
W. R. Grace (67) $1,733.

3. Our family home in Cohasset, Massachusetts, with an estimated market value of approximately $75,000 is owned jointly by my brother, my sister and me. My interest in the house, therefore, is roughly $25,000.

4. Savings Accounts: a. NOW account, First National Bank of Cape Cod, $321.25; b. Savings account, Cape Cod Five Cents Savings Bank, $114.55; c. NOW account, First National Bank of Boston, $850.

5. One bedroom cooperative apartment, Washington, D.C. Estimated market value, $85,000.

6. Two room condominium apartment, Provincetown, Mass., $62,000.

7. 1975 Chrysler Newport Sedan.

8. 1974 Saab.

PART V—LIABILITIES 1977

1. Mortgage, one bedroom cooperative apartment, Wash., D.C., approximately, $19,800.

2. Secured loan, Rockland Trust Co., Rockland, Mass., approximately, $52,000.

3. Mortgage, condominium apartment, Provincetown, Mass., Cape Cod Five Cents Savings Bank, approximately, $48,000.

4. Automobile loan, Sergeant at Arms Bank, House of Representatives, approximately, $1,375.

PART VI—1977 TAXES PAID

Federal income tax, $11,085.79.
Massachusetts income tax, $2,528.29.
Local property taxes, $2,394.11.
Automobile excise taxes, $141.90.
Total Taxes, $16,150.09.

PART VII—CAPITAL GAIN ON SALE OF TWO BEDROOM HOME, WASHINGTON, D.C.

(Reinvested in purchase of one bedroom cooperative apartment, Wash., D.C.), $684.●

## THE LAST MILE (KILOMETER) TO THE METRIC SYSTEM

## HON. JOHN P. MURTHA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. MURTHA. Mr. Speaker, in my recent districtwide questionnaire, I asked individuals in the 12th Congressional District, "Would you like to see the U.S. adopt the metric measurement system?"

The results showed 22 percent favored; 74 percent opposed; and 4 percent with no opinion.

These results parallel a Gallup survey on the question. The Gallup research also showed only 13 percent could correctly convert from inches to meters, 2 percent from gallons to liters, and 1 percent from miles to kilometers.

Congress has debated stimulating the

national metric conversion, but these polls again indicate the public support is not present for the switch. Without that support, any effort is doomed to fail.

I believe we should keep these results in mind as we continue to debate the possibility of metric conversion.●

## THE KEMP-ROTH TAX REDUCTION ACT WOULD HELP ELIMINATE THE SUBTERRANEAN ECONOMY

### HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. KEMP. Mr. Speaker, in the April 15 issue of the New York Times Mr. Peter Passell wrote about the growing underground or subterranean economy in the United States, which was first brought to public attention by Prof. Peter Gutmann of Baruch College.

This underground economy results when people make economic transactions outside the view of Government, largely through cash. Although much of this underground economy results from criminal activity, the largest part of it results from people wishing to avoid paying taxes.

Consequently, the underground economy can be in large part reduced by lower tax rates, which would make it no longer worthwhile to deal in the underground economy in lieu of normal economic channels. As Mr. Passell put it:

With Federal income tax rates, say, one-third lower, the incentive to break the law would be much diminished. Revenues lost thereby would, at least in part, be made up at the expense of the subterranean economy.

Since the Kemp-Roth proposal would reduce all individual income tax by roughly one-third, it would cause many people to be pulled out of the subterranean economy—and out of tax shelters as well—thereby expanding the tax base and leading to new revenues at all levels of government.

As Mr. Passell so articulately points out the very fabric of our society is at stake in restoring credibility and equity to our tax code.

[From the New York Times, Apr. 15, 1978]

THE UNDERGROUND ECONOMY

(By Peter Passell)

It seems that everyone but the authorities who "accidentally" discovered $600,000 in small bills in the suitcases of some visiting Colombians has a pretty good idea of what the money was for. The visitors to New York City might have been planning only to eat at the Palace restaurant or to take a cab from midtown to Newark. More likely, though, the cash was destined for a Latin American cocaine connection. To the surprise of almost nobody, drugs, prostitutes, and gambling generate billions in revenues that are never recorded by Federal statisticians.

What may surprise many, however, is the fact that organized crime represents only a modest proportion of a vast subterranean economy that exists beyond the reach of tax collectors, safety inspectors and labor laws. It includes skilled workers who moonlight on the sly, accepting less than the union wage but more than making up the difference by keeping Uncle Sam's share. It includes babysitters, gardeners, physicians, housekeepers and other service workers who insist on payment in cash, the better to avoid income and Social Security taxes. It includes small businesses that pay their bills in barter, offering steaks and suits and furniture in return for accounting and plumbing and security services. Taken as a whole, in the estimate of Prof. Peter Gutmann of Baruch College, this invisible world created about $195 *billion* in income last year.

Professor Gutmann may have erred on the high side in his calculations; other economists dispute both his research method and his finding. But government evidence compiled by Business Week magazine suggests that *at least* $100 billion worth of income eludes the Feds each year, and that the amount may be growing rapidly. The public policy implications of these staggering sums are only beginning to be assessed.

The official unemployment and poverty statistics may be overstated. If just one-tenth of the $100 billion is earned by those now counted as unemployed, then a million "unemployed" workers may each be bringing home a tax-free $10,000 income. The true unemployment rate might thus be 5 percent or less, instead of the recorded 6 percent plus. Roughly 25 million Americans, moreover, are estimated to be living below the poverty level. But just $16 billion a year (carefully distributed) would eliminate Government-defined poverty entirely.

Conservatives take great comfort from these seat-of-the-pants extrapolations, arguing that poverty and unemployment deserve less of our attention. But there is another way to look at the same evidence. We seem to have achieved an uneasy, hypocritical peace with our economic underclass, providing inadequate education, job opportunities and welfare assistance, while allowing it easy access to the subterranean economy. The poor may do better for themselves than the official figures show, but only by working outside the elaborate system of social protection—worker's compensation, Social Security, anti-discrimination laws—that is offered to the majority.

The tax system may be in deep trouble. Despite the example of the Gynecologist From the Country Club Who Spent Six Months in Allenwood to help keep folks honest, income tax collection in the United States still depends on voluntary compliance. The I.R.S. estimates that more people are cheating than ever before. Even worse, such cheating on taxes is becoming socially acceptable.

Serious tax reform might restore the good name of the income tax; it would at least undercut the rationalization that cheating only compensates for the unfairness of the system. Probably a more effective (and politically more realistic) means of deterring tax cheating would be to pare personal income taxes across the board. With Federal-tax rates, say, one-third lower, the incentive to break the law would be much diminished. Revenues lost thereby would, at least in part, be made up at the expense of the subterranean economy. The rest could be recaptured in easily collectible indirect taxes on production, a practice in West Europe.

The subterranean economy is, by definition, a hidden problem. We have been ignoring it for decades, and, one supposes, we can go on ignoring it a few more years without great social upheaval. If we are smart, though, we will take its growth as a warning. The social contract that binds us together is showing some serious signs of fraying at the edges.●

## ACCOUNTING FOR THE "FREEBIES"

### HON. WILLIAM L. ARMSTRONG

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mr. ARMSTRONG. Mr. Speaker, today I am introducing a resolution which will make Members of the House accountable for a variety of "free" items and services provided to Members at taxpayer expense. I am pleased to be joined in this resolution by my distinguished colleague from Pennsylvania, Congressman PETER KOSTMAYER.

The most expensive and by far the most questionable of these "freebies" is the flood of Government publications made available to Members of Congress for mass distribution to constituents. Each year, millions of copies of calendars, agriculture yearbooks, pamphlets, and books flow from Government printing shops, through congressional offices, and on to the voters. From time to time * * * and particularly in an election year * * * the halls of House office buildings are clogged with stacks of publications awaiting shipment to the voters, "Compliments of * * *." Apart from the cost, which runs in the millions, this practice has too large a measure of campaign gimmickery and deserves to be curbed.

The resolution we are introducing today will require that House Members, committees, and other House organizations reimburse from official expense allowances the cost of all such "free" publications intended for mass distribution to constituents. Under this amendment to House rules, Members will make their own determination about whether they wish to receive or send out such materials. However, if they choose to do so, then they must reimburse the cost from their official expense allowances and, this expenditure will show up on the quarterly expense listing prepared by the Clerk of the House and made available to the public.

We believe this reform will also serve to cut back on the excessive spending by Congress and Government agencies. Currently there is no incentive to carefully evaluate a particular publication * * * so the printing presses roll on and on, providing Congress with more and more in the way of handouts to friends and voters. One hundred free copies of "Art in the U.S. Capitol" (a book sold to the public through Government bookstores for $12.55 a copy); 400 free copies of the Agriculture Yearbook (sold to the public for $6.50 a copy); and, thousands upon thousands of free copies of smaller publications, calendars, and pamphlets (all sold to the public at varying prices up to a dollar or more).

Under our reform proposal, Members will be forced to allocate funds from their office budgets to pay for such mass distribution materials. There will be an incentive for exercising some control over the flood of free Government publications and, we believe we will soon see a dramatic reduction.

This resolution also amends House

rules to apply the same reimbursement procedures to several other items and service * * * shipping trunks from the Clerk of the House; plants from the Botanic Garden; and, picture framing services from the Architect of the Capitol. While these are not as sizable a drain on the tax dollar as publications, they are representative of an approach to public service which has too high a component of private convenience.

This resolution is timely; and, it seeks to correct an abuse which is important in and of itself and which is also symbolic of the kind of practices which undermine public confidence in the Congress. We commend this proposal to our colleagues and urge their serious consideration and speedy approval.●

## PERSONAL EXPLANATION

### HON. PATRICIA SCHROEDER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

*Monday, April 17, 1978*

● Mrs. SCHROEDER. Mr. Speaker, on Thursday, April 13 I was absent for rollcall No. 684. Had I been present I would have voted "nay." ●

## SENATE COMMITTEE MEETINGS

Title IV of the Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee—of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meeting as they occur.

As an interim procedure until the computerization of this information becomes operational, the Office of the Senate Daily Digest will prepare this information for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD on Monday and Wednesday of each week.

Any changes in committees scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Tuesday, April 18, 1978, may be found in Daily Digest of today's RECORD.

### MEETINGS SCHEDULED

### APRIL 19

9:00 a.m.
Armed Services
Research and Development Subcommittee
To resume hearings on S. 2571, military procurement authorizations for FY 79.
224 Russell Building

Environment and Public Works
Water Resources Subcommittee
To consider proposed water resources legislation.
4200 Dirksen Building

9:30 a.m.
Commerce, Science, and Transportation
To hold hearings on the reauthorization of the International Investment Survey Act (P.L. 94-472).
235 Russell Building

Foreign Relations
International Operations Subcommittee
To hold hearings on S. 2863, FY 79 authorizations for the Department of State.
4221 Dirksen Building

Human Resources
Alcoholism and Drug Abuse Subcommittee
To hold hearings on S. 2916, FY 79 authorizations for the Office of Drug Abuse and for drug treatment programs.
4232 Dirksen Building

Judiciary
Juvenile Delinquency Subcommittee
To resume oversight hearings on the Drug Enforcement Administration's efforts to control drug trafficking on U.S. borders with Mexico.
424 Russell Building

Judiciary
Antitrust and Monopoly Subcommittee
To hold hearings on competition in the oil refining industry.
5110 Dirksen Building

10:00 a.m.
Agriculture, Nutrition, and Forestry
To hold an open business meeting.
324 Russell Building

Appropriations
Interior Subcommittee
To continue hearings on proposed budget estimates for FY 79 for the Department of the Interior.
1114 Dirksen Building

Appropriations
Transportation Subcommittee
To hold hearings on budget estimates for FY 79 for the FAA, Department of Transportation.
1223 Dirksen Building

*Appropriations
State, Justice, Commerce, the Judiciary Subcommitee
To receive testimony from Attorney General Bell on budget estimates for FY 79 for the Department of Justice.
S-146 Capitol

Armed Services
Military Construction and Stockpiles Subcommittee
To resume hearings on S. 2636, FY 79 authorizations for military construction.
212 Russell Building

Banking, Housing, and Urban Affairs
Financial Institutions Subcommittee
To continue hearings on S. 2096 the Right to Financial Privacy Act, and S. 2293, to modernize the banking laws with regard to the geographic placement of electronic funds transfer systems.
5302 Dirksen Building

Energy and Natural Resources
Business meeting on pending calendar business.
3110 Dirksen Building

Environment and Public Works
Transportation Subcommittee
To hold hearings on the status of proposed construction of a Federal Interstate Highway near Memphis, Tennessee.
4200 Dirksen Building

Finance
To consider H.R. 8149, the proposed Customs Procedural Reform Act.
2221 Dirksen Building

Governmental Affairs
To resume hearings on S. 2640, proposing reform of the Civil Service laws.
3302 Dirksen Building

Judiciary
To continue hearings on FY 79 authorizations for the Department of Justice.
2228 Dirksen Building

Rules and Administration
To resume hearings on S. 2 and S. 1244, to require periodic reauthorization of Government programs, and to consider other legislative and administrative business.
301 Russell Building

10:30 a.m.
Commerce, Science, and Transportation
To resume hearings on H.R. 9370, S. 2762, and S. 2582, to provide for the development of aquaculture in the United States.
1202 Dirksen Building

11:00 a.m.
Select Intelligence
To resume hearings on S. 2525, to improve the intelligence system of the U.S. by establishing a statutory basis for U.S. intelligence activities.
357 Russell Building

2:00 p.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To receive testimony on budget estimates for FY 79 for the FBI, and on supplemental appropriations for FY 78.
S-146, Capitol

Armed Services
General Procurement Subcommittee
To mark up general procurement provisions of S. 2571, FY 79 authorizations for military procurement.
212 Russell Building

### APRIL 20

9:00 a.m.
Agriculture, Nutrition, and Forestry
Agricultural Research and General Legislation Subcommittee
To resume oversight hearings to examine the possible development of aquaculture in the United States.
324 Russell Building

*Appropriations
Agriculture Subcommittee
To resume hearings on budget estimates for FY 79 for the Department of Agriculture and related agencies.
1224 Dirksen Building

Judiciary
Citizens and Shareholders Rights and Remedies Subcommittee
To hold hearings on S. 2390, the Citizens' Access to the Courts Act.
6226 Dirksen Building

9:30 a.m.
Energy and Natural Resources
Energy Research and Development Subcommittee
To resume markup of S. 2692, FY 79 authorizations for the Department of Energy.
3110 Dirksen Building

Environment and Public Works
Nuclear Regulation Subcommittee
To consider proposed nuclear regulation legislation.
4200 Dirksen Building

Human Resources
Alcoholism and Drug Abuse Subcommittee
To hold hearings on S. 2915, authorizing funds through FY 1981 for the Alcohol and Drug Abuse Education Act.
4232 Dirksen Building

Judiciary
To hold oversight hearings on the application and enforcement of the FBI Charter.
2228 Dirksen Building

Judiciary
Criminal Laws and Procedures Subcommittee
To resume hearings on S. 2013, to require the additional labeling of explosive materials for the purpose of identification and detection.
5110 Dirksen Building

10:00 a.m.
Appropriations
HUD-Independent Agencies Subcommittee
To continue hearings on budget estimates for FY 79 for NASA.
1313 Dirksen Building

Appropriations
Interior Subcommittee
To continue hearings on proposed budget estimates for FY 79 for the Department of the Interior.
1114 Dirksen Building

Armed Services
Manpower and Personnel Subcommittee
To markup manpower and personnel provisions of S. 2571, FY 79 authorizations for military procurement.
212 Russell Building

Banking, Housing, and Urban Affairs
Financial Institutions Subcommittee
To continue hearings on S. 2096, the Right to Financial Privacy Act, and S. 2293, to modernize the banking laws with regard to the geographic placement of electronic funds transfer systems.
5302 Dirksen Building

Commerce, Science, and Transportation
To resume consideration of S. 1381, setting standards for State no-fault benefit plans to compensate motor vehicle accident victims.
235 Russell Building

Energy and Natural Resources
Energy Conservation and Regulation Subcommittee
To resume hearings on S. 2692, FY 79 authorizations for the Department of Energy.
S–126, Capitol

Foreign Relations
Arms Control, Oceans, and International Environment Subcommittee
To hold hearings, followed by markup of S. 2703, FY 79 authorizations for the Arms Control and Disarmament Agency.
4221 Dirksen Building

Governmental Affairs
To continue hearings on S. 2640, proposing reform of the Civil Service laws.
3302 Dirksen Building

Select Indian Affairs
To resume hearings on S. 2375, to establish guidelines to be followed by the Department of the Interior in response to petitioning Indian tribes seeking an acknowledgment of a Federal relationship.
318 Russell Building

1:30 p.m.
Select Ethics
To hold hearings on Rule XLVI (46) Unofficial Office Accounts, to be followed by a business meeting.
S–126, Capitol

2:00 p.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To continue hearings on budget estimates for FY 79 for the Department of Justice.
S–146, Capitol

APRIL 21

9:00 a.m.
Agriculture, Nutrition, and Forestry
Foreign Agricultural Policy Subcommittee
To hold hearings on S. 2278, S. 2641, and S. 2869, the International Emergency Food Reserve Act.
324 Russell Building

9:30 a.m.
Commerce, Science, and Transportation
Merchant Marine and Tourism Subcommittee
To hold hearings to receive a report on Federal policies and programs relating to tourism.
235 Russell Building

Commerce, Science, and Transportation
Surface Transportation Subcommittee
To hold hearings on S. 2897 and S. 2898, authorizing funds through FY 1980 for the Federal Railroad Safety Act and to coordinate activities between State and Federal inspectors by permitting State agencies to enforce safety rules in U.S. district courts.
1202 Dirksen Building

Environment and Public Works
Resource Protection Subcommittee
To consider proposed resource protection legislation.
4200 Dirksen Building

Human Resources
Education, Arts, and the Humanities Subcommittee
To resume markup of S. 1753, authorizing funds through FY 83 for the Elementary and Secondary Education Act.
155 Russell Building

Judiciary
To resume hearings on S. 1874, to allow consumers and other parties who have not dealt directly with an antitrust violator to recover their damages under the antitrust laws.
2228 Dirksen Building

Judiciary
Criminal Laws and Procedures Subcommittee
To continue hearings on S. 2013, to require the additional labeling of explosive materials for the purpose of identification and detection.
5110 Dirksen Building

10:00 a.m.
Appropriations
HUD–Independent Agencies Subcommittee
To continue hearings on budget estimates for FY 79 for NASA.
1318 Dirksen Building

Appropriations
Interior Subcommittee
To continue hearings on proposed budget estimates for FY 79 for the Department of the Interior.
1114 Dirksen Building

Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To continue hearings on budget estimates for FY 79 for the Department of Justice.
S–146, Capitol

Energy and Natural Resources
To hold hearings on pending nominations.
3110 Dirksen Building

Finance
International Trade Subcommittee
To hold hearings on proposed FY 79 authorizations for the International Trade Commission.
2221 Dirksen Building

Foreign Relations
International Operations Subcommittee
To resume hearings on S. 2863, FY 79 authorizations for the Department of State.
4221 Dirksen Building

Select Indian Affairs
To resume hearings on S. 2712, proposed Indian Program Evaluation and Needs Assessments Act.
457 Russell Building

1:00 p.m.
Human Resources
Aging Subcommittee
To hold hearings on S. 2850 and S. 2609, proposed Older Americans Act amendments.
457 Russell Building

1:30 p.m.
*Human Resources
Handicapped Subcommittee
To mark up S. 2600, to extend certain vocational rehabilitation programs and to establish a comprehensive services program for the severely handicapped.
4232 Dirksen Building

2:00 p.m.
Select Intelligence
Collection, Production, and Quality Subcommittee
Closed business meeting.
S–407, Capitol

APRIL 24

9:00 a.m.
Human Resources
Employment, Poverty, and Migratory Labor Subcommittee
To mark up S. 2570, to extend the Comprehensive Employment Training Act (CETA).
4232 Dirksen Building

9:30 a.m.
Environment and Public Works
Regional and Community Development Subcommittee
To consider proposed regional and community development legislation.
4200 Dirksen Building

Judiciary
To resume consideration of S. 1874, to allow consumers and other parties who have not dealt directly with an antitrust violator to recover their damages under the antitrust laws.
2228 Dirksen Building

10:00 a.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To hold hearings on budget estimates for FY 79 for the Department of Commerce, and on supplemental appropriations for FY 78.
S–146, Capitol

Banking, Housing, and Urban Affairs
To hold oversight hearings on monetary policy.
5302 Dirksen Building

Commerce, Science, and Transportation
To hold hearings on S. 2832, FY 79 authorizations for the Fishery Conservation and Management Act, and S. 2878, authorizing funds through FY 82 for the Central, Western, and South Pacific Fisheries Development Act.
235 Russell Building

Energy and Natural Resources
Parks and Recreation Subcommittee
To hold hearings on S. 2876, authorization ceilings and boundary modifications of units of the National Park System.
3110 Dirksen Building

Energy and Natural Resources
Public Lands and Resources Subcommittee
To hold oversight hearings on the implementation of the Surface Mining Act (P.L. 95–97).
6226 Dirksen Building

Finance
Taxation and Debt Management Subcommittee
To hold hearings on S. 2738, to provide for the indexation of certain provisions of the Federal income tax laws, and related bills.
2221 Dirksen Building

Foreign Relations
Foreign Assistance Subcommittee
To resume hearings on FY 79 authorizations for foreign assistance programs; S. 2420, proposed International Development Cooperation Act; and to mark up proposed FY 79 authorizations for the Peace Corps.
4221 Dirksen Building

2:00 p.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To continue hearings on budget estimates for FY 79 for the Department of Commerce, and on supplemental appropriations for FY 78.
S-146, Capitol

APRIL 25

9:00 a.m.
Human Resources
Employment, Poverty, and Migratory Labor Subcommittee
To continue markup of S. 2570, to extend the Comprehensive Employment Training Act (CETA).
4232 Dirksen Building

9:30 a.m.
Environmental and Public Works
To consider proposed highway legislation.
4200 Dirksen Building
Judiciary
To resume oversight hearings on the application and enforcement of the FBI Charter.
2228 Dirksen Building

10:00 a.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To receive testimony from Secretary of Commerce Kreps on budget estimates for FY 79 for the Department of Commerce.
S-146, Capitol
Banking, Housing, and Urban Affairs
To continue oversight hearings on monetary policy.
5302 Dirksen Building
Energy and Natural Resources
To resume hearings on S. 499, 1500, 1546, 1787, and 2465, to designate or add certain lands in Alaska to the National Park, National Wildlife Refuge, National Wild and Scenic Rivers, and National Wilderness Preservation Systems.
3110 Dirksen Building
Finance
Public Assistance Subcommittee
To resume hearings on S. 2084, to replace the existing Federal welfare program with a single coordinated program.
2221 Dirksen Building
Foreign Relations
Foreign Assistance Subcommittee
To continue hearings on FY 79 authorizations for foreign assistance programs, and on S. 2420, proposed International Development Cooperation Act.
4221 Dirksen Building

1:00 p.m.
Select Small Business
To resume hearings on the nomination of Milton D. Stewart, of New York, to be Chief Council for Advocacy, SBA.
424 Russell Building

1:00 p.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To continue hearings on budget estimates for FY 79 for the Department of Commerce, and on supplemental appropriations for FY 78.
S-146, Capitol
Banking, Housing, and Urban Affairs
Securities Subcommittee
To hold hearings on H.R. 8331, the Securities Investor Protection Act.
5302 Dirksen Building
Judiciary
To resume hearings on FY 79 authorizations for the Department of Justice.
2228 Dirksen Building

APRIL 26

9:00 a.m.
Commerce, Science, and Transportation
Science, Technology, and Space Subcommittee
To hold oversight hearings to examine the science and technology aspects of the Federal Research and Development budget.
5110 Dirksen Building
Human Resources
Employment, Poverty, and Migratory Labor Subcommittee
To continue markup of S. 2570, to extend the Comprehensive Employment Training Act (CETA).
4232 Dirksen Building

9:30 a.m.
Environment and Public Works
Regional and Community Development Subcommittee
To resume consideration of proposed regional and community development legislation.
4200 Dirksen Building

10:00 a.m.
Appropriations
HUD-Independent Agencies Subcommittee
To hold hearings on budget estimates for FY 79 for the Federal Home Loan Bank Board and the National Institute for Building Sciences.
1318 Dirksen Building
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To hold hearings on budget estimates for FY 79 for the Arms Control and Disarmament Agency, Foreign Claims Settlement Commission, Japan-U.S. Friendship Commission, and the Legal Services Corporation.
S-146, Capitol
Appropriations
Transportation Subcommittee
To hold hearings on budget estimates for FY 79 for ConRail and the U.S. Railroad Association.
1224 Dirksen Building
Commerce, Science, and Transportation
To hold oversight hearings on the Fishery Conservation and Management Act (P.L. 94-265).
235 Russell Building
Energy and Natural Resources
To consider pending calendar business.
3110 Dirksen Building
Environment and Public Works
Nuclear Regulation Subcommittee
To mark up FY 79 authorizations for the Nuclear Regulatory Commission.
S-126, Capitol
Finance
Public Assistance Subcommittee
To continue hearings on S. 2084, to replace the existing Federal welfare program with a single coordinated program.
2221 Dirksen Building
Foreign Relations
Foreign Assistance Subcommittee
To continue hearings on FY 79 authorizations for foreign assistance programs, and on S. 2420, proposed International Development Cooperation Act.
4221 Dirksen Building
Rules and Administration
To resume hearings on S. Res. 166, to reorganize administrative services of the Senate, and to consider other legislative matters.
301 Russell Building
Select Indian Affairs
To hold hearings on S. 2358 and S. 2588, to declare that the U.S. hold in trust for the Pueblo tribes of Zia and Santa Ana respectively, certain public domain lands.
6226 Dirksen Building

2:00 p.m.
Appropriations
Transportation Subcommittee
To hold hearings on budget estimates for FY 79 for the National Transportation Safety Board and the ICC.
1224 Dirksen Building
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To hold hearings on budget estimates for FY 79 for the FCC, Federal Maritime Commission, FTC, International Trade Commission, and on supplemental appropriations for FY 78.
S-146, Capitol

APRIL 27

9:00 a.m.
Agriculture, Nutrition, and Forestry
Foreign Agricultural Policy Subcommittee
To hold hearings on S. 2385, S. 2405, and S. 2504, bills to authorize the Commodity Credit Corporation to finance export credit sales of agricultural commodities.
324 Russell Building
Judiciary
Constitution Subcommittee
To resume hearings on S.J. Res. 65, to amend the Constitution so as to provide for representation of the District of Columbia in Congress.
5110 Dirksen Building

9:30 a.m.
Environment and Public Works
Resource Protection Subcommittee
To resume consideration of proposed resource protection legislation.
4200 Dirksen Building
Judiciary
To hold hearings on S. 1382, to establish criteria for the imposition of the sentence of death.
2228 Dirksen Building

10 a.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To hold hearings on budget estimates for FY 79 for the Civil Rights Commission, EEOC, and on supplemental appropriations for FY 78.
S-146, Capitol
Energy and Natural Resources
To hold hearings on pending nominations.
3110 Dirksen Building

10:30 a.m.
Commerce, Science, and Transportation
To continue oversight hearings on the Fishery Conservation and Management Act (P.L. 94-265).
235 Russell Building

2:00 p.m.
Appropriations
State, Justice, Commerce, the Judiciary Subcommittee
To hold hearings on budget estimates for FY 79 for the Renegotiation Board, SEC, and on supplemental appropriations for FY 78.
S-146, Capitol

APRIL 28

9:00 a.m.
Judiciary
Constitution Subcommittee
To continue hearings on S.J. Res. 65, to amend the Constitution so as to provide for representation of the District of Columbia in Congress.
5110 Dirksen Building

9:30 a.m.
Environment and Public Works
Resource Protection Subcommittee
To continue consideration of proposed resource protection legislation.
4200 Dirksen Building

Judiciary
Improvements in Judicial Machinery Subcommittee

Energy Research and Development Subcommittee
To mark up S. 2692, FY 79 authorizations for the Department of Energy.
6202 Dirksen Building

# HOUSE OF REPRESENTATIVES—*Tuesday, April 18, 1978*

The House met at 12 o'clock noon.

Rabbi Moshe E. Bomzer, Young Israel of Hollywood, Fort Lauderdale, Fla., offered the following prayer:

I offer this prayer on the day which has been proclaimed by the President of the United States and both Houses of Congress as Education Day, U.S.A., in celebration of the 76th birthday of the illustrious and revered leader of world Jewry—the Lubavitcher Rebbe. Shlita, whose selflessness and devotion have been a model for the education of all mankind.

In these trying times we beseech You, our God, to grant us the wisdom, kindness, patience, and understanding to educate ourselves and our children in Your divine ways. Bestow upon us the knowledge to differentiate between right and wrong, good and evil, sanctity and impurity. Cast the rays of Your divine guidance upon the President, the Vice President, the Members of the House of Representatives, and all the leaders of our beloved country. Enable them to find solutions for the problems which plague our country and the world. As Jews throughout the world prepare for the holiday of freedom, dedicated to the concepts of human rights and devotion through education as stated in Exodus 13: 15 "And you shall teach your children," let this message of peace and freedom resound through the Halls of this great Capitol of ours. Make Your divine prophecy come to pass when "nations shall beat their swords into plowshares and their spears into pruning hooks;" when "nation shall not lift sword against nation, neither shall they learn war anymore."

Let us learn to teach the world and educate our youth so that we may merit to live in a world permeated with love, honesty, ethics, and morals and to the realization of our potential to establish a world built on peace and knowledge. Amen.

## CALL OF THE HOUSE

Mr. WYLIE. Mr. Speaker, under rule I, clause 1, of the rules of the House, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Without objection, a call of the House is ordered.

There was no objection.

The call was taken by electronic device, and the following Members failed to respond:

[Roll No. 228]

| | | |
|---|---|---|
| Alexander | Dingell | Pursell |
| Ammerman | Drinan | Rangel |
| Andrews, N.C. | Eilberg | Rodino |
| Archer | Evans, Colo. | Rose |
| Armstrong | Fisher | Runnels |
| Aspin | Ford, Mich. | Scheuer |
| Bedell | Gammage | Shuster |
| Beilenson | Garcia | Skubitz |
| Biaggi | Guyer | St Germain |
| Blanchard | Heckler | Stockman |
| Bonker | Hefner | Teague |
| Burke, Calif. | Howard | Thone |
| Burton, John | Hubbard | Thornton |
| Burton, Phillip | Jones, N.C. | Tucker |
| Cederberg | Kazen | Udall |
| Clausen, Don H. | Krueger | Ullman |
| | Long, Md. | Vander Jagt |
| Cochran | McCloskey | Walgren |
| Collins, Ill. | McDonald | Walker |
| Conyers | Martin | Whitley |
| Davis | Mathis | Wolff |
| Dellums | Miller, Calif. | Young, Tex. |
| Dent | Pike | |
| Diggs | Pressler | |

The SPEAKER pro tempore (Mr. ROSTENKOWSKI). On this rollcall 365 Members have recorded their presence by electronic device, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

## THE JOURNAL

The SPEAKER pro tempore. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

## MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Sparrow, one of its clerks, announced that the Senate had passed without amendment a joint resolution of the House of the following title:

H.J. Res. 649. Joint resolution to authorize the President to call a White House Conference on the Arts, and to authorize the President to call a White House Conference on the Humanities.

The message also announced that the Senate had passed a resolution of the following title:

S. RES. 429

*Resolved*, That the Senate does not favor the energy action numbered DOE Numbered 1 transmitted to Congress on April 4, 1978.

## IN MEMORY OF GORDON E. CASEY

(Mr. MAHON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MAHON. Mr. Speaker, last Friday, April 14, Gordon Casey, who was a member of the professional staff of the Committee on Appropriations, died unexpectedly as a result of an accidental fire in his home.

Gordon had worked since 1973 on the Defense Subcommittee and during that time he provided invaluable assistance and advice to its members in the course of deliberating on the Department of Defense's research and development budget. I know of no other person who has the depth of knowledge that Gordon Casey had in this area. Previous to working for the committee, he had worked for the General Accounting Office.

In both positions he served his country well. His advice and counsel will be sorely missed.

The members of the committee and particularly the Defense Subcommittee extend our heartfelt sympathy to Gordon's parents and his brother and sister in this sad moment in their lives.

Under permission to revise and extend, I am inserting excerpts from the article which appeared in the Washington Post following Gordon's death.

The article follows:

Gordon Eldon Casey, 34, a staff member of the defense subcommittee of the House Appropriations Committee, died of asphyxiation yesterday in an accidental fire at his home in Falls Church.

Mr. Casey came to Washington in 1973 as a temporary staff member of the subcommittee and became a full-time employe the following year. He was responsible for reviewing the research and development budget of the Defense Department.

Born in Lovell, Wyo., Mr. Casey grew up in Casper. He attended Casper Junior College, and graduated from the University of Wyoming in 1965.

He then joined the General Accounting Office as an auditor, working in the Denver regional office until 1970, when he was transferred as supervisory auditor to the Far East branch in Honolulu. He traveled extensively to Korea, Okinawa, Taiwan, South Vietnam and Kwajalein Atoll in the Marshall Islands, conducting GAO audits.

He is survived by his parents, Mr. and Mrs. Eldon A. Casey, and a brother, Curt John, of Casper, and a sister, Karlene Virginia Richards, of Denver.

## ATTORNEY GENERAL GRIFFIN BELL

(Mr. DERWINSKI asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DERWINSKI. Mr. Speaker, our illustrious Attorney General must feel like a beekeeper without protective clothing. He is being stung from all sides on his administration of the Justice Department. Now, he has walked into another hornet's nest.

Based on press reports, Polish-Americans are demanding an explanation of what they consider a "Polish slur" by Attorney General Griffin Bell. The source of their irritation is an item which appeared in the April 10 issue of New York magazine. The magazine said Bell was responsible for the punch line to the question: "How would the Poles have handled the Marston affair?" His answer: "The same way we did."

Bell denies telling the joke, but the magazine is sticking to its guns. Meanwhile, various Polish-American groups are incensed. Some want an apology; others are talking about demanding a resignation. Some groups, as a penalty, reportedly are suggesting that the Attorney General be assigned responsibility for making a daily interpretative briefing on the President's foreign and domestic program.

It is difficult to determine who the authentic spokesmen are for the Polish-American community. I certainly have no illusions about claiming that role.

But I feel it would be a serious mistake to take disiplinary action against Attorney General Bell. That would put the State Department in the position of having to retaliate against Georgia jokes which have been in vogue in Poland ever since the President was accompanied on his state visit there by his now famous interpreter.

Poles in Warsaw are chuckling over the joke that it requires three Georgia peanut farmers to change a light bulb in a peanut warehouse. As the Polish version goes:

One peanut farmer holds the light bulb while two companions turn him counter clockwise.

With the humor balancing itself out, I think we should let well enough alone. Our Attorney General has enough problems to occupy his time. He is the most controversial of the Carter Cabinet members. Of course, this is predictable since he is a Georgian. Polish-Americans can make light note of that fact.

## THE RELEASE OF JACOB TIMERMAN

(Mr. CONTE asked and was given permission to address the House for 1 minute and to revise and extend his remarks).

Mr. CONTE. Mr. Speaker, I rise today with great news. I have learned that Mr. Jacob Timerman has just been released from prison in Buenos Aires. As my colleagues may remember, I spoke on the House floor 1 month ago concerning the plight of this brave individual. The news of his release comes almost 1 year to the day of his imprisonment. I truly believe that this situation would have dragged on indefinitely had the plight of Mr. Timerman not been made the focus of world attention.

Yesterday, I received the good news, Jacobo Timerman has been released. His year-long suffering, and that of his family, is about to end.

Unfortunately, Mr. Speaker, although Mr. Timerman was released from his prison cell, I also learned that he was placed under house arrest until the Government officially clears him of suspicion of economic crimes. This arrest places this persecuted individual in a highly dangerous position, since he has been the focus of numerous threats.

The obvious, preferable solution to this volatile situation is to forgo further proceedings and allow Mr. Timerman and his family to leave Argentina immediately.

In the interest of administering long-overdue justice to this individual as well as avoiding personal danger to Mr. Timerman and his family, I again urge the leaders of Argentina to allow Mr. Timerman and his family to leave Argentina immediately. The time has come, and gone, to right this grevious wrong. I appeal to the conscience of these leaders to exercise wise judgment in this case. Let them be assured, the rest of the world is watching closely. We must not let this "just" victory turn into a disaster.

## VIGIL FOR FREEDOM

(Mr. BALDUS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BALDUS. Mr. Speaker, almost a year ago, I brought to the attention of the House the plight of a refusenik family living in Moscow, Boris and Natalya Katz. Today, once again, I wish to speak about the Katzes.

I am sorry to report that since I spoke about them last June, their situation has steadily worsened. Last October, Mrs. Katz had a baby daughter, Jessica, who has been seriously ill with a digestive disorder. The three are now living in a one-room apartment with no bathroom and are trying to make ends meet on an annual income of $1,800, which is considered low by Soviet standards. Boris is a very sensitive and lonely person, who is isolated by his plight. These feelings of frustration are compounded by the fact that he must travel 75 miles to work; as a result, he can come home only on weekends. You can imagine the sense of loneliness that Boris must feel what with the ferocity of Moscow's winters and the forced separation from Natalya and Jessica.

Boris and Natalya are totally alone in the Soviet Union. His mother and two brothers have emigrated to the United States and now live outside of Boston. Thus, there is no one to give Boris and Natalya the moral support that they now need so desperately.

The Katz family has been denied visas for emigration to Israel many times now. They were rejected for the fifth time on January 25. They have reapplied once more, but there seems to be little chance that they will be granted permission to leave.

Surely there is ample reason, both in the spirit and provisions of the Helsinki Accord, for Soviet authorities to make a favorable decision on the Katzes' application for emigration. Once more, I express my hopes that Boris, Natalya, and now their baby, Jessica, will be reunited with their family without delay.

## PRIVATE CALENDAR

The SPEAKER pro tempore (Mr. MURTHA). This is Private Calendar day. The Clerk will call the first individual bill on the Private Calendar.

## KWONG LAM YUEN

The Clerk called the bill (H.R. 1798) for the relief of Kwong Lam Yuen.

Mr. WYLIE. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

## MORRIS AND LENKE GELB

The Clerk called the bill (H.R. 3084) for the relief of Morris and Lenke Gelb.

Mr. BAUMAN. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Maryland,

There was no objection.

## HABIB HADDAD

The Clerk called the bill (H.R. 3995) for the relief of Habib Haddad.

Mr. ROUSSELOT. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

## IRENE HOFFMAN

The Clerk called the bill (H.R. 5612) for the relief of Irene Hoffman.

Mr. WYLIE. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

MARTINA NAVRATILOVA

The Clerk called the bill (H.R. 10210) for the relief of Martina Navratilova.

Mr. BAUMAN. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Maryland?

There was no objection.

## CONFIRMING CONVEYANCE OF CERTAIN PROPERTY BY THE SOUTHERN PACIFIC RAILROAD CO. TO M. L. WICKS

The Clerk called the bill (H.R. 7588) to confirm a conveyance of certain real property by the Southern Pacific Railroad Co. to M. L. Wicks.

There being no objection, the Clerk read the bill, as follows:

H.R. 7588

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the conveyance described in section 2(a) of this Act involving certain real property in Los Angeles County, California, is hereby confirmed in the successors in interest to M. L. Wicks, the grantee in such conveyance, with respect to all interests of the United States in the surface rights to the real property described in section 2(b) of this Act. Portions of the real property described in such section 2(b) formed part of the right-of-way granted to the Southern Pacific Railroad Company, a corporation, by the United States by the Act entitled "An Act to incorporate the Texas Pacific Railroad Company, and to aid in the Construction of its Road, and for other purposes", approved March 3, 1871 (16 Stat. 573).

SEC. 2. (a) The conveyance confirmed by this Act was made by a deed dated May 4, 1887, by the Southern Pacific Railroad Company, a corporation, and D. O. Mills and Gerrit L. Lansing, Trustees, to M. L. Wicks and recorded on May 9, 1887, in the office of the county recorder of Los Angeles County, in the Book of Official Records, Book 222 at page 172.

(b) The real property referred to in the first section of this Act is certain real property in the northwest quarter of the northeast quarter of section 15, township 7 north, range 12 west, San Bernardino Meridian, in Los Angeles County, California, more particularly described as follows:

Beginning at the intersection of the easterly line of Sierra Highway (formerly Antelope Avenue) 90 feet wide as shown on county surveyor's map numbered 8200 on file in the office of the surveyor of said county with the easterly prolongation of the northerly line of Jackman Street (formerly 8th Street); hence easterly along said prolongation to the westerly line of the right-of-way, 100 feet wide, as reserved in that certain deed dated May 4, 1887, from Southern Pacific Railroad Company, a corporation, and D. O. Mills and Gerrit L. Lansing, trustees to M. L. Wicks, recorded May 9, 1887, in Book 222 at page 172, official records of said county; thence northerly along said westerly right-of-way line 624.34 feet more or less to the southerly line of Avenue I (formerly Sierra Madre Road); thence westerly along said southerly line of Avenue I to the easterly line of said Sierra Highway; thence southerly along said easterly line of Sierra Highway to the point of beginning.

With the following committee amendments:

Page 1, line 7, delete the word "surface";

Page 3, following line 9, insert the following new section:

SEC. 3. (a) Nothing in this Act shall—

(1) diminish the right-of-way referred to in the first section of this Act to a width of less than fifty feet on each side of the center of the main tract or tracts established and maintained by the Southern Pacific Company on the date of the enactment of this Act; or

(2) validate or confirm any right or title to, or interest in, the land referred to in the first section of this Act arising out of adverse possession, prescription, or abandonment and not confirmed by conveyance made by the Southern Pacific Company before the date of the enactment of this Act.

(b) There is reserved to the United States all oil, coal, or other minerals in the land referred to in the first section of this Act, together with the right to prospect for, mine, and remove such oil, coal, or other minerals under such rules and regulations as the Secretary of the Interior may prescribe.

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

## VALIDATING CONVEYANCE OF CERTAIN LAND IN CALIFORNIA BY THE SOUTHERN PACIFIC TRANSPORTATION CO.

The Clerk called the bill (H.R. 7971) to validate the conveyance of certain land in the State of California by the Southern Pacific Transportation Co.

There being no objection, the Clerk read the bill, as follows:

H.R. 7971

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That, subject to section 3, the conveyances executed by the Southern Pacific Transportation Company and described in section 2, involving certain land in San Joaquin County, California, forming a part of the right-of-way granted by the United States to the Central Pacific Railway Company under the Act entitled "An Act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure to the Government the use of the same for postal, military, and other purposes", approved July 1, 1862 (12 Stat. 489), as amended, are hereby legalized, validated, and confirmed, as far as any interest of the United States in such land is concerned, and shall have the same force and effect as if the land involved in each conveyance had been held, on the date of conveyance, under absolute fee simple title by the Southern Pacific Transportation Company, subject to a reservation to the United States of the minerals therein.

SEC. 2. The conveyances referred to in the first section of this Act are as follows:

(1) The conveyance entered into between the Southern Pacific Transportation Company, grantor, and Stokely-Van Camp, an Indiana corporation, as grantee, on March 2, 1973, and recorded as instrument numbered 55797 on December 3, 1973, book 3822, page 586, of the Official Records of San Joaquin County, California, describing the following lands: That certain parcel of land situate in the county of San Joaquin, State of California, being a portion of the west half of section 12, township 3 north, range 6 east, Mount Diablo base and meridian, described as follows:

The easterly 125 feet of the westerly 150 feet of lots 66, 67, 68, 69, the westerly 150 feet of lot 70 and the easterly 100 feet of the westerly 150 feet of lot 71, as said lots are shown on the map of the Lodi-Barnhart Tract, recorded November 5, 1906, in volume 3 of Maps and Plats, page 48, records of said county.

Excepting therefrom that portion of said lot 68 lying easterly of the easterly boundary of the land described in the deed dated August 27, 1962, to Stokely-Van Camp, Incorporated, recorded September 5, 1962, in book 2592, page 385, of Official Records, records of said county, and southerly of the easterly prolongation of the northerly boundary thereof.

(2) The conveyance entered into between the Southern Pacific Transportation Company, grantor, and Bernardino Barengo, a married man, as grantee, on June 27, 1973, and recorded as instrument numbered 37943 on August 9, 1973, book 3792, page 21, of the Official Records of San Joaquin County, California, describing the following lands: That certain parcel of land situated in the county of San Joaquin, State of California, being a portion of the southwest quarter of section 24, township 4 north, range 6 east, Mount Diablo base and meridian, described as follows:

Commencing at the intersection of the original located center line of Southern Pacific Transportation Company's main track (Stockton to Sacramento) with a line that is parallel with and distant 20.00 feet northerly, measured at right angles, from the south line of said southwest quarter of section 24, said parallel line being the north line of Acampo Road (formerly Main Street);

thence north 88 degrees 36 minutes 00 seconds west, along said parallel line, 140.71 feet to a line that is parallel with and distant 135.00 feet westerly, measured at right angles, from said original located center line and the true point of beginning of the parcel of land to be described;

thence north 14 degrees 58 minutes 30 seconds west, along last said parallel line, 883.19 feet;

thence south 75 degrees 01 minutes 50 second west, at right angles from last said parallel line 9.40 feet to the southeasterly corner of the lands of Dino Barengo as described in deed recorded September 29, 1961, in book 2462, page 290, Official Records of said county;

thence northerly along the easterly line of said lands on the following four courses: (1) north 14 degrees 58 minutes 30 seconds west, parallel with said center line, 14.60 feet, (2) north 11 degrees 33 minutes 30 seconds west 100.00 feet, (3) north 9 degrees 39 minutes 30 seconds west 50.00 feet, (4) north 8 degrees 29 minutes 30 seconds west 27.60 feet;

thence south 67 degrees 42 minutes 00 seconds west, along the northerly line of last said lands 69.88 feet to a line that is parallel with and distant 200.00 feet westerly, measured at right angles, from said original located center line, last said parallel line being the westerly line of the 400-foot right-of-way granted by Act of Congress to the Central Pacific Railroad Company;

thence south 14 degrees 58 minutes 30 seconds east, along last said parallel line, 1046.81 feet to said north line of Acampo Road;

thence south 88 degrees 36 minutes 00 seconds east, along said north line, 67.75 feet to the true point of beginning, containing an area of 1.565 acres, more or less.

(3) The conveyance entered into between the Southern Pacific Transportation Company, grantor, and Calvin Clark III, a married man, as grantee, on November 4, 1974, and recorded as instrument numbered 56311 on December 9, 1974, book 3934, page 640, of the Official Records of San Joaquin County, California, describing the following lands:

That certain real property situated in the county of San Joaquin, State of California, being a portion of section 24, township 4 north, range 6 east, Mount Diablo base and meridian, more particularly described as follows:

Commencing at the point of intersection of a line parallel with and distant 30 feet westerly, measured at right angles, from the easterly line of Sycamore Street, with the westerly prolongation of the northerly line of an alley in block 4 as said street, alley and block are shown on the map of the town of Acampo;

thence south 88 degrees 36 minutes 00 seconds east along said prolongation, northerly line and its easterly prolongation thereof, 474.05 feet to a point in the southwesterly line of land (400 feet wide) of Southern Pacific Transportation Company;

thence north 14 degrees 58 minutes 30 seconds west along said southwesterly line being parallel with and distant 200.0 feet southwesterly, measured at right angles, from the original located center line of said company's main track (Tracy-Polk), 166.38 feet to a point in the northerly line of land of Dino Barengo as described in deed recorded September 29, 1961, in book 2462 of the Official Records, page 290, Records of San Joaquin County and the actual point of beginning of the parcel of land to be described;

thence continuing north 14 degrees 58 minutes 30 seconds west along said southwesterly line, 693.8 feet to a point in the southerly line of land now or formerly of George L. Keeney and E. M. Keeney;

thence south 88 degrees 57 minutes east along the seconds west along said southwesterly line, 693.8 feet to a point distant 74.08 feet westerly, measured at right angles, from said center line of main track;

thence south 6 degrees 42 minutes east 96.05 feet;

thence south 8 degrees 29 minutes 30 seconds east 559.88 feet to a point in said northerly line of Dino Barengo, being distant 151.12 feet westerly, measured at right angles, from said center line;

thence south 67 degrees 42 minutes 00 seconds west along last said northerly line, 49.29 feet to the actual point of beginning, containing an area of 1.343 acres, more or less.

(4) The conveyance entered into between the Southern Pacific Transportation Company, grantor, and the city of Lodi, a municipal corporation, as grantee, on November 6, 1974, and recorded as instrument numbered 57584 on December 17, 1974, book 3937, page 183, of the Official Records of San Joaquin County, California, describing the following lands: That certain strip of land 125.00 feet in width, situate in the south half of section 36, township 4 north, range 6 east, Mount Diablo base and meridian, county of San Joaquin, State of California and described as follows:

A strip of land 125.00 feet wide lying contiguous to and easterly of a line parallel with and distant 75.00 feet easterly, measured at right angles, from the original located center line of Southern Pacific Transportation Company's main track (Stockton to Polk), and extending from that certain course described as "south 80 degrees 47 minutes west 200 feet, more or less" in the northerly boundary of the land described in deed dated July 13, 1967, from Southern Pacific Company to Jay Loveless recorded October 10, 1967, in book 3158, page 339, Official Records of San Joaquin County, northerly, to the northerly line of the 3.6-acre parcel of land described in deed dated May 22, 1915, from H. Bechthold et ux, to city of Lodi recorded June 25, 1915, in book "A", volume 266 of deeds, page 3, San Joaquin County Records, said northerly line being described in said deed as following the meanders of the southern bank of the Mokelumne River.

(5) The easement entered into between the Southern Pacific Transportation Company, grantor, and the city of Lodi, a municipal corporation, as grantee, for roadway purposes, on November 21, 1974, and recorded as instrument numbered 5528 on February 7, 1975, book 3952, page 203, of the Official Records of San Joaquin County, California, describing an easement upon the following property: That certain strip of land situate in the south half of section 36, township 4 north, range 6 east, Mount Diablo base and meridian, County of San Joaquin, State of California, and described as follows:

A strip of land 25.00 feet in width lying contiguous to and easterly of a line parallel and concentric with and distant 75.00 feet easterly, measured at right angles and radially, from the original located center line of Southern Pacific Transportation Company's main track (Stockton to Polk), and extending from the northerly line of the 20,480 square foot parcel of land described in Indenture dated August 24, 1960 from Southern Pacific Company to city of Lodi recorded September 12, 1960 in book 2334, page 421, San Joaquin County Records, northerly, to that certain course described as "south 80 degrees 47 minutes west 200 feet, more or less," in the northerly boundary of the land described in deed dated July 13, 1967, from Southern Pacific Company to Jay Loveless recorded October 10, 1967 in book 3158, page 339, Official Records of San Joaquin County, said 25.00 foot wide strip hereinabove described being also contiguous to and westerly of the westerly line of the 100.00 foot wide strip of land quitclaimed to Jay Loveless by said deed.

Reserving unto grantor, its successors and assign, the right to construct, maintain, and use railroad, pipeline communication, and transportation facilities in, upon, over, along, and across said property.

(6) The conveyance entered into between the Southern Pacific Transportation Company grantor, and Edward W. Le Baron and Mable B. Le Baron, his wife, Donald Reynolds and Constance E. Reynolds, his wife, and Robert Reynolds and Carolyn W. Reynolds, his wife, as grantees on March 22, 1977, and recorded as instrument numbered 34048 on June 2, 1977, book 4267, page 458, of the official records of San Joaquin County, California, describing the following lands: That certain parcel of land situated in the southeast quarter of section 23 and southwest quarter of section 24, township 4 north, range 6 east, Mount Diablo base and meridian, County of San Joaquin, State of California, and more particularly described as follows:

Commencing at the point of intersection of a line parallel with and distant 30 feet westerly, measured at right angles, from the easterly line of Sycamore Street with the westerly prolongation of the northerly line of an alley in block 4, as said street, alley, and block are shown on the map of the town of Acampo;

thence south 88 degrees 36 minutes 00 seconds east, along said prolongation, said northerly line and its easterly prolongation, 474.05 feet to a point in the southwesterly line of land (400 feet wide) originally acquired by Central Pacific Railroad Company by virtue of Act of Congress dated July 1, 1862;

thence north 14 degrees 58 minutes 30 seconds west, along said southwesterly line, being parallel with and distant 200.0 feet southwesterly, measured at right angles, from the original location center line of main track (Tracy-Polk) now of the Southern Pacific Transportation Company, a distance of 860.18 feet to the northwesterly corner of the 1.343-acre parcel of land described in quitclaim deed dated November 4, 1974 from Southern Pacific Transportation Company to Calvin Clark III recorded December 9, 1974 in book 3934, page 640, Official Records of San Joaquin County, and the true point of beginning of the parcel of land to be described;

thence continuing north 14 degrees 58 minutes 30 seconds west, along said southwesterly line, parallel with and distant 200.0 feet southwesterly, measured at right angles, from said center line of main track, a distance of 1,000 feet, more or less, to the north line of said southeast quarter of said section 23;

thence easterly along last said north line, 130.3 feet, more or less, to a point in a line parallel with and distant 74.08 feet southwesterly, measured at right angles, from said center line of said transportation company's main track;

thence south 14 degrees 58 minutes 30 seconds east, last said parallel line, 1,000 feet, more or less, to the northeasterly corner of said 1.343-acre parcel of land described in said deed dated November 4, 1974 to Calvin Clark III;

thence north 88 degrees 57 minutes west, along the northerly line of last said parcel, 131.02 feet to the true point of beginning, containing an area of 2.89 acres, more or less.

SEC. 3. (a) Nothing in this Act shall—

(1) diminish the right-of-way referred to in the first section of this Act to a width of less than fifty feet on each side of the center of the main track or tracks established and maintained by the Southern Pacific Company on the date of the enactment of this Act; or

(2) validate or confirm any right or title to, or interest in, the land referred to in the first section of this Act arising out of adverse possession, prescription, or abandonment, and not confirmed by conveyance made by the Southern Pacific Company before the date of the enactment of this Act.

(b) There is reserved to the United States all oil, coal or other minerals in the land referred to in the first section of this Act, together with the right to prospect for mine, and remove such oil, coal, or other minerals under such rules and regulations as the Secretary of the Interior may prescribe.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

---

## AUTHORIZING SECRETARY OF THE INTERIOR TO CONVEY CERTAIN LANDS IN PLACER COUNTY, CALIFORNIA, TO MRS. EDNA C. MARSHALL

The Clerk called the bill (H.R. 4243) to authorize the Secretary of the Interior to convey certain lands in Placer County, Calif., to Mrs. Edna C. Marshall, and for other purposes.

There being no objection, the Clerk read the bill, as follows:

H.R. 4243

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Secretary of the Interior is hereby authorized and directed to convey to Edna C. Marshall, Auburn, California, all right, title, and interest of the United States in and to a tract of land in Tahoe National Forest, Placer County, California, more particularly described as the northeast quarter northwest quarter of section 28, township 14 north, range 11 east, Mount Diablo base and meridian, California, consisting of forty acres,

more or less. Such conveyance shall only be made if Edna C. Marshall makes application therefor, and within one year after the date of this Act, makes payment of the fair market value of the land as of the date of this Act, less any enhancement in value brought to the land by Edna C. Marshall or her predecessors on the land, as determined by the Secretary of the Interior, Edna C. Marshall shall bear any administrative expenses, including appraisal, filing, and recording fees arising from the conveyance.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

## BALL STATE UNIVERSITY AND THE AMERICAN ASSOCIATION OF COLLEGES FOR TEACHER EDUCATION

The Clerk called the bill (H.R. 1415) for the relief of Ball State University and the American Association of Colleges for Teacher Education.

Mr. ROUSSELOT. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

## CHARLES P. ABBOTT

The Clerk called the bill (H.R. 3994) for the relief of Charles P. Abbott.

There being no objection, the Clerk read the bill, as follows:

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, the sum of $———— to Charles P. Abbott of Glendora, California, in full settlement of all his claims against the United States, arising out of the following actions by the Small Business Administration from March 1957 to June 1959:

(1) their negligent delay in processing his small business loan application numbered L–102,045–BOS for Cape Cod Manor, Incorporated (also known as the Royal Megansett Hotel), of North Falmouth, Massachusetts;

(2) their delay is disbursement of the loan moneys, once the above application was approved, directly contributing to the failure of the aforesaid business; and

(3) their arbitrary, prejudicial refusal to fully consider, and their rejection of this bid to repurchase the hotel property in June 1959.

With the following committee amendment:

Strike out all after the enacting clause and insert:

That any debt owed the United States by Charles P. Abbott of Glendora, California, arising from the judgment of the United States District Court for the District of Massachusetts in *United States* v. *Abbott* (Civil Action No. 60–800–W), entered September 29, 1964, is hereby extinguished.

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

## CERTAIN FORMER EMPLOYEES OF WESTERN AIRLINES

The Clerk called the resolution (H. Res. 83) to refer, H.R. 1394, a bill for the relief of certain former employees of Western Airlines, to the Chief Commissioner of the U.S. Court of Claims.

There being no objection, the Clerk read the resolution, as follows:

H. RES. 83

*Resolved,* That H.R. 1394 entitled "A bill to provide for the relief of certain former employees of Western Airlines", together with all the accompanying papers, is hereby referred to the Chief Commissioner of the United States Court of Claims pursuant to sections 1492 and 2509 of title 28, United States Code, for further proceedings in accordance with applicable law.

The resolution was agreed to.

A motion to reconsider was laid on the table.

## FIRST BAPTIST CHURCH OF PADUCAH, KY.

The Clerk called the Senate bill (S. 422) for the relief of the First Baptist Church of Paducah, Ky.

Mr. WYLIE. Mr. Speaker, I ask unanimous consent that the Senate bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The SPEAKER pro tempore. This concludes the call of the Private Calendar.

## ANNOUNCEMENT BY THE SPEAKER PRO TEMPORE

The SPEAKER pro tempore. Pursuant to the provisions of clause 3(b) of rule XXVII, the Chair announces that he will postpone further proceedings today on each motion to suspend the rules on which a recorded vote or the yeas and nays are ordered, or on which the vote is objected to under clause 4 of rule XV.

After all motions to suspend the rules have been entertained and debated and after those motions, to be determined by "nonrecord" votes have been disposed of, the Chair will then put the question on each motion on which the further proceedings were postponed.

## ESTABLISHING OFFICES OF INSPECTOR GENERAL

Mr. FOUNTAIN. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 8588) to reorganize the executive branch of the Government and increase its economy and efficiency by establishing Offices of Inspector General within the Departments of Agriculture, Commerce, Housing and Urban Development, the Interior, Labor, and Transportation, and within the Community Services Administration, the Energy Research and Development Administration, the Environmental Protection Agency, the Federal Energy Administration, the General Services Administration, the National Aeronautics and Space Administration, the Small Business Administration, and the Veterans' Administration, and for other purposes, as amended.

The Clerk read as follows:

Strike out everything after the enacting clause and insert in lieu thereof the following:

PURPOSE; ESTABLISHMENT

SECTION 1. In order to create independent and objective units—

(1) to conduct and supervise audits and investigations relating to programs and operations of the Department of Agriculture, the Department of Commerce, the Department of Housing and Urban Development, the Department of the Interior, the Department of Labor, the Department of Transportation, the Community Services Administration, the Environmental Protection Agency, the General Services Administration, the National Aeronautics and Space Administration, the Small Business Administration, and the Veterans' Administration;

(2) to provide leadership and coordination and recommend policies for activities designed (A) to promote economy and efficiency in the administration of, and (B) to prevent and detect fraud and abuse in, such programs and operations; and

(3) to provide a means for keeping the head of the establishment and the Congress fully and currently informed about problems and deficiencies relating to the administration of such programs and operations and the necessity for and progress of corrective action;

there is hereby established in each of such establishments an Office of Inspector General.

APPOINTMENT OF OFFICERS

SEC. 2. (a) There shall be at the head of each Office an Inspector General who shall be appointed by the President, by and with the advice and consent of the Senate, without regard to political affiliation and solely on the basis of integrity and demonstrated ability in accounting, auditing, financial analysis, law, management analysis, public administration, or investigations. Each Inspector General shall report to and be under the general supervision of the head of the establishment involved or, to the extent such authority is delegated, the officer next in rank below such head, but shall not be under the control of, or subject to supervision by, any other officer of such establishment.

(b)(1) There shall also be in each Office within the Departments of Agriculture, Housing and Urban Development, Labor, and Transportation, and in the Veterans' Administration, a Deputy Inspector General appointed by the President, without regard to political affiliation and solely on the basis of integrity and demonstrated ability in accounting, auditing, financial analysis, law, management analysis, public administration, or investigations. Each Deputy shall assist the Inspector General in the administration of the Office and shall, during the absence or temporary incapacity of the Inspector General, or during a vacancy in that office, act as Inspector General.

(2) In each Office in which no Deputy Inspector General is provided or in which such position is vacant, the Inspector General may designate a staff member to act as Inspector General during the absence or temporary incapacity of the Inspector General. If no such designation is made, the senior Assistant Inspector General shall act as Inspector General during the absence or temporary incapacity of the Inspector General. The senior Assistant Inspector General shall also act as Inspector General in the event of a vacancy in that position in any Office in which no Deputy Inspector General is provided or in which such position is vacant.

(c) An Inspector General or Deputy may be removed from office by the President.

(d) For the purposes of section 7324 of title 5, United States Code, no Inspector General or Deputy Inspector General shall be considered to be an employee who determines policies to be pursued by the United States in the nationwide administration of Federal laws.

(e) Each Inspector General shall, in accordance with applicable laws and regulations governing the civil service—

(1) appoint an Assistant Inspector General for Auditing who shall have the responsibility for supervising the performance of auditing activities relating to programs and operations of the establishment, and

(2) appoint an Assistant Inspector General for Investigations who shall have the responsibility for supervising the performance of investigative activities relating to such programs and operations.

DUTIES AND RESPONSIBILITIES

SEC. 3. (a) It shall be the duty and responsibility of each Inspector General, with respect to the establishment within which his Office is established—

(1) to supervise, coordinate, and provide policy direction for auditing and investigative activities relating to programs and operations of such establishment;

(2) to recommend policies for, and to conduct, supervise, or coordinate other activities carried out of financed by such establishment for the purpose of promoting economy and efficiency in the administration of, or preventing and detecting fraud and abuse in, its programs and operations;

(3) to recommend policies for, and to conduct, supervise, or coordinate relationships between such establishment and other Federal agencies, State and local governmental agencies, and nongovermental entities with respect to (A) all matters relating to the promotion of economy and efficiency in the administration of, or the prevention and detection of fraud and abuse in, programs and operations administered or financed by such establishment, or (B) the identification and prosecution of participants in such fraud or abuse; and

(4) to keep the head of such establishment and the Congress informed, by means of the reports required by section 4 and otherwise, concerning fraud and other serious problems, abuses, and deficiencies relating to the administration of programs and operations administered or financed by such establishment, to recommend corrective action concerning such problems, abuses, and deficiencies, and to report on the progress made in implementing such corrective action.

(b) In carrying out the responsibilities specified in subsection (a)(1), each Inspector General shall have authority to establish standards for the use of outside auditors and to take other appropriate steps to insure the competence and independence of such auditors.

(c) In carrying out the duties and responsibilities provided by this Act, each Inspector General shall give particular regard to the activities of the Comptroller General of the United States with a view to avoiding duplication and insuring effective coordination and cooperation.

(d) In carrying out the duties and responsibilities provided by this Act, each Inspector General shall report expeditiously to the Attorney General whenever the Inspector General has reasonable grounds to believe there has been a violation of Federal criminal law.

REPORTS

SEC. 4. (a) Each Inspector General shall, not later than April 30 and October 31 of each year, prepare semiannual reports summarizing the activities of the Office during the immediately preceding six-month periods ending March 31 and September 30. Such reports shall include, but need not be limited to—

(1) a description of significant problems, abuses, and deficiencies relating to the administration of programs and operations of such establishment disclosed by such activities during the reporting period;

(2) a description of the recommendations for corrective action made by the Office during the reporting period with respect to significant problems, abuses, or deficiencies identified pursuant to paragraph (1);

(3) an identification of each significant recommendation described in previous semiannual reports on which corrective action has not been completed;

(4) a summary of matters referred to prosecutive authorities and the prosecutions and convictions which have resulted;

(5) a summary of each report made to the head of the establishment under section 4(c) during the reporting period;

(6) a summary of each report made to the head of the establishment under section 5(b)(2) during the reporting period; and

(7) a listing of each audit and investigative report completed by the Office during the reporting period.

(b) Semiannual reports of each Inspector General shall be furnished to the head of the establishment involved not later than April 30 and October 31 of each year and shall be transmitted by such head to the appropriate committees or subcommittees of the Congress within thirty days after receipt of the report, together with a report by the head of the establishment containing any comments such head deems appropriate.

(c) Each Inspector General shall report immediately to the head of the establishment involved whenever the Inspector General becomes aware of particularly serious or flagrant problems, abuses, or deficiencies relating to the administration of programs and operations of such establishment. Each Deputy and Assistant Inspector General shall have particular responsibility for informing their respective Inspector General of such problems, abuses, and deficiencies.

AUTHORITY; ADMINISTRATION PROVISIONS

SEC. 5. (a) In addition to the authority otherwise provided by this Act, each Inspector General, in carrying out the provisions of this Act, is authorized—

(1) to have access to all records, reports, audits, reviews, documents, papers, recommendations, or other material available to the applicable establishment which relate to programs and operations with respect to which that Inspector General has responsibilities under this Act;

(2) to make such investigaitons and reports relating to the administration of the programs and operations of the applicable establishment as are, in the judgment of the Inspector General, necessary or desirable;

(3) to request such information or assistance as may be necessary for carrying out the duties and responsibilities provided by this Act from any Federal, State, or local governmental agency or unit thereof;

(4) to require by subpena the production of all information, documents, reports, answers, records, accounts, papers, and other data and documentary evidence necessary in the performance of the functions assigned by this Act, which subpena, in the case of contumacy or refusal to obey, shall be enforceable by order of any appropriate United States district court: *Provided*, That procedures other than subpenas shall be used by the Inspector General to obtain documents and information from Federal agencies;

(5) to have direct and prompt access to the head of the establishment involved when necessary for any purpose pertaining to the performance of functions and responsibilities under this Act;

(6) to select, appoint, and employ such officers and employees as may be necessary for carrying out the functions, powers, and duties of the Office subject to the provisions of title 5, United States Code, governing appointments in the competitive service, and the provisions of chapter 51 and subchapter III of chapter 53 of such title relating to classification and General Schedule pay rates;

(7) to obtain services as authorized by section 3109 of title 55, United States Code, at daily rates not to exceed the equivalent rate prescribed for grade GS–18 of the General Schedule by section 5332 of title 5, United States Code;

(8) to the extent and in such amounts as may be provided in advance by appropriations Acts, to enter into contracts and other arrangements for audits, studies, analyses, and other services with public agencies and with private persons, and to make such payments as may be necessary to carry out the provisions of this Act.

(b)(1) Upon request of an Inspector General for information or assistance under subsection (a)(3), the head of any Federal agency shall, insofar as is practicable and not in contravention of any existing statutory restriction or regulation of the Federal agency from which the information is requested, furnish to such Inspector General, or to an authorized designee, such information or assistance.

(2) Whenever information or assistance requested under subsection (a)(1) or (a)(3) is, in the judgment of an Inspector General, unreasonably refused or not provided, the Inspector General shall report the circumstances to the head of the establishment involved without delay.

(3) In the event any record or other information requested by the Inspector General under subsection (a)(1) or (a)(3) is not considered to be available under the provisions of section 552(b)(1), (3), or (7) of title 5, United States Code, such record or information shall be available to the Inspector General in the same manner and to the same extent it would be available to the Comptroller General.

(c) Each head of an establishment shall provide the Office within such establishment with appropriate and adequate office space at central and field office locations of such establishment, together with such equipment, office supplies, and communications facilities and services as may be necessary for the operation of such offices, and shall provide necessary maintenance services for such offices and the equipment and facilities located therein.

TRANSFER OF FUNCTIONS

SEC. 6. (a) There shall be transferred—

(1) to the Office of Inspector General—

(A) of the Department of Agriculture, the offices of that department referred to as the "Office of Investigation" and the "Office of Audit";

(B) of the Department of Commerce, the offices of that department referred to as the "Office of Audits" and the "Investigations and Inspections Staff" and that portion of the office referred to as the "Office of Investigations and Security" which has responsibility for investigation of alleged criminal violations and program abuse;

(C) of the Department of Housing and Urban Development, the office of that department referred to as the "Office of Inspector General";

(D) of the Department of the Interior, the office of that department referred to as the "Office of Audit and Investigation";

(E) of the Department of Labor, the offices of that department referred to as the "Direc-

torate of Audits and Investigations" and the "Office of Investigation and Compliance";

(F) of the Department of Transportation, the offices of that department referred to as the "Office of Investigations and Security" and the "Office of Audit" of the Department, the "Offices of Investigations and Security, Federal Aviation Administration", the "External Audit Divisions, Federal Aviation Administration", the "Office of Program Review and Investigation, Federal Highway Administration", and the "Office of Program Audit, Urban Mass Transportation Administration";

(G) of the Community Services Administration, the offices of that agency referred to as the "Inspections Division", the "External Audit Division", and the "Internal Audit Division";

(H) of the Environmental Protection Agency, the offices of that agency referred to as the "Office of Audit" and the "Security and Inspection Division";

(I) of the General Services Administration, the offices of that agency referred to as the "Office of Audits" and the "Office of Investigations";

(J) of the National Aeronautics and Space Administration, the offices of that agency referred to as the "Management Audit Office" and the "Office of Inspections and Security";

(K) of the Small Business Administration, the office of that agency referred to as the "Office of Audits and Investigations"; and

(L) of the Veterans' Administration, the offices of that agency referred to as the "Office of Audits" and the "Office of Investigations"; and

(2) such other offices or agencies, or functions, powers, or duties thereof, as the head of the establishment involved may determine are properly related to the functions of the Office and would, if so transferred, further the purposes of this Act,

except that there shall not be transferred to an Inspector General under paragraph (2) program operating responsibilities.

(b) The personnel, assets, liabilities, contracts, property, records, and unexpended balances of appropriations, authorizations, allocations, and other funds employed, held, used, arising from, available or to be made available, of any office or agency the functions, powers, and duties of which are transferred under subsection (a) are hereby transferred to the applicable Office of Inspector General.

(c) Personnel transferred pursuant to subsection (b) shall be transferred in accordance with applicable laws and regulations relating to the transfer of functions except that the classification and compensation of such personnel shall not be reduced for one year after such transfer.

(d) In any case where all the functions, powers, and duties of any office or agency are transferred pursuant to this subsection, such office or agency shall lapse. Any person who, on the effective date of this Act, held a position compensated in accordance with the General Schedule, and who, without a break in service, is appointed in an Office of Inspector General to a position having duties comparable to those performed immediately preceding such appointment shall continue to be compensated in the new position at not less than the rate provided for the previous position, for the duration of service in the new position.

CONFORMING AND TECHNICAL AMENDMENTS

SEC. 7. (a) Section 5315 of title 5, United States Code, is amended by adding at the end thereof the following new paragraphs:

"(122) Inspector General, Department of Health, Education, and Welfare.

"(123) Inspector General, Department of Agriculture.

"(124) Inspector General, Department of Housing and Urban Development.

"(125) Inspector General, Department of Labor.

"(126) Inspector General, Department of Transportation.

"(127) Inspector General, Veterans' Administration.".

(b) Section 5316 of title 5, United States Code, is amended by adding at the end thereof the following new paragraphs:

"(144) Deputy Inspector General, Department of Health, Education, and Welfare.

"(145) Deputy Inspector General, Department of Agriculture.

"(146) Inspector General, Department of Commerce.

"(147) Deputy Inspector General, Department of Housing and Urban Development.

"(148) Inspector General, Department of the Interior.

"(149) Deputy Inspector General, Department of Labor.

"(150) Deputy Inspector General, Department of Transportation.

"(151) Inspector General, Community Services Administration.

"(152) Inspector General, Environmental Protection Agency.

"(153) Inspector General, General Services Administration.

"(154) Inspector General, National Aeronautics and Space Administration.

"(155) Inspector General, Small Business Administration.

"(156) Deputy Inspector General, Veterans' Administration.".

(c) Section 202(e) of the Act of October 15, 1976 (Public Law 94-505, 42 U.S.C. 3522), is amended by striking out "section 6(a)(1)" and "section 6(a)(2)" and inserting in lieu thereof "section 206(a)(1)" and "section 206(a)(2)", respectively.

DEFINITIONS

SEC. 8. As used in this Act—

(1) the term "head of the establishment" means the Secretary of Agriculture, Commerce, Housing and Urban Development, the Interior, Labor, or Transportation or the Administrator of Community Services, Environmental Protection, General Services, National Aeronautics and Space, Small Business, or Veterans' Affairs, as the case may be;

(2) the term "establishment" means the Department of Agriculture, Commerce, Housing and Urban Department, the Interior, Labor, or Transportation or the Community Services Administration, the Environmental Protection Agency, the General Services Administration, the National Aeronautics and Space Administration, the Small Business Administration, or the Veterans' Administration, as the case may be;

(3) the term "Inspector General" means the Inspector General of an establishment;

(4) the term "Deputy" means the Deputy Inspector General of an establishment;

(5) the term "Office" means the Office of Inspector General of an establishment; and

(6) the term "Federal agency" means an agency as defined in section 552(e) of title 5 (including an establishment as defined in paragraph (2)), United States Code, but shall not be construed to include the General Accounting Office.

EFFECTIVE DATE

SEC. 9. The provisions of this Act and the amendments made by this Act shall take effect October 1, 1978.

The SPEAKER pro tempore (Mr. MURTHA). Is a second demanded?

Mr. WYDLER. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from North Carolina (Mr. FOUNTAIN) will be recognized for 20 minutes, and the gentleman from New York (Mr. WYDLER) will be recognized for 20 minutes.

The Chair recognizes the gentleman from North Carolina (Mr. FOUNTAIN).

Mr. FOUNTAIN. Mr. Speaker, I yield myself 6 minutes.

Mr. Speaker, I would like to begin expressing the opinion that this is one of the most monumental pieces of legislation this or any other Congress has ever considered, because of the billions of dollars it may well save through increased economy and efficiency and a reduction in fraud and program abuse.

Mr. Speaker, H.R. 8588, which was approved unanimously by the Committee on Government Operations, will consolidate existing audit and investigative units in 12 additional Federal departments and agencies into Offices of Inspector General similar to those already established for HEW and the Department of Energy.

The Offices would be headed by Inspectors General appointed by the President, subject to Senate confirmation, without regard to political affiliation and solely on the basis of integrity and demonstrated ability. Each Inspector General would report to and be under the general supervision of the agency head or the officer next in rank below the head, but would not be under the control or supervision of any other officer of the establishment involved.

In addition to conducting and supervising audits and investigations, each Inspector General would have a key role in other activities designed to promote economy and efficiency and to prevent and detect fraud and program abuse. Moreover, the Inspector General would have responsibility for keeping the agency head and the Congress informed about serious problems and deficiencies and for recommending necessary corrective action.

The executive departments and agencies covered by this bill have generally endorsed the Inspector General concept. However, some of them have objected to one or more specific provisions of the bill as reported out by the committee. The amendment to the bill makes several minor modifications which, in our judgment, will meet some of these objections without impairing in any way the ability of Inspectors General to accomplish the purposes of the bill.

The primary effect of the modifications is to substitute semi-annual reports to Congress for the annual, quarterly, and special reports required under the present language of the bill. Although the timing will be different, the semi-annual reports will contain all information which would be required under the bill as reported.

We have been assured by the Office of Management and Budget that the administration will support the bill with these modifications.

The departments and agencies covered by this bill are responsible for expenditure of around $100 billion annually, and have more than 600,000 employees.

The need for Offices of Inspector General in these establishments was clearly

demonstrated by an extensive subcommittee inquiry, which included 9 days of hearings.

We found serious deficiencies in auditing and investigative organization, procedures, and resources, such as—

Multiple audit or investigative units within a single agency, organized in fragmented fashion and without effective central leadership;

Auditors and investigators reporting to officials who were responsible for the programs under review or were devoting only a fraction of their time to audit and investigative responsibilities;

Lack of affirmative programs to look for possible fraud or abuse; some agencies did not even require employees to report evidence of irregularities;

Instances in which investigators had been kept from looking into suspected irregularities, or even ordered to discontinue an ongoing investigation;

Potential fraud cases which had not been sent to the Department of Justice for prosecution; and

Serious shortages of audit and investigative personnel, even though such personnel more than repay their cost in savings and recoveries.

Several agencies admitted they had only one-third to one-fifth the number of auditors or investigators needed.

One Department (Labor) had only six trained criminal investigators to look into irregularities in the expenditures of some $25 billion annually.

Other agencies had audit cycles as long as 20 years; some activities had never been audited.

These and other serious deficiencies are fully documented in the committee report (H. Rept. 95–584) and the subcommittee hearings.

Enactment of this bill will—

Insure that each covered agency has a high-level official with no program responsibilities, required by law to give undivided attention to promoting economy and efficiency and combating fraud and program abuse;

Help to coordinate, within each agency and throughout the Government, the work of numerous audit and investigative units which are now disorganized and without effective leadership; and

Help to insure that agency heads and the Congress receive information needed to promote economy and efficiency and to combat fraud and abuse.

Even though the HEW Office of Inspector General, after which this bill is patterned, has been in operation for less than a year, it has already been responsible for substantial and very badly needed progress in improving HEW's administrative operations.

Details concerning the work being done by the HEW Office of Inspector General can be found in the first annual report of that Office, which has just been submitted to Congress. This 191-page report describes a wide variety of audits, investigations, and other initiatives undertaken by that Office, and estimates that losses from fraud, abuse, and waste at HEW have totaled more than $7 billion annually.

Waste, inefficiency, fraud, and abuse in federally financed programs is impairing the accomplishment of program objectives and imposing an intolerable and inexcusable burden on this country's taxpayers.

It is time for Congress to do something about it.

I urge passage of this badly needed legislation.

Under leave to extend my remarks, I am including at this point material from pages 2 through 7 of House Report 95–584 which summarizes the major provisions of H.R. 8588 and describes the extremely serious deficiencies disclosed by subcommittee hearings which the bill is designed to correct.

I am also including a brief summary of the modifications made by the amendment offered today. The revised language of H.R. 8588, as amended, can be found in H.R. 12053.

PURPOSE AND SUMMARY

H.R. 8588 would consolidate existing audit and investigative units in the Departments of Agriculture, Commerce, Housing and Urban Development, the Interior, Labor and Transportation, and the Community Services Administration, the Environmental Protection Agency, the General Services Administration, the National Aeronautics and Space Administration, the Small Business Administration, and the Veterans Administration into newly established Offices of Inspector General.

These offices, which would have no program responsibilities, would conduct and supervise audits and investigations relating to programs and operations of the above establishments. The offices would also provide leadership and coordination and recommend policies for activities designed to promote economy and efficiency in the administration of, and to prevent and detect fraud and abuse in, such programs and operations.

In addition, the offices would provide a means for keeping agency heads and the Congress fully and currently informed about problems and deficiencies relating to the administration of such programs and operations and the necessity for and progress of corrective action.

Each office would be headed by an Inspector General appointed by the President, by and with the advice and consent of the Senate, without regard to political affiliation and solely on the basis of integrity and demonstrated ability, in accounting, auditing, financial analysis, law, management analysis, public administration, or investigations. The Inspector General would report to and be under the general supervision of the agency head (or, to the extent such authority is delegated, the officer next in rank below the head), but would not be under the control of or subject to supervision by any other officer of the establishment involved.

A Deputy Inspector General would be appointed in the same manner as the Inspector General in the Departments of Agriculture, Housing and Urban Development, Labor, and Transportation, and in the Veterans Administration. The Deputy would assist the Inspector General and serve as Inspector General during a vacancy or the absence or temporary incapacity of the Inspector General. In establishments not having a Deputy, the Inspector General could designate a staff member to act as Inspector General during the IG's absence or temporary incapacity; in the event of a vacancy, the senior Assistant Inspector General would act as Inspector General.

Inspectors General or Deputies could be removed from office by the President. The Comptroller General would promptly investigate and report to each House of Congress on the circumstances of any such removal.

Each Inspector General would have responsibility for conducting audits and investigations and for coordinating other activities designed to promote economy and efficiency and to prevent and detect fraud and abuse. The Inspector General would also have responsibility for relationships between the department or agency involved and other Federal State and local government agencies and nongovernmental entities with respect to such matters.

The Inspectors General would have specific responsibility for recommending corrective action concerning fraud and other serious problems, abuses and deficiencies and for reporting to agency heads and the Congress on the progress made in implementing such corrective action.

In addition to an annual report to the agency head and the Congress on activities of the office, each Inspector General would make quarterly reports identifying significant recommendations for corrective action on which adequate progress was not being made. Each Inspector General would report immediately to the agency head and within 30 days thereafter to appropriate congressional committees whenever their office became aware of particularly serious or flagrant problems, abuses or deficiencies.

In order to prevent lengthy delays, resulting from agency "clearance" procedures, reports or information would be submitted by each Inspector General to the agency head and the Congress without further clearance or approval. Copies of annual and quarterly reports would, insofar as practicable, be submitted by each Inspector General to the agency head sufficiently in advance of the due date for submission to Congress to provide a reasonable opportunity for comments of the agency head to be appended to the reports when submitted to Congress.

In carrying out provisions of H.R. 8588, each Inspector General is specifically authorized to obtain necessary information by subpoena and to request necessary information or assistance from any Federal, State, or local governmental agency or unit thereof.

H.R. 8588 further provides for each Inspector General to have direct and prompt access to the agency head when necessary for the performance of the duties of the office.

Existing audit and investigative units of each department or agency would become component parts of the establishment's Office of Inspector General. Additional units or functions related to the duties of the Office of Inspector General could be transferred to the office by the agency head, with the consent of the Inspector General, but no program operating responsibilities could be so transferred.

COMMITTEE ACTION AND VOTE

H.R. 8588, as amended, was reported by the Committee on Government Operations by a unanimous vote, with a quorum present.

HEARINGS

H.R. 8588 is a clean bill incorporating minor changes made by the Intergovernmental Relations and Human Resources Subcommittee in H.R. 2819, an earlier bill to establish Offices of Inspector General in a number of Federal departments and agencies. Nine days of hearings were held on this legislation, with testimony from representatives of 14 departments and agencies. Dates of each hearing, together with the names of departments or agencies whose representatives testified, are listed below:

May 17, 1977—Department of Agriculture.

May 24, 1977—Department of Commerce and Department of Housing and Urban Development.

June 1, 1977—Department of Interior and Department of Labor.

June 7, 1977—Department of Transportation and Environmental Protection Agency.

June 13, 1977—General Services Administration and National Aeronautics and Space Administration.

June 21, 1977—Small Business Administration and Veterans' Administration.

June 29, 1977—Community Services Administration.

July 25, 1977—Department of Justice.

July 27, 1977—Department of Health, Education, and Welfare.

DISCUSSION

*Background*

An extension investigation by the Intergovernmental Relations and Human Resources Subcommittee, which began in late 1974 and continued for more than a year, disclosed serious deficiencies in the resources and procedures used by the Department of Health, Education, and Welfare for the prevention and detection of fraud and program abuse. These deficiencies were described in a report issued by the committee on January 26, 1976.

The subcommittee's investigation and its further studies led to unanimous approval by the committee of legislation to establish an Office of Inspector General for the Department of Health, Education, and Welfare. The legislation was subsequently approved unanimously by both House and Senate, and signed into law by President Ford.

H.R. 8588, a clean bill incorporating changes to H.R. 2819, would establish similar Offices of Inspector General in 12 additional Federal departments and agencies. These establishments, as detailed below, are responsible for expenditure of nearly $100 billion annually and have over 600,000 employees.

| | Estimated outlays fiscal year 1977 (millions) [1] | Number of employees, April 1977 [2] |
|---|---|---|
| Department of Agriculture | $13,691 | 115,580 |
| Department of Commerce | 3,040 | 38,905 |
| Department of Housing and Urban Development | 7,673 | 16,787 |
| Department of Interior | 3,491 | 80,163 |
| Department of Labor | 23,468 | 16,647 |
| Department of Transportation | 12,774 | 74,890 |
| Community Services Administration | [3] 512 | 1,077 |
| Environmental Protection Agency | 5,295 | 11,948 |
| General Services Administration | 176 | 36,905 |
| National Aeronautics and Space Administration | 3,706 | 24,870 |
| Small Business Administration | [4] 722 | 4,910 |
| Veterans' Administration | 18,370 | 222,300 |

*Deficiencies in organizational structure*

Subcommittee hearings disclosed that auditors and investigators at a number of departments and agencies report to different officials, rather than being under the same leadership. In other instances, there is no unit with agencywide audit or investigative jurisdiction; the Department of Transportation reported having 116 separate audit and investigative units.

Almost without exception, auditors and investigators are reporting to officials who either have responsibility for programs subject to audit or investigation or are unable to devote full time to their audit or investigative responsibilities.

In some instances, auditors or investigators stationed outside Washington report to and are supervised by regional program managers, rather than agency headquarters.

*Deficiencies in procedures*

Serious deficiencies in auditing and investigative procedures were disclosed during the subcommittee hearings.

Most of the departments and agencies included in the bill have no affirmative programs to look for possible fraud or abuse; instead they rely primarily on complaints. In some cases, agency regulations do not even require employees to report evidence of irregularities. Other agencies have not prepared annual audit plans, even though preparation of such plans is required by OMB circular 73–2.

Even when complaints are received, investigators in some agencies are not permitted to initiate investigations without clearance from officials responsible for the programs involved. The chief of the Community Services Administration's Inspection Division testified that he had been denied clearance to investigate allegations of wrongdoing on several occasions; in one of these cases, according to his testimony, a later investigation by another law enforcement agency resulted in 22 indictments.

The CSA Inspection chief also testified that he had been ordered to discontinue one investigation which had already been initiated; the subject of that investigation, who was suspected of embezzling $10,000, subsequently became a fugitive.

A supervisory investigator for the Small Business Administration testified that an office inspection program which might have resulted in earlier detection of irregularities in SBA's Richmond office had been terminated some years ago.

Justice Department officials responsible for prosecuting fraud against the Government testified that, with some exceptions, working relationships with other Federal departments and agencies on fraud matters are far from optimum. They also told the subcommittee that coordination would be easier if all agencies had a single high-level official devoting full time to overall direction of both audit and investigative activities. The Justice Department's most effective working relationship, according to the witnesses, are with the Departments of Agriculture, HUD and HEW. (HEW, of course, has a statutory Office of Inspector General; HUD has a nonstatutory OIG, and the Department of Agriculture had one for many years before that office was dismantled in 1974.)

Although Justice Department witnesses endorsed direct referral of fraud cases to Justice by investigators, some agencies require that all such referrals be cleared by their Office of General Counsel. In some instances, potential fraud cases were never referred to Justice by agency Offices of General Counsel. A partial review of Agriculture Department files disclosed that, during a 2-year period, 24 cases referred by the USDA Office of Investigation were held for more than 6 months in the Office of General Counsel before being sent to the Department of Justice; one case was held for more than 2 years.

Although some agencies testified that it was their policy to voluntarily inform Congress concerning serious problems, the subcommitee found no evidence that any formal procedures existed to insure such reporting.

Other testimony indicated that program officials frequently ignore recommendations of auditors.

*Deficiencies in resources*

The hearings disclosed serious deficiencies in the resources devoted to auditing and investigations.

Internal audit cycles (the length of time it takes for all activities to be audited) are incredibly long. General Services Administration representatives testified that it would take as long as 20 years to audit all activities with that agency's present resources. Other lengthy audit cycles reported were 13 years for the Department of Commerce, 9 or 10 years for Interior, and 10 years for the Department of Transportation. The Small Business Administration and the Veterans' Administration estimated their audit cycles as 12 to 14 and 10 to 12 years, respectively.

Witnesses from the Department of the Interior and the Department of Transportation acknowledged that their departments have never audited some activities.

Many agency representatives told the subcommittee that their audit and/or investigative manpower is only a fraction of the amount needed to do an adequate job. Interior Department witnesses said their audit manpower is sufficient for only about half of the agency's priority workload, with no resources available for affirmative programs to detect fraud.

Representatives of the Department of Labor and the Small Business Administration testified that they have only one-third the audit manpower they need. Community Services Administration witnesses indicated their audit resources are even less than one-third the amount needed.

According to testimony from Labor Department witnesses, that department has only six trained criminal investigators to look into irregularities in the expenditure of some $25 billion annually. Veterans Administration officials told the subcommittee they have less than one-fifth the number of investigators they believe they need.

The severe shortages of manpower at many agencies are particularly ironic in view of uniform testimony that additional auditors and investigators would more than repay their cost through savings and recoveries. National Aeronautics and Space Administration officials estimated their auditors recover three to four times the amount spent. According to Veterans Administration witnesses, their internal auditors saved or recovered more than $14 million at a cost of less than $3 million. GSA officials estimated their agency's ratio of savings to costs at 20 to 1.

The importance of adequate auditing and investigative personnel was emphasized by Justice Department officials, who testified that the bulk of Government fraud cases originate through referrals from program agencies; if agency investigative operations are ineffective because of lack of personnel, potential fraud cases will not be referred.

SUMMARY OF CHANGES MADE BY AMENDMENT

1. Requirement for automatic GAO investigation of circumstances in event of removal of IG removed; however, such an investigation could—and undoubtedly would—still be

carried out on the basis of Congressional requests.

2. Phrase "fully and currently" deleted from requirement that IG keep agency head and Congress informed about problems, abuses and deficiencies, since compliance might be very burdensome if strictly interpreted. Another section still declares that a broad purpose of the bill is to provide a means for keeping the agency head and the Congress fully and currently informed.

3. Inspectors General are given authority to "establish standards" for use of outside auditors, rather than specifically approving or disapproving their use. IG's also have broad authority to "take other appropriate steps to insure the competence and independence of such auditors".

4. Inspectors General are specifically required to report expeditiously to the Attorney General whenever they have reasonable grounds to believe there has been a violation of Federal criminal law. This provision broadens an existing statutory requirement that suspected law violations involving Federal employees be so reported.

5. The prior requirement for annual, quarterly, and special reports to the Congress has been changed to a system of semi-annual reports. Although the timing will be different, the semi-annual reports will contain all information which would be required under the bill as reported. It should be noted that each IG would continue to be specifically authorized to make such investigations and reports as the IG considers necessary or desirable.

6. Language has been added to clarify the intent of the Committee that subpoenas not be used by IG's to obtain information and documents from Federal agencies. Other provisions of the bill call for Federal agencies to provide information or assistance requested by IG's insofar as practicable and for the IG to report unreasonable refusals of such requests to the agency head and Congress.

7. The requirement that an IG must consent to transfer of additional units, functions, powers or duties to the Office of Inspector General has been eliminated. This should not create any problems, since

(a) Program operating responsibilities cannot be so transferred;

(b) It is unlikely that an IG would object to a proposal to transfer more resources and authority to the Office; and

(c) It is unlikely that an agency head would want to make such a transfer over an IG's objection.

In addition to the above, several editorial and technical changes are made.

Revised language of H.R. 8588, as modified by the amendment, can be found in H.R. 12053.

Mr. WYDLER. Mr. Speaker, I yield such time as he may consume to the gentleman from New York (Mr. GILMAN).

Mr. GILMAN. Mr. Speaker, I want to commend both the distinguished chairman of the committee and the gentleman from New York for their work in bringing this measure to the floor. I think it is an extremely important measure. It is going to help us do away with a great deal of waste and abuse in Government. I strongly support the measure and I urge my colleagues to do the same.

Mr. Speaker, I thank the gentleman for yielding and I welcome this opportunity to address myself to the need for the Offices of Inspector General in 12 Federal departments and agencies. H.R. 8588, introduced by my esteemed colleague the gentleman from North Carolina (Mr. FOUNTAIN) creates the Office of Inspector General in 12 Federal departments to audit programs, to investigate fraud and abuse and to correct actions which may be deemed abusive and fraudulent.

I had the privilege to testify before the Government Operations Committee in June 1976, in behalf of legislation which I cosponsored creating an office of Inspector General in the Department of Health, Education, and Welfare. I felt then, as I feel now, that such an office is not only beneficial, but also serves to enhance the workings of any department or Federal agency of which it becomes a part. The Inspector General, responsible for investigations of fraud and abuse, is a symbol to the Congress and the public, that any department or agency desires efficiency and honesty within its ranks, and is symbolic of an agency's willingness to tighten up on fraud in any of its programs.

The Congress was very disturbed to hear instances of abuse within the welfare system, and was gravely concerned about the widespread nature of such abuse. It is imperative that each department and agency report to an independent office to insure that the workings of each agency and department are in keeping with the values of efficiency and accountability.

I am very pleased that the distinguished chairman of the Intergovernmental Relations Subcommittee, the gentleman from North Carolina (Mr. FOUNTAIN) and the ranking minority member, the gentleman from New York (Mr. WYDLER) have seen fit to bring this legislation to the floor for our consideration. It is important legislation which must and should be passed. This measure is a necessary first step in the process of Government accountability, and is a necessary gesture for encouraging public trust. We owe our constituents the peace of mind which the passage of this legislation will bring—peace of mind that their Government and its numerous agencies are functioning with a minimum of fraud and abuse, and that their representatives have seen fit to enhance accountability.

Accordingly, I urge my colleagues to join with me in supporting this legislation and want to take this opportunity to commend the Office of Inspector General in HEW for the good work that it has done to date.

Mr. WYDLER. Mr. Speaker, I yield such time as he may consume to the gentleman from New York (Mr. HORTON).

Mr. HORTON. Mr. Speaker, I want very briefly to say that I support H.R. 8588 as amended and recommend its approval here today. I join my colleague, JACK WYDLER, in expressing relief that the inordinate and unnecessary 7-month delay in bringing this bill to the House floor has finally come to an end. The need for this legislation has been clearly documented, not only in the thorough subcommittee hearings led by the distinguished gentleman from North Carolina (Mr. FOUNTAIN), but also by the continuing abuse of Federal programs in many agencies and departments of our Government.

The creation of an Office of Inspector General in a number of these agencies and departments will probably not completely eradicate the abuses that we have heard so much about in recent years, but it will be a step in the right direction. At least we will have in place a series of offices whose sole responsibilities would be the detection and prevention of fraud and abuse and the promotion of economy and efficiency within its particular agency or department. That is a great deal more than we have now.

Mr. Speaker, I urge my colleagues to support this important piece of legislation.

Mr. Speaker, I am glad we are here at last. This bill has been a long time in finally getting acted on by this House of Representatives. It could have been acted on a long time ago. But we are moving it forward, finally and at last, and that is something that we can all be happy about. I particularly appreciate the efforts made by the gentleman from North Carolina (Mr. FOUNTAIN), the chairman of the subcommittee, who really put this bill together and guided it through the committee and here on the floor of the House. Although I rise in support of H.R. 8588, as amended, and urge its prompt approval, I do want to point out some things about the history of this legislation that I think is important for the House to know.

The bill originally was studied very carefully and extensively at the subcommittee level, and it was unanimously approved by the full Committee on Government Operations in August of last year. The bill was on the House Calendar last September 27. It was withdrawn at the last minute because of opposition by the Carter administration. Mr. Speaker, why the President should have been opposed to the concept of an Inspector General to fight fraud and abuses in Government programs has never been clear to me, but I am pleased that finally, after some 7 months of unnecessary and tedious negotiations, the President has agreed to support the bill.

This bill to establish an Office of Inspector General in various Federal departments is clearly necessary, and it was a year ago. Its need has been recognized by everyone who has studied the issue of fraud and abuse in Government programs.

When we think, Mr. Speaker, that the estimates are that we are losing currently, through fraud and abuse, approximately $1 billion a month in our Federal programs, we can understand what 7 months of delay, unnecessary, unjustified delay, on this program has cost the American taxpayers. I think somebody has to be held responsible for that delay.

Mr. Speaker, the changes that have been made by the subcommittee to satisfy the administration are generally very

minor changes; but every one of them without exception, is a change that weakens the bill or undermines to some extent the independence of the Inspector General whose office we are setting up. They are not constructive changes; they are really weakening amendments, and I think we would be better off if we did not have them in the bill. However, apparently, that is the price we are going to have to pay to get this type of Inspector General established in the Federal Government.

In my view, Mr. Speaker, we have too long neglected the concept of an Inspector General, even in the face of mounting evidence year after year of abuse and fraud in a wide range of Government programs. This legislation will correct that oversight on our part and will be a significant first step in an effort to promote economy and efficiency as well as the detection and prevention of fraud and abuse. Those two objectives, after all, are inextricably linked to each other. We cannot realize economy and efficiency unless we deal in an effective manner with the problem of fraud and abuse.

It is important, Mr. Speaker, to remember and to realize that this new Office of Inspector General will have absolutely no policy responsibility. The new IG's are to be totally independent and free from political pressure. If I have any reservations at all, they are concerned with that independence. I would merely suggest that we keep an eye on these IG's and see to it that they have the freedom to operate independently.

That reservation aside, Mr. Speaker, I wholeheartedly support H.R. 8588, and I urge my colleagues to do likewise.

Mr. Speaker. I recommend this bill's approval even at this late date.

Mr. RONCALIO. Mr. Speaker, will either gentleman yield to me for a question?

Mr. WYDLER. I yield to the gentleman from Wyoming.

Mr. RONCALIO. Mr. Speaker, it has been reported, according to the Department of Health, Education, and Welfare, that the medicaid-medicare accounts of physicians in this country run $500 million a year.

Yet, I find that this bill would consolidate existing audit and investigative units of the Inspector General only in the Departments of Agriculture, Commerce, Housing and Urban Development, Labor and Transportation, the Community Services Administration, the Environmental Protection Agency, NASA, the Small Business Administration and the Veterans' Administration, but that that would not apply to HEW.

Why is that?

Mr. WYDLER. The reason is very important. If the gentleman remembers, we have already established an Inspector General in the Department of Health, Education, and Welfare. That has already been done. We did that first. It has been operated very successfully in HEW; and of course, is the model which shows why we need it in the other agencies of the Federal Government.

Mr. RONCALIO. Mr. Speaker, I am happy to know that, and I thank the gentleman.

Mr. FOUNTAIN. Mr. Speaker, I yield 2 minutes to the gentleman from Texas (Mr. BROOKS), the distinguished chairman of the full Committee on Government Operations.

Mr. BROOKS. Mr. Speaker, I thank my distinguished friend for yielding.

Mr. Speaker, this bill will provide appreciable benefits to the American people by improving the administration of Federal programs and reducing losses of taxpayers' money due to waste, inefficiency, and fraud.

We had a good example just the other week of the important role an Office of Inspector General can play in an executive department when the annual report of the Inspector General of the Department of Health, Education, and Welfare was released. It found that $7 billion a year is being lost or wasted at HEW through mismanagement and fraud. That report is bound to have quite an impact on the people who run those programs. They are going to have to make sure they do not show up in next year's report.

With H.R. 8588, we will establish similar offices in six other executive departments and six Federal agencies. These offices will not have any program responsibilities. They will be set up solely to conduct and supervise audits and investigations of programs. And the Inspector General, who will be appointed by the President, will not be under the control or supervision of anyone but the head of the agency.

After the Committee on Government Operations reported this bill last year, the administration raised some objections to it. They did not like certain parts of the reporting provision, which they felt raised a "separation of powers" problem. We agreed to sit down and try to work it out with them. We have done that. After many discussions and meetings we agreed on new language for the reporting section. Now the reports from the Inspector General will go to the head of the agency; but they must be transmitted to Congress by the head of the agency within 30 days without any change, but including any comments the agency head wants to make.

The administration is satisfied with this language. The President supports the bill. The Committee on Government Operations reported the original bill unanimously. The amendments have been approved by the ranking members on both sides and have been circulated among all the other members and we have heard of no objection.

This is a good bill, Mr. Speaker. It will strengthen the administration of our Federal programs and improve their integrity. It should be overwhelmingly approved by the House.

Mr. FOUNTAIN. Mr. Speaker, I yield 3 minutes to the gentleman from Georgia (Mr. LEVITAS).

Mr. LEVITAS. Mr. Speaker, I rise in support of H.R. 8588 which establishes Offices of Inspectors General within 11 executive departments and agencies. The need to establish such offices having overall responsibility for detecting fraud and program abuse within these various agencies and departments has been clearly documented. The American people are sick and tired of seeing their hard-earned tax dollars go down ratholes in waste and abuse of programs or line the pockets of thieves who defraud and steal from the Government.

My Government Operations Subcommittee on Intergovernmental Relations conducted extensive hearings both in this Congress and the last Congress. As a result of the hearings in the 94th Congress, an Office of Inspector General was established within the Department of HEW. Although only in operation for a year or so, the HEW Office of Inspector General has begun to prove itself to be effective in fighting fraud and abuse, and promoting Government efficiency and economy. A similar Office of Inspector General was set up in the Department of Energy created last year.

During the course of the subcommittee hearings, I repeatedly asked representatives of the various agencies whether the problem of fraud ran into billions of dollars. While acknowledging that fraud was a serious problem, no one was quite willing to admit the loss of billions of taxpayer dollars and preferred to say probably in the millions. However, the facts belie the situation. A recent report by the HEW Inspector General estimates that at least $6.3 billion to $7.4 billion was lost through fraud, abuse, and waste last year in that agency alone. GAO estimates that fraud in Federal economic assistance programs could amount from $12 billion to $15 billion a year and perhaps as much as $25 billion a year. I think those figures are still too low.

Present auditing and investigative capacity within the departments and agencies is woefully inadequate. The Department of Labor has only six trained criminal investigators to look into irregularities in expenditures of approximately $25 billion annually. The Department of Transportation assigned only four inspectors to detect fraud in the $6 billion Federal highway program last year. The Veterans' Administration had only one auditor for every $238 million in its budget. Moreover, the Justice Department which would prosecute cases of alleged fraud has only 13 attorneys and 3 supervisors within the fraud section of the civil division to handle about 1,200 active cases and a backlog of 4,000 referrals.

In addition, serious deficiencies are evident in auditing and investigative procedures used by the departments and agencies. Most of the investigators within the departments and agencies respond to complaints, as opposed to having affirmative programs to look for possible fraud and abuse. In some agencies, investigators may not initiate investigations without clearance from the administrators of the programs involved. Obviously, administrators have an allegiance to their programs and are not inclined to pursue efforts that may reveal fraud and reflect badly upon their pro-

grams. Who wants to be identified with a program that is full of cheaters?

Mr. Speaker, I would like to bring to your attention a series of articles which have appeared in the New York Times the past 3 days concerning fraud and abuse in Federal programs. These articles point out that Government defenses against fraud and abuse are meager. It appears to be easy to steal from the Government. This was again brought home to me when it was recently discovered that a DOT employee stole $856,000 in construction funds from the Atlanta rapid transit system. How was this done? The employee merely put his name on the checks and cashed them. Moreover, I understand that it was a fluke that this employee was even caught since an audit of the program from which the money was taken was not scheduled until 8 years later.

The bill we are considering today, H.R. 8588, will not rectify all problems. of fraud and abuse within or against Government agencies, but it will be a significant step in the right direction. The Inspectors General to be appointed by the President with the advice and consent of the Senate will first of all be independent and have no program responsibility to divide allegiances. The Inspectors General will be responsible for audits and investigations only. They will report directly to the agency head and to Congress to alert them to particularly serious or flagrant problems, abuses or deficiencies. Their offices will also coordinate and recommend policies to promote economy and efficiency in the administration of programs and operations.

Moreover, the Offices of Inspector General would not be a new "layer of bureaucracy" to plague the public. They would deal exclusively with the internal operations of the departments and agencies. Their public contact would only be for the beneficial and needed purpose of receiving complaints about problems with agency administration and in the investigation of fraud and abuse by those persons who are misusing or stealing taxpayer dollars. As one who is committed to limiting the size of the bureaucracy and making it work better, the establishment of Offices of Inspector Generals can accomplish this by streamlining and coordinating various investigative units within the departments and agencies and consequently achieving better results.

I urge you to join with me in supporting H.R. 8588. This bill will not create more government, but actually cut back on it and make certain that taxpayers get a dollar's value for a dollar spent. It will save money and will also assure that the funds which are spent end up where they are supposed to go.

Mr. BAUMAN. Mr. Speaker, will the gentleman from North Carolina yield for a question?

Mr. FOUNTAIN. I yield to the gentleman from Maryland.

Mr. BAUMAN. Mr. Speaker, in the course of consideration of the committee before reporting of this bill, did the committee hold any hearings that touched upon the abolition of the Office of Inspector General for the foreign aid program in the State Department?

I ask this question since a distinguished constituent of mine, Mr. John Shaw, served in that capacity until recently and was the last Inspector General of Foreign Aid. It is my impression, from discussions I have had with him and reports that he filed in that capacity, that if any program in the Government or any department needs an Inspector General, it is the foreign aid program and the State Department. Last year Congress abolished that position in a little noticed provision in the foreign aid authorization. Now we are legislating to extend the principle to other departments.

Mr. FOUNTAIN. I would like to respond to the gentleman by saying that the fact that the foreign aid program was not included in this legislation by no means should be construed to indicate that the subcommittee reached any conclusion that there should not be an Inspector General for Foreign aid.

We did not include an Inspector General for the State Department and for foreign aid in the bill because we felt these international operations involved some significant differences from the activities of the 12 domestic agencies included in the bill. This was also true of the Department of Defense, which has military rather than civilian operations, and also one or two other agencies.

We felt that the time available for hearings would not permit us to do a thorough job on any more than the 12 departments and agencies covered by the bill. This certainly does not preclude or prejudice our looking at other agencies in the future.

I can assure the gentleman that I would be glad to take a look at the operations of the State Department.

Mr. BAUMAN. I appreciate that assurance from the gentleman from North Carolina. Based on the critical reports that I read which were filed by Mr. Shaw during his service as Inspector General of the foreign aid program, apparently he was too effective and he stirred up much concern on the part of the higher-ups in the department. The net result was that the Office of Inspector General was abolished by this Congress, written into the foreign aid conference report last year.

This may be something that the gentleman's committee should watch very closely, the fact that if these ladies and gentlemen become too effective, they get bounced out of office.

Mr. FOUNTAIN. The gentleman makes an excellent point. As a matter of fact, the Department of Agriculture at one time, as a result of an investigation by our subcommittee of the operations of Billie Sol Estes administratively established an Inspector General. Secretary Butz abolished it. Also, there are some other agencies that have them. That is why we wanted to make it statutory so that Offices of Inspector General could not be abolished administratively.

Mr. BAUMAN. I thank the gentleman.

● Mr. FUQUA. Mr. Speaker, I am very pleased that the House of Representatives is today considering this important legislation which was reported out unanimously by the Committee on Government Operations.

I was proud to cosponsor the legislation, now public law, which created the post of Inspector General within the Department of Health, Education, and Welfare and supported the inclusion of an Inspector General in the legislation creating the Department of Energy.

The Inspector General at HEW has recently issued his first annual report and I believe this report clearly demonstrates the valuable contribution this position can make in our efforts to curb bureaucratic fraud, abuse, and inefficiency.

The Inspector General at HEW discovered that nearly 5 percent of that Department's budget is, in one form or another, mishandled and never goes to assist any of the people we are all dedicated to helping. It is shocking to learn that we are throwing away $7 billion but it would be even worse to go on without knowing what money is being wasted and where.

Congress continues to have a critical role to play in agency oversight investigations but the Federal Government has grown far too large for Congress to effectively police it without the benefit of an on-the-spot watchdog such as an Inspector General.

The Inspector General will be in a unique position to advise Congress as to areas which merit prompt attention and we will be much more successful in reducing, and hopefully eliminating, program fraud and abuse.

Let us face the simple fact that we cannot begin to take necessary legislative actions to curb abuses if we do not have a frame of reference as would be provided by the Inspector General.

Let no one think, however, that the Inspector General within these agencies will be a "tool" of Congress or a "spy." He or she, as a Presidential appointee, will be able to assist their agency heads and the President in determining what intra-agency actions can and should be taken to immediately correct problems. The President can direct improvements in many respects by Executive order but, like Congress, he needs up-to-date information and data.

The Inspector General will also be able to assist in determining what matters should be referred to the Justice Department for possible criminal action.

The costs of this legislation are modest . . . extremely modest when one considers the potential for savings to the taxpayer.

I am extremely enthusiastic about H.R. 8588 and I call upon my colleagues to join me in demonstrating to the American public that we in Congress are quite serious when we say we intend to do something about controlling the costs of the Federal Government and improving Government's efficiency. I wholeheartedly endorse this bill and urge its acceptance.●

● Mr. BEDELL. Mr. Speaker, I rise in support of H.R. 8588, and ask permission to revise and extend my remarks.

H.R. 8588 would establish Offices of Inspector General in the Departments of Agriculture, Commerce, HUD, Interior, Labor, and Transportation, and in the Community Services Administration, the EPA, GSA, NASA, SBA, and the Veterans' Administration, by consolidating existing audit and investigative units in each department and agency. These offices would conduct and supervise audits and investigations of their respective establishments and recommend policies to promote economy and efficiency and to prevent fraud and abuse, under the direction of Inspectors General who have been appointed by the President and confirmed by the Senate. The Department of Health, Education, and Welfare and the Department of Energy already have statutory Inspectors General.

I believe that H.R. 8588 is a much-needed piece of legislation. The 12 departments and agencies covered by the bill are responsible for the annual expenditure of almost $100 billion. They have in their employ over 600,000 individuals, here in Washington and throughout the country.

Through congressional hearings, media news stories and piecemeal official investigations, we have been made aware that so much money and too little accountability have provided irresistible temptations for thousands of individuals of various socioeconomic backgrounds to systematically cheat the Federal Government and the American taxpayer. It has been estimated by the General Accounting Office, the investigative arm of Congress, that outright fraud, occurring primarily in Federal economic assistance programs, could amount to between $12- to $15-billion per year through "white collar" crime.

Up until now, we have allowed ourselves to slip into a pattern of institutional negligence which has enabled the Federal Government to become too easily cheated on a massive scale. An all too frequent example of insufficient investigative efforts is the $6 billion Federal highway aid program to which the Department of Transportation last year assigned only four inspectors to root out fraud and abuse.

The resources devoted to auditing as a means of uncovering illegalities have been consistently inadequate to the task. According to the House Committee on Government Operations, in its report on the deficiencies in resources devoted to auditing and investigations:

> Internal audit cycles (the length of time it takes for all activities to be audited) are incredibly long. General Services Administration representatives testified that it would take as long as 20 years to audit all activities with that agency's present resources. Other lengthy audit cycles reported were 13 years for the Department of Commerce, 9 or 10 years for Interior, and 10 years for the Department of Transportation. The Small Business Administration and the Veterans Administration estimated their audit cycles as 12 to 14 and 10 to 12 years respectively.
>
> Witnesses for the Department of the Interior and the Department of Transportation acknowledged that their departments have never audited some activities.

Unfortunately, these audit cycles extend far beyond the applicable statutes of limitations, and most of these crimes, if they are indeed ever discovered, can thus not be prosecuted.

The House Government Operations Committee found many further cases of investigative resource deficiencies: The Veterans Administration's assignment of only one auditor for every $238 million in authorized program spending, and the Labor Department's budgeting of only three one-hundredths of 1 percent for investigations and audits out of almost $25 billion in annual expenditures, to list only two.

This shortage of personnel and money invested in the search for abuses is doubly unfortunate since many agencies have stated that additional auditors and investigators would more than repay their costs through savings and recovery of funds. With the auditors they do have on their payroll, the Veterans' Administration, for example, has saved or recovered more than $14 million at a cost of less than $3 million. The General Services Administration estimates its ratio of savings to cost at 20 to 1. The National Aeronautics and Space Administration estimates a ratio of savings to cost at 3 or 4 to 1.

Unfortunately, because of inadequate auditing and investigative efforts, the prevailing practice within most departments and agencies has been to passively wait for complaints to rise through the layers of bureaucratic hierarchy to a level where they may or may not be dealt with. Often, because of indifference, a lack of resources or a fear of rocking the boat and doing harm to the status of one's own program, little, if any remedy to the problem is found.

Occasionally, if a problem of fraud or abuse is widespread enough, it is discovered not within the Federal department or agency involved, but rather in the media. This was the case with the medicaid program, where abuses are now believed to have resulted in the misspending of 24 percent of medicaid funds. Criminal prosecutions are now expected in cases involving at least 290 doctors and 245 pharmacists.

There are many other recent examples of similar cases, most of them complex and involving large sums of money. In one, the Government is trying to recover $24 million from Cook Industries which, through short weighting, misgrading, or adulteration of grain shipments, defrauded the Government on grain sales to 32 foreign countries. While Cook Industries gained $24 million from the Government through fraud, it was the American farmer, already enduring the effects of a reduced return for his crops in the marketplace, as well as the hungry citizens of our Third World customers who were the real victims of this white-collar crime.

Mr. Speaker, beyond the enormous monetary costs of these thefts, there are also extremely significant social costs. Such crime does great harm to the programs established and implemented on the authority of the Congress to meet real and pressing national needs. When the integrity and effectiveness of these programs are damaged, those truly in need as well as those who must rely on the honesty and integrity of their Federal Government become the true victims. To my mind it has been demonstrated that there is solid ground for the growing apprehension among our people that waste has been allowed to run rampant and that a few, if they are dishonest and clever enough, have clear opportunities to steal from the Federal Government and the American people. I believe that if we are going to restore integrity in Government and at the same time stem the draining of billions of dollars in tax revenues away from their intended uses, we should implement and fully support offices of Inspectors General in the various Federal departments and agencies.●

Mr. FOUNTAIN. Mr. Speaker, I have no further requests for time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from North Carolina (Mr. FOUNTAIN) that the House suspend the rules and pass the bill H.R. 8588, as amended.

The question was taken.

Mr. LEVITAS. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 3, rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

---

## HUMPHREY INSTITUTE AND DIRKSEN CENTER ACT

Mr. FORD of Michigan. Mr. Speaker, I move to suspend the rules and pass the Senate bill (S. 2452) to authorize funds for the Hubert H. Humphrey Institute of Public Affairs and for the Everett McKinley Dirksen Congressional Leadership Research Center, as amended.

The Clerk read as follows:

S. 2452

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That this Act may be cited as the "Hubert H. Humphrey Institute of Public Affairs and the Everett McKinley Dirksen Congressional Leadership Research Center Assistance Act".

SEC. 2. (a) In recognition of the public service of Senator Hubert H. Humphrey, the Commissioner of Education (hereafter in this Act referred to as the "Commissioner") is authorized to make grants in accordance with the provisions of this Act to assist in the development of the Hubert H. Humphrey Institute of Public Affairs, located at the University of Minnesota, Minneapolis-Saint Paul.

(b) In recognition of the public service of Senator Everett McKinley Dirksen, the Commissioner is authorized to make grants in accordance with the provisions of this Act to assist in the development of the Everett McKinley Dirksen Congressional Leadership Research Center, located in Pekin, Illinois.

SEC. 3. No payment may be made under this Act except upon an application at such time, in such manner, and containing or accom-

panied by such information as the Commissioner may require.

SEC. 4. (a) There are authorized to be appropriated such sums, not to exceed $5,000,000, as may be necessary to carry out the provisions of section 2(a) of this Act.

(b) There are authorized to be appropriated such sums, not to exceed $2,500,000, as may be necessary to carry out the provisions of section 2(b) of this Act.

(c) Funds appropriated pursuant to this Act shall remain available until expended.

(d) This Act shall take effect October 1, 1978.

The SPEAKER pro tempore. Is a second demanded?

Mr. BAUMAN. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Michigan (Mr. FORD) will be recognized for 20 minutes, and the gentleman from Maryland (Mr. BAUMAN) will be recognized for 20 minutes.

The Chair recognizes the gentleman from Michigan (Mr. FORD).

Mr. FORD of Michigan. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, S. 2452 is the Senate-passed version of legislation which has earlier passed the House to authorize a one-time appropriation of $5 million for the Hubert H. Humphrey Institute of Public Affairs at the University of Minnesota. In honor of our late Vice President, this institute was founded last year "to perpetuate the innovative, creative, and humane approach to public service exemplified by the career of Senator Hubert H. Humphrey—a center for the education, stimulation, and recruitment of bright young men and women for positions in public and community service."

The Humphrey memorial bill was introduced on January 30 and was cosponsored by my distinguished colleague, the ranking minority member of the Education and Labor Committee (Mr. QUIE). It was reported unanimously from committee on February 8. It is a truly bipartisan proposal with close to 50 House sponsors.

The Senate passed it with an amendment on March 22 by a voice vote. The House version was adopted under suspension on February 21 by a vote of 356 to 53.

This gift from a grateful nation will provide a portion of the funds necessary to support the institute which Senator Humphrey asked to be his memorial. Through the institute, this living memorial will provide substantial scholarships to attract and train creative young people for leadership positions in public service and will offer programs of continuing education to professionals in the private and public sectors and to the general public.

The institute, Mr. Speaker, will create professorial chairs in public affairs and planning, graduate fellowships, public service internships, and lectureships. It will provide a curator and reference service for the Humphrey archives and will provide for a continuous updating and expansion of the Humphrey library collection.

The fund will make grants to faculty and advanced students for research projects in public policy and planning and support the development of applied research projects for local officials and political units. Finally, the institute will help support the university's weekly forum on public affairs.

In recognition of the international stature of Senator Humphrey and his role as a great statesman, other nations are planning to make significant contributions to the institute with the belief that there will be created at the University of Minnesota a center of great value to the international community.

Certainly, it is fitting for his colleagues to adopt this legislation joining other governments of the world in honoring the memory of this great American by contributing to the establishment of an institute to perpetuate the dedication to our democratic system demonstrated by former Vice President Humphrey during his entire public career which stretched over four decades.

The amendment added in the Senate authorizes $2,500,000 to assist in the development of the Everett McKinley Dirksen Congressional Leadership Research Center in Pekin, Ill. According to the board of directors, the goal of this center is "to serve as an educational institution * * * for the art and science of American politics and American government, in particular the role of the United States Congressional Leadership."

Mr. Speaker, there are certainly ample precedents for legislation of this sort. In memory of the late Senator Allen J. Ellender, Congress provided funds for grants in the form of fellowships to support the Close-Up program. Legislatioin was enacted to support the Wayne Morse Chair of Public Affairs at the University of Oregon in honor of the late Senator. To house the late Speaker's papers, Congress provided up to $1 million in aid to the Sam Rayburn Library in Texas. Our late Presidents are also honored in similar fashion.

Mr. Speaker, I hope we can demonstrate our gratitude to Hubert Humphrey by giving this legislation unanimous approval today.

Mr. PERKINS. Mr. Speaker, will the distinguished gentleman from Michigan yield?

Mr. FORD of Michigan. I yield to the gentleman from Kentucky (Mr. PERKINS).

Mr. PERKINS. Mr. Speaker, I rise in support of S. 2452, a bill authorizing $5,000,000 for the Hubert H. Humphrey Institute of Public Affairs at the University of Minnesota; and $2,500,000 to assist the Everett McKinley Dirksen Congressional Leadership Center in Pekin, Ill.

S. 2452 passed the Senate on March 22, 1978, with strong bipartisan support. Earlier this year, Mr. Speaker, on February 21, by a vote of 356 to 53, the House passed H.R. 10606 providing $5,000,000 for the Humphrey Institute.

The House bill, which enjoyed such wide support, paid tribute to the late Senator from Minnesota in what I consider a most appropriate way.

I want at this point to compliment Mr. WILLIAM D. FORD, chairman of our Subcommittee on Postsecondary Education, for his efforts in guiding this legislation through the House. I would also like to commend Mr. QUIE, the ranking minority Member, and members of the committee on both sides of the aisle for their bipartisan support of this worthwhile legislation.

Mr. Speaker, the Senate provision honoring the late Senator from Illinois, is a most appropriate one—since it is concerned with the subject of congressional leadership. The Senate provision will add $2,500,000 to an endowment established by Senator Dirksen's estate for the Center for Congressional Leadership.

I am sure the provision added by the Senate is quite acceptable to my colleagues on this side, because of the man whose memory is honored in this way.

I want to assure my colleagues that these types of memorials are not without precedent—for the Congress has seen fit to enact memorials such as the Allen J. Ellender Fellowships; the Herbert Hoover Memorial; the Harry S. Truman Memorial Scholarship Act; and the Wayne Morse Chair of Law Politics.

Because both provisions in S. 2452—the Humphrey Institute and the Dirksen Research Center—will aid research and study leading to greater excellence in our public leaders, I believe every Member of this body can vote in favor of the bill.

I therefor urge unanimous approval of S. 2452.

Mr. FORD of Michigan. Mr. Speaker, I thank the gentleman from Kentucky (Mr. PERKINS) for his contribution today and for his total cooperation in making possible the early consideration of this legislation. We were faced, frankly, with a situation where people outside of the country were showing a response faster than we were. Had it not been for the gentleman from Kentucky (Mr. PERKINS) insisting on rapidly moving this calendar before his committee, we would not be here today.

Mr. BAUMAN. Mr. Speaker, I yield such time as he may consume to the gentleman from Minnesota (Mr. QUIE).

Mr. QUIE. Mr. Speaker, I join with the gentleman from Michigan (Mr. FORD) in support of the motion to take from the Speaker's desk S. 2452 and agree to the same with an amendment. As one of the original authors of the Hubert H. Humphrey Institute of Public Affairs at the University of Minnesota Twin Cities Campus bill, I am very pleased at the swift action of the Congress in dealing with this legislation. I support the action of the other body in adding an authorization for the Everett McKinley Dirksen Congressional Leadership Research Center in Pekin, Ill.

I am hopeful that the Subcommittee on Labor-HEW of the House Appropriations Committee will act in its mark-up session early next month to include the $5 million authorized in this legislation for the Humphrey Institute.

As I have often said before, Hubert Humphrey was a remarkable individual. His contributions to the Nation and his native State of Minnesota are legion and known to us all. There can be no more fitting memorial for him than the furtherance of an institute directed at public service in the preparation of professionals to enter into that field. The location of the institute at the University of Minnesota is an ideal choice and will make the programs of the Institute available to a wide variety of people from around the Nation and the world. The $20 million fundraising drive, of which the Federal share will be only one-quarter, will accomplish the following, according to information supplied by the university:

HOUSING FOR THE INSTITUTE

A central campus location has been selected as the site for a new building to house the institute. This facility will provide adequate space to accommodate the institute's programing objectives. It also will provide display and public reception areas.

PROFESSIONAL CHAIRS

The endowment will provide for the creation of at least three chairs in public affairs and planning, designed to bring a broad spectrum of knowledge to the institute. A major effort will be made to attract persons of national and international stature, recognized for their thinking, writing and activities on the large questions of public concern.

TEN GRADUATE FELLOWSHIPS

The topnotch students will be attracted to the institute by the most prestigious fellowships.

FIVE PUBLIC SERVICE INTERNSHIPS

As part of the institute's degree programs, all students must complete an internship to augment their academic training with job experience in public affairs work. Normally, interns are paid for their services. A portion of the endowment will be used to support interns who work for those public agencies and quasi-public and private nonprofit organizations that cannot afford to provide remuneration.

LECTURESHIPS

In the past, the public affairs school annually has appointed more than a dozen planners, governmental officials, and professionals in private practice to offer courses and workshops in their specialties. These programs are offered both for degree-seeking and continuing education students. To expand this outreach program of continuing education and professional training, the need for three additional lectureships has been identified for the institute.

HUMPHREY ARCHIVES

An extensive collection of Senator Humphrey's papers will be cataloged and maintained by the Minnesota Historical Society. The institute will provide a curator and reference service for the documents.

HUMPHREY LIBRARY COLLECTION

To serve the expanded programs of the institute, the endowment will provide for a continuous updating and expansion of the public affairs library collections.

DISPLAY AREA

While the bulk of the Humphrey papers will be housed at the Minnesota Historical Society, a selection of the papers and Humphrey memorabilia will be displayed at the institute. Situated nearby will be a public reception area.

PROBLEM SOLVING THROUGH RESEARCH

A fund will be established to make grants to faculty and advanced students needing support for research projects in public policy and planning. The fund also will support the development of applied research projects for local officials and political units.

PUBLIC AFFAIRS FORUM

Currently, the university produces and sponsors a weekly forum on public television which provides an indepth analysis of major public issues by key policymakers. Moneys from the institute endowment will help support the continuation of this forum and expansion of its programing.

As I noted when the House considered this legislation in February, there is ample precedent for this legislation. I urge my colleagues to join with me in supporting the motion of the gentleman from Michigan.

Mr. BAUMAN. Mr. Speaker, I yield 5 minutes to the gentleman from Illinois (Mr. MICHEL).

Mr. MICHEL. Mr. Speaker, I thank the gentleman from Maryland for yielding.

I want to take the opportunity here first to thank my friend, the chairman of the subcommittee, the gentleman from Michigan (Mr. FORD), and the ranking minority of the subcommittee, the gentleman from Minnesota (Mr. QUIE), for their kindness in accepting the language which was added by the Senate which for all practical purposes took on the text of the bill, H.R. 11000, which I had introduced here in the House. Unfortunately, there was not enough time for a hearing on my proposal so that it could have been included at the time we in the House originally considered this bill in honor of Hubert H. Humphrey.

Mr. Speaker, I think it is very appropriate, now that we have the two tied together. Both Senator Humphrey and Senator Dirksen were towering figures in the other body. They were leaders in the finest sense of the word. Both were regarded as official spokesman for their parties and every President from Roosevelt on relied heavily on their advice. Both were eloquent and noted for their ability to speak at length. They were at their best in debate. Both were witty and never at a loss for an appropriate anecdote.

Someone asked me why if we were honoring both men we should have only half of the money in the measure for Dirksen that we do for Hubert H. Humphrey. My answer to that question quite frankly is that if both men were supporting essentially the same program Ev Dirksen's solution would have cost the taxpayers half of Hubert Humphrey's solution.

It is unfortunate that we could not have the two men here to debate the merits or demerits of these different figures. They would have us in stitches, I am sure.

As I said, Mr. Speaker, I am very happy that the subcommittee has seen fit to marry the two proposals together.

Everett McKinley Dirksen was elected eight times to represent the people of the district I now have the honor of representing. He was elected U.S. Senator four times. He always remained a man who never forgot the basic principles of the people he represented.

That is why this grant of $2.5 million to the Dirksen Congressional Leadership Research Center in Pekin, Ill. is such a fitting tribute to his memory.

The Dirksen Center will honor the memory of the Senator in a way he himself would heartily approve. As Dirksen himself envisioned this center, it will be a place where students of government, political science and of history, from here and abroad, will come to inquire, to learn, to understand, and, hopefully, to be inspired.

The institute will be a place full of life and energy and the spirit of youth and idealism, a spirit Dirksen never lost throughout his life. Perhaps most important, it will be devoted to the study of politics and congressional leadership in particular, two subjects about which there can be no doubt concerning his expertness.

The center got its seed money from the estate of the late Senator, when he died in 1969 and an endowment was established to perpetuate the center located in Pekin, Ill. Approximately $1.5 million has been raised through private fundraising to date.

The long-range goals of the center are:

To serve as an educational institution . . . for the arts and sciences of American politics and American government, in particular the role of the United States Congressional leadership.

Current activities and planning for the Dirksen Center include:

Educational programs for all levels, from secondary to post-gradaute, including the American public at large;

Timely seminars throughout the United States on current public policy issues;

Publications and other projects to encourage a better understanding of the Congress; and

Expansion of research materials available at the center for the study of Congress and congressional leadership.

If Everett Dirksen were here, I am certain he could conclude these remarks with some typically wry and witty story and that he would leave us all a bit happier and a bit more informed than we were before he spoke.

He was unique and irreplaceable. So I just want to express my thanks, the thanks of the people of the 18th Congressional District of Illinois and the people of the State of Illinois. Although the center is located in the land and

among the people he loved and knew best, Ev Dirksen would, I am sure, want everyone to know that the center will serve all Americans who want to know more about the way we govern ourselves.

Mr. BAUMAN. Mr. Speaker, I yield myself 3 minutes.

Mr. Speaker, I assume that in the flood of Federal spending that this is considered only a small droplet containing, as it does, about $7½ million. However, Mr. Speaker, I objected to the consideration of this bill originally because I do not feel it is an appropriate form of remembrance for any national figure. I know that some former Presidents have had Federal funding used to finance their libraries. But the honor bestowed upon them is now being extended to Vice Presidents and Senators and on and on. As I say, I do not feel it is the proper way in which to honor these men. I believe that their public careers should be their own monuments rather than to ask the public to pick up the cost of these projects out of tax dollars. I believe that this does a disservice to the taxpayers. Especially in view of the fact that when the legislation was originally before us it was only for the former Vice President Hubert H. Humphrey. Now it comes back from the other body adding $2½ million for the Everett McKinley Dirksen Congressional Leadership Research Center in Pekin, Ill., a classic example of political back scratching. I suppose another grant such as this does not greatly affect the Congress of the United States, except for its significance as a measure of your seriousness in fighting inflation.

We were told that this was to be the monument to Senator Humphrey, a grant to the University of Minnesota. Now I notice that the Committee on House Administration has reported out the Hubert H. Humphrey Fellowship in Social and Political Affairs that we will be asked to vote on for another $1 million for spending. Where is this going going to end? The possibilities are almost endless in which the taxpayers will be asked to fund projects for every deceased statesman. I think it is inappropriate. For that reason I oppose the legislation.

Mr. FORD of Michigan. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I can appreciate the concern expressed by the gentleman from Maryland. I regret that the gentleman seems to miss the point of this action being taken by the House and the action that was taken by the other body. All we are talking about here is the authorization of an expenditure of moneys to educate young Americans and to do that under circumstances that will honor the people who for many years respected the need for the Federal Government to support education and the need for the broadening of our cultural attainments in this country by the use of Federal resources.

This is not a new procedure from the precedents which the Members can find if they will look in the report of our committee, or if Members review the list which I will insert at this point in the RECORD.

Precedents: The Congress has authorized appropriations for memorials to several outstanding public servants—including Presidents, Senators and Members of the House of Representatives.

Allen J. Ellender Fellowship Program (1972): Fellowships to disadvantaged secondary school students and their teachers to participate in a Washington public affairs program (Close-Up Foundation). Now $1 million per year.

Grants to Eisenhower College and Rayburn Library (1974): $10 million authorized.

Authorizes the Secretary of the Treasury to give one-tenth of all moneys derived from the sale of $1 proof coins (Eisenhower Silver Dollars) to the Eisenhower College (provided that the Eisenhower College transfers one-tenth of all the money received pursuant to this Act to the Rayburn Library in Texas).

Herbert Hoover Memorial (1975): ($7 million.)

To establish an appropriate memorial to the late President . . . grants to the Hoover Institution on War, Revolution and Peace at Stanford University.

Harry S. Truman Memorial Scholarship Act (1975): $30 million to a scholarship fund for "persons who demonstrate outstanding potential for and who plan to pursue a career in public service."

Wayne Morse Chair of Law and Politics (1976): $500,000 to pay up to 50 percent of the cost of establishing the chair at the University of Oregon.

For instance, the Allen J. Ellender fellowship program, which includes the Close-Up Foundation program that many of the people here on the floor have participated in. Others are grants to the Eisenhower College and to the Rayburn Library; the Herbert Hoover Memorial, some $7 million; the Harry S. Truman Memorial Scholarship Act, which is a $30 million program; the Wayne Morse Chair of Law and Politics; and the L. B. J. intern program. None of these programs are for the purpose of building a monument or buying a piece of stone. They are for perpetuating a continuing process of providing access to education in fine institutions of this country for this and future generations of Americans.

Mr. Speaker, I now yield to the senior gentleman from Minnesota (Mr. FRASER) such time as he may consume.

Mr. FRASER. I thank the gentleman for yielding.

Mr. Speaker, I rise in support of the bill to authorize funds for the Hubert H. Humphrey Institute of Public Affairs. This institute will be a magnificent monument to the work of Hubert Humphrey. During the last months of his life he spoke of the institute as one of his dreams. This new effort was important to him because it would help prepare young people for a career of public service. For him there was no more important calling, and he knew that the institute would, in a small but significant way, help our democratic society function more effectively.

I can think of no better way to perpetuate Hubert Humphrey's commitment to social, political, and economic justice than to provide a strong and permanent foundation for this important new educational institution that will bear his name.

Mr. FORD of Michigan. Mr. Speaker, I yield such time as he may consume to the gentleman from Minnesota (Mr. NOLAN).

Mr. NOLAN. Mr. Speaker, I first want to commend our colleague, the gentleman from Michigan (Mr. FORD) for his leadership in bringing forth this legislation to the House.

Mr. Speaker, I rise in support of the bill. Hubert Humphrey never sought the kind of memorial that could only be visited and photographed. He never sought the kind of memorial that gains its dignity and its beauty from quiet. On the contrary, Hubert wanted a noisy memorial full of people, full of books, full of debate, full of history, and full, also, of the promise of this country and the promise of our people.

He sought, in short, a memorial that epitomized the kind of individual that he himself was: devoted to education, devoted to solutions, and devoted to young people with his commitment to a workable, compassionate, problem-solving, people-oriented government.

Before he was a politician and a statesman, Hubert was a teacher and an educator.

He never gave a speech without attaching a little lesson to it.

If there was something to learn, Hubert tried to learn it;

If there was something to teach, Hubert tried to teach it.

Almost every effort he made in public life was an effort to help someone or encourage someone to live up to full potential: to contribute, to seek solutions, to exchange ideas, and to see not only the kind of world we do live in, but to envision and build the kind of world we ought to live in.

The Humphrey Institute for Public Affairs and the Dirksen Leadership Research Center continue the efforts, the commitments, the vitality, and the promise of new Hubert Humphreys and Everett Dirksens, individuals with the ability not only to make history in America and throughout the world, but to foresee it.

Mr. Speaker, I urge my colleagues to pass this legislation overwhelmingly.

Mr. VENTO. Mr. Speaker, will the gentleman yield?

Mr. NOLAN. I yield to the gentleman from Minnesota.

Mr. VENTO. Mr. Speaker, I thank the gentleman, and I commend the gentleman for his efforts and leadership.

It is truly fitting that we establish the Hubert H. Humphrey Institute of Public Affairs at the University of Minnesota. I say this not just because I represent Minnesota or because Hubert Humphrey was my colleague and friend.

The institute stands on its own merits. It is being established in tribute to the late Senator, but its reason for existence goes beyond that.

The institute was founded to "perpetuate the innovative, creative, and humane approach to public service exemplified by the career of Senator Hubert Humphrey, and to be a center for the education, stimulation, and recruitment of bright young men and women for

positions in public and community service."

The institute will be unique. It is for students who want to be administrators and legislators. And it is structured to meet the needs of our changing times and changing policies.

The lessons that Hubert Humphrey taught us during his four decades of leadership and public service—lessons of decency, integrity, courage, and compassion—will help form the basic philosophy underlying the institute's curricula and programs. Hubert Humphrey's record, his style, his optimistic approach to the gigantic problems of this world, will provide the backdrop against which these bright young men and women who attend the institute will learn and grow.

We need the Hubert Humphrey Institute of Public Affairs because we need to continue the tradition and contributions that marked the late Senator's life. The good that will come from this institute benefits not just us, but nations throughout the world. I am proud to speak in behalf of the institute and I hope you will join me in supporting this country's gift to it.

Mr. FORD of Michigan. Mr. Speaker, I have no further requests for time and I yield back the balance of my time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Michigan (Mr. FORD) that the House suspend the rules and pass the Senate bill (S. 2452), as amended.

The question was taken.

Mr. ASHBROOK. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 3, rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

## GENERAL LEAVE

Mr. FORD of Michigan. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks with respect to the Senate bill (S. 2452).

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Michigan?

There was no objection.

## ANNOUNCEMENT BY THE SPEAKER PRO TEMPORE

The SPEAKER pro tempore. Debate has been concluded on all motions to suspend the rules.

Pursuant to clause 3, rule XXVII, the Chair will now put the question on each motion on which further proceedings were postponed in the order in which that motion was entertained.

Votes will be taken in the following order:

H.R. 8588 and S. 2452, on which the yeas and nays were ordered.

The Chair will reduce to 5 minutes the time for any electronic votes after the first vote in this series.

## ESTABLISHING OFFICES OF INSPECTOR GENERAL

The SPEAKER pro tempore. The unfinished business is the question of suspending the rules and passing the bill H.R. 8588, as amended.

The Clerk read the title of the bill.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from North Carolina (Mr. FOUNTAIN) that the House suspend the rules and pass the bill H.R. 8588, as amended, on which the yeas and nays are ordered.

The vote was taken by electronic device, and there were—yeas 388, nays 6, not voting 40, as follows:

So (two-thirds having voted in favor thereof) the rules were suspended and the Senate bill, as amended, was passed.

The result of the vote was announced as above recorded.

The title was amended so as to read: "A bill to authorize funds for the Hubert H. Humphrey Institute of Public Affairs and for the Everett McKinley Dirksen Congressional Leadership Research Center."

A motion to reconsider was laid on the table.

## GENERAL LEAVE

Mr. FOUNTAIN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill H.R. 8588, establishing Offices of the Inspector General.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from North Carolina?

There was no objection.

## PERMISSION FOR COMMITTEE ON RULES TO FILE PRIVILEGED REPORT

Mr. SISK. Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight tonight to file a privileged report.

The SPEAKER pro tempore. Is there

objection to the request of the gentleman from California?

There was no objection.

## ZUNI INDIANS COURT OF CLAIMS CASE

Mr. SISK. Mr. Speaker, by direction of the Committee on Rules I call up House Resolution 1126 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 1126

*Resolved*, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 3787) to direct the Secretary of the Interior to purchase and hold certain lands in trust for the Zuni Indian Tribe of New Mexico; to confer jurisdiction on the Court of Claims with respect to land claims of such tribe; and to authorize such tribe to purchase and exchange lands in the States of New Mexico and Arizona. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interior and Insular Affairs, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit. After the passage of H.R. 3787, the Committee on Interior and Insular Affairs shall be discharged from the further consideration of the bill S. 482, and it shall then be in order in the House to move to strike out all after the enacting clause of the said Senate bill and insert in lieu thereof the provisions contained in H.R. 3787 as passed by the House.

The SPEAKER pro tempore. The gentleman from California (Mr. SISK) is recognized for 1 hour.

Mr. SISK. Mr. Speaker, I yield 30 minutes to the gentleman from Mississippi (Mr. LOTT) pending which I yield myself such time as I may consume.

Mr. Speaker, this is a very simple 1-hour open rule dealing with a problem in New Mexico in connection with the Zuni Indians.

Mr. Speaker, I want to just take this opportunity to pay a special tribute to the Zuni Indian Tribe and the Zuni people. Those of us in the West who represent national forests and forest areas throughout the West are particularly appreciative of the great deeds of the Zuni Indians. They are probably the greatest fire jumpers in this world. We use them in California from time to time in connection with our own forest fires. They come in and they are dropped from airplanes into the midst of areas where a fire exists. They have done a tremendous job in forest firefighting throughout the years. I simply want to take this opportunity to pay tribute to them, although I do not represent the Zuni Indian Tribe, as do our friends the representatives from New Mexico, but I do want to take this opportunity to express my deep appreciation for the great contribution that these people have made to the people in the western part of our Nation.

Mr. Speaker, House Resolution 1126 provides for the consideration of H.R. 3787, the Zuni Indians Land bill.

This is a simple, open rule providing for 1 hour of general debate with the time equally divided and controlled by the chairman and ranking minority member of the Committee on Interior and Insular Affairs.

The rule further provides that upon passage of H.R. 3787 the Committee on Interior and Insular Affairs will be discharged from further consideration of the bill, S. 482, the Senate companion measure. It shall then be in order in the House to move to strike out all after the enacting clause of the Senate bill and to insert in lieu thereof the provisions of H.R. 3787 as passed by the House.

Mr. Speaker, H.R. 3787 seeks to address certain problems confronted by the Zuni Indian Tribe of New Mexico. Basically the bill does two things. It direct the Secretary of Interior to acquire, through purchase or exchange, 618.41 acres of land including the Zuni Salt Lake in New Mexico and to hold the land in trust for the Zuni Indian Tribe. This lake is the most sacred shrine of the Zuni Indians and plays a very prominent role in the present religion and culture of the Zuni people. It is located about 18 miles south of the existing reservation boundary. The Zuni Indians have made repeated efforts to purchase the lake and have recently acquired lease rights to the area from the State of New Mexico which holds title to the land.

The bill also provides that the Zuni Indian Tribe may file any claims they may have against the United States in the U.S. Court of Claims. The Zuni Indians are currently prohibited from filing land claims in court because they did not file their claims by 1951, the cutoff date mandated by the Indian Claims Commission Act. Until recently the Zuni Indians were legally represented by the Bureau of Indian Affairs. Due to certain misunderstandings, the tribe, apparently, was not aware of rights to file land claims with the Indian Claims Commission during the appropriate time frame. This bill simply allows the Zuni Indians to go to court to pursue their claims.

Mr. Speaker, again I say, although I do not represent the Zuni Indians, I am aware, as are many of my western colleagues, of their very fine reputation as firefighters. The Zuni Indians are renowned for their bravery in parachuting into forest fires to put out hot spots. The Zuni Indians are owed a debt of gratitude by all of us for the valiant service they have performed over the years in helping to protect our national forest resources.

Mr. Speaker, H.R. 3787 is a bill worthy of consideration by this House, and I would urge my colleagues to adopt House Resolution 1126 so that we might begin deliberations on this matter.

Mr. LOTT. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, this is a 1-hour, open rule allowing consideration of H.R. 3787, legislation involving the Zuni Indian Tribe of New Mexico. The rule also provides that after passage of this bill, the Interior and Insular Affairs Committee is discharged from further consideration of S. 482; it will be in order to move to strike the Senate language therein and substitute the text of H.R. 3787 as passed by the House.

As reported, H.R. 3787 directs the Secretary of the Interior to acquire, either through purchase or exchange, from the State of New Mexico approximately 618 acres of land which encloses the Zuni Salt Lake, the most sacred shrine of the Zuni Tribe. Title to the lands is to be taken by the United States and held in trust for the benefit of the Zuni Indians. In addition, the bill confers jurisdiction on the U.S. Court of Claims to hear and render judgment on land claims arising prior to August 13, 1946, which the tribe has against the United States. Any award made by the Indian Claims Commission with respect to these lands located in New Mexico and Arizona is not to be considered as a defense, estoppel, or setoff to these claims.

The cost of acquiring the 618 acres outright is estimated at $30,000. If there is an exchange, no budget impact will occur. The costs of the land claims is dependent upon the judgment of the court.

I know of no objection to the passage of this rule.

Mr. SISK. Mr. Speaker, I have no requests for time, and I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. RONCALIO. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 3787) to direct the Secretary of the Interior to purchase and hold certain lands in trust for the Zuni Indian Tribe of New Mexico; to confer jurisdiction on the Court of Claims with respect to land claims of such tribe; and to authorize such tribe to purchase and exchange lands in the States of New Mexico and Arizona.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Wyoming (Mr. RONCALIO).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 3787, with Mr. PEASE in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Wyoming (Mr. RONCALIO) will be recognized for 30 min- and the gentleman from Colorado (Mr.

JOHNSON) will be recognized for 30 minutes.

The Chair recognizes the gentleman from Wyoming (Mr. RONCALIO).

Mr. RONCALIO. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, H.R. 3787 provides for the acquisition of certain lands of religious significance to the Zuni Indian Tribe and for the filing of Zuni land claims against the United States.

Section 1 of the bill directs the Secretary of the Interior to acquire for the Zuni Tribe 600 acres of land in New Mexico surrounding and containing the Zuni Salt Lake. The lake is a sacred, religious shrine of the Zuni traditional religion, but was excluded from the Zuni Reservation. The land is currently in the ownership of the State of New Mexico which is willing to sell or exchange the land.

The lands were leased by the State for development as a salt mine. This desecration of the shrine was an affront to the Zuni who have continuously sought to recover ownership of the lake. Recently, the tribe paid $250,000 for the lease rights to the lake to prevent further desecration. The appraised value of the land itself is only $30,000. This bill provides for the acquisition of the lake to prevent any possibility of further desecration and to secure to the Zuni their right to religious worship.

Section 2 of the bill authorizes the Zuni Indian Tribe to file its land claims against the United States with the Court of Claims notwithstanding the limitation contained in the Indian Claims Commission Act of 1946.

Mr. Chairman, as I stated to the Rules Committee on two occasions, it is not the intent of the Interior Committee to upset the underlying policy of the Indian Claims Commission Act to bring to an end these old land claims of the Indian tribes. Nor is it our policy to reopen the floodgates to these kind of claims.

There are only a few claims remaining. It is the committee's policy to review each of these requests on an individual basis and on their individual merits. Where we find that the failure to timely file was clearly not the fault of the tribe; where an outside factor contributed to that failure; and where a denial of permission to file would be a denial of elementary justice, we will recommend an exception.

The committee strongly feels that these factors are present in the Zuni case.

The committee report sets the case out in detail and I will only stress the central point in our decision.

Recognizing that many Indian tribes of that day were relatively unsophisticated in these matters, Congress imposed a positive burden on the Commission and the Bureau of Indian Affairs to notify the tribes of the provisions of the act and to advise them of their rights.

Documents submitted to the subcommittee and testimony taken not only show that the BIA agency superintendent failed in this positive duty, but actually prepared a letter for the signature of the Zuni chief denying any knowledge of claims against the United States.

Mr. Chairman, this default is even more inexcusable when you realize that the Zuni people and their leaders, at that time, were not organized; had no employees or staff of their own; had no legal counsel; were illiterate in English; and were entirely dependent upon the Bureau of Indian Affairs for advice and assistance.

There is a section 3 which the committee recommends be stricken. I will offer that amendment and another committee amendment at the appropriate time.

Mr. Chairman, I urge passage of the bill, as amended.

Mr. JOHNSON of Colorado. Mr. Chairman, I yield such time as he may consume to the gentleman from New Mexico (Mr. LUJAN).

Mr. LUJAN. Mr. Chairman, I might inform the Members that this bill has already been passed by the Senate. Of course, it is awaiting House action.

Mr. Chairman, this bill would accomplish two objectives of genuine importance to the Zuni Indian Tribe of New Mexico:

First, it would direct the Secretary of the Interior to obtain by land trade with the State of New Mexico 618 acres upon which is located the Zuni Salt Lake, the most sacred shrine of the Zuni people. Though there is minimal commercial value to the desert land involved—approximately $30,000—New Mexico law prohibits the State from selling land to anyone but permits land transfers to the Federal Government. Hence, the shrine legally lost by the tribe many years ago, but cared for by them ever since, can only be restored to the tribe by Federal action.

Second, the legislation would permit the Indian tribe to file with the U.S. Court of Claims for compensation for land lost due to the Federal Government's failure to protect them in their ownership. The filing deadline under the Indian Claims Act expired in 1951.

In hearings before the House Indian Affairs Subcommittee in 1976 and again in 1977, and before the Senate in 1976, the Zunis set forth convincing evidence which I strongly believe justifies this waiver of the statute. It is clear to me that the Bureau of Indian Affairs not only failed to perform its trustee obligation to the tribe, but there is a clear inference in the evidence that the local BIA agents misled the tribe as to their rights and their obligations to act to protect their interests before a deadline. As a consequence, no claim was ever filed.

According to the Bureau of Indian Affairs in testimony offered by the Ford Interior Department in 1976 and the Carter Interior Department in 1977, this case is unique among possible other claimants because of the evidence of BIA trusteeship failure. The Interior Department testified this past June in favor of passage of this legislation, urging that the Zunis be authorized to file their land claim.

This claim would be adjudicated by the court of claims with any eventual recovery dependent on the affirmative case of aboriginal ownership which the tribe could prove, on the same basis on which other tribes who filed in a timely manner have made claims before the Indian Claims Commission.

Mr. JOHNSON of Colorado. Mr. Chairman, I yield myself 2 minutes.

Mr. Chairman, I think the only question to which we should alert the Members of this body about which there is any disagreement on this subject is the extension of time on this claim. All claims were to be filed by 1951. We are not particularly setting a precedent in granting an extension of 3 years for the Zunis because these are unique circumstances and we do not know of them having been repeated elsewhere. There are, however, perhaps somewhere between 10 to 15 other claims of various Indian tribes, we do not know exactly how many, that might wish to come in and ask for an extension of time to file long past the 1951 filing deadline.

Those of us who have had some experience with this particular problem perhaps are biased. Perhaps we are not as objective as we should be; but it seems to me that those extensions which we have brought to the floor of the House, the first was the Wichitas and the Zunis are the second one, are justified by their own peculiar circumstances.

I do not wish to speak for the chairman of the subcommittee or anyone else on this side of the aisle, but when facts are brought to our attention as in the cases of the Wichitas and the Zunis, I believe justice to the tribes involved should be our first consideration. We may have another 10 to 15 claims for extensions and I think they should be considered on a case-by-case basis. I realize that the deadline for filing was 1951, 27 years ago, but we must not allow the current anti-Indian bias to prevent us from seeing that the intent of the act of 1946 be carried out. The intent of the act was to compensate tribes for the violent taking of their lands, and once and for all extinguish all aboriginal claims. It was a worthy aim, and we are in the process of achieving it; but we have not achieved it yet. There may be some other justifiable claims and there may not. I cannot assure Members on that point, I am urging that we pass this bill to see that the Zunis receive a hearing to which they are entitled, and approach any future claims by other tribes with open minds not befuddled by the prejudice and demagoguery which is presently prominent in discussion of Indian affairs.

In other words, as each tribe presents its claim, we should consider it individually, not with regard to either this treatment or the treatment of the Wichitas as being a precedent which is binding on any subsequent claims that might arise.

Mr. Chairman, I have no further requests for time, and I reserve the balance of my time.

Mr. RONCALIO. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I would like to take an additional minute or two to state for

the record my further support of the bill, reinforcing the support of my colleague, the gentleman from Colorado (Mr. JOHNSON).

There is nothing in the record that would indicate that the superintendent of the agency did anything to promulgate or make known the contents of the Indian Claims Commission Act to the Zuni people. In fact, there are affidavits in the hearings before the subcommittee that indicate there never were any public meetings held to discuss the Indian Claims Commission Act and that the content of the letter from the Indian Claims Commission was never made public, translated or otherwise made known to the Governor, the tribal council, or to the people in general.

The record further indicates that officials of the BIA having jurisdiction over the Zuni Tribe prepared a letter for the Governor's signature wherein the Governor had no knowledge of any claim which the Zuni Tribe may have had against the United States.

The Governor who signed the letter stated in an affidavit that when he signed the letter denying knowledge of the claims, he did not know what he was signing but assumed that it had something to do with the Homestead Act. The prepared letter was then forwarded to the Indian Claims Commission.

It should be noted that other than the Bureau of Indian Affairs, the Zuni Tribe had no offices, no employees, no tribal counsel, nor any other person in a position to provide it with information about the Indian Claims Commission Act, and it ill-behooves the guardian to benefit from a transaction which has been done as a violation of a stated trust responsibility, not only on the part of the superintendent of the Zuni people but in fact by the people of America, as it related to any amount of acreage.

So, Mr. Chairman, I urge the adoption of H.R. 3787.

● Mr. SKUBITZ. Mr. Chairman, I rise in support of H.R. 3787 which provides for the acquisition or trade with the State of New Mexico of 618 acres of an area of "historical and religious" significance to the Zuni Indian Tribe known as "Salt Mother," to be held in trust for the tribe.

This legislation also provides the following: A 3-year time limit for the Zuni Indians to assert their claim before the Indian Claims Commission, and confers jurisdiction for the court of claims.

This legislation recognizes past injustices and the efforts we must make to correct them. Taking all aspects of this bill into consideration, I feel my affirmative support shows compassion for the Zuni Indian Tribe at an extremely nominal cost to the American taxpayer.●

Mr. RONCALIO. Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. If there are no further requests for time, the Clerk will read.

The Clerk read as follows:

H.R. 3787

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That (a) the Secretary of the Interior (hereinafter in this Act referred to as the "Secretary") shall acquire, through purchase or exchange, the lands described in subsection (b).

(b) The lands to be acquired under subsection (a) are lands in the State of New Mexico upon which the Zuni Salt Lake is located and which are more particularly described as follows: Lots 3 and 4, east half southwest quarter, west half southeast quarter, section 30, township 3 north, range 18 west, lots 1 and 2, east half northwest quarter, west half northeast quarter, section 31, township 3 north, range 18 west, southeast quarter southeast quarter, section 25, and east half northeast quarter, section 36, township 3 north, range 19 west, all of the New Mexico principal meridian, New Mexico, containing approximately 618.41 acres, more or less.

(c) Title to the lands to be acquired under subsection (a) shall be taken and held in trust in the name of the United States for the benefit of the Zuni Indian Tribe of New Mexico (hereinafter in this Act referred to as the "tribe"), and such lands shall be exempt from State and local taxation.

SEC. 2. (a) Notwithstanding sections 2401 and 2501 of title 28, United States Code, and section 12 of the Act of August 13, 1946 (60 Stat. 1052; 25 U.S.C. 70k), jurisdiction is hereby conferred upon the United States Court of Claims to hear, determine, and render judgment on any claims of the tribe against the United States with respect to any lands or interests therein in the State of New Mexico or the State of Arizona held by aboriginal title otherwise, which were acquired from the tribe without payment of adequate compensation by the United States. Such jurisdiction is conferred notwithstanding any failure of the tribe to exhaust any available administrative remedies. Any party to any action under this subsection shall have the right to have any final decision of the Court of Claims reviewed by appeal to the Supreme Court of the United States.

(b)(1) Any award made to any Indian tribe other than the Zuni Indian Tribe of New Mexico before, on, or after the date of the enactment of this Act, under any judgment of the Indian Claims Commission or any other authority, with respect to any lands that are the subject of a claim submitted by the tribe under subsection (a) shall not be considered as a defense, estoppel, or setoff to such claim, and shall not otherwise affect the entitlement to, or amount of, any relief with respect to such claim.

(b)(2) Any award made to the tribe pursuant to subsection (a) shall not be considered as a defense, estoppel, or setoff to the claims pending before the Indian Claims Commission on the date of the enactment of this Act in docket 196 (filed August 3, 1951) and docket 229 (filed August 8, 1951), and shall not otherwise affect the entitlement to, or amount of, any relief with respect to such claims.

SEC. 3. (a) For purposes of making additions to the Zuni Indian Reservation, the tribe may, subject to approval by the Secretary, purchase or otherwise acquire any lands within the State of New Mexico or the State of Arizona which are contiguous to such reservation.

(b) The tribe may, subject to approval by the Secretary, exchange any lands held by such tribe which are not contiguous to the Zuni Indian Reservation for lands of equal or comparable value held by any person, any State, any agency or political subdivision of a State, or any agency or department of the United States.

(c) Title to any lands which are—

(1) acquired by the tribe under subsection (a), or

(2) acquired by the tribe under subsection (b) and which are contiguous to the Zuni Indian Reservation, shall be taken and held in trust in the name of the United States for the benefit of the tribe. Any such lands shall be considered for all purposes as part of such reservation, and shall be exempt from State and local taxation.

(d) Title to any lands acquired by the tribe under subsection (b) which are not contiguous to the Zuni Indian Reservation shall be held in the name of the tribe.

Mr. RONCALIO (during the reading). Mr. Chairman, I ask unanimous consent that the bill be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request from the gentleman from Wyoming?

There was no objection.

COMMITTEE AMENDMENTS

The CHAIRMAN. The Clerk will report the first committee amendment.

The Clerk read as follows:

Committee amendment: Page 2, line 17 through page 3, line 6, strike the present text and insert in lieu thereof the following:

Sec. 2. (a) Notwithstanding sections 2401 and 2501 of title 28, United States Code, and section 12 of the Act of August 13, 1946 (60 Stat. 1052; 25 U.S.C. 70k), jurisdiction is hereby conferred upon the United States Court of Claims to hear, determine, and render judgment on any claims of the Zuni Indian Tribe of New Mexico against the United States with respect to any lands or interests therein in the State of New Mexico or the State of Arizona held by aboriginal title or otherwise which were acquired from the tribe without payment of adequate compensation by the United States: *Provided,* That jurisdiction is conferred only with respect to claims accruing on or before August 13, 1946, and all such claims must be filed within three years after approval of this Act. Such jurisdiction is conferred notwithstanding any failure of the tribe to exhaust any available administrative remedies.

Mr. RONCALIO (during the reading). Mr. Chairman, I ask unanimous consent that both committee amendments be considered as read, printed in the RECORD, and that the committee amendments be considered en bloc.

The CHAIRMAN. Is there objection to the request of the gentleman from Wyoming?

There was no objection.

The remaining committee amendment is as follows:

Committee amendment: Page 4, line 14 through page 5, line 12, strike all of section 3.

The CHAIRMAN. The question is on the committee amendments.

The committee amendments were agreed to.

The CHAIRMAN. Are there further amendments to the bill?

If not, under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. PEASE, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 3787) to direct the Secretary of the

Interior to purchase and hold certain lands in trust for the Zuni Indian Tribe of New Mexico; to confer jurisdiction on the Court of Claims with respect to land claims of such tribe; and to authorize such tribe to purchase and exchange lands in the States of New Mexico and Arizona, pursuant to House Resolution 1126, he reported the bill back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. HILLIS. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 347, nays 48, not voting 39, as follows:

[Roll No. 231]

Mr. Hefner with Mr. Walgren.
Mr. Ford of Michigan with Mr. Horton.
Mr. Flynt with Mr. Vander Jagt.
Mr. Tucker with Mr. Cochran of Mississippi.

Mr. DUNCAN of Oregon changed his vote from "yea" to "nay."

Mr. MAHON changed his vote from "nay" to "yea."

So the bill was passed.

The result of the vote was announced as above recorded.

The title was amended so as to read: "A bill to direct the Secretary of the Interior to purchase and hold certain lands in trust for the Zuni Indian Tribe of New Mexico, and to confer jurisdiction on the Court of Claims with respect to land claims of such tribe.".

A motion to reconsider was laid on the table.

The SPEAKER. Pursuant to the provisions of House Resolution 1126, the Committee on Interior and Insular Affairs is discharged from the further consideration of the Senate bill (S. 482) to direct the Secretary of the Interior to purchase and hold certain lands in trust for the Zuni Indian Tribe of New Mexico; to confer jurisdiction on the Court of Claims with respect to land claims of such tribe; and to authorize such tribe to purchase and exchange lands in the States of New Mexico and Arizona.

The Clerk read the title of the Senate bill.

MOTION OFFERED BY MR. RONCALIO

Mr. RONCALIO. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. RONCALIO moves to strike out all after the enacting clause of the Senate bill, S. 482, and to insert in lieu thereof the provisions of H.R. 3787, as passed by the House, as follows:

That (a) the Secretary of the Interior (hereinafter in this Act referred to as the "Secretary") shall acquire, through purchase or exchange, the lands described in subsection (b).

(b) The lands to be acquired under subsection (a) are lands in the State of New Mexico upon which the Zuni Salt Lake is located and which are more particularly described as follows: Lots 3 and 4, east half southwest quarter, west half southeast quarter, section 30, township 3 north, range 18 west, lots 1 and 2, east half northwest quarter, west half northeast quarter, section 31, township 3 north, range 18 west, southeast quarter southeast quarter, section 25, and east half northeast quarter, section 36, township 3 north, range 19 west, all of the New Mexico principal meridian, New Mexico, con-

taining approximately 618.41 acres, more or less.

(c) Title to the lands to be acquired under subsection (a) shall be taken and held in trust in the name of the United States for the benefit of the Zuni Indian Tribe of New Mexico (hereinafter in this Act referred to as the "tribe"), and such lands shall be exempt from State and local taxation.

SEC. 2. (a) Notwithstanding sections 2401 and 2501 of title 28, United States Code, and section 12 of the Act of August 13, 1946 (60 Stat. 1052; 25 U.S.C. 70k), jurisdiction is hereby conferred upon the United States Court of Claims to hear, determine, and render judgment on any claims of the Zuni Indian Tribe of New Mexico against the United States with respect to any lands or interests therein in the State of New Mexico or the State of Arizona held by aboriginal title or otherwise which were acquired from the tribe without payment of adequate compensation by the United States: *Provided*, That jurisdiction is conferred only with respect to claims accruing on or before August 13, 1946, and all such claims must be filed within three years after approval of this Act. Such jurisdiction is conferred notwithstanding any failure of the tribe to exhaust any available administrative remedies.

(b)(1) Any award made to any Indian tribe other than the Zuni Indian Tribe of New Mexico before, on, or after the date of the enactment of this Act, under any judgment of the Indian Claims Commission or any other authority, with respect to any lands that are the subject of a claim submitted by the tribe under subsection (a) shall not be considered as a defense, estoppel, or setoff to such claim, and shall not otherwise affect the entitlement to, or amount of, any relief with respect to such claim.

(b)(2) Any award made to the tribe pursuant to subsection (a) shall not be considered as a defense, estoppel, or setoff to the claims pending before the Indian Claims Commission on the date of the enactment of this Act in docket 196 (filed August 3, 1951) and docket 229 (filed August 8, 1951), and shall not otherwise affect the entitlement to, or amount of, any relief with respect to such claims.

Amend the title so as to read: "An Act to direct the Secretary of the Interior to purchase and hold certain lands in trust for the Zuni Indian Tribe of New Mexico, and to confer jurisdiction on the Court of Claims with respect to land claims of such tribe."

The motion was agreed to.

The Senate bill was ordered to be read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill to direct the Secretary of the Interior to purchase and hold certain lands in trust for the Zuni Indian Tribe of New Mexico, and to confer jurisdiction on the Court of Claims with respect to land claims of such tribe.".

A motion to reconsider was laid on the table.

A similar House bill (H.R. 3787) was laid on the table.

## GENERAL LEAVE

Mr. RONCALIO. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from Wyoming?

There was no objection.

## AUTHORIZING APPROPRIATIONS TO THE NATIONAL SCIENCE FOUNDATION

Mr. DODD. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1099 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 1099

*Resolved*, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11400) to authorize the appropriation of specified dollar amounts for each of the National Science Foundation's major program areas (and certain subprograms), and to provide requirements relating to periods of availability and transfers of the authorized funds. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Science and Technology, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

The SPEAKER pro tempore (Mr. KILDEE). The gentleman from Connecticut (Mr. DODD) is recognized for 1 hour.

Mr. DODD. Mr. Speaker, I yield 30 minutes to the gentleman from California (Mr. DEL CLAWSON) for the purpose of debate only, pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 1099 provides for the consideration of H.R. 11400, the bill authorizing appropriations to the National Science Foundation. This resolution provides for an open rule with 1 hour of general debate to be equally divided and controlled by the chairman and ranking minority member of the Committee on Science and Technology. It provides for one motion to recommit.

Mr. Speaker, H.R. 11400 would authorize $934.4 million in fiscal year 1979 appropriations to the National Science Foundation. Out of this total, $928.4 million would be authorized out of money in the Treasury, while the remaining $6 million would be in foreign currencies which the Treasury Department determines to be excess to the normal requirements of the United States.

The National Science Foundation supports scientific education and research which is of vital importance to the present and future well-being of the United States. The Committee on Science and Technology urges that because of the importance of the Foundation's work, the full $934.4 authorization in the bill be appropriated. Indeed, the Nation's scientific community could well use more money than this bill appropriates, but as the President and the committee agree, the Nation, at this time, cannot afford a larger investment.

Mr. Speaker, two specific appropriations authorized by H.R. 11400 deserve particular notice. First, of the funds authorized for applied science and research applications, $2 million would be authorized to establish a science and technology program focused on the problems of the disabled. In my work in the Congress I have been particularly concerned about the problems of the handicapped, and I am pleased to see this appropriation which will further our commitment to the handicapped.

Second, the funding level for the U.S. Antarctic program has been raised by the committee by $2.4 million above the NSF request of $50.7 million. Through the Antarctic program, the United States can maintain an active and influential presence in the Antarctic. United States involvement helps insure observance of the international treaty which suspends territorial claims and keeps the Antarctic open for scientific research. Increased funding for the Antarctic program will support study of Antarctic fisheries.

Mr. Speaker, H.R. 11400 authorizes appropriations for the National Science Foundation and will allow this valuable organization to carry out educational and research activities of vital importance to the United States. I request that we adopt House Resolution 1099 so that we may proceed to the consideration of this bill.

Mr. DEL CLAWSON. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, House Resolution 1099 provides for the consideration of H.R. 11400, the National Science Foundation Authorization Act. This is an open rule allowing for 1 hour of general debate to be equally divided and controlled by the chairman and ranking minority member of the Committee on Science and Technology. The bill will then be open to amendment under the 5-minute rule.

Mr. Speaker, H.R. 11400 authorizes appropriations to the National Science Foundation for fiscal year 1979. A total of $934.4 million is authorized for the NSF's major program areas. The Foundation maintains many laboratories and educational facilities in the United States as well as other countries. Their programs explore many diverse subject areas from the bottom of the sea to the stars in the heavens, some of which may be of questionable value depending upon individual preferences and points of view.

Mr. Speaker, to my knowledge there is no objection to the rule.

Mr. DODD. Mr. Speaker, I yield 2 minutes to the gentleman from Oklahoma (Mr. JONES).

Mr. JONES of Oklahoma. Mr. Speaker, research and development activities are

vital to the survival and prosperity of the United States. Without a strong, ongoing program of scientific research and development, the high standard of living enjoyed by the citizens of our country would be impossible. Indeed, our national security is dependent on the continued probing of the frontiers of science.

The National Science Foundation has been at the forefront of these activities. Accordingly, I support the general thrust of the bill before the House today in order to insure a strong and viable program of research and development. I do, however, have some reservations about the conduct of the advisory commissions attached to the National Science Foundation.

As you know, Mr. Speaker, the President has set a goal of reducing these advisory commissions. I recently conducted a study to ascertain how effective the President has been at reaching this goal. This study generally showed that the President has made some progress in cutting back on the numbers of such commissions. Nevertheless, it did point up several disturbing trends in this area that deserve more study by both the executive branch and Congress.

The conduct of the National Science Foundation's advisory commissions mirrors some of the conclusions of this study. I would like to include a chart compiled from this study to illustrate some of the problems in this area:

ADVISORY COMMITTEE ACTIVITY IN THE NATIONAL SCIENCE FOUNDATION

| | 1972 | 1973 | 1974 | 1975 | 1976 | 1977 |
|---|---|---|---|---|---|---|
| Number of committees | 41 | 43 | 45 | 48 | 51 | 21 |
| Number of members | | | 494 | 1,190 | 2,241 | 2,464 |
| Actual staff support years | | | 8.11 | 9.19 | 19 | 23 |
| Projected staff support years | | | | | 12.19 | 17 | 18 |
| Actual cost (dollars) | 231,297 | 341,183 | 450,388 | 552,300 | 1,248,970 | 1,745,055 |
| Projected cost | | | | 701,100 | 1,315,369 | 1,088,484 |

As you can see, Mr. Speaker, while the number of committees decreased by one-half between 1972 and 1977, the membership on these committees increased by 400 percent. Moreover, the costs associated with the functions of these committees increased by 7,400 percent from 1972 through 1977.

In effect, more people are serving on fewer commissions, and it is costing the Government more to maintain the commissions. This trend is disturbing enough, but I also fear that certain imbred regional bias may have crept into these commissions. My study revealed a trend in other Cabinet-level departments to weight commissions toward one section of the country, or toward one special interest group. I am fearful that the commissions serving the National Science Foundation may have fallen victim to a similar problem. These commissions and committees pass on thousands of applications for research and grants. I am sure all Members of Congress would want to insure that every applicant gets a fair hearing before these commissions. It is my hope that the Congress and the executive branch will continue to monitor the activity of the Commissions to insure that they perform their tasks competently and fairly. The Federal Government should not be subsidizing an overbloated or unfair system that so vitally concerns our national well-being.

Mr. DODD. Mr. Speaker, I have no further requests for time, and I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. TEAGUE. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11400) to authorize the appropriation of specified dollar amounts for each of the National Science Foundation's major program area—and certain subprograms—and to provide requirements relating to periods of availability and transfers of the authorized funds.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Texas (Mr. TEAGUE).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 11400, with Mr. DANIELSON designated as Chairman, and Mr. PANETTA (Chairman pro tempore) in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN pro tempore. Under the rule, the gentleman from Texas (Mr. TEAGUE) will be recognized for 30 minutes, and the gentleman from New Jersey (Mr. HOLLENBECK) will be recognized for 30 minutes.

The Chair recognizes the gentleman from Texas (Mr. TEAGUE).

Mr. TEAGUE. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, the chairman of this subcommittee is the gentleman from Arkansas (Mr. THORNTON), who has done a wonderful job of holding hearings.

Mr. Chairman, getting this bill to the House floor took a little bit of time for committee members, but it took months of hard work by the staff. I want to thank the staff for their dedication to the committee and to scientific advancement. As chairman of the Committee on Science and Technology, I have always insisted on hiring and promotion on the basis of merit alone. And I want to tell you that is a good policy because it has produced one of the best committee staffs in Congress.

We are lucky on our committee to have good cooperation between the minority and majority. The best proof of this is my friend, the Honorable Charlie Mosher. After retiring as ranking minority member of the committee, Charlie was kind enough to accept my offer to be staff director. Charlie had done a magnificent job of running the committee this year, and I thank him for it.

I also want to thank Phil Yeager, counsel to the committee and staff director of the Subcommittee on Science, Research, and Technology. Phil and his people do the legwork that gets the NSF bill to the floor, and they do it well.

It has been a real pleasure for me to work with those people, and I just wanted to get a few words of appreciation on the record.

Mr. Chairman, I yield such time as he may desire to the gentleman from Iowa (Mr. HARKIN).

Mr. HARKIN. Mr. Chairman, I support the bill, H.R. 11400. Before I describe the principal features of the bill, I would like to express my appreciation to members of the Committee on Science and Technology.

Foremost among those who have made it possible to bring this bill to the floor is Chairman TEAGUE. Congress and the Nation will lose the service of a fine man and a staunch supporter of scientific research with the retirement of Chairman TEAGUE at the end of this Congress. If I were more eloquent I might find fitting words of praise for the gentleman from Texas to convey my regard for him. But words, however eloquent, would only be words. TIGER is a man of action. The only sufficient tribute to Mr. TEAGUE is to be the kind of legislator and leader he has been and let action carry the message. That would be the best praise, and I encourage you all to give it.

Another Member who will not be in the House next session is RAY THORNTON, chairman of the Subcommittee on Science, Research, and Technology. I would like to thank Chairman THORNTON for delegating his authority over this NSF authorization bill to me.

Finally, the gentleman from New York (Mr. WYDLER), ranking minority member of the Committee on Science and Technology, and the gentleman from New Jersey (Mr. HOLLENBECK), ranking minority member of our subcommittee, have both been extremely helpful. I thank them for their cooperation in bringing to the floor a truly nonpartisan bill, a bill which passed the Committee on Science and Technology with not a single dissenting vote.

In consideration of this bill, H.R. 11400, the Committee on Science and Technology held hearings beginning on January 24, and ending on January 31 to review NSF performance over the past year, and the Foundation's request for fiscal year 1979. Testimony was taken from Foundation officials and individuals representing education and research organizations. The hearings covered all

aspects of the Foundation's budget request. On many other occasions over the past year representatives of NSF have testified at committee hearings.

In addition to hearings, extensive investigations and site visits have been carried out by committee members and staff, several General Accounting Office and Congressional Research Service studies of NSF operations have been used by the committee, and other forms of oversight have been performed.

The bill itself, H.R. 11400, authorizes the appropriation of $934.4 million for National Science Foundation programs in fiscal year 1979, almost the exact amount requested by the President. The net difference between the request by the President and the total in this bill is a $400,000 increase. In addition to the amount authorized by the bill, NSF plans to defer the obligation of $6.9 million from fiscal year 1978 to fiscal year 1979. Thus, total NSF obligations would be $941.3 million in fiscal year 1979. The $934.4 million authorized by the bill represents an 8-percent increase over the plan for NSF obligations in fiscal year 1978.

The Committee on Science and Technology believes that the scientific community could effectively use larger amounts of NSF money than authorized by this bill, but the committee intentionally held the total near the President's request. The committee concurs with the President's judgment that the Nation cannot afford a larger investment at this time. Because of the importance of scientific work to the Nation, however, the committee urges that the full amount authorized be appropriated.

Roughly three-fourths of the NSF budget is devoted to basic research. For fiscal year 1979 the President's policy for basic research is to increase total Federal support by an amount sufficient to provide 5 percent real growth over 1978 with inflation taken into account at 6 percent. The total amount budgeted by the President for basic research support from the Federal Government in fiscal year 1979 is $3.6 billion, an 11-percent increase over 1978. The NSF percentage increase was somewhat less than the Federal agency average. This means that several of the mission agencies exhibit slightly larger increases than the Federal average. The committee applauds the basic research policy of the President which seeks to maintain a balance of support for basic research across the Federal Government.

As I stated earlier, the committee felt that the total amount requested by the President for NSF was reasonable, so we did not change the total very much. The request was for a $940.9 million program, and the committee reported $941.3 million, a tiny increase.

We have shifted the emphasis on a few of NSF's programs from the request. Science education and the Antarctic program were increased while two of the basic research directorates were decreased in order to hold the total down.

First let me explain the two increases. The science education increase of $4.4 million is intended to help NSF put more emphasis on an area that the Science and Technology Committee has supported for years but which has been held down by the Office of Management and Budget. The $82 million in H.R. 11400 is the same amount that NSF asked OMB for at the beginning of the budget process.

The Antarctic increase follows on close oversight of the Antarctic program. I visited Antarctica in December, reviewed NSF's activities there, and the subcommittee came to the conclusion that the program should be increased. The committee agreed, and the program budget has been raised by $2.4 million from NSF's request.

As for the decreases recommended by the committee, the $3.2 million decrease from mathematical and physical sciences and engineering is not aimed at any specific program. It is only 1.2 percent of the requested amount of $268.3 million and leaves that category with $265.1 million, which is still $19.1 million or 7.8 percent above the 1978 program level.

The $3.2 million decrease from astronomical, atmospheric, Earth, and ocean sciences is specifically aimed at a new deep-sea drilling program. In taking this action the committee has not judged that deep-sea drilling is a bad idea; it may be an extremely good idea. However, it is our opinion that NSF has not presented adequate justification for the project.

To complete my remarks, Mr. Chairman, I would like to draw the Members' attention to the fact that the bill is quite brief this year. The reasons for this are that we are trying to keep the authorization simple and many of the provisions of last year's act do not need repetition either because they have been codified as permanent law or because they pertained only to last year's act.

That ends my remarks. I am submitting a budget table for the RECORD. This is a good bill, and I urge its passage by the House.

NATIONAL SCIENCE FOUNDATION BUDGET COMPARISONS, ACTIONS BY THE COMMITTEE ON SCIENCE AND TECHNOLOGY

[In millions of dollars]

| | Current plan, fiscal year 1978 | Budget request, fiscal year 1979 | Committee recommendations, fiscal year 1979 | Increase of committee recommendations over fiscal year 1978 current plan | | Change of committee recommendations from fiscal year 1979 request | |
|---|---|---|---|---|---|---|---|
| | | | | Amount | Percent | Amount | Percent |
| Mathematical and physical sciences and engineering | 246.0 | 268.3 | 265.1 | 19.1 | 7.8 | −3.2 | −1.2 |
| Astronomical, atmospheric, Earth and ocean sciences | 210.1 | 227.3 | 224.1 | 14.0 | 6.7 | −3.2 | −1.4 |
| Biological, behavioral, and social sciences | 142.2 | 158.0 | 158.0 | 15.8 | 11.1 | | |
| U.S. Antarctic program | 48.2 | 50.7 | 53.1 | 4.9 | 10.2 | +2.4 | +4.7 |
| Basic research stability grants | 4.5 | 0 | 0 | −4.5 | | | |
| Science education | 74.0 | 77.6 | 82.0 | 8.0 | 10.8 | +4.4 | +5.9 |
| Applied science and research applications | 57.9 | [1] 67.0 | [1] 67.0 | 9.1 | 15.7 | | |
| Scientific, technological, and international affairs | 24.6 | 24.3 | 24.3 | −.3 | −1.2 | | |
| Program development and management | 52.0 | 54.8 | 54.8 | 2.8 | 5.4 | | |
| Special foreign currency appropriation | 5.4 | 6.0 | 6.0 | .6 | 11.1 | | |
| Total | 864.9 | [1] 934.0 | [1] 934.4 | 69.5 | 8.0 | +.4 | 0 |

[1] It is planned to defer $6,900,000 for ASRA from fiscal year 1978 to fiscal year 1979. This will not change the fiscal year 1978 current plan shown, but will increase the ASRA budget to $73,900,000 and the NSF total recommended by the committee to $941,300,000.

Mr. FUQUA. Mr. Chairman, will the gentleman yield?

Mr. HARKIN. I yield to the gentleman from Florida.

Mr. FUQUA. Mr. Chairman, I want to commend the gentleman from Iowa (Mr. HARKIN) for the fine job he did in conducting the hearings this year on this very important matter. The gentleman did a very excellent job, and from that effort we have brought to the floor a bill that I think basically every Member can support. I commend the gentleman and also commend the ranking minority Member, the gentleman from New Jersey (Mr. HOLLENBECK), for his cooperation in getting this bill to the floor.

Mr. Chairman, I am pleased to support the fiscal year 1979 authorization for the National Science Foundation's Science Education Directorate. The Science and Technology Committee has increased the authorization for science education by $4.4 million, to a total of $82 million. We were disappointed in the small budget request for science education, an increase well below the inflation rate and below the authorization figure for last year. Since 1970, the science education funding has been declining both absolutely and in terms of its percent of the entire NSF budget. With the committee increase, science education will represent approximately 8.7 percent of the total NSF budget.

The Foundation's Science Education Directorate has the important mission of initiating and supporting programs to strengthen science education programs

at all levels. This mission is carried out through programs to promote public understanding of science, research and development in science education, information dissemination for science education, precollege teacher development, undergraduate instructional improvement, undergraduate research participation, minority institutions science improvement, science for citizens, graduate fellowships, student-science training, and comprehensive assistance to undergraduate science education.

Mr. Chairman, these programs are designed to assure that the Nation's science education establishment can successfully meet the changing scientific needs of a dynamic society. The Foundation provides support to educational institutions in order to improve their capabilities to teach science and engineering and to facilitate needed innovations in science education. To help insure the availability of high quality science personnel to meet out Nation's future needs, the Foundation provides support, through a highly competitive process, to well qualified individuals who wish to pursue careers in advanced science and engineering. This is accomplished by awarding graduate and post-doctoral fellowships. NSF supports programs of research and development in science education to develop new knowledge which will allow the Nation's science education activities to improve. Finally, NSF's science education directorate supports programs which seek to reach beyond formal educational institutions and make available, to the general population, information about science and the scientific process.

Dr. James Rutherford, the Foundation's able new assistant director for science education, has told our committee that NSF hopes to greatly intensify two new thrusts:

First. The improvement of science learning for all, particularly minorities and women, by emphasizing junior high school science and mathematics, and

Second. Research and development related to all aspects of science education in and out of schools.

NSF data suggests that it is in the junior high school grades that women and minorities tend to turn away from the pursuit of careers in science and engineering. It is at this level that the improved teaching of science can lay the foundations for a broader understanding of science for as many students as possible and also attract many talented individuals who may have chosen other careers.

The Foundation supports programs in science for students at the high school level through enrichment projects of the student science training program, for college undergraduates through undergraduate research participation, for graduate science and engineering students by awarding graduate fellowships, and for advanced studies in research through post-doctoral fellowships. Through this broad-based approach, NSF directly reaches thousands of science and engineering students throughout the Nation at the high school, college undergraduate, graduate, and post-doctoral levels. The future of our Nation depends on our ability to capitalize on the talents of this Nation's youth in maintaining scientific leadership.

Through the Foundation's CAUSE (comprehensive assistance to undergraduate science education) program, support is provided to strengthen the undergraduate science education at both the 2- and 4-year colleges and universities. To date, 128 awards have been made through CAUSE to institutions in 41 States, the District of Columbia, and Puerto Rico. The Foundation projects 85 CAUSE awards in fiscal year 1978, and our authorization bill supports a program for 90 awards totaling $14.9 million in fiscal year 1979.

The CAUSE program was established by the Science Committee 3 years ago. More than half of the awards have gone to smaller colleges and universities with less than 5,000 students and 28 percent of the awards have gone to 2-year junior colleges. It is the smaller colleges and the rapidy growing 2-year institutions that are feeling the worst of the college financial crisis. The CAUSE program is an important element in helping maintain the strength of our Nation's colleges.

Mr. Chairman, I strongly endorse the Foundation's science education authorization contained in H.R. 11400. We have increased the authorization to $82 million for fiscal year 1979, and on my motion the committee report directs NSF to support the undergraduate research participation program at a $2 million funding level. With this science education authorization, the foundation can carry out one of its most central and traditional responsibilities, that of maintaining an effective scientific and engineering community for America.

In closing, I wish to point out that NSF's science education programs are substantially people programs that reach students of high ability and potential throughout the country. I urge approval of the bill authorizing these programs.

Mr. HARKIN. Mr. Chairman, I thank the gentleman from Florida (Mr. FUQUA) for his remarks, and I yield back the balance of my time.

Mr. HOLLENBECK. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I would like to take this opportunity to point out the leadership Mr. HARKIN has demonstrated in preparing H.R. 11400 for presentation today. Throughout our hearings and later markups, he set the tone by emphasizing the important role played by basic research in the future economic and scientific health of the Nation. I also wish to express my appreciation to my colleague from New York (Mr. WYDLER) for his support and assistance. On numerous occasions, he has expressed the conviction, which I share, that support for basic research is vital if we are to solve the pressing problems such as energy and materials shortages. The solutions to these problem will surely involve a great change in outlook over the next generation and it is the understanding provided by basic research which will be a major factor in determining that outlook.

Mr. Chairman, I rise in support of H.R. 11400, to authorize appropriations for the National Science Foundation for fiscal year 1979. In so doing, I wish to commend the Foundation's Director, Dr. Atkinson, as well as other members of the Foundation, for the strong program they have put forward. Over the years, the Foundation has been a major source of support for innovative basic research. Years later, much of this research bears fruit.

H.R. 11400 authorizes appropriations of $934,400,000 for the Foundation for fiscal year 1979. While I know, from the testimony we heard, that there are many exciting and extraordinary scientific projects which should be undertaken and which could easily use substantially greater funding, there are limits to financial resources. Therefore, it is doubly important that the Foundation make every effort to allocate its resources over the long term for the most effective pursuit of scientific research.

If there is one area in which I would slightly fault the foundation—and this is by no means to belittle its generally excellent programs—it is that there does not appear to be sufficient effort devoted toward truly long-range planning of investment in research facilities as well as in the training of young scientists. The committee report expresses this in one way by pointing out the controversy over the relative allocation of resources between "big science" and "little science." As part of that debate. the committee recommends, and I concur heartily that the funding for the conversion of the *Glomar Explorer* for ocean margin drilling be reduced from the $4.2 million requested to $1 million. I concur not because the research that may be performed would not be worthwhile, but I am uncertain, and I do not believe the foundation has sufficiently examined the alternatives. This project would require a $540 million commitment, in capital construction and operating costs over a 10-year period. Yet, it is not apparent to me that this is the best program for the expansion of knowledge of the ocean floor which could be undertaken. This research is vital as we seek to expand our understanding of basic geological processes; it has direct commercial application; and it may lead to greater understanding about the process by which mineral and energy deposits are laid down. But the decision to proceed with detailed design does not seem warranted until a more comprehensive examination of the understanding of the future of ocean drilling and Earth sciences is formulated.

This problem faces not only the Earth sciences, it faces other areas such as physics and astronomy, and, to a lesser extent, atmospheric sciences. It is essential that the foundation prepare longer range plans—plans which would extend throughout the lifetime of facilities to determine whether construction is in the

best interest of the sciences concerned, and to determine how scientific discovery will proceed most rapidly between different scientific fields accordingly as major projects are undertaken.

The need for long range planning is also apparent in the training of young scientists. In the late 1950's and throughout the 1960's, we trained large numbers of PhD's. Now, as the support for basic research levels off in proportion to the number of trained researchers, young scientists who are entering the job market find it very difficult to obtain steady employment in their chosen field. This problem is particularly acute in astronomy.

Training young people for science without thought to their future support is itself but a further example of the need for long range planning. It is a waste of talent and of resources to train people for careers which they cannot pursue. In sum, planning of scientific facilities and the training of scientists must be undertaken over a long term commensurate with the lifetime of the facilities and with the careers of the scientists. I strongly urge the foundation to make greater efforts in this direction and I would hope that the next year the foundation will be able to shed some further light on these problems.

Mr. Chairman, I would also draw my colleagues' attention to the increase of $4.4 million for science education. In particular, I am heartened by the innovative programs which the director of the Science Education Directorate, Dr. Rutherford, has undertaken. The committee's increase, in part, reflects the desire to fund some of the programs such as the science equivalent of Sesame Street for elementary school children which Dr. Rutherford wishes to pursue. More generally, I think his emphasis on broadening the basis of scientific understanding in the general population is terribly important. In an era when science and technology pervade all aspects of our daily life, it is important for everyone to have some knowledge about the major concepts of science and the principles of scientific inquiry.

This knowledge will provide the basis for general understanding of the changes in outlook which will occur as the Nation moves to solve its pressing problems. For instance, complex interactions between the use of energy, agricultural practices, and climate change may determine our ability to use fossil fuels in the future, or to continue the expansion of food producing lands, particularly in the developing countries. These interactions are comprehensible only to someone who is aware of the complex web of relationships which extend throughout the natural environment. But this understanding can only come with some familiarity—familiarity acquired at an early age—with the general principles and objects of scientific research. For this reason, I support the committee's recommended increase in funds for science education.

In closing, I urge my colleagues to join me in supporting H.R. 11400. Let me say that while I have pointed out a need for greater diligence in the foundation's planning, its overall effort appears to be successful. The witnesses at our subcommittee hearings made apparent, as never before, that we are undergoing an amazing scientific revolution—a revolution which is fully equivalent to the total change in outlook which occurred during the 16th and 17th centuries. This revolution extends through all sciences from particle physics to cosmology to atmospheric sciences, oceanography and to the social sciences as well.

Mr. Chairman, I yield 5 minutes to the ranking minority member, the gentleman from New York (Mr. WYDLER).

Mr. WYDLER. Mr. Chairman, I rise in support of H.R 11400, to authorize appropriations in the amount of $934,400,000 for the National Science Foundation for fiscal year 1979.

First, let me thank the gentleman from New Jersey, my colleague Mr. HOLLENBECK, for his generous remarks and let me congratulate him for the outstanding work he has done as ranking minority member on the Subcommittee on Science, Research and Technology in helping to bring this bill to the floor. I think he has done a superb job in understanding some of the basic challenges in complex areas of scientific research. This is a difficult task, and his efforts have been of great assistance to the committee.

Mr. Chairman, the National Science Foundation has more than proved itself as a leader in the support of innovative basic research. But there are limits to available resources. For this reason, as last year in my remarks, I would continue to stress the importance of long range planning for research programs—programs which through their understanding of the physical world, the environment, and of the impact of human activities upon the environment will aid us in constructing a vision of the future which will enable us to see beyond the difficult problems facing this Nation in the coming years.

Mr. Chairman, programs supported by the National Science Foundation are extremely varied. Some, such as the understanding of reactions in the interior of the Sun, carried out in the solar physics program, may enable us to understand better the behavior of materials under extreme conditions and thus may enable us to obtain fusion reactions here on Earth. The same program may lead us to a greater understanding of the effects of the solar winds and the solar magnetic fields upon the Earth's climate.

That could be of great importance to our understanding of climate change with which the combustion of fossil fuels and agricultural practices are intimately connected. In the areas of mathematics and of computer sciences, we are beginning to approach a time when we can ask with reasonable precision what are the limits of problems which can be solved by computers. In the area of materials research, techniques are being developed which will be of enormous value in electronics. Advances in ocean science may teach us the process by which mineral deposits and petroleum, natural gas, and coal fields are laid down. This knowledge could tell us, on the one hand, where to uncover new resources, but it may also make us aware of possible limits on the availability of resources regardless of the expenditure of energy.

Mr. Chairman, these are just a few examples of the important research being supported by the National Science Foundation. As my colleague, Mr. HOLLENBECK, mentioned—and as I noted earlier—it is important for the foundation to undertake much greater efforts in long-range planning for the training of young scientists and for the construction of major research facilities. I hope that the foundation, over the coming year, will make a greater attempt in this direction. I urge my colleagues to join me in supporting H.R. 11400.

Mr. TEAGUE. Mr. Chairman, I yield such time as he may consume to the gentleman from Washington (Mr. MCCORMACK).

Mr. MCCORMACK. Mr. Chairman, I rise in support of this bill, and I commend all those who have worked to prepare it.

Mr. Chairman, as the Members know, I have been studying the possibility of harnessing solar energy. The Sun, upon which all life on this planet depends, holds almost unlimited potential as a future energy source. Scientists and engineers are just beginning to learn how to use solar energy to heat and cool our homes efficiently, and someday, clean, unending, inexpensive solar energy will surpass fossil fuels as an energy source.

Today, however, I would not like to speak only of those scientists and engineers working to convert solar energy from a dream to a reality. While considering the fiscal year 1979 National Science Foundation authorization, I would like to point out that some of the money the House will authorize today will provide support for fundamental research in solar physics and astrophysics, two scientific disciplines that are essential to a better understanding of the Sun and consequently, to our future progress in using solar energy. To harness the Sun effectively, we must first understand how it works, and this is precisely what NSF-supported scientists are trying to accomplish.

In laboratories and observatories from Arizona to South Dakota, from Colorado to Massachusetts, the National Science Foundation has been responsible for work that is changing our whole outlook on how to study the Sun. There have been exciting new discoveries in solar and astrophysics in recent years, and these scientific breakthroughs will have a profound impact on our knowledge, not only as it relates to the Sun, but as it contributes to such diverse fields as climate and communications.

For almost 100 years, scientists have studied the Sun by dissecting its parts. Interpretations of miniscule bits and pieces of information have led to a credible, although not very comprehensible, solar model. Recently, however, some scientists have decided it was time

to approach the study of the Sun from a different perspective: Study it not as a composition of independent parts, but rather as an entity, as a star. Instead of considering the Sun to be the sum of its parts, scientists are now saying that perhaps we should study the Sun as a whole. The results have been dramatic, and in some ways, unexpected.

For example, scientists from the University of Arizona, the National Center for Atmospheric Research in Boulder, and the University of Colorado, in seeking to measure precisely the diameter of the Sun, were frustrated by small perturbations in the Sun's edge. These perturbations, or changes, in the Sun's diameter seemed to indicate that the entire Sun was oscillating. Is the Sun really ringing like a gong, constantly changing shape? If so, it is like the Earth pulsating during a violent earthquake. While this theory of solar oscillation still remains questionable, if confirmed, it will be a new and fundamental discovery in solar—and stellar—science.

Another exciting new area of solar science is the case of the missing neutrinos, or the "neutrino deficiency," as it is sometimes termed. Neutrinos are very tiny, uncharged, and, for practical purposes, massless particles of matter which rarely react to anything. Scientists have determined that studying neutrinos emitted by the Sun can provide them with the opportunity to measure events taking place inside the Sun itself.

A single neutrino can pass through the Sun, and since the number of neutrinos produced by the Sun varies with the temperature of the thermonuclear reaction, scientists should be able to draw significant conclusions about the reactions occurring in the Sun's core by counting the number of neutrinos emitted toward the Earth. Even with sophisticated, Earth-based neutrino counters, such as the one located in South Dakota and operated by Brookhaven National Laboratories, counting these elusive particles is not easy. Counts have shown significant quantities of neutrinos to be "missing." Perhaps, as some postulate, the Sun is altering these neutrinos before they reach the Earth; or perhaps, the solar oscillations are cooling the thermonuclear furnace, and therefore, reducing the production of neutrinos. Whichever one of these, or any other as yet unconceived theory proves correct, the foundation of astrophysics could change because of the "neutrino deficit."

As Beverly Lynds, assistant director of Kitt Peak Observatory in Tucson, Ariz., said,

> The lack of neutrinos is an indication that something (in our understanding of the sun) is wrong. Is it with our theory of the sun's structure or with that of atomic reactions? If it is the model of the sun, then the whole theory of stellar evolution could be wrong.

A third puzzle that NSF supported solar scientists are attempting to unravel is the inconsistent nature of the Sun. Mathematical and computer modeling have become favorite tools of scientists who must deal with situations that cannot be reconstructed in the laboratory. Clearly, scientists cannot build a miniature Sun or Earth, and because of its inconsistency, the Sun has yet to be represented by an accurate computer model. One way astronomers are seeking to solve this problem is to search the universe for a solar twin in a different phase of its life in order to learn more about solar cycles. Another possible solution is, of course, to study and learn as much about the solar cycles and the Sun's differential rotation, sunspot activities, and magnetic cycles. Changes in the Sun can have profound effects on life here on Earth, ranging from variations in the world's climate with its subsequent impact on food production and energy consumption, to disruptions in worldwide communications, and electrical power blackouts.

Mr. Chairman, the mysteries of science can only be unraveled by the hard work of dedicated scientists. By focusing on a single research area—astrophysics—I have attempted to show my colleagues in the House how the basic scientific research as supported by the NSF can provide both short-term and long-range solutions to a variety of problems. Solar research, especially as it relates to solar energy development, is a popular subject today. What we should keep in mind is that research into the functioning of the Sun, as expressed by solar astronomers, and astrophysicists, can have an equal, if not greater, long-term impact on the world. However, this impact may not be felt for decades or even centuries. NSF's programs in these areas have been on the frontier of an exciting discipline, one with huge potential payoffs, and one that often goes unnoticed by those of us whose primary concerns are the immediacy of the current situation. NSF and the scientific community should be commended for their patience and dedication.

Mr. HOLLENBECK. Mr. Chairman, I yield 5 minutes to the gentleman from Arizona (Mr. RUDD).

Mr. RUDD. Mr. Chairman, I have been troubled by the sizable yearly increases in the National Science Foundation's budget, and this year is no exception.

The overall increase in this year's authorization is 8 percent above the foundation's' current budget plan.

NSF basic research support, which has increased an average of 18.4 percent per year since 1969, is increased again by 10 percent in this bill's authorized levels.

I would like to include for the RECORD a table that shows these increases for each budget activity:

NATIONAL SCIENCE FOUNDATION—SUMMARY OF FISCAL YEAR 1979 BUDGET BY PROGRAM AND FUNDING

| | Actual, fiscal year 1977 | Current plan, fiscal year 1978 | Budget request, fiscal 1979 | House Science and Technology Committee mark | Difference, fiscal years 1979 and 1978 | Percen. differencet fiscal years 1979 and 1978 |
|---|---|---|---|---|---|---|
| Research and related activities: | | | | | | |
| Mathematical and physical sciences and engineering | $224,419,502 | $246,015,000 | $268,300,000 | $265,100,000 | +$19,085,000 | +7.7 |
| Astronomical, atmospheric, earth and ocean sciences | 188,230,077 | 210,080,000 | 227,300,000 | 224,100,000 | +14,020,000 | +6.7 |
| U S Antarctic program | 45,295,316 | 48,233,000 | 50,700,000 | 53,100,000 | +4,867,000 | +10.1 |
| Biological, behavioral and social sciences | 126,607,209 | 142,215,000 | 158,000,000 | 158,000,000 | +15,785,000 | +11.1 |
| Basic research stability grants | 0 | [1] 4,500,000 | 0 | 0 | −4,500,000 | |
| Applied science and research applications | 62,358,910 | 57,903,261 | 73,900,000 | 67,000,000 | +9,096,739 | +15.7 |
| Scientific, technological, and international affairs | 20,661,511 | 24,555,031 | 24,300,000 | 24,300,000 | −255,031 | −1.0 |
| Program development and management | 45,530,012 | 52,014,457 | 54,800,000 | 54,800,000 | +2,785,543 | +5.3 |
| Subtotal | 713,102,537 | 785,515,749 | 857,300,000 | 846,400,000 | +61,394,313 | +7.7 |
| Science education activities: | | | | | | |
| Scientific personnel improvement | 30,912,605 | 32,221,397 | 29,800,000 | (29,800,000) | (−2,421,000) | (−7.5) |
| Science education resources improvement | 28,196,055 | 28,156,000 | 29,700,000 | (30,700,000) | (+2,144,000) | (+7.6) |
| Science education development and research | 11,066,833 | 8,193,000 | 11,700,000 | (14,000,000) | (+5,807,000) | (+70.9) |
| Science and society | 4,088,062 | 5,388,000 | 6,400,000 | (7,400,000) | (+2,012,000) | (+37.3) |
| Subtotal | 74,263,555 | 73,958,397 | 77,600,000 | [2] 82,000,000 | +8,042,000 | +10.9 |
| Special foreign currency | 4,403,426 | 5,434,055 | 6,000,000 | 6,000,000 | +565,945 | +10.4 |
| Total NSF funding [3] | 791,769,518 | 864,908,201 | [4] 940,900,000 | 934,400,000 | +69,491,799 | +8.0 |

[1] NSF has received committee approval to reprogram these funds into fiscal year 1978 basic research activities, following an administration deferral on this item. See p. F–1 of NSF budget estimate to the Congress.

[2] This science education total is $500,000 more than NSF expected to receive when it provided the parenthetical figures for each subactivity in answer to a subcommittee question concerning earmarking of funds with a 5-percent increase (to a total of $81,500,000) in the requested amount for fiscal year 1979. The subcommittee did not object to the proposed NSF increases, but did not earmark the additional $500,000 in the ultimate $82,000,000 mark for any specific purpose. (Parenthetical figures were provided by NSF congressional liaison.)

[3] These totals do not reflect unobligated balances, carryovers, and a total of $952,754 of unused funds that NSF returned to the U.S. Treasury at the end of fiscal year 1977. These items are displayed on p. A–8 of the fiscal year 1979 NSF budget estimate tc the Congress.

[4] The budget request includes a $6,900,000 administration deferral from fiscal year 1978.

Sources: National Science Foundation (fiscal year 1979 budget estimate to the Congress) House Committee on Science and Technology (staff).

Mr. Chairman, there are other troubling areas with the National Science Foundation.

There is the continuing demonstrated discrimination against certain areas of the country in the geographic distribution of NSF funds.

Only five States last year received more than 42 percent of all NSF research awards, while nine other States in the South received a combined total of only 6.4 percent of all NSF support.

The Foundation has done nothing to correct this discrimination in the way that research support is allocated.

In fact, I have recently been provided an internal Foundation memorandum which states that the Foundation should not acknowledge or give credibility to complaints or charges that such geographic discrimination is being practiced, when the facts are plain that it is, which indicates a refusal of NSF to do anything real to correct the problem.

Another problem I have with the Foundation's program is its failure to audit and monitor projects it supports with millions of taxpayers dollars.

The Department of Health, Education, and Welfare recently audited a number of large universities receiving Federal R. & D. support, and found blatant misuse and waste of Federal funds.

Mr. Chairman, I have discussed these and other problems in my dissenting views on this bill, which is included in the committee's report on H.R. 11400.

I hope that we will be able to solve these problems soon.

I would like to include my views from the committee report at this point in the RECORD:

DISSENTING VIEWS OF REPRESENTATIVE ELDON RUDD

There are several disturbing trends and questionable assumptions that have marked the history of National Science Foundation budget authorizations over the past 10 years.

I strongly hope that closer consideration will be given to these matters in future congressional action on the NSF budget and programs, as part of our important legislative oversight responsibilities.

1. The steady upward trend of NSF budget increases since 1969 cannot be justified by the impact of inflation on academic science research efforts, or the Foundation's record of support to strengthen and uplift the Nation's scientific community.

This bill authorizing $941.3 million (including a $6.9 million deferral from fiscal year 1978) is $76.4 million more than the Foundation's current fiscal year 1978 plan, an increase of 8.8 percent. This on top of the 9.2 percent increase over the fiscal year 1977 program.

The bill includes $751 million for basic research, a 10 percent increase over the current fiscal year 1978 plan, which itself is an 11.5 percent increase over the fiscal year 1977 amount. NSF is the leading Federal supporter of basic research at colleges and universities, and funds for this purpose comprise about 80 percent of the Foundation's total budget.

The Foundation's basic research project support has increased an average of 18.4 percent per year since fiscal year 1969, and will have increased a total of 203 percent in just 10 years if this bill is approved at its current proposed level.

In constant (1969) dollars, using a Consumer Price Index deflator to adjust for inflation, NSF basic research project support has had a real increase between fiscal year 1969 and fiscal year 1977 of more than 8.4 percent above what is necessary to account for inflation.

The following table accurately summarizes NSF basic research budget trends since fiscal year 1969:

NATIONAL SCIENCE FOUNDATION BASIC RESEARCH BUDGET INCREASES, FISCAL YEARS 1969–79

[Dollar amounts in millions]

| Fiscal year | Amount | Dollar increase | Percent increase | Total increase since fiscal year 1969 Amount | Total increase since fiscal year 1969 Percent |
|---|---|---|---|---|---|
| 1969 | [1] $247.6 | | | | |
| 1977 | [2] 612.0 | +$364.4 | +147.0 | +$364.4 | +147.0 |
| 1978 (current plan) | [3] 682.6 | +70.6 | +11.5 | +435.0 | +175.0 |
| 1979 (committee mark) | [4] 751.0 | +68.4 | +10.0 | +503.4 | +203.0 |

[1] NSF fiscal year 1971 budget to Congress (fiscal year 1969 actual column).
[2] NSF fiscal year 1978 budget to Congress ("Budget in Brief," p. 12).
[3] NSF fiscal year 1979 budget to Congress ("Budget in Brief," pp. 14, 30).
[4] This is $4,400,000 less than NSF's request, which was transferred by the committee into science education programs.

The tremendous increase in NSF basic research support since 1969 is underscored by the fact that creation of the Energy Research and Development Administration in 1975 resulted in the transfer of about $52 million of NSF-funded energy research to that agency.

THE REAL IMPACT OF INFLATION ON R. & D.

In years past, Congress has been told that these increases in NSF basic research support to colleges and universities were justified by the impact of inflation on academic institutions. Last year, based on Joint Economic Committee projections, the staff of this committee told members after the subcommittee had marked up the fiscal year 1978 NSF authorization that a $15.1 million increase in basic research support was needed to account for a 7 percent inflation rate in this area. A chief reason given for this increase was that faculty salaries were reported to be moving up faster than the general rate of inflation.

The committee approved the increase, despite questions by several members about this assumption of a 7 percent inflation impact. A study of inflation at academic institutions by D. Kent Halstead of the National Institute of Education now shows that this inflation projection was erroneous.

The Halstead study of inflation at colleges and universities since 1971 shows that the average rate of inflation for all areas associated with basic research is 5.3 percent. The actual inflation rate for NSF-supported research would be lower than 5.3 percent, since manpower costs—faculty salaries and support for graduate and research assistants—which comprise more than 50 percent of NSF awards have increased at an average rate of only 4.8 percent per year since 1971, not at a rate higher than inflation generally as the committee was led to believe.

A breakdown of rising prices paid by colleges and universities for goods and services associated with basic research, as shown by Halstead's NIE study, is as follows:

*Average percentage increase per year since 1971*

*Basic research item*

| | |
|---|---|
| Manpower costs: | |
| Faculty salaries | 4.7 |
| Graduate and research assistants | 4.9 |
| Services: | |
| Data processing | 3.9 |
| Communication | 5.3 |
| Transportation | 6.0 |
| Printing and duplicating | 6.5 |
| Supplies and materials | 5.1 |
| Equipment | 5.3 |
| Administration and institutional services | 6.4 |

This error in adjusting NSF's annual basic research budget to compensate for inflation has resulted in the authorization of $12–$15 million more each year than was intended, in order to give the Foundation a real growth of 2 to 3 percent per year. This is an added bonus of $36–$45 million just since the fiscal year 1977 authorization.

COMPARATIVE R. & D. EXPENDITURES

Another justification offered for the substantial increases in NSF's basic research budget over the years has been the comparative R. & D. investment of other nations whose scientific and technological advances pose an economic or strategic threat to the United States.

It has been suggested that since the Soviet Union devotes a larger portion of its Gross National Product to R. & D. than the United States, and because such nations as Canada, France, West Germany, Japan, and the United Kingdom also devote a large proportion of their GNP to R. & D., that the U.S. Government should increase its spending in this area.

These arguments, while persuasive, are designed to deceive. If these nations are outstripping the United States in research and development, it is not because of a greater investment than the United States. It is because of the application of criteria for supporting research that is of national importance, wiser allocation of funds and resources, better fiscal management, and supporting a wider range of superior talent.

The United States is allocating 64.5 percent more funds to R. & D. efforts each year than the Soviet Unon, even though our investment is a smaller proportion of GNP. U.S. R. & D. expenditures in 1975 were $35.2 billion, compared to $21.4 billion for the Soviet Union.

The United States is spending $5.3 billion more each year on R. & D. than the combined total of all funds being spent by Canada, France, West Germany, Japan, and the United Kingdom. U.S. investment is 17.9 percent more each year in R. & D. than the total investment of these five nations in this area.

The following statistical tables compare the Gross National Product and annual R. & D. expenditures of the United States and these other competitive nations. (The statistics are from the National Science Board's Science Indicators—1976, pages 185–186, and were converted into U.S. dollar equivalents at the average annual exchange rate by the Congressional Research Service of the Library of Congress.):

GEOGRAPHIC DISTRIBUTION OF NSF AWARDS

Another disturbing aspect of NSF support for basic research at colleges and universities throughout the Nation is the apparent consistent favoritism for institutions in several large States, and discrimination in the award of funds to institutions in other parts of the country.

The statistics on the geographic distribution of NSF basic research funds speak for themselves.

Institutions in only four States received more than 42 percent of all funds awarded by NSF in fiscal year 1977. Those States—California, Colorado, Massachusetts, and New York—accounted for $290.9 million of the $685.1 million awarded by the Foundation that year.

Yet nine other States—Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, and Tennessee—received a combined total of only $44.3 million, which is only 6.4 percent of all fiscal year 1977 NSF expenditures. These States received only 15.2 percent of the amount awarded to the four preferred States above, and only slightly more than twice the amount awarded to only one institution—Massachusetts Institute of Technology, which alone received $20.9 million.

Unlike the Department of Defense and other Federal mission agencies that support basic research on a solicited basis with national priorities and objectives in mind, the National Science Foundation awards unsolicited research proposals under the legislative mandate to support and uplift science throughout the United States.

Apparently, NSF is violating that mandate by failing to distribute grant awards equitably.

Statistics on NSF's geographic distribution of awards and on the geographic success ratio for proposals submitted to the Foundation both suggest a conscious policy of discrimination in the way that NSF decisionmakers award funds to academic institutions around the country.

Other factors, including the makeup of NSF's top management, which is heavily dominated by former administrators and researchers from institutions favored by NSF funding patterns, or who have returned to those institutions after serving in management positions at the Foundation, pose serious questions about NSF's geographic distribution of awards and its failure to comply with congressional mandates against undue concentration of awards in only a few institutions or States.

Unfortunately, the actions proposed by NSF to achieve a greater geographic distribution offer no relief in a reasonable period of time. It is extremely doubtful in view of the positions taken by the National Science Board and the Foundation's management that Congress will see any progress made on a more equitable distribution of NSF support in fiscal year 1978. There is also only a remote possibility that there will be any improvement in fiscal year 1979.

It appears clear that Congress must take some positive legislative action to correct this problem of discrimination in the geographic distribution of NSF research awards, in order to reaffirm the original purpose for which the Foundation was created.

That purpose was to be a source of Federal funds to benefit research and development efforts among a large array of researchers throughout the U.S. scientific community, and to uplift science rather than support just elite science, for the benefit of the entire country.

The history of NSF's budget increases over the years, and the inequitable geographic distribution of R. & D. funds by the Foundation, suggest that NSF has abandoned the mandate of its organic act and subsequent actions of Congress in order to become a source of large and continuing subsidies for the administrative costs primarily of some of the Nation's larger, prestige institutions.

2. Recent Federal audits disclosing careless and unauthorized use of Federal research funds by recipients of NSF grant awards demonstrate the need for improved and more vigilant management practices and greater accountability by both grantees and the National Science Foundation.

A widespread pattern of careless bookkeeping, alleged misuse of funds by research grant recipients, and other abuses involving hundreds of millions of dollars awarded by NSF and other Federal agencies has been discovered in audits of colleges and universities by the Department of Health, Education, and Welfare.

Some of the discovered irregularities include: (1) Failure to document work performed on Federal contracts; (2) Permitting researchers to spend less time on projects than specified in grant proposals and contracts; (3) Allowing unauthorized transfer of funds between projects; (4) Paying more than once for the same work; (5) Using Federal funds to pay for work not related to the awarded proposal; (6) Not accounting for equipment and supplies; (7) Receiving Federal funds to perform research work that has already been done by the applicant with funds from another source; (8) Abandoning a project once Federal funds have been

awarded for specific work, and not returning the funds.

In light of these HEW audit revelations, I would like to have seen an opportunity for the full committee to discuss with Foundation officials their efforts to detect and eliminate such abuses in NSF-supported research projects. However, this was not possible since for the first time in many years the traditional NSF Director's posture briefing before the full committee was not held this year.

The Foundation has established a new Office of Audit and Oversight in response to concerns that had been raised about its management of Federally-funded R. & D. projects. But it is not apparent that the Foundation has taken adequate steps to provide this new office with adequate resources and an aggressive mandate that are necessary to perform a sufficient number of on-site audits of ongoing projects to find and eliminate these widespread abuses.

The Foundation should adopt a positive attitude in establishing effective accountability over funds entrusted to it by the Congress. Colleges and universities and other NSF grantee institutions should be made to meet certain minimum management standards in order to qualify for participation in NSF support.

For example, academic institutions which do not have a complete inventory of their scientific equipment, or which take no action to demonstrate that they are making good efforts in establishing research management practices, should not be qualified for NSF support.

The National Science Foundation should also take steps to insure that research supported is in fact carried out. Under the present system, there is no guarantee that NSF support will actually go for research described in the research proposal, since colleges and universities commingle the funds for R. & D.

I personally cannot vote in favor of the Foundation's authorization until this management situation has been improved, and the Foundation can demonstrate to Congress and the public that current abuses are being eliminated.

Because of the uniqueness of the Fondation's program, I believe that Congress should carefully review the current practice of relying on the Department of Health, Education, and Welfare to perform fiscal and program audits for most NSF activities.

In view of the Foundation's approaching $1 billion annual budget, it would seem to dictate that the Foundation establish and play a direct and significant role in auditing functions for which it is responsible.

This would not preclude HEW's continued role as the lead audit agency for Federally-supported R. & D. projects, and would still be supplemented when deemed advisable with audits by the General Accounting Office.

Mr. BAUMAN. Mr. Chairman, will the gentleman yield?

Mr. RUDD. I yield to the gentleman from Maryland.

Mr. BAUMAN. Mr. Chairman, I want to commend the gentleman from Arizona (Mr. RUDD) for his minority views, which I have had occasion to read. I know that his is a very difficult position to take because of the enormous scientific and educational establishment that has been built up over the years, largely financed with Federal funds.

Certainly we need continuing research and other scientific activities, but as the gentleman eloquently states in his additional views, the question is, How much shall be spent and is the money being properly spent?

Mr. Chairman, there have been a great many figures in public life in recent years who have made a political career out of monthly criticism, unjustly perhaps, some of the expenditures by the National Science Foundation; and certainly I have been very critical on occasion. However, I have also noticed that when "push comes to shove", as it is said in the vernacular, the same public leaders are almost never willing to make the hard decisions and impose the restrictions on these agencies that are really needed.

In fact, Mr. Chairman, I have read articles in major magazines about all the things that should be done to limit NSF, but they are not done. I think the responsibility lies right here in the Congress; and the gentleman from Arizona (Mr. RUDD), as a member of this committee, certainly can take credit for pointing out the deficiencies in the operation of the National Science Foundation and the lack of justification for the continual increases in that agency's budget. Certainly also the people who sent him here should know of the role he has played in this instance.

Mr. RUDD. Mr. Chairman, I thank the gentleman from Maryland (Mr. BAUMAN) for expressing his views.

There is always room for dissent in our system of Government. That, however, does not detract from the great job which the gentleman from Texas (Mr. TEAGUE) has done or that our minority leader, the gentleman from New York, has done.

Mr. TEAGUE. Mr. Chairman, I yield such time as he may consume to the gentleman from Alabama (Mr. FLIPPO).

Mr. FLIPPO. Mr. Chairman, I rise in support of H.R. 11400. The National Science Foundation's budget, which this bill would authorize for fiscal year 1979, is an important "balance wheel" in the context of the entire Federal research and development system. Basic research supported by the NSF is often vital to the solution of national problems which you might expect to fall primarily under the responsibility of the mission agencies. That is not by any means the result of faulty planning of research efforts on the part of the mission agencies. On the contrary, this situation exists because we often do not know what research is going to pay off in the long run. We need a pluralistic yet cooperative system which involves different approaches by different agencies.

For example, 3 years ago Illinois experienced the most severe outbreak on record of an insect pest called soybean thrips. This pest had the potential for dramatically reducing the soybean crop that year and causing enormous financial losses across the State. This potential loss of the soybean crop was further complicated by two other factors—a common herbicide used in weed control was toxic to the soybean seedlings, and the below normal temperatures that year resulted in slow growth early in the season.

Very little basic information was available on the insect pest—the soybean thrips. However, the NSF and the Department of Agriculture had jointly sponsored a large project which had previously determined that the soybean plant has a large capacity to compensate for severe injury, provided that the injury is inflicted during early vegetative growth. This information led to a logical recommendation to the farmers in Illinois: Hold back on insecticides unless the seedling soybean plants were actually being killed by the thrips.

Extension service scientists and county agents were successful in persuading most farmers to hold back on the use of insecticides, which at that point would have been expensive, unnecessary and possibly very harmful to the crop and to the natural enemies of the thrips. As a result, soybean yield was not impaired, and the risk of this pest's becoming a serious threat in the region—by the destruction of its natural enemies by insecticides—was averted.

Mr. Chairman, we could go on and on giving examples like this of the importance of the knowledge obtained from basic research. Although at first glance some of the projects may seem to be unrelated to real problems, it may only be years later that these projects prove invaluable for the solution of real problems. I encourage my colleagues to support basic research and the important role of the NSF in basic research by voting for this bill.

Mr. Chairman, I have been concerned that the National Science Foundation should follow the charge in its statutory authority to avoid undue concentration of science in the United States. I particularly want to see more even geographical distribution of NSF funds. I was very pleased, therefore, to see that the Foundation is initiating a program to increase geographical distribution of its funds. States which have little science activity of Federal science funds will be eligible for the program. Each State which is funded will determine for itself how scientific activity best be encouraged and how the State's competitive ability for getting Federal funds might be improved.

This is important to insure that the important diversity of research be achieved and that the full potential of scientific resources throughout the Nation be utilized. I look forward to the contributions which will be made by my home State of Alabama, which will be eligible for this program. I am sure that bringing the scientific community of all regions into the mainstream of research will significantly benefit the basic research which this bill supports. This is another of the many reasons to support H.R. 11400.

● Mr. BROWN of California. Mr. Chairman, the Breaux amendment to add $3.2 million to the National Science Foundation authorization for the purpose of doing an engineering feasibility study on refitting the *Glomar Explorer* poses a few problems for me.

I most wholeheartedly endorse exploring and gaining further understanding of the continental margins, and I generally view our exploration of the oceans as a burgeoning scientific venture, and deserved so. Such a program has signifi-

cant scientific and practical benefits and would greatly complement the vast amount of important knowledge accumulated through the present deep sea drilling project.

This program to extensively explore the continental margins represents a significant change in the DSDP, as indicated by the need to have a research vessel with new drilling capabilities. My concern, and that of the Science and Technology Committee, is that we fully understand this commitment and that we take the proper approach to fullfilling it. That is, we should consider how this new program is to fit into the overall NSF program, what priority it is to have, how well the NSF can meet the goals of the program, and whether or not another agency, such as DOE or the Interior's Geological Survey, should be involved in the research. On page 16 of the report which accompanies H.R. 11400 it states:

> There is no indication that the National Science Board, NSF's policymaking body, has authorized the project. There is no request for Congressional approval of the project itself. There is no discussion of what other "Big Science" projects will have to be foresaken if the deep sea drilling project goes ahead.

I feel the Science and Technology Committee is correct in these observations.

Therefore, despite my real desire to see this type of research conducted, and although I understand and respect the opposing arguments of my friends and colleagues, I believe the long-term health of scientific planning and therefore science itself, would best be served by supporting the views of the Science and Technology Committee and voting against this amendment. And, Mr. Chairman, I urge my colleagues to do likewise.●

● Mr. KRUEGER. Mr. Chairman, to maintain our preeminent position in international science and the resulting benefits to the economy and to the quality of American life, it is imperative that we continue to provide funds to the National Science Foundation. The NSF was established in 1950 to benefit scientific endeavors for reasons of national security and economic well-being. Since that time the NSF has used these funds to support basic research and science education and, more recently, to aid applied research on selected national problems. Over the years the NSF has been most effective in stimulating scientific research and education programs. Through the programs of this agency we have made many advances, whether by individual students in various educational programs or for all mankind through radio telescopic discoveries in the universe.

The NSF budget request was well within reason; in fact, many thought the budget request for scientific programs was too small. The only major changes from the President's budget resulted from the committee's belief that the additional funds were needed for science education, which was increased from $77.6 million to $82 million, and for the U.S. Antarctic program, increased from $50.7 million to $53.1 million. The other changes were made to reduce the budget to an acceptable level. It would have been preferable to allocate more funds for the advancement of science; however, this would have caused an even greater budget deficit than we currently face. The NSF authorization recommended by the Science and Technology Committee is reasonable and worthy of our support, with only a $0.4 million difference between it and the President's request.

H.R. 11400 was reported unanimously by the committee, and the report makes recommendations which should result in more efficient allocation of NSF funds. The progress of American science is important to the future of America and adequate funding for the NSF is the most important method of promoting our science and insuring its continued success.●

● Mr. LEGGETT. Mr. Chairman, I am pleased this afternoon to voice my support for the amendment being offered by my distinguished colleague from Louisiana (Mr. BREAUX).

The President, in his proposed fiscal year 1979 budget, included $4.2 million in budget authority for the initiation of studies necessary to determine the economic and technological feasibility of converting the *Glomar Explorer* for deep ocean research.

As an oversight, I am sure, the Science and Technology Committee approved only $1 million of that request. This amount is woefully inadequate and obviously would not provide the National Science Foundation with the funding they will need to do the evaluation.

My colleagues will no doubt recall the *Glomar Explorer* was constructed by the Summa Corp., a Howard Hughes company, under contract from the Central Intelligence Agency. It was built at an estimated cost of $240 million. Its one and only mission was the recovery of a sunken Soviet submarine from the bottom of the Pacific Ocean.

At this very moment, the *Explorer* sits idle in my congressional district with the mothball fleet at Suisun Bay, Calif. This is indeed an unfortunate waste of the taxpayer's dollars for the construction of this vessel, not to mention the waste of its superior deep ocean research capability.

As chairman of the Subcommittee on Fisheries, and Wildlife Conservation and the Environment, I have been working for several years to get this most remarkable ship back to sea as an active participant in our rapidly expanding national ocean exploration and mineral development effort.

Mr. Chairman, I had the pleasure last summer of personally inspecting the *Glomar Explorer* moored at Suisun Bay. I found the vessel to be in surprisingly excellent condition and with the proper modification, I understand, quite seaworthy.

The amendment offered today would reinstate an additional $3.2 million authorization which would allow the National Science Foundation to proceed with their detailed engineering studies. These studies are needed to determine the type of drilling string and well support system modifications necessary in the conversion of the *Glomar Explorer*.

The proper utilization of the *Explorer* is an essential component in our proposed $450 million ocean margin drilling program for the next decade. This vessel can maintain position for deep water drilling under the oceanographic conditions far better than a new "large" ship. The vessel motions are less than those of "large" drilling ships now operating in the same environmental conditions. This vessel's size allows for the incorporation of all needed laboratory and scientific accommodations on board.

We must be deliberate and cost-effective in our actions. Since this vessel is already in the U.S. Government inventory, the cost of operating the *Explorer*, even with the needed modification, would be significantly less on a daily basis than a contractor-owned large drilling ship.

We cannot and should not neglect the *Glomar Explorer*'s potential beyond utilization as a drilling ship. Obviously, its use for deep sea exploration and underwater recovery has been established. But what of the other possibilities—they defy the imagination! How many ships have been lost at sea through the years? How many billions of dollars worth of treasure have been lost on the ocean bottom? This ship most certainly has potential as a deep sea treasure hunter.

The stakes in deep ocean mining alone are gigantic. In the region between Hawaii and Central America, just north of the equator, an estimated 1.5 trillion tons of manganese-rich nodules lie on the ocean floor at depths of about 15,000 feet. These nodules contain about 29 percent manganese, which is essential in making steel. We are now totally dependent upon imported supplies of manganese, which come largely from Brazil and the African Nation of Gabon. The nodules also contain about 25 percent cobalt, a metal particularly important in the manufacture of alloys used in the electrical and aerospace industries. We today import all of our cobalt—almost all of it—from Zaire. The possibilities for undersea mining are endless.

To allow this superb vessel, with its magnificent capabilities, to remain idle and to deteriorate with the remnants of our World War II fleet in Suisun Bay, is absurd. We have within our grasp the ability to make monumental progress in deep sea development. Rejection of this amendment would slow that momentum to a crawl. Support would reaffirm our national commitment to expand our mineral resource in that great unexplored and undeveloped frontier—the sea. The technology is at hand, the time is at hand. I urge you to join me in support of this amendment and in support of H.R. 11400.●

Mr. HOLLENBECK. Mr. Chairman, I

have no further requests for time, and I reserve the balance of my time.

Mr. TEAGUE. Mr. Chairman, I have no further requests for time, and I reserve the balance of my time.

The CHAIRMAN. There being no further requests for time, the Clerk will read.

The Clerk read as follows:

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That this Act may be cited as the "National Science Foundation Authorization Act for Fiscal Year 1979".

SEC. 2. (a) There is hereby authorized to be appropriated to the National Science Foundation for the fiscal year 1979 for the following categories:

(1) Mathematical and Physical Sciences and Engineering, $265,100,000.

(2) Astronomical, Atmospheric, Earth, and Ocean Sciences, $224,100,000.

(3) United States Antarctic Program, $53,100,000.

(4) Biological, Behavioral, and Social Sciences, $158,000,000.

(5) Science Education Programs, $82,000,000.

(6) Applied Science and Research Applications, $67,000,000.

(7) Scientific, Technological, and International Affairs, $24,300,000.

(8) Program Development and Management, $54,800,000.

(b) Of the total amount authorized under subsection (a)(6)—

(1) $2,000,000 is authorized for a "Handicapped Research Program"; and

(2) $250,000 is authorized for the design of a program in Appropriate Technology.

SEC. 3. Appropriations made under the authority provided in sections 2 and 5 shall remain available for obligation, for expenditure, or for obligation and expenditure for periods specified in the Acts making the appropriations.

SEC. 4. From appropriations made under this Act, not more than $5,000 may be used for official consultation, representation, or other extraordinary expenses upon the determination of the Director of the National Science Foundation, and his determination shall be final and conclusive upon the accounting officers of the Government.

SEC. 5. In addition to the sums authorized by section 2, not more than $6,000,000 is authorized to be appropriated for the fiscal year 1979 for expenses of the National Science Foundation incurred outside the United States, to be paid for in foreign currencies that the Treasury Department determines to be excess to the normal requirements of the United States.

SEC. 6. Funds may be transferred among the categories listed in section 2(a), but neither the total funds transferred from any category nor the total funds transferred to any category may exceed 10 percent of the amount authorized for that category in section 2, unless—

(A) thirty legislative days have passed after the Director of the National Science Foundation or his designee has transmitted to the Speaker of the House of Representatives, to the President of the Senate, to the Committee on Science and Technology of the House of Representatives, and to the Committee on Human Resources of the Senate a written report containing a full and complete explanation of the transfer involved and the reason for it, or

(B) before the expiration of thirty legislative days both the Committee on Science and Technology of the House and the Committee on Human Resources of the Senate have written to the Director to the effect that they have no objection to the proposed transfer.

Mr. TEAGUE (during the reading). Mr. Chairman, I ask unanimous consent that the bill be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

AMENDMENT OFFERED BY MR. BREAUX

Mr. BREAUX. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BREAUX: On page 2, line 2, strike "$224,100,000" and insert in lieu thereof "227,300,000".

After line 18 on page 2 add the following new subsection:

"(c) Of the total amount authorized under subsection (a)(2), $14,400,000 is authorized for the Ocean Sediment Coring Program of which $4,200,000 is authorized for ocean margin drilling, planning and evaluation.".

Mr. BREAUX. Mr. Chairman and members of the committee, first I want to start off by saying that I have a great deal of respect for the Committee on Science and Technology, and the work it has done on this authorization bill. I think the efforts that committee has put into it indicates that it is basically a sound bill, and I do support the authorization, with one amendment.

I can also say that I have discussed my amendment with the chairman of the full committee, the gentleman from Texas (Mr. TEAGUE), for whom I have a great deal of respect. While I cannot say that the gentleman enthusiastically supports my amendment, I think he understands it but does oppose it. However, I think it is necessary, and I will tell the Members why.

I think, very seriously, that the committee's authorization is being penny-wise and pound foolish. By that I simply mean that they are seeking in their bill funds for an oceans program bill, over which the Oceanography Subcommittee, which I have the privilege of chairing, has joint jurisdiction. We have had one day of hearings on that particular aspect of the bill.

What we have found out is something that is very interesting. As a deep sea drilling program, they have come up with the idea of converting a ship called the *Glomar Explorer,* which we were told at one time was used as a drilling ship but which was actually used to try and pick up Russian submarines. They have come up with the idea that the *Glomar Explorer* can be a very effective vessel to do this deep sea drilling operation.

However our Government placed it in moth balls. I, along with many other Members of Congress, very loudly criticized the decision to mothball the ship in the first place. I said, "Do not mothball it. Later on you are going to find some use for it, and it is going to cost us a lot of money to demothball it."

Here is where we find ourselves today. We are in the process of trying to recommission this ship for a very worthwhile purpose. The Committee on Science and Technology has authorized $1 million. The budget of the President of the United States recommends $4.2 million. The Office of Management and Budget has cleared it. They recommend $4.2 million. They think it is going to be a four-step process to do engineering studies and other evaluations to determine whether this is a feasible proposition or not.

So, my argument is, if it is going to cost us $4.2 million, let us go ahead and authorize the $4.2 million; and not trickle it out; not say, "All right, we will give you a million dollars this year, and then if you do all right, come back and we will give you a little bit more, and eventually the entire authorization."

If we are going to make the decision, let us make it. If it is $4.2 million, fine, here is the authorization.

In our hearings Dr. Robert White, former Administrator of the National Oceanic and Atmospheric Administration, said:

Failure to authorize and appropirate the money in FY '79 will cause a delay in making major program decisions with a consequent impact on the total funding of the program. It is our estimate that the delay of a single year can amount to a total increase in the cost of the program of some $28 million.

So what I have a great deal of fear about is simply this: that if we trickle out the authorization, if we say we will give them a little bit at a time in order to save money, we are not going to save money at all but it is going to end up costing more money and delaying the project. I think the responsible decision is to go ahead and authorize the $4.2 million.

The total project the ship is going to be used for is going to cost eventually $450 million, and we are talking about an increase in the authorization of $3.2 million. That is money well spent. It is money in the long run that will be a savings.

Dr. John Slaughter, the Assistant Director of the National Science Foundation said the same thing:

Rather than experience the kind of delay in moving ahead that could occur, which might cost us as much as $25 to $30 million to recover, it is essential to have the kind of funding in fiscal year '79 to allow us to complete those studies and to make an assessment of the proper places to drill.

The whole project I am talking about has four steps. The Committee on Science and Technology has made a determination to authorize only the first two steps. I say we should go ahead and take all four steps now, because before this decision can be made all four steps have to be taken. Let us give them the money now and I think in the long run we are going to end up saving money.

Mr. PRITCHARD. Mr. Chairman, I rise in support of the amendment offered by the gentleman from Louisiana (Mr. BREAUX).

This country is desperate for oil and

there are strong indications that there are large deposits of oil off the margins, but it does mean some very difficult drilling. This ship will allow us to go down some 3 miles, that is 18,000 feet. We have this ship in mothballs. It would be a crime not to put it into operation. We should not get behind on the timetable.

We talk about the impact of oil imports in this country, and when we have justification to believe there are large amounts of oil in the margins off of this country's coast, I think, as the last speaker stated, it would be penny wise and pound foolish for us to delay this program.

So I, as a member of the Subcommittee on Oceanography that went into this problem in detail, believe I can honestly ask the Members to come up with that additional $3 million, because I think it is definitely in the interest of this country. To delay the program, as the gentleman from Louisiana Congressman BREAUX said, would certainly cost us many millions of dollars more. The estimate from Dr. Robert White, president of the Joint Oceanographic Institute, Inc., was $20 million. So I would ask the members of the committee to give us some support on this project. It is an additional $3 million but it would be money well spent.

Mr. WYDLER. Mr. Chairman, will the gentleman yield?

Mr. PRITCHARD. I yield to the gentleman from New York.

Mr. WYDLER. Mr. Chairman, will the gentleman straighten me out on this? I am under the impression that ship is being used at the present time for drilling operations in the Atlantic. If it is not that ship which is being used, what ship is it they are using?

Mr. PRITCHARD. I think the gentleman is mixed up. That is another ship.

Mr. BREAUX. Mr. Chairman, if the gentleman will yield, the gentleman might be referring to the *Glomar Challenger*, which is a smaller ship that the National Oceanographic Service is using.

Mr. WYDLER. And the larger sister ship is in mothballs at the present time?

Mr. BREAUX. Yes, sir.

Mr. WYDLER. I thank the gentleman.

Mr. HARKIN. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, our subcommittee cut the $3.2 million out of this not lightly in any way. We had the National Science Foundation people up 1 day on extensive hearings on this project.

What we are talking about is not drilling for oil or anything else. That would be something subsidiary that might come along, but what we are talking about is drilling very deeply in what is called the margins, where the plates meet, where the crust of the Earth is subsiding underneath another plate and they want to drill down into that area and get some scientific data. There might be some subsidiary benefits in oil, and so on, but they would be subsidiary benefits.

We are talking about a very big project. The estimates range from $450 million to $540 million. This project would use the *Glomar Explorer*, the existing ship.

Our subcommittee felt at this time the NSF had really not justified this expenditure of money.

We do not know if we are going to go ahead with this $450 million to $540 million project. We have not made that decision as yet. And, Mr. Chairman, when I say "we" I mean the National Science Foundation has not made that decision. We have not come to the Congress for that kind of money.

Further, Mr. Chairman, we want to hold the line on the budget, just as I mentioned in my opening remarks we only increased it by $400,000, but we left in the $1 million for this purpose for the feasibility study and for the preliminary design cost estimates studies. We still do not have an indication of how much the whole thing will cost or whether it is feasible.

For that reason, Mr. Chairman, I think the $1 million represents sufficient money for the use of the National Science Foundation to continue the studies and to come back after the preliminary studies are made and decide whether or not this project should go ahead.

Mr. Chairman, I might add one other thing and that is that the National Science Board, which is required by law to approve any projects costing more than half a million dollars, have to give their approval of these projects, and they have not given their approval to this project as yet, although the Board did authorize the appropriation of this money for the preliminary studies.

So, Mr. Chairman, we believe that the $1 million is sufficient to go ahead with the preliminary design and study concept.

The only items, I am told, that will not be funded, the items that will go unfunded with this cut, are the design of the drill string and the site surveys.

We do not believe that delaying these two items will delay the overall project.

Finally, Mr. Chairman, I might speak to the amount of the $28 million that has been referred to by two previous speakers, telling us that if we delay this a year that the total cost will be increased by $28 million. Let me say that this estimate came from Dr. Robert White, president of the Joint Oceanographic Organization and that is the group that will receive the bulk of the money if this project is approved.

But, Mr. Chairman, I think the responsible thing to do is to give the money to the National Science Foundation that is needed to make the preliminary studies so as to know what the cost estimates are so that we will know what we are talking about in next year's bill.

Mr. FUQUA. Mr. Chairman, if the gentleman will yield, is it not true that in the testimony before the committee it was made pretty clear that the National Science Foundation really was not sure it could spend the additional funds that the amendment offered by the gentleman from Louisiana, Mr. BREAUX's amendment provides? Therefore, I believe that we should approve the approach of using the $1 million, then if the NSF comes back with the information that they can carry on with the project and have the facts and figures in a more definitive outline, then we can go ahead in the next authorization bill and grant it. But there is serious question with regard to the total funds, whether the $4.2 million could be actually expended in this fiscal year.

Is that correct?

Mr. HARKIN. The gentleman is right. That is why I feel the responsible thing for us to do is to provide the $1 million for this project now. Speaking for myself and, I believe, for the subcommittee and the full committee, none of us are opposed to the project, but, rather we want to proceed in an orderly and responsible manner.

Mr. HOLLENBECK. Mr. Chairman, will the gentleman yield?

Mr. HARKIN. I yield to the gentleman from New Jersey.

Mr. HOLLENBECK. Mr. Chairman, I heard the subject of drilling for oil mentioned earlier in the debate.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. HARKIN was allowed to proceed for 3 additional minutes.)

Mr. HOLLENBECK. Mr. Chairman, if the gentleman will yield further, it seems to me that all of the testimony was aimed at the fact that the current plans for this drilling were purely scientific and not for oil exploration and the like. Is that the recollection of the gentleman from Iowa?

Mr. HARKIN. Yes, that is my recollection. That is what the National Science Foundation testified to.

Mr. BREAUX. Mr. Chairman, will the gentleman yield?

Mr. HARKIN. I yield to the gentleman from Louisiana.

Mr. BREAUX. Mr. Chairman, I have just a couple of points that I would like to cover.

First of all, on the position of the National Science Foundation, let me say that the assistant director of the National Science Foundation, Dr. John Slaughter, when I asked him in the hearings whether he thought the money was necessary said:

> We feel very strongly about the need for the $4.2 million to do the kind of job we think is important to do.

He continued to clearly express how it was to be used and what the timetable for it was going to be, and he said:

> Rather than experience the kind of delay in moving ahead that could occur, which might cost us as much as $25 million to $30 million to recover, it is essential to have the kind of funding in fiscal year 1979 to allow us to complete those studies and to make an assessment of the proper places to drill.

And he was referring to this year.

So at least in their testimony before the subcommittee they said the money was necessary, that they could use it, and if we were to delay it would end up

costing everyone a whole lot more money than that.

Mr. HARKIN. I thank the gentleman. I would just respond to that by again saying that certainly those people in NSF want, of course, to keep their budgets up as much as possible in the different directorates, but again I think the responsible way to proceed is to make them justify the program first. We have not had that kind of justification for a half-billion-dollar project to move ahead as rapidly as they want. We feel that the million dollars for the study is sufficient for this year. Of course, we will be back next year with their feasibility study and with their cost estimates. Then we will have a firmer handle on just how we are going to proceed on it, and at that time this committee can again take it up.

The CHAIRMAN pro tempore. The question is on the amendment offered by the gentleman from Louisiana (Mr. BREAUX).

The question was taken; and the Chairman announced that the noes appeared to have it.

Mr. BREAUX. Mr. Chairman, I demand a recorded vote, and pending that, I make the point of order that a quorum is not present.

The CHAIRMAN pro tempore. Evidently a quorum is not present.

The Chairman announces that pursuant to clause 2, rule XXIII, he will vacate proceedings under the call when a quorum of the Committee appears.

Members will record their presence by electronic device.

The call was taken by electronic device.

QUORUM CALL VACATED

The CHAIRMAN pro tempore. One hundred Members have appeared. A quorum of the Committee of the Whole is present. Pursuant to rule XXIII, clause 2, further proceedings under the call shall be considered as vacated.

The Committee will resume its business.

RECORDED VOTE

The CHAIRMAN pro tempore. The pending business is the demand of the gentleman from Louisiana (Mr. BREAUX) for a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 111, noes 291, not voting 32, as follows:

[Roll No. 232]

Mr. DICKINSON and Mr. STRATTON changed their vote from "no" to "aye."

Mr. GONZALEZ changed his vote from "aye" to "no."

So the amendment was rejected.

The result of the vote was announced as above recorded.

The CHAIRMAN. Are there further amendments?

AMENDMENT OFFERED BY MR. ASHBROOK

Mr. ASHBROOK. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ASHBROOK: On page 2, line 5, strike $158,000,000 and insert $152,000,000.

Mr. ASHBROOK. Mr. Chairman, since first being elected to Congress I have been deeply dismayed by the tremendous waste in Government spending. Every year millions and millions of taxpayers' dollars go down the drain without serving any useful purpose.

Congress must bear a large share of the responsibility for this waste. All too often funds are appropriated and then there is no follow-up to see that the money is being wisely spent.

Research grants given out by Federal agencies such as the National Science Foundation are an area of particular abuse. Highly questionable projects will be funded to the tune of tens or even hundreds of thousands of dollars.

Perhaps some of you saw the segment on CBS–TV's "60 Minutes" program a few weeks ago, called "Bugs Are a Negative Factor." It discussed NSF's incredible $918,000 project in Big Sky, Mont., which resulted in a report so full of academic gobbledygook that about the only intelligible finding was that people who go camping don't like bugs and mosquitoes. As one man on the show stated; "I know a little bit about hunting and fishing and camping and stuff like that, and for $900 I could tell them the same thing they spent $900,000 to find out."

The CBS story properly credited NSF with supporting much good research. But it also noted that many NSF grants are nothing more than "intellectual welfare." They support research that the public doesn't need, that only satisfies a researcher's eccentric fancy, and whose results are then wrapped up in

lots of academic double-talk in an attempt to fool us into believing that the project was worthwhile, when most likely it was not.

Other examples abound. NSF gave $40,000 for research of "Spider Distributions Associated With Prey Density." Then there was the NSF-funded study "Social Behavior of Prairie Dogs" and the investigation of "The Socio-Sexual Behavior of the Dabbling African Black Duck." Or how about $19,370 spent to study "Epiphytic Vegetation of Brazilian Amazonia."

Another $40,700 grant went to study "Interpersonal Attraction in the Laboratory and in Educational Settings." Others included $36,500 to study "Evolution of Songlearning and Consequences in Parasitic Finches," and $25,000 for a series of experiments including one to gauge people's reactions when shown a picture of an octopus in a barnyard.

Just looking at NSF grants for March and April, I came across one for $107,827 for studying "Coordinated Activities in the Middle-Ear and Laryngeal Muscles of Echo locating Bats." There was also $35,600 for "Gene Action and the Development of Pigment Patterns in Mice" and $34,900 for "Magmatic Evolution at Active Volcanoes in El Salvador and Nicaragua." In addition, $33,439 was awarded for "Factors of Non-breeding Habitat in Shorebird Social Systems."

Crazy grant titles are far from being the major problem. It is the muddy, often totally wasteful research that is behind the titles as well. The following grant summary quoted during Senate hearings on NSF appropriations tells the story:

This research continues substantive work on problems of internal representation and concurrent related methodological work on problems of external representation. The emphasis in the substantive work is upon experimental paradigms that yield structurally rich information bearing on questions of the extent to which internal representations and mental operations upon these are in some sense isomorphic to or analogous of their corresponding external objects and transformations.

No wonder taxpayers are angry, and I share their belief that Congress should do something concrete to stop this kind of foolish Federal spending. By all means let us encourage and support good basic research. But let us also strike a blow for commonsense by sending a message to NSF that it is time to stop awarding Federal research funds for "intellectual welfare."

That is why I am offering an amendment to NSF's fiscal year 1979 authorization bill to reduce the foundation's $941 million budget by $6 million in the area where many of the questionable grants are funded. This cut will come out of the NSF's $158 million line item for biological, behavioral, and social sciences research, which has been increased a whopping 11.1 percent over its current fiscal year 1978 budget plan. The social sciences element of this area, where a very large number of questionable esoteric grants come from, has been increased 22.5 percent over the current fiscal year 1978 budget in that area. My amendment provides a modest cut, and still allows more than $9 million increase in biological, behavioral, and social sciences basic research support over fiscal year 1978. It is less than a 1-percent cut in the total NSF basic research budget proposed for next year, which this bill increases 10 percent over last year.

But the amendment is designed to send a message to the National Science Foundation, without hurting support for good and worthwhile basic research, that Congress will not continue to authorize funds for unreasonable basic research, and that Federal research granting agencies should apply criteria of public importance to projects they support.

I urge your "yes" vote for my amendment to H.R. 11400.

Mr. RUDD. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I rise in support of this amendment.

I have studied NSF programs with some interest, and I am concerned about the bad image being given to Federal R. & D. efforts by some of the frivolous and unnecessary projects that are being funded by the foundation.

These projects get a lot of adverse publicity.

We have all seen news reports and television exposes about some of the more outlandish ones, such as projects to research the sociology of spider webs.

This amendment would sound a needed bell for some fiscal responsibility by NSF along these lines, in one budget area where much frivolous research gets funded, without hurting other good research efforts.

We cannot expect NSF to think seriously in terms of real public importance in the funding of research projects if we continue to authorize huge annual increases for esoteric and low-priority research.

I want to include a table in the RECORD which shows the huge increases authorized by this bill in the budget area that this amendment seeks to reduce:

NATIONAL SCIENCE FOUNDATION—SUMMARY OF FY 1979 BUDGET FOR BIOLOGICAL, BEHAVIORAL, AND SOCIAL SCIENCES RESEARCH SUPPORT

| | Actual fiscal year 1977 | Current plan fiscal year 1978 | House S.&T. Committee mark | Difference fiscal year 1979/78 | Percent difference fiscal year 1979/78 |
|---|---|---|---|---|---|
| I. Physiology, cellular, and molecular biology: | | | | | |
| Number of awards | 1,169 | 1,220 | 1,190 | −30 | −2.4 |
| Average dollars per grant | $43,920 | $47,000 | $51,500 | $4,500 | +9.5 |

| Total, biological, behavioral, and social sciences: | | | | | |
| Number of awards | 2,750 | 2,920 | 2,980 | +60 | +2.0 |
| Average dollars per grant | $46,039 | $48,700 | $53,000 | +$4,300 | +8.8 |
| Level of funding | $126,607,209 | $142,215,000 | $158,000,000 | +15,785,000 | +11.1 |

How can we possibly justify a 22.5-percent increase for social science research projects, which are funded by the Federal Government on an unsolicited basis?

NSF is not a mission agency, like NASA and the Commerce Department.

Researchers submit proposals to NSF for funds to research some idea that they want to develop. These projects are not necessarily vital to the public interest, and often do not justify taxpayer support.

Obviously NSF must toe the line on some of this over-generous spending for questionable research. The best way to accomplish this is to slightly cut the Foundation's budget in an area where much of the trouble lies. This may prompt NSF program officers to use more discretion in the projects they support.

NSF should not be in the business of using taxpayer dollars to finance the research hobbies of academic Ph.D.'s who have some time on their hands and some esoteric idea that they would like to develop at public expense.

This amendment will help us to accomplish the objective of limiting this practice, of injecting some fiscal sanity into the support of basic research.

I urge adoption of the amendment.

Mr. HARKIN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in opposition to the amendment. More than 100 years ago, a distinguished U.S. Senator by the name of Simon Cameron rose in the Senate Chamber and declared, "I am tired of all this thing called science. We have spent millions on that sort of thing for the last few years and it is time it should be stopped."

Cameron was venting his frustration in 1861 over a $6,000 request by the Smithsonian Institution for funds to be used for scientific endeavors. How forunate we are that Senator Cameron's views were in the minority. I shudder to think what the state of the world might be now if the U.S. Congress had decided, in 1861 to cease its encouragement and support for scientific research.

Today the House is being asked to approve a bill to authorize funds for NSF for next year. While no responsible Member would now suggest that the Government terminate its support for scientific research, some may begin to question why we have to spend all this money, over $940 million to the NSF. To those of my colleagues who would even begin to think such thoughts, I would like to point out that in the 117 years since Senator Cameron spoke those words, science has eliminated most of the diseases and pestilences that have plagued mankind from prehistoric times; has made giant strides to provide a better understanding of the fundamental laws of nature; has provided the United States with the capability to have the highest standard of living in the world, and one with unlimted potential.

I would like to talk about the amendment which is offered and some of the comments just made about studying "gay sea gulls." We have heard a lot of discussion about studying homosexual sea gulls. The title of this project is really the "Etho-Endocrinology of Female Pairs of Western Gulls." Somebody wrote a newspaper article about it and titled it "Gay Gulls Discovered."

What is this study? This is a study of hormones. Endocrinologists study the glands which secrete hormones and the mechanisms by which hormones are made.

Ethology is the study of animal behavior and in 1973 the Nobel Prize in physiology and medicine was awarded to three men who many regarded as "Mere Animal Watchers."

Two of these men, Dr. Lawrence and Dr. Ben Bergen studied the behavior of birds. This study we are funding now for $62,300 is to continue that kind of study. What kind of hormone differences are making these birds act the way they do?

You know, we get a lot of talk in this Chamber about silly sounding grants and about why they are funded. Let me give you an example of silly sounding grants and what they do. Here is one titled, "The Excretion of Urine in the Dog." How many members would like to go on record as voting for funds to study the excretion of urine in the dog?

Then there is, "The Excretion of Insulin by the Dogfish." Such studies seem rather remote from human concerns.

Yet the results of this study by Dr. Shannon led to vital information on the function of the human kidney and the relationship of hormones to kidney functions. In 1975 Dr. Shannon was awarded this Nation's highest honor in science, the National Medal of Science, for his research in this area.

How about rat skins and pigeon hearts? How many Members would like to vote for funds for a study of the "Spectroflurometry of Rat Skins" and "Aerobic Reduction of Cytochrome in Pigeon-Hearts?" Again, what do they have to do with all the pressing problems that face us today?

The answer is that the work done on these 2 studies by Dr. Chance—and again he too was awarded the National Medal of Science in 1975—led to developing methods of identifying what factors were crucial to the performance of the lungs and the blood in supplying oxygen to body tissues.

Here is really a good one: How many Members would like to vote to spend some of their taxpayer's dollars on a study that is titled "Concerning the Inheritance of Red Hair"? Do the Members think their taxpayers would approve spending money on that? The answer is yes, if they are told the full truth about this study.

This study was done by Dr. James Neel of the University of Michigan Medical School, and he won the National Medal of Science for his work. That research increased our understanding of sickle cell anemia, a disease that follows genetic patterns of inheritance.

So these are funny-sounding titles, but the amount of information we have gained from the studies has increased by a thousandfold our understanding of what is happening in human nature. They all go together to make up this great jigsaw puzzle in our study of the science of human behavior and human nature. These studies may sound silly; they may sound like a waste of money.

The CHAIRMAN pro tempore. The time of the gentleman from Iowa (Mr. HARKIN) has expired.

(By unanimous consent, Mr. HARKIN was allowed to proceed for 2 additional minutes.)

Mr. HARKIN. Mr. Chairman, as I say, these titles may sound silly. Some of them may not bear fruit, but they are all very important.

I want to leave the Members with this one thought about how important one of these projects may be, even though it sounds silly. How many Members in the past would have voted for money to study the "Growth of viruses in monkey kidney cells"? Probably not very many.

But this project alone won the Nobel Prize for Dr. John Enders of Harvard University some years ago. The study had no practical use at that time, but it laid the foundation for the development of the first polio vaccine by Dr. Jonas Salk. The silly sounding title of a basic research project today may be the cancer cure of tomorrow.

Mr. Chairman, I yield back the balance of my time.

Mr. ROUSSELOT. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I appreciate the fact that my distinguished colleague, the gentleman from Iowa (Mr. HARKIN) has now told us why he thinks these specific grants in this section on biological, behavioral, and social sciences are so important. The gentleman mentioned that he could tell us something about them, and I think he said something about the fruitful results that have occurred.

Was the gentleman speaking of the gay gulls, or just what did he have in mind when he spoke about "fruitful results"? Can the gentleman tell us what the results were?

Mr. Chairman, I think the taxpayers would be glad to know that some Members from the gentleman's side of the aisle hissed when we were trying to find out how this $158 million was to be spent. Let the RECORD show that.

But can the gentleman tell us what fruitful results we are to have from this specific research?

Mr. HARKIN. Mr. Chairman, will the gentleman yield?

Mr. ROUSSELOT. I yield to the gentleman from Iowa.

Mr. HARKIN. Mr. Chairman, as I understand it, the study was just started last June. I do not know that we have any results yet.

Mr. ROUSSELOT. It started last June, and we do not have any idea what end results we can expect?

Mr. HARKIN. Of course not. With many of these studies we will not know the end results for years. Again, this may be just one little part of the jigsaw puzzle.

Mr. ROUSSELOT. For years we will not know the result? Not even a guess?

Mr. HARKIN. We may not know for years.

Mr. ROUSSELOT. Mr. Chairman, the gentleman knows full well that our colleague, the gentleman from New York (Mr. DOWNEY) constantly demands of the Defense Department that we have an accountability on future research. Yet the gentleman is asking us to vote against this amendment because it will cut out what the gentleman from Ohio (Mr. ASHBROOK) feels are unnecessary authorizations. This is the place to reduce something before we get started.

So would the gentleman tell us again what grand results we are going to have from these studies?

Mr. MCCORMACK. Mr. Chairman, if the gentleman will yield, perhaps I can be of help to him.

Mr. ROUSSELOT. Yes, I yield to the gentleman. We do need a lot of help.

Mr. MCCORMACK. Mr. Chairman, in the first place, we never set out on basic research with the promise that we are going to have some immediate profitable results. Basic research is established as a search for truth, and many pieces of truth from many different sources may, over a long period of time, interlock together to the benefit of society.

Let me give the gentleman several simple examples.

This particular study that he is questioning really has to do with the relationship between hormones in animal bodies and animal behavior. This is something we do not understand, and it has perplexed medical science for many years. There are thousands of questions which flow from such relationships.

Mr. ROUSSELOT. Mr. Chairman, if I could interrupt for just 1 minute, the gentleman from Iowa stated that there were going to be, or hoped to be, some very concrete results to come from this research. What are they?

Mr. MCCORMACK. If the gentleman will yield for a moment longer, and allow me to finish my comments, I will answer his question. We have known for many years, for instance, that secretions—or the lack of them—in the body influence diabetes, our ability to metabolize sugar, that they influence gout, our ability to metabolize amino acids. We have learned that they influence schizophrenia and epilepsy.

Mr. ROUSSELOT. Have we learned this from the gay gulls?

Mr. MCCORMACK. We have learned this from basic research.

Mr. ROUSSELOT. What basic research?

Mr. MCCORMACK. Basic research similar to the research that is being carried out today in thousands of different experiments, such as the one gentleman has picked to make fun of.

Mr. ROUSSELOT. I am not trying to make fun of it. I want to understand it.

Mr. MCCORMACK. The point I am making is that these relations between chemical secretions in any animal body—and many of them are extremely subtle—are related to all sorts of behavioral patterns. We are now learning that minute traces of new chemicals produced in the body, and found with new methods of detection, may influence our ability to learn, our general health, our resistance to disease, the aging process, and many similar and important human activities. All research in these and related areas may interlock, and lead to important discoveries for mankind.

Mr. ROUSSELOT. I must say to my colleague, if I could recapture some of my time, that I do not think he is really contributing an answer to the question.

Mr. ASHBROOK. Mr. Chairman, will the gentleman yield?

Mr. ROUSSELOT. I yield to my colleague, the gentleman from Ohio.

Mr. ASHBROOK. I thank the gentleman for yielding.

Mr. Speaker, I think we ought to put this in its proper perspective.

Mr. ROUSSELOT. Does the gentleman think that is possible?

Mr. ASHBROOK. My friend, the gentleman from Iowa, compared my amendment to an amendment offered some 100 years ago. The scope of that amendment was to cut out research altogether. I think anybody who has read my amendment can see that we are cutting from $158 million to $152 million. I leave it to your own best judgment whether the $152 million will be spent in basic proper applied research. I myself might have some doubt. You might not.

The CHAIRMAN. The time of the gentleman from California (Mr. ROUSSELOT) has expired.

(By unanimous consent, Mr. ROUSSELOT was allowed to proceed for 2 additional minutes.)

Mr. ASHBROOK. Mr. Chairman, if the gentleman will yield further, the other side of the argument of my colleague, the gentleman from Iowa, implicit in his argument is that everything they have spent is proper, he would support, and somewhere, someplace, sometime it is going to help man and mankind. If you believe that, then go ahead and vote my amendment down. But if you have just one little inkling somewhere in some dark, deep passage of your mind you will do otherwise. The gentleman talked about schizophrenia. Maybe he is talking about balanced budgets and voting against amendments like this. Who knows, maybe they ought to study that. But if you have any doubts whatsoever about the overall expenditures of the National Science Foundation, then a cut of $6 million in no way is going to hurt them in their good purposes. I would suggest that we vote for this amendment.

Mr. ROUSSELOT. I thank the gentleman for his comments and want to emphasize just one fact. The Ashbrook amendment would delete $6 million from the "Biological, behavioral and social sciences" section of the bill thereby reducing the program in fiscal year 1979 to $152 million. This is no meat-ax cut—all we are suggesting is a restraint on the increase over last year's budget. In fiscal year 1978 this same category was budgeted at $142 million. Putting the fiscal 1979 level of funding at $152 million would still be a 6.8 percent increase over last year.

Mr. TEAGUE. Mr. Chairman, I move to strike the last word.

Mr. Chairman, our committee has taken note of the problems of the National Science Foundation. I confess I do not know anything about the sex life of seagulls, but I do know a little about cattle. A few years ago on this floor it was proposed that we study the sex life of the fly, and everybody laughed and everybody thought it was ridiculous. But anybody in this House who knows anything about cattle knows that we got rid of the screw worm by studying the sex life of the fly. So it is not good to ridicule every kind of proposal that comes up here.

Mr. GARY A. MYERS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I attempted to ask the gentleman from Iowa (Mr. HARKIN) to yield briefly because I thought the point ought to be made that there is a set of priorities which every agency has to deal with.

I think the question which the Ashbrook amendment goes to is the question of whether or not the National Science Foundation has always acted wisely in the selection of basic research projects.

It bothers me that during the committee hearings on one occasion I did ask the NSF representatives to describe some of their failures to me. Their response was that they believe there were no failures. It appears that their attitude is as long as they spend money and they generate some information, there is no failure involved.

I reject that attitude because of the fact that a serious need has been demonstrated for the application of basic research. Perhaps $150 million is not adequate, and the $6 million is necessary. However, the question that this Congress has to address itself to is as to whether it is going to apply sufficient pressure and oversight on NSF to justify those basic projects which they have funded. I do not think we can accept out of hand the attitude from this agency that just anything they do has been successful.

I personally think that they probably had some failures in that they have overlooked some of the greater needs when they have applied money to some of the lesser needs. It is that sort of attitude we have to get at.

Mr. Chairman, I tend to agree with the gentleman that with respect to this line item there has been a significant increase in funding.

I voted for the bill when it came out of committee, with reservations, much the same as those which the gentleman has expressed. Even if I object to his amendment, I will continue to have a concern that the attitude in this agency prevails that they have not failed and they cannot fail as long as some information is generated. That is a little narrow-minded, and I would hope they would change their attitude in that respect.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. GARY A. MYERS. I yield to the gentleman from Washington.

Mr. McCORMACK. I thank the gentleman for yielding. I suggest to the gentleman that I do not think anyone in this Chamber would pretend that everything the National Science Foundation does is perfect, or that NSF personnel do not make errors in judgment in making grants. However to criticize on that plane is Monday morning quarterbacking.

I suggest to the gentleman that one of the greatest failures in the last 100 years of experimental history was the Michelson-Morley experiment, when two of the outstanding optical scientists of the world set out to measure the speed of the Earth through what was then called the ether. After years of extremely careful work they reported that they could find nothing.

The scientific world was dumfounded. The whole experiment was a colossal failure. Everyone asked why. It was that failure—and why it occurred that led Albert Einstein to develop the theory of relativity.

Mr. Chairman, even failures produce information and, in some cases, valuable information.

Mr. GARY A. MYERS. If I may respond to the gentleman, Mr. Chairman, my point was that I asked a representative of NSF this question: "Looking back on the projects to which you have already applied money, can you identify some information or some project that you would not have funded if you had better insight?"

They indicated in response to that that they had no failures.

Mr. Chairman, it seems to me that if they do not have a good way of evaluating past funding, that would make it very difficult to determine which are the most reasonable projects to go forward with.

There is a judgmental consideration, and all I was trying to get at is, What are the ground rules? What are the criteria which they attempted to project in a solicitation for a grant? What would be the proper funding for an appropriate project at the time?

Mr. HARKIN. Mr. Chairman, will the gentleman yield?

Mr. GARY A. MYERS. I yield to the gentleman from Iowa.

Mr. HARKIN. Mr. Chairman, I thank the gentleman for yielding.

The gentleman knows that not every proposal which comes into NSF is funded, not by any stretch of the imagination. They do have to make their determination, after peer review, in justifying the proposals.

When they do that, I would say that anything after that point which is regarded as basic research, anything that adds to the storehouse of knowledge that mankind has, is not a failure.

Mr. GARY A. MYERS. Of course, the gentleman then supports the attitude that NSF ought not to have any oversight applied to it by this Congress. It would seem to me that that is what the gentleman said in his original premise.

The CHAIRMAN. The time of the gentleman from Pennsylvania (Mr. GARY A. MYERS) has expired.

(By unanimous consent, Mr. GARY A. MYERS was allowed to proceed for 2 additional minutes.)

Mr. GARY A. MYERS. Mr. Chairman, I agree, and the gentleman from Iowa (Mr. HARKIN) obviously agrees that there are more opportunities to fund than there are funds to apply, and that demands some level of competence in selecting the most worthwhile projects. Mr. Chairman, the question which I think it is proper for the Members of the House to ask is, "What criteria can you identify under which you selected projects when you would, in looking back, have felt that something else was more appropriate?"

Mr. HARKIN. Will the gentleman yield?

Mr. GARY A. MYERS. I yield to the gentleman from Iowa.

Mr. HARKIN. Our purpose is not to sit as an authority and pick one project over another. Our oversight authority and responsibility is to make sure that the procedures are fair and equitable, but not to sit in authority to pick one project over another.

Mr. GARY A. MYERS. The gentleman states my case, if I may reclaim my time. I think that is important. It was the procedure by which they work which I was trying to get at; procedures by which they apparently work so that they have no failures as long as some information is generated. That is what concerns me about their attitude. Their procedures indicate that they say, "Yes, there was some inappropriate application of funds, and we are taking corrective steps."

Mr. HARKIN. I would agree that there have been some projects that have been funded that maybe have not produced a tangible result, something we can grab hold of, but that research has added to the basic storehouse of knowledge we have, and it may produce results in the future. But, even if it does not, it adds to the total picture of our understanding of nature and human behavior.

Mr. GARY A. MYERS. It seems obvious to me that in the number of projects the National Science Foundation has made in any given year, there is great potential for advantage to pursue it. If, in fact, less potential has been selected, NSF has in fact experienced some sort of failure.

Mr. DOWNEY. Mr. Chairman, I move to strike the last word.

Mr. Chairman, to my colleagues who are anxious to vote, I promise that I will not take the full 5 minutes.

To my friend from Ohio who has, I believe, the taxpayers' interests at heart, and who I know is careful in his scrutiny of oversight, I issue this challenge to him:

If the gentleman is concerned with the $150 million or so R. & D. money that is spent in this committee, what I would hope he would do with me, when the $12 billion authorization for research and development for the military comes up, is that he will be as vigilant as he is with the National Science Foundation and take a look at some of the projects that we deal with in R. & D. in the Armed Services. For instance, we have the $3.1 million for food radiation, and we have spent almost $50 million for bombarding meat and potatoes with neutrons which the Army, by the way, has never been able to get FDA approval for.

Mr. ASHBROOK. I absolutely agree with that.

Mr. DOWNEY. I hope the gentleman is willing to take a hard look at the R. & D. budget, and take a look at some of these projects so that we might deal effectively with the National Science Foundation, and also the military, because I suspect that there are many, many hundreds of millions of dollars that we let slide by every year.

Mr. ASHBROOK. Mr. Chairman, if the gentleman will yield, I agree with him 100 percent on that particular point, as he well knows, because we conferred on it. As a matter of fact, I am one of those who thinks that it takes a considerable amount of talent to spend as much money on defense as we do, and have as little defense as we have.

Mr. DOWNEY. If the gentleman takes that stand, I am well pleased.

Mr. MARTIN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I make this motion reluctantly. I was even reluctant to stay here when I was listening to the debate that has taken place. I oppose the Ashbrook amendment.

I would say to the Members that if the purpose of the Member who moved this amendment is to exercise fiscal control, to provide some change in the rate of increase in funding for scientific research, then I would say the evidence is there; he had made his case. Unfortunately the debate got far beyond that because we then began to indulge in a sort of amateur oversight in the area of science which, in real life as I have said before, was dear to my heart. The House got into an exercise of fun and games.

I would say to the Members that if what they seek to do is not just to exercise fiscal restraint, but rather to discourage basic research, fundamental research, research for which we do not know whether there will be a public benefit or a public payout, then I would say that they are threatening the technological superiority of our country. I would say to the Members that they are undermining the technological basis of our scientific society.

I have heard some of my colleagues talk disparagingly of esoteric research.

I have heard some of theim refer contradictorily to basic applied research, as though there were such a thing. I have heard those who criticize research which was not vital to our public interest.

What they are talking about there is basic research, basic fundamental studies, pure research, the investigation of fundamental scientific questions for which it may not be known until after, perhaps long after, the experiment is concluded whether there was any public benefit, until after the experiment was concluded.

I think I would have to say they are on dangerous grounds.

In general it can be shown that most scientific breakthroughs come not from applied research. Most scientific breakthroughs come not from practical applied studies but from fundamental research, where we do not know in advance whether or not we are going to find anything. In fact, it is difficult to decide, looking at the particular topic, whether there is going to be any benefit at all. That is why it is important for us to rely on the peer review system that is used for deciding which projects are going to be funded.

It seems to me some of our colleagues want to fund only applied research. I want to make a point about that. There we are talking about research where practical results are pretty well known in advance, where the public benefits are clearly perceived in advance. I want to suggest to the Members that if indeed, such benefits can be clearly perceived in advance we may not even really need to have Government fund that kind of research. If there are going to be marketable benefits we are going to find there will be numerous interests willing to pay for that kind of research, in order to enjoy the royalties and other benefits of patent rights.

Rather it is in the field where we cannot tell whether there will be any monetary rewards where the public support is much more important; where it is much more important for public policy to provide a climate for that kind of research. That is where we must seek to enable our best minds to study, not what we as politicians think they ought to be studying, but what they from their scientific training are led to be curious about, what they want to question, what they want to probe in a scientific way.

I would hope our Members would be very careful in considering this amendment before us today. If what we want is fiscal control, that is one question. That ought to be applied to all agencies, as we have indicated. But if what we want is to abolish fundamental studies as opposed to practical applied research, then I would urge the Members to be very careful because we are treading on very dangerous ground, indeed.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. MARTIN. I yield to the gentleman from Washington.

Mr. McCORMACK. Mr. Chairman, I want to congratulate my colleague for his excellent statement. Let me ask him if he would not agree that when we are pursuing basic research, really we are hoping to uncover facts. We are seeking scientific facts which by themselves may be confusing or of little present value; but which, taken together with what may result from various other experiments, may in time fit together into a new understanding of nature. It is when these new understandings are subsequently applied that we later produce valuable tools which may be of great benefit to human society?

Mr. MARTIN. The gentleman has put it very well. I thank him for his contribution.

The CHAIRMAN. The time of the gentleman from North Carolina has expired.

(By unanimous consent, Mr. MARTIN was allowed to proceed for 1 additional minute.)

Mr. MARTIN. Mr. Chairman, often it is when our most capable scientific minds are investigating matters, which their training and the training of their colleagues enable them to study in ways that the rest of us cannot do, that they are often able to find discoveries that they had not anticipated. Those discoveries would not have been found if lesser minds were looking in those areas. It is only when we have our best minds which are studying a matter of curiosity to them that we have that kind of unexpected discovery known as serendipity. If we discourage our best talent from studying purely scientific questions which they can perceive but which you or I might ridicule, if instead we direct them to study only questions which the untrained mind can understand, society will lose.

I ask my colleagues to resist the temptation of this amendment and vote it down.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. ASHBROOK).

The question was taken; and the Chairman announced that the noes appeared to have it.

RECORDED VOTE

Mr. ASHBROOK. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 174, noes 229, not voting 31, as follows:

[Roll No. 233]

NOT VOTING—31

| | | |
|---|---|---|
| Andrews, N.C. | Gammage | Shipley |
| Aspin | Hefner | Sisk |
| Bonker | Howard | Thone |
| Burke, Calif. | Hubbard | Thornton |
| Burton, Phillip | Kazen | Tsongas |
| Clausen, Don H. | Krueger | Tucker |
| | Nix | Walgren |
| Cochran | Pickle | Whitley |
| Conyers | Pursell | Young, Alaska |
| Dellums | Rodino | Young, Tex. |
| Eilberg | Runnels | |

The Clerk announced the following pairs:

Mr. Rodino with Mr. Don H. Clausen.
Mr. Howard with Mr. Tucker.
Mrs. Burke of California with Mr. Cochran of Mississippi.
Mr. Krueger with Mr. Hyde.
Mr. Phillip Burton with Mr. Pursell.
Mr. Gammage with Mr. Luken.
Mr. Walgren with Mr. Bonker.
Mr. Thornton with Mr. Fascell.
Mr. Shipley with Mr. Ford of Michigan.
Mr. Nix with Mr. Hefner.
Mr. Dellums with Mr. Sisk.
Mr. Eilberg with Mr. Tsongas.
Mr. Mazzoli with Mr. Runnels.
Mr. Conyers with Mr. Aspin.
Mr. Kazen with Hubbard.
Mr. Whitley with Mr. Thone.

Mr. MAHON and Mr. LIVINGSTON changed their vote from "no" to "aye."

Mr. WIRTH changed his vote from "aye" to "no."

So the amendment was rejected.

The result of the vote was announced as above recorded.

The CHAIRMAN pro tempore. If there are no further amendments, under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. PANETTA, Chairman pro tempore of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 11400) to authorize the appropriation of specified dollar amounts for each of the National Science Foundation's major program areas (and certain subprograms), and to provide requirements relating to periods of availability and transfers of the authorized funds, pursuant to House Resolution 1099, he reported the bill back to the House.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. RUDD. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were—yeas 364, nays 37, not voting 33, as follows:

[Roll No. 234]

YEAS—364

So the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

## GENERAL LEAVE

Mr. HARKIN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days within which to extend their remarks, and to include extraneous matter, on the bill just passed, H.R. 11400.

The SPEAKER pro tempore (Mr. BROWN of California). Is there objection to the request of the gentleman from Iowa?

There was no objection.

## CHARLES H. WILSON ATTACKS PHONY INVOICE FRAUDS

(Mr. CHARLES H. WILSON of California asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. CHARLES H. WILSON of California. Mr. Speaker, in recent months there has been a good deal of attention focused on fraud schemes which involve so-called false billings or phony invoices.

In these cases a fraudulent operation will mail materials to an organization or business in the form of an invoice or bill. Actually these are solicitations, not bills, but an organization's central accounting office is often misled, and taken in by the sham, and the "invoice" is paid.

This problem has fortunately received needed publicity as a result of the work of the Postal Consumer Protection Office, business and labor groups, and the determined efforts by several of my colleagues in the Congress, most notably Senator JOHN GLENN, of Ohio, and Congresswoman BARBARA MIKULSKI, of Maryland.

This issue is particularly important to me for two reasons. First, I am chairman of the Postal Personnel and Modernization Subcommittee, which has legislative jurisdiction over this issue. Secondly, many of these frauds, according to the Postal Service, operate out of the Los Angeles vicinity.

In light of this, I am today introducing identical legislation to that offered by Senator GLENN, and will be scheduling hearings on the issue in the near future. Specifically, the bill would increase Postal authorities ability to investigate and stop these illicit operators.

I am confident that with prompt congressional action we can enact into law this year a satisfactory deterrent to these obnoxious schemes.

At this point, I include the text of the bill to be entered into the RECORD:

H.R. 12190

A bill to amend the provisions of title 39, United States Code, relating to the mailing of solicitations disguised as invoices or statements of accounts

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That section 3005(a) of title 39, United States Code, is amended—

(1) by inserting "including the mailing of matter which is nonmailable under section 3001(d) of this title," after "false representations,"; and

(2) by adding at the end thereof the following: "For purposes of the preceding sentence, the mailing of matter which is nonmailable under such section 3001(d) by any person shall constitute prima facie evidence that such person is engaged in conducting a scheme or device for obtaining money or property through the mail by false representations.".

## AFRICA UPDATE: RHODESIANS, REVOLUTIONARIES AND RUSSIANS

(Mr. ICHORD asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. ICHORD. Mr. Speaker, as Secretary of State Vance is now in Africa and has met with guerrilla leaders Joshua Nkomo and Robert Mugabwe and I believe is now meeting with the established transitional Government of Rhodesia, I would encourage my colleagues to read the firsthand report of another highly respected American, Lt. Gen. Daniel O. Graham, former head of the Defense Intelligence Agency, titled, "Update: Rhodesians, Revolutionaries and Russians." It is regrettable that there are few Members in this body who have not personally journeyed to Rhodesia to survey conditions as they exist thus permitting them to make informed and unbiased judgments.

Having been one of the few Members of the House to have visited Rhodesia, I have a basis for comparison and evaluation. I find General Graham's observations totally consistent with my own and while what he has to say is not highly complimentary of our policy with respect to Rhodesia, his comments are deserving of the attention of all Members. It is indeed strong language to state that a coalition of black Rhodesian moderates and the white Rhodesian minority are confronting a coalition of Marxist black terrorists, supported by the Soviet Union and incredible as it may seem—the United States and Great Britain, but unfortunately this is true.

It takes a big man and a great nation to admit that a mistake has been made. America is a great Nation and we can and should make such an admission at this time.

We can play a significant and positive role in the peaceful transition to majority rule, let's take the proper step in that direction, now.

Mr. Chairman, I would ask that General Graham's remarks be printed in the RECORD at this point.

The remarks follow:

AFRICA UPDATE: RHODESIANS, REVOLUTIONARIES AND RUSSIANS

(By Lt. General Daniel O. Graham, U.S. Army (Ret.))

The essence of the situation in Rhodesia today is this: A coalition of black Rhodesian moderates and the white Rhodesian minority are confronting a coalition of Marxist black terrorists supported by the Soviet Union and incredible as it may seem—the United States and Great Britain! This situation is made even more grotesque by the atrocities committed against defenseless black tribesmen by the US–UK supported side in the struggle for control of Rhodesia.

The recent political agreement inside Rhodesia between the whites led by Prime Minister Ian Smith and the moderate blacks represented by Mssrs. Chirau, Sithole and Muzorewe presents the United States and the British with a chance to make sense of policy toward that country and toward Southern Africa as a whole. This is the so-called "internal solution" to the problem of majority rule in Rhodesia. It quite simply excludes the participation of the Marxist "Popular Front" led by Joshua Nkomo from neighboring Zambia and Robert Mugabwe in neighboring Mozambique.

Both London and Washington have been insisting that no settlement in Rhodesia would be tolerated that did not include these "external" factions. Surprisingly, the British government softened its stand almost immediately after the new Salisbury agreement was announced, leaving the U.S. State Department alone in condemning the agreement out of hand. However, Washington registered second thoughts a few days later and took a more neutral stance toward the "internal solutions" in Rhodesia. It remains to be seen whether these faint indicators actually herald a return to common sense in U.S. policy toward critically important Southern Africa.

As one American who has visited Southern Africa, I certainly hope that our government takes advantage of the current opportunity to discard immoderate and immoral politics toward Rhodesia and South Africa. Once an American is brought face-to-face with the realities of Southern Africa, he finds it difficult if not impossible to explain his government's policies, let alone defend them. He finds the United States wide open to charges of blatant hypocrisy, of playing into our enemy's hands, and of pushing the black populations which we profess to defend backwards toward the Stone Age. The American in Southern Africa finds himself using the lame excuses of "American naivete" or "deference to British policies" to explain our blind hostility toward the Rhodesians and South Africans.

There is one other escape from the problem of trying to defend indefensible U.S. policy—to attack the obvious flaws in South African and Rhodesian societies. It is the easiest escape, because the American visitor can point the finger of outraged supermorality at the gross disparity of numbers between the powerful white factions and the politically deprived black population. He can in South Africa point with scorn at the "Whites Only" and "Nonwhite Only" signs which bedeck the country's facilities. (He can't do this in Rhodesia.) An American can lash out at the all too obvious disparity between Rhodesian and South African societies and the ideals (not the reality) of Western democracy.

Many Americans and Europeans take this tack when addressing Southern Africa. But to do so requires rejection of a fundamental reality—Rhodesia and the Republic of South Africa are in Africa, not in Europe or North America. The condemnation and subsequent pariah status of these two coun-

tries can be justified only by the unjust practice of comparing them with European states, e.g., Holland or France. If we judge them in the African context, Rhodesia and South Africa—for all their flaws—are exemplary states. This is true not only in terms of the material and social well-being of their black populations, but even in terms of the black populations.

The stark reality of Africa is that only a handful of its 52 nations are not totalitarian or authoritarian dictatorships. Some are ruled by incredibly brutal regimes such as that of Idi Amin's Uganda or Mengistu's Ethiopia. With the exception of four or five countries—Rhodesia and South Africa being prominent among those exceptions—no political opposition is allowed; no opposition newspapers, no meaningful elections. Most of these dictatorships are drifting backwards into tribalism, sometimes accompanied by massive slaughter of weaker tribes by the dominant one, e.g., 100,000 opposition tribesmen slaughtered in Burundi. Political repression in many of these countries makes the limited franchise of Rhodesia and South Africa appear benign and liberal.

These lame excuses are not a comfortable refuge from black and white Southern African questioners of U.S. policy. There is no escaping the fact that in Rhodesia black men are volunteering to defend the government in numbers too great to be accommodated with salary and arms, while on the other side, that of the "Patriotic Front", black recruits are collected at gun point and forced into the terrorist movement. Yet the U.S. government insists that the terrorist "Patriotic Front" represents Rhodesian blacks! There is absolutely no doubt that the "Patriotic Front" is supported by the U.S.S.R. and Cuban troops while the much-abused black and white Rhodesians plead for the support of the West. Yet we insist on joining our enemies against our friends. There is no doubt that the "confrontation states" of Zambia, Mozambique and Tanzania are destroying their own economies and reducing their black populations to misery while Rhodesia and South Africa offer the black person a far better life. We join the edeologues of black power to the detriment of black people. These realities which loom starkly to any American visiting Southern Africa make it awkward indeed to explain his government's attitudes.

The human misery in a country like Mozambique makes the economic condition of a black Rhodesian look utopian by contrast. Prior to the accession of black nationalists in Mozambique, the country exported foodstuffs. Today the population teeters on the brink of starvation, with utter famine ironically held at bay by food imports from the "enemy"—Rhodesia and South Africa. The once-great game herds of Mozambique are being slaughtered for food. Endemic diseases nearly obliterated by the Portuguese have returned in epidemic proportions.

These are African realities, and U.S. policies ignore them. We cannot pretend to a higher morality when we support totalitarian regimes over imperfect democracies. We deserve the appellation of hypocrites when we support the butchers and oppressors of black people simply because they are also black while condemning two African nations simply because the dominant "tribe" there is white, ignoring if not thwarting their progress toward our own political ideals.

The whites and moderate blacks of Rhodesia have given us a rare opportunity to shed our image as hypocrites. At a minimum we should drop our insistence that those who have perpetrated vicious atrocities against Rhodesian black people must be part of a settlement. How can we in good conscience insist that the terrorist leaders Nkomo and Mugabwe enter the Rhodesian government when their henchmen have hacked off the noses and genitals of black men and made their wives cook and eat the severed parts? Is this the road to political power we condone? Does our support of Soviet-backed terrorists who lock black women and children in huts and set fire to them signify U.S. concern for the black people of Rhodesia or contempt? Honest answers to these questions would prompt a U.S. change of policy toward support of the black-white settlement reached recently in Rhodesia which should be followed by a lifting of economic sanctions to give a promising effort by men of good will in that part of the world a reasonable chance of success.

## THE FINANCIAL PLIGHT OF JUNIOR ENLISTED PERSONNEL OVERSEAS

(Mr. HILLIS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HILLIS. Mr. Speaker, the financial plight of many of our junior enlisted personnel stationed overseas—particularly in Germany—has received considerable attention in the news media of late. Remarkably, junior enlisted personnel are not reimbursed if they move their families to overseas stations. To his credit, the President has requested funds to transport the dependents and household goods of service members overseas. If they are appropriated, I believe many of the financial problems of junior enlisted men will be alleviated. It is not fair to ask our military personnel to be separated from their families unless absolutely necessary.

Moving expenses are not the only cause of financial problems among junior enlisted personnel overseas. Once there, the service member stationed in certain areas receives a housing allowance and a cost-of-living allowance to offset the higher cost of living in these areas. Although these allowances are fairly responsive to changes in the difference in the cost of living due to the changes in the currency rate of exchange and in the general rate of inflation, the housing allowance, in particular, is calculated under a number of different formulas. Some of these formulas more closely approximate the actual housing expense than others.

Since housing expenses make up a major portion of the service member's income, it is especially important to insure that they are computed accurately and adjusted in a timely manner.

The "normal" housing allowance system in effect at most overseas locations requires annual surveys of members living on the local economy. The survey records rents, initial occupancy expenses, and utility costs. These are averaged for each pay grade, and housing allowances are set up to make up the differences between basic allowances for quarters and the average expense. As a result of the averaging, some members in a given grade draw housing allowances greater than their expenses and some draw less than their expenses. Further, annual reviews of housing expenses do not account for rapid changes in the exchange rate such as has been experienced during the last year with the fall of the dollar on the world market.

Several special systems have been designed for specific overseas areas to prevent the overpayments and underpayments resulting under the "normal" allowance system.

When military personnel secure off-base housing in Tehran, Iran, they must check with military housing officials to see if the proposed rental charges and the conditions of the quarters are justified, based on the individual's grade and family composition. If local housing officials approve, the individual can draw the difference between the BAQ and the actual rental expenses. The allowance is decided on a case-by-case basis.

The Air Force is testing a "five-tier" housing allowance program to combat the high cost of off-base quarters in the area around Yokota Air Base in Japan. Under this system, the range of rents paid by officers and enlisted personnel is divided into five segments (or tiers). The housing allowance is then determined depending on which tier the member's rent falls in. The higher tiers result in a larger housing allowance.

I believe that a system similar to the five-tier method used by the Air Force at Yokota Air Base or the actual expense method used in Tehran, Iran, would more accurately compensate our service members, particularly those in the low pay grades, for housing costs.

If we expect young men to make the military a career, we must make absolutely sure that they are adequately compensated for their efforts and sacrifices. We cannot expect military personnel to stay in the service if they cannot maintain an acceptable standard of living. To this end, I introduced a House resolution yesterday, House Resolution 1134, that would encourage the Department of Defense to implement a system of housing allowances outside the United States computed on an "actual average expense basis by grade." Although this type of system would be more cumbersome to administer, I think that this would be a small cost to incur to insure equitable treatment of our most junior personnel.

## THE AGING VETERAN POPULATION

(Mr. ROBERTS asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

● Mr. ROBERTS. Mr. Speaker, the administration is proposing that during the next fiscal year, the Veterans' Administration close 3,132 operating beds in various hospitals throughout the country. I have notified every Member where these beds are scheduled to be closed.

According to a recent study conducted by the Veterans' Administration, there were 1.15 million veterans between the age of 65 and 70 years. The number will about double by 1980—2.22 million. By 1985 the number will have increased to 4.10 million veterans.

Is this a time to be closing beds? Is not the demand for inpatient and outpatient care greater than ever before?

The answer is obvious, Mr. Speaker. Many World War II veterans have reached the age where their medical needs are increasing. The aged veteran is subject to a number of health problems which are characteristic, and are related to age or the aging process.

According to the VA study, currently, veterans comprise 45 percent of all American males over the age of 20 years. Because of the large number of veterans of World War II and the Korean war, by 1990 more than half of U.S. males over age 65 years will be veterans, and by 1995 veterans will exceed 60 percent of the total. It is important to bear in mind that veterans will comprise the major portion of the male aged population for the remainder of this century. To the veteran, the VA is a comprehensive health service resource provided as a prepaid benefit and available as eligibility is achieved. It represents a catastrophic or last resort source of care for thousands of needy veterans throughout the country.

It is for these reasons that veterans everywhere are questioning our budget priorities. They seek answers as to why in fiscal year 1979 the Office of Management and Budget is requiring the VA to close 3.132 hospital beds at a time when bed demand by World War II veterans is rapidly escalating. If VA study results show that within the next 2 years our aged veteran population between the ages of 65 and 70 will have doubled since 1975, does it make sense to start closing beds?

Mr. Speaker, I can understand OMB's desire to reduce the budget deficit. I can understand the Budget Committee's desire to reduce the budget deficit. I want to reduce the budget deficit. I am simply asking why should we do it at the veteran's expense? It is a question of priorities and apparently to some people benefits and services for war veterans and their families do not rate so high. Let me cite an example. The administration is proposing more than a billion dollar increase in education programs administered by HEW—much of it going to individuals whose family income exceeds $30,000 or $40,000 per year. Yet, not a penny is proposed by the administration to offset inflation for those going to school under the GI bill.

The President's foreign aid budget request represents major increases in bilateral assistance and in contributions to international financial institutions; yet, the administration proposes to terminate research programs in more than 50 VA hospitals this year.

The President recommended $250 million to fund the controversial Legal Services Corporation. The Budget Committee increased the amount by $50 million; yet, it did not include enough in its first resolution for cost-of-living compensation increases for service-connected disabled veterans; cost-of-living increases for our needy, elderly disabled veterans drawing pension and DIC benefits; and cost-of-living increases for Vietnam veterans going to school under the GI bill.

The administration dropped more than $200 million in VA construction projects from the 1979 budget. These projects have already been approved by Congress and preliminary plans are completed or will have been completed by September 30 for most of them. They are now "on the shelf" waiting to be funded. These projects are desperately needed to: First, help relieve the crowded conditions existing at most VA ambulatory care units and outpatient clinics; Second, provide more nursing home and extended care units for our aged needy veterans; third, provide additional clinical laboratory facilities to relieve the long waiting period to receive services; and fourth, to relieve the critical parking situation at several hospitals throughout the country. The timely construction of these projects could mean thousands of jobs for many unemployed Vietnam veterans out of work. The Budget Committee only increased the medical budget by some $50 million. Yet, the committee increased the funding for community and regional development by $2 billion to create more public works jobs.

Mr. Speaker, I propose that we include the funds for the construction of these VA facilities, and in doing so, eliminate the problems existing at so many VA medical facilities. At the same time, it will provide jobs for veterans and give them some hope for the future. It is the least we can do.

I hope we will review our priorities and make the necessary adjustments. Let is not forget those who fought and died for our freedom.

## THE RELEASE OF JACOB TIMERMAN FROM THE PRISON OF ARGENTINA

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Massachusetts (Mr. CONTE) is recognized for 30 minutes.

● Mr. CONTE. Mr. Speaker, I was elated to inform the House earlier today, of the release from prison of Mr. Jacob Timerman. Mr. Timerman has been incarcerated in an Argentine prison for over a year, while the government tried to substantiate the accusations made against him. Recently, I had the privilege of visiting Mr. Timerman in his prison cell, and listened to the events which befell this persecuted individual. Mr. Timerman was arrested at his home by a score of civilian-dressed, well-armed, men, who later turned out to be Army officers. Then the long ordeal began, where the government tried in vain to substantiate the weak accusations that Mr. Timerman was involved in some economic crime. The long, drawn-out events became what can only be described as a "Catch 22" situation, with the officials keeping Mr. Timerman locked-up until something that justified his arrest was discovered; the less that was "discovered," the longer he remained under lock and key. I truly believe that this situation would have continued indefinitely had the plight of Mr. Timerman not been made the focal point for world opinion. During my visit with Mr. Timerman, I outlined my efforts in his behalf to date, and assured him that I would redouble these efforts in order to focus the necessary attention on this example of political injustice.

Upon my return, I discussed this depressing case with the Argentina Ambassador to the United States. Additionally, I personally corresponded with the leaders of the Argentina junta, and discussed this injustice with my colleagues on the floor of the House. I have kept the pressure of the Congress and the concerned public on the appropriate officials to facilitate the release of this individual. Last Friday, the word was that Mr. Timerman was about to be released, due in part to the Argentine leaders realizing that his continued cruel incarceration would only serve to injure the Government's relationship with the rest of the free world. Yesterday, I received the good news, Jacobo Timerman has been released. His year-long suffering, and that of his family, is about to end.

Mr. Speaker, however, I have also learned that the Argentine officials are reportedly going to still persist in one act of continued cruelty. The latest information that I have received is that Mr. Timerman was released from his prison cell, but was placed under house arrest until the Government officially clears him of charges of economic crimes. This house arrest will place this persecuted individual in a highly dangerous position even with the security precautions the Government is instituting. Ever since his unsubstantiated arrest, Mr. Timerman has been the focus of numerous threats from the so-called right wing sympathizers. However, their attempts on his life have been frustrated due to the secure prison atmosphere. However, it now appears that Mr. Timerman will not be allowed to leave the country, thus he becomes a walking target for these extreme groups. This situation is most unacceptable and places all the economic accomplishments of the Government, as well as Mr. Timerman's own fate in serious jeopardy. By forcing Mr. Timerman and his family to remain in Argentina until the official public process of a hearing is completed by the Commission for National Patrimony, the officials are embarking on yet another form of injustice. I hasten to add that this situation will place the Argentina Government in the most vulnerable position, the same position Mr. Timerman will find himself in.

If anything regrettable should occur to either Mr. Timerman or his family, the consequences would be swift and punative to the up-to-now promising future for Argentina's political stability and economic prosperity. I believe I can state with a high degree of confidence, that any injury that befalls Mr. Timerman will result in the serious reconsideration of our preception and the resultant relationship with that country. Such a price is too high for one country to pay in order to detain one individual until he is "processed" merely for public consumption.

Mr. Speaker, I understand that the

docket for this hearing process is lengthy; however, I also understand that the exact order whereby an individual is scheduled to appear is flexible. I therefore strongly suggest that if the Argentine officials are so adamant in pursuing the public hearing procedure, that they schedule Mr. Timerman's hearing immediately, and allow him to leave the country on the same day.

The obvious, preferable answer to this volatile situation, is to forego the public hearing and allow Mr. Timerman and his family to leave Argentina immediately. Such a course of action will allow Mr. Timerman to elude the dangerous position incurred by waiting for his hearing process to occur, and also would allow the Government of Argentina to avoid an explosive situation. Such a course of action would be to the best interests of both valid concerns.

Mr. Speaker, I implore the Argentine officials to utilize the rational approach to this situation. Nothing can be served by detaining this individual while the slow, bureaucratic clearance process works its inevitable will. The time has come for the responsible officials to realize the serious, explosive nature of this situation and to allow Mr. Timerman and his family to leave in safety at the earliest possible time. Anything short of this prescribed humane action is not in keeping with Argentina's pledge to return to its people their basic human rights. Only "ill" can be served by this continued delay.

Mr. Speaker, I look forward to reporting to my colleagues of the safe emigration of the Timermans. Such a speech will give me great, personal satisfaction that "justice" as we know it is slowly returning to that great country—Argentina.

Thank you, Mr. Speaker.●

## NO REDUCTION IN STATUS OF MAIL DELIVERY DURING 1978

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. CORCORAN) is recognized for 5 minutes.

● Mr. CORCORAN of Illinois. Mr. Speaker, last Friday, April 14, our new Postmaster General, William F. Bolger, gave me some good news concerning the future of Saturday mail delivery.

In responding to may letter of April 3 regarding the future of Saturday deliveries, Mr. Bolger indicated that there there would be no reduction in the present status of mail delivery during 1978, stating:

> With the press of other important matters, there will be no action taken in 1978 toward discontinuing Saturday mail service.

This is indeed good news. Postmaster Bolger's thoughtful and prompt reply to my inquiry and the overall tone of his letter encourages me to believe that he is off to a good start by showing a primary concern for the postal needs of the American people.

This attitude, combined with the recently passed postal reform bill (H.R. 7700), bodes well for the future of the U.S. Postal Service. Action taken by the House on H.R. 7700, culminating in its passage on April 6, would return to Congress policy and fiscal accountability controls over the Postal Service. I hope the other body will move soon to address itself to the problems of the Postal Service and support H.R. 7700 substantially in its present form.

Mr. Speaker, at this point in the RECORD, I would like to share with my colleagues the aforesaid correspondence:

CONGRESS OF THE UNITED STATES,
*Washington, D.C., April 3, 1978.*

Mr. WILLIAM F. BOLGER,
*Postmaster General, U.S. Postal Service, Washington, D.C.*

DEAR Mr. BOLGER: Congratulations on your recent appointment to the position of Postmaster General of the U.S. Postal Service.

Your new position carries with it a great responsibility to the public. It was to serve the public that the Post Office Department and, most recently, the Postal Service were formed. In light of this obligation to meet the needs of the American people, I hope that you will reconsider your predecessor's position regarding six day mail delivery.

In letters, in hearings, and in person the public has made clear their desire to see six day mail delivery continued and their unwillingness to accept the proposed reduction in service. In a post card poll in my district, 89% of the respondents indicated that they would not accept five day mail delivery, and at the Saturday mail hearing in my district, people were unanimously opposed to eliminating the sixth day of delivery.

As a member of Congress, it is my obligation to make you aware of my constituents' feelings. As Postmaster General, it is your obligation to be responsive to these feelings. I would greatly appreciate it if you would institute a new policy for the U.S. Postal Service—a policy of responsiveness to public needs and support for six day mail delivery.

Sincerely,

TOM CORCORAN,
*Representative in Congress.*

---

WASHINGTON, D.C.,
*April 12, 1978.*

Hon. TOM CORCORAN,
*House of Representatives, Washington, D.C.*

DEAR CONGRESSMAN CORCORAN: Thank you you for your letter of April 3, concerning six-day mail delivery. I appreciate your good wishes on my appointment as Postmaster General.

I feel very strongly that we have an obligation to give the people and businesses of this country the postal service they want. It is their postal service, not mine. Likewise, it is also my responsibility to make clear to the public the costs associated with providing the level of service they want and what cost benefits would be obtained if certain changes in postal activities are made. Once these facts are known by the people and they elect to continue service levels and forego the savings involved then it is up to the Postal Service to render this service and raise the monies to fund it.

It is this type of reasoning that caused us not to make a decision on the subject of Saturday delivery and we will not do so until we are satisfied that we understand what level of postal service the people want and what price they are willing to pay for such service. We are currently trying to determine the answers to these questions.

With the press of other important matters, there will be no action taken in 1978 toward discontinuing Saturday delivery service.

Sincerely,

WILLIAM F. BOLGER,
*Postmaster General.*●

## IT'S THE PEOPLE WHO GET HURT AS NEW YORK TIGHTENS ITS BELTS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. GREEN) is recognized for 5 minutes.

Mr. GREEN. Mr. Speaker, as many of my colleagues are aware, the New York City Seasonal Financing Act of 1975 expires on June 30 this year.

Within the next 2 weeks, the Subcommittee on Economic Stabilization of the House Committee on Banking, Finance and Urban Affairs is tentatively expected to begin to markup H.R. 11753, the New York City Financial Assistance Act of 1978. Also before the subcommittee is the administration's draft proposal, the New York City Loan Guarantee Act of 1978. The exact schedule for the subcommittee will be influenced by assessment of the budgetary impact of existing and proposed labor settlements between the city and its unions.

Much has been written about the question of Federal assistance to New York City. Certainly, avid readers of the pages of the CONGRESSIONAL RECORD have had the benefit of many statements on the issue.

In the midst of the debate about labor contracts, loan guarantees, and pension funds, the human side of the New York City financial situation sometimes tends to get lost. Yet it is the individual on the street in New York whose life is directly affected by layoffs, transit cutbacks, and budgetary service reductions.

Ms. Susan Jacoby, a resident of the 18th district which I represent, graphically captured this human dimension of the New York City fiscal crisis in article which appeared in the Washington Post on April 16. In the interest of furthering understanding of the problems we New Yorkers face, I commend Ms. Jacoby's observations to the attention of my colleagues:

IT'S THE PEOPLE WHO GET HURT AS NEW YORK TIGHTENS ITS BELT

(By Susan Jacoby)

W. MICHAEL BLUMENTHAL,
*Secretary of the Treasury.*
Senator WILLIAM PROXMIRE,
*Committee on Banking, Housing and Urban Affairs, Washington, D.C.*

I see by my morning paper that New York City is, once again, in trouble with Washington. In a letter to our mayor, Mr. Blumenthal said New York has almost no chance of receiving loan guarantees from the federal government unless the city and its unions reach a "reasonable" labor settlement long before the expiration date of the union contracts. This short-circuiting of the normal collective bargaining process is supposed to give Sen. Proxmire and his colleagues time to consider the loan guarantee legislation. Unfortunately for New York, the Senator has said he doubts Congress will approve the guarantees with or without a "reasonable" labor agreement.

Words like "outrageous" and "incredible" have been floating around Capitol Hill since the announcement of a tentative pact that averted a New York City bus and subway strike scheduled for April Fool's Day. This "incredible" settlement guarantees the city transit workers a 6 percent pay raise over a two-year period, with thhe possibility of an additional 3 percent in cost-of-living in-

creases, to be paid for through increased productivity. No one is in a better position than the Secretary of the treasury and the chairman of the Senate Banking Committee to realize that such a settlement will not even begin to keep pace with inflation.

According to the Bureau of Labor Statistics, New York is the third most expensive metropolitan area in the country (topped only by Honolulu and Boston). In the fall of 1976, the Bureau set an "intermediate budget" for a family of four at $18,866. The comparable figure for Washington was $16,950.

In spite of what it costs to live here, New York's municipal workers—including the men and women who keep subways and buses running—are not "the highest paid in the nation." This accusation has been leveled so often and so loudly that it has achieved the status of a Big Lie.

In total compensation—which includes employer pension contributions, health insurance and overtime as well as basic salaries—New York bus drivers rank 6th among their counterparts in the nation's largest cities. Police officers and firemen also rank 6th, while computer operators rank 9th. The purchasing power of these workers is, of course, much lower because New York is so much more expensive than most other cities. When wages are adjusted to take the cost of living into account, a New York bus driver ranks 16th and a computer operator ranks 22nd.

Let's take a look at the maximum compensation for an ordinary white-collar municipal worker—a computer operator—in cities with more than half a million people. New York ranks 9th, with total compensation of $17,736. That includes an annual employer pension contribution of $3,776, and health insurance of $794. Just for the record, the computer operator receiving the biggest package, including a pension contribution of $4,901, works in Washington. His compensation totals $23,114.

You two gentlemen are, of course, familiar with these figures. They appear in a meticulous report submitted in December to Sen. Proxmire's committee by Program Planners, Inc. Program Planners is a highly respected New York consulting firm with clients that include businesses, unions and municipal governments throughout the country. The statistics in the report, current as of last December, are drawn from city governments, the Bureau of Labor Statistics, the Census Bureau and other appropriate federal agencies. The figures check out.

I mention the salaries of Washington bus drivers not because I think they are making too much but because I am tired of seeing the working people of New York—those who use city services and those who provide them—depicted as a bunch of big spenders and freeloaders. There has been a great deal of fire and brimstone surrounding the debate over New York's fiscal crisis by Washington officials who ought to know better. According to this line of thought, New York has sinned and been wasteful and New Yorkers must quit gorging themselves in order to be saved.

I don't think this misconception stems as much from ill will as it does from an understandable difficulty that arises when Washington residents try to envision daily life in New York. I spent half of my adult life in Washington, and I found when I moved to New York that there could scarcely be two more different cities within an hour's shuttle flight of each other. This difference was underlined for me by a conversation with a congressional aide before the April 1 transit strike deadline. "Of course a strike would hurt you," he said, "but you could double up in cars. After all, we got along in Washington before there was a subway."

This comment embodies a fundamental misperception of New York's daily reality. Washington, like most areas of the United States, is a place where nearly every middle-class person owns a car. New York is the only city in the nation in which substantial numbers of middle-class residents depend entirely on public transportation for access to jobs, schools and cultural institutions. If we all owned cars, business and traffic would come to a standstill on the island of Manhattan. Two million of us ride the subways every day. A transit strike is not merely an inconvenience in this city; it is a social and economic disaster.

The day before the transit strike deadline, I was trapped for about 15 minutes in a train beneath Lexington Avenue. The Lexington Avenue line, opened in 1904, is the oldest in the city; the wonder is not that the subway breaks down so often, but that it usually runs on time. As we were waiting for the train to lurch forward, a woman next to me began to cry. I thought at first that she was just afraid, a victim of the claustrophobia that hits some subway riders when a train is stuck.

But no, she told me, she was terrified that there was going to be a transit strike the next day. She lived in the Bronx and worked a 4 p.m. to midnight shift as a nurse's aide at a hospital in Brooklyn, an hour and a half subway commute from her home. She wept softly and said, "I'm supporting my three kids. Where will I find a car pool to take me home at midnight? The mayor says every city worker's supposed to be on the job, strike or not. How will I get there? What will I do if I lose a week's pay?"

The same sort of misconception that underrated the dangers of a transit strike has been applied to New York's overall fiscal crisis by most Washington analysts. Of course there has been (and continues to be) waste and mismanagement by the city—just as there is waste and mismanagement in federal agencies and large corporations. Bookkeeping gimmickry and overly generous labor settlements under the administration of former mayor John Lindsay and Comptroller (subsequently mayor) Abraham Beame were part of what led New York to the brink of bankruptcy at the end of 1974. The most important element in the crisis has not been as widely publicized. That is the steady decline in the quality of life for the middle class and for the "working poor" who aspire to middle-class status for themselves and their children. The decline is related to a complicated interaction of federal, state and city policies.

To avoid going bankrupt during the past three years, New York has made major cuts in city services. Those cuts have, ironically, fallen most heavily on the middle class and have contributed to a continuing erosion of the middle-class population and the city's tax base. The cuts have not merely gotten rid of excess fat; they have sliced to the bone and muscle of ordinary working people. Only millionaires are unaffected by a budget crisis that has cut 50,000 jobs from the city workforce.

Let me tell you about the human reality behind the statistics. In 1975, I met a girl I will call Sharon Ambrose while I was doing a story on her high school in Queens. Sharon, now 18, is black, bright and beautiful. She lives in the South Bronx, a destitute area that has been accurately compared to bombed-out Dresden after World War II.

It has long been the custom in this city for bright kids to take the subway out of their neighborhoods when they enter high school. In this respect, the subway is not only an instrument of geographical mobility but a source of and a metaphor for the social mobility that is essential to any great city. Sharon did not want to go to the high school nearest her home: It was too full of junkies and kids who were, as she put it, "walking around more dead than alive." So she chose to attend a school with safer halls and a better academic reputation. In order to get to and from the school, she spent approximately 2½ hours a day on the subway.

Between the beginning of 1975 and the spring of 1977, subway service was cut back 22 percent—a statistic which means more crowded cars and longer waits between trains. For Sharon Ambrose, the subway cuts meant she had to spend an additional 45 minutes a day commuting. A small inconvenience? It might be a small matter if Sharon lived in a safe neighborhood, but she lives near a subway stop where extra time spent waiting for a train means frightening extra exposure to crime. Sharon was especially scared because the guard in her local subway station was no longer on duty in the afternoon.

This is not the sort of story that gets told at congressional hearings. A bright girl is working hard to get out of the South Bronx and into college; she has to spend extra time traveling to and from school; she is frightened by the loss of a subway guard. This is the "fat" that has been cut out of the subway system.

Then there are the cuts in the schools. Frank D'Amico is the principal of a junior high school in Chinatown, where more than half of the students are children of immigrant families. As a result of changes in the federal immigration laws, a new wave of Chinese immigrants has quadrupled the population of Chinatown—from about 30,000 to more than 120,000—during the past decade. The new Chinese immigrants live in the buildings that were occupied by immigrant Jews and Italians 75 years ago.

Frank D'Amico grew up in an immigrant home on the Lower East Side and he chose to work in the schools of his old neighborhood. When I interviewed him in the summer of 1976, he had lost all but one of his Chinese-speaking teachers. He was dispirited, because he had encouraged his former Chinese students to return to the neighborhood and work with the new immigrant children.

When layoffs began, the young Chinese-speaking teachers were the first to go. "We say to these kids, 'Fulfill the American Dream, get an education, go to college, become a professional,'" D'Amico observed sadly. "Then they do all that, and they're working at a job that desperately needs doing, and they get laid off."

The teacher layoffs cast a particularly interesting light on what the budget crisis has meant to many middle-class professionals in New York. Last year, new federal funds became available to hire back some of the teachers. Notices were sent to 9,000 who had been laid off but only 2,500 were interested in returning. The teachers' union did a survey and found that substantial numbers of those who were laid off had simply left the city—some of them for better-paying jobs in nearby suburban school systems.

Before I introduce you to another human casualty of the budget crisis, I must provide you with some facts about one of the greatest institutions this country has ever produced: the City University of New York.

Today it is difficult for us to imagine how revolutionary it must have seemed in 1847 for a city to establish a tuition-free college. Around the turn of the century, when immigrants were sending their children to school in unprecedented numbers, there was no other city in the world where children of a comparable economic class could obtain a free higher education. Throughout this century, the free colleges of New York City continued to take the children of the poor and give them a chance to become distinguished scientists, scholars and artists. In 1974, in spite of the fact that many of its entering

freshmen were the graduates of a deteriorating elementary and secondary school system, the City University was still fulfilling its historic function.

The budget crisis has brought about an irreversible change. Tuition was imposed in the fall of 1976: $775 a year for freshmen and sophomores and $925 for juniors and seniors. Do those fees sound low? More than 74 percent of the students came from homes with incomes of under $12,000 a year. (Remember—that same year, the federal government set $18,000 a year as an "intermediate" budget for a family of four in New York.)

Since 1975, student enrollment has dropped by nearly 28 percent. During the same period, part-time enrollment has fallen by nearly 50 percent. This is an extremely significant figure, because the City University has always had an unusually high proportion of part-time students who are working adults.

Although nearly two-thirds of the remaining City University students receive some tuition aid from the state, there is almost no money available for part-time students.

One victim of cutbacks and tuition is Alice Capraro, a 42-year-old mother of four. I have known Mrs. Capraro (not her real name) since 1973, when I was writing a story on the formation of a small feminist group in her neighborhood in Brooklyn.

Mrs. Capraro's husband, Joe, is a construction worker. When she told him she wanted to go to college and become a teacher, he was all for it. He was making about $20,000 a year with overtime, their children were growing up and he understood his wife's desire for work of her own.

Then Joe Capraro got laid off. Unemployment in the construction industry—another product of the city's poor economic condition—is about 10 per cent. Joe Capraro has been out of work about half of the time during the past three years. Alice found a job as a typist with an insurance company to help pay the bills. She went on going to school part-time because it was free, she loved her classes and she still wanted to be a teacher.

In 1976, when tuition was imposed, Alice Capraro had to quit college. The family income had dropped to $12,000 a year and there was no extra money for her tuition. Alice looked into the possibility of financial aid and found there was no money for a middle-aged woman.

"I feel sad all the time, just cheated," she says. "Joe was even talking about going to school part-time—he saw how interested I was. It's like we were reaching for opportunity but no matter how hard we were willing to work, we couldn't have it."

It does not take a financial genius to figure out that the destruction of such hopes erodes the initiative of people whose efforts are vital to any true economic restoration of this city.

At some point during the next month, Sen. Proxmire's committee will consider a proposal to provide long-term loan guarantees for the city. The city's unions which have kept New York from going bankrupt during the past three years by massive investments in city notes from their pension funds, cannot continue to risk their money without the assurance that they will get it back. Millions of New York workers are worried not only about losing their jobs but about losing their future pensions.

The city is not asking for a handout—it is not asking for any money at all—but for a government backup while it puts its own house in order. A long-term guarantee for city notes would do what the city cannot do by itself: restore the confidence of private investors. I am sure there would be no controversy over this backing if Washington, not New York, were the economic capital of the nation. But historic circumstances have dictated that we have two capitals—Washington for government, New York for finance and culture. It should be as unthinkable for the federal government to let New York go bankrupt as it would for Congress to let the District of Columbia go bankrupt—as unthinkable as it would be for England to let London go bankrupt or for the Soviet Union to abandon Moscow.

The federal government has the right and the responsibility to demand strict financial accounting and better management in return for guaranteeing the city's notes. But I hope that legislators and federal officials will refrain from talking about "fat" in the city budget as though everyone in New York were a millionaire or a "welfare cheat."

Some of the budget cutting of the past few years has been nothing more than a new kind of bookkeeping gimmickry—this time, at the insistence of Congress and New York state officials. When you cut 50,000 jobs from the city payroll, it is obvious that both the state and federal governments are spending a good deal of money for social security, unemployment compensation and welfare to support the people who have, as they say in bureaucratic jargon, been "excessed." The city and federal government are, of course, losing substantial tax revenues when fewer people are working. It's a vicious circle: cut jobs and services to the middle class and you may balance the budget in the short run, but you speed up the loss of energy and money that is at the heart of the city's fiscal crisis.

I could go on, as bankers and city officials are prone to do, about the need to prevent New York from going broke because of the potentially disastrous impact on our image and our economic influence in the rest of the world. I could go on about the domestic economic consequences of collapse by a city that the rest of the country loves, hates and—above all—needs. I could go on about New York's past generosity to immigrants from the poorer areas of this country as well as from abroad.

All of these things are true, but they are not the main reasons why you should affirm the national government's stake in the survival of New York City.

You should do it because of Alice and Joe Capraro and Frank D'Amico and Sharon Ambrose. They are the kind of ambitious, hard-working people who built this city. They deserve better from you (and from their own city and state officials) than they have been getting. Give them something better and they will help restore the stability and economic vitality of this incomparable city.

Sincerely yours,

SUSAN JACOBY.

## A CASE FOR ENERGY ALLOCATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. WHALEN) is recognized for 5 minutes.

● Mr. WHALEN. Mr. Speaker, when Department of Energy representatives briefed Congress last week on the department's proposal for a "standby emergency gasoline rationing plan," few people noticed. Only a handful of Members or staff were in attendance, little press coverage was given, and frankly, nobody cared.

The proposed plan would go into effect in an emergency energy shortage—upon Presidential declaration and congressional approval. Eligibility for a ration would be based on motor vehicle registration records maintained by State departments of motor vehicles. Car owners would receive an entitlement through the mail, which then would be cashed at a local bank for the actual coupons. State governments and the Department of Energy would receive ration reserves to be used for issuing hardship allotments.

The impetus for the rationing scheme is part of Public Law 94–163, the Energy Policy and Conservation Act, passed by Congress in 1975. Reacting to the then recent Arab oil embargo, Congress decreed that the United States would have an emergency gasoline rationing plan ready to take effect should a similar shortage occur. The DOE proposal responds to that mandate.

Although the shock of the Arab embargo, and the shortages and disruptions that it caused are virtually forgotten, the tenuous state of our energy dependence warns that the situation is not so distant. Violence in the Middle East, as we have seen so recently in Lebanon, could bring with it another cutoff of OPEC oil, which now supplies one-fourth of total U.S. energy demand. Such an embargo could come at any moment.

But the DOE plan is significant, not for its purpose in emergency situations, but for its use right now to reduce U.S. oil imports, to stem our growing balance-of-payments deficit, to support our falling dollar, and to ease inflation here at home. It is significant because it brings home the fact that rationing—or quotas, allotments, or allocation—is the most effective and most equitable means of reducing consumption.

I have favored, the "concept" of mandatory allocation as an alternative to energy price increases for a number of years. While this type of program is not included in the stalled National Energy Act, I still believe that if we are serious about conserving energy by reducing our usage, then rationing is the best way to achieve that goal. Rationing has three strengths.

First, it provides certainty in terms of quantities consumed. Inherent in a fuel allocation program is the simple guarantee that an ascertained amount of fuel will be used.

Second, rationing is not inflationary since no price increases are mandated. The administration of the program itself will not significantly contribute to inflation. Further, since mandatory allocations will effectively reduce our dependence on foreign petroleum, inflationary pressures will be eased.

Third, and most important, rationing will permit equitable distribution based on need, rather than ability to buy. No one contends that it will be possible to implement a perfect rationing system in a nation with 200 million people and massive industrial output. But, of all the alternatives for combating the energy crisis, rationing is the fairest.

The problem with gas rationing is its administration. Those who favor an allotment approach in theory, are taken aback by visions of bureaucratic entanglements, a U.S. black market in stolen or counterfeit coupons, or rampant speculation on energy supplies.

The importance of DOE's new emergency rationing program is that it does deal with the administration of such a plan. And, progress has been made and

problems have been solved. Although the emergency proposal only provides a crude organizational framework, it does demonstrate that an allocation plan could be rationally implemented and likely could be fine-tuned to work effectively.

The standby emergency gasoline rationing plan is just that—for emergencies. It is to be utilized when the United States must forcibly cutback on consumption.

The question is how close are we now to that point? How long can America go on consuming unreasonable amounts of energy at high inflationary prices before we admit that it is, in fact, an emergency?

Historically, rationing has been used only during time of war or national crisis. Yet, President Carter has declared America's energy problem "the moral equivalent of war" and our dangerous dependence on foreign energy supplies with its damaging effect on the U.S. economy indicates that we have a crisis.

No energy program will be worth its salt until it mandates reduced consumption based on predetermined quantities of fuel. Neither present energy law nor the new National Energy Act are equipped to carry out such a program. I argue they should be.●

## WHEAT GROWER PRESERVATION ACT OF 1978

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Kansas (Mr. SEBELIUS) is recognized for 5 minutes.

Mr. SEBELIUS. Mr. Speaker, yesterday, I introduced legislation entitled the "Wheat Grower Preservation Act of 1978." In Great Plains wheat country, the grain producer is still in the midst of the worst economic crisis since the Great Depression.

As I have indicated to my colleagues in a personal letter following the defeat of the emergency farm bill, the economic conditions that prompted the recent farm movement remains the real issue and these conditions continue to exist. Today, the price of wheat in western Kansas is $2.66 at the country elevator. At the same time, a farm management association within Kansas State University has determined the current cost of production between $3.07 and $3.46 depending upon the farmer's operation. These figures are subject to considerable debate in farm country due to cost-of-production definition, evaluation and inflation problems. Suffice it to say, the market price for wheat remains depressed far below the cost of production and the situation has been made even more severe due to the current boxcar shortage resulting in grain price discounts to the farmer up to 15 cents a bushel.

Despite the threat of a Presidential veto in regard to the emergency farm bill, I believe the administration at least acknowledged this continuing economic problem when the Secretary of Agriculture said an increase in the wheat target price as much as $3.50 per bushel would be acceptable. Mr. Speaker, at this juncture some help is better than none.

In addition, without additional assistance, the grain producer has no real alternative or hope other than the much talked about grain reserve program. However, during the debate on the emergency farm bill what has been virtually ignored is that the reserve program is little more than a sophisticated form of price controls. As it stands now, wheat in the reserve can be released when the national average market price reaches $3.15. As cost of production estimates clearly show, that figure is well below what it costs many farmers to grow their grain.

For this reason, the legislation I have introduced would not only raise the target price and loan for wheat but also would raise to parity the price level at which reserves would be released.

I wish to point out that under the current system, the grain reserve release prices are tied to the price support loan level. As I indicated, in my bill the loan level is increased from the current $2.25 per bushel to $2.50. That would make the reserve release trigger $3.50 per bushel or at least close to cost of production estimates and it would allow hard-pressed farmers to make ends meet before the Government glutted the market with grain from the reserve.

In addition, my bill also raises the target price for wheat to $3.55 per bushel if the 1978 crop is 1.8 billion bushels or less and to $3.50 per bushel if the 1978 crop exceeds that figure. I believe these figures are in keeping with what the administration may accept.

Mr. Speaker, during the debate on the emergency farm bill many of my colleagues considered that legislation little more than an inflationary, consumer ripoff. I do not intend to "rehash" that debate except to say the worst enemy of the farmer is inflation. I do not think we can slow down and halt inflation by making the farmer a whipping boy. It has been the farmer who has suffered the most from inflation and whose economic problems are unprecedented.

I solicit the consideration of my colleagues in regard to this legislation. I wish to reiterate and underscore the fact the social and economic problems in farm country that brought the farmer to Washington in the first place have not gone away and over the short term will not go away without paying a tremendous human and economic cost that will have repercussions throughout our Nation.

## CONSTITUTIONALITY OF CONTRIBUTOR DISCLOSURE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. RAILSBACK) is recognized for 5 minutes.

● Mr. RAILSBACK. Mr. Speaker, tomorrow when the House takes up H.R. 8494, the lobby disclosure bill, recently reported by the House Judiciary Committee, I plan to offer an amendment to require registered lobbying organizations to identify their major financial backers; that is, those who contribute $3,000 or more annually.

Those who oppose this type of amendment have raised concerns about the constitutionality of such a contributor disclosure requirement. To me, these contentions are simply unsupported by the holdings of the Supreme Court. To provide my colleagues with a better understanding of the constitutional issues involved and why I very strongly believe that the type of contributor disclosure called for in my amendment meets the criteria set out by the Supreme Court, I would like to place in the RECORD today immediately following my remarks a legal memorandum written by Kenneth Guido, the general counsel, and Ellen Block, a staff attorney at Common Cause:

THE CONSTITUTIONALITY OF REQUIRING THE DISCLOSURE OF THE IDENTITIES OF CONTRIBUTORS TO LOBBYING ORGANIZATIONS

(By Kenneth J Guido, Jr., general counsel and Ellen Block, staff attorney)

The Railsback-Kastenmeier amendment on disclosure of contributors to lobbying organizations requires the identification of each organization or individual who contributes an annual aggregate of $3,000 or more in dues or contributions which was expended in whole or part for lobbying communications or lobbying solicitations. Only organizations that meet the requirements of the Judiciary Committee bill, H.R. 8494, as lobbying organizations [1] *and* whose expenditures for lobbying exceed one percent of the organization's annual income are required to disclose the identity of their contributors. Even when the organizations qualify, the disclosure requirements may be waived by the Comptroller General if disclosure would violate the privacy of the contributor's religious beliefs or otherwise impose an undue hardship or expose the contributor to harassment.

The Judiciary Committee Report on H.R. 8494, H.R. Rept. No. 95–1003, 95th Cong., 2d Sess. 51–53 (1978), expressed concern about the constitutionality of requiring disclosure of the identity of contributors. It is our view, however, that the Judiciary Committee's analysis of the constitutionality of requiring the disclosure of the identities of large contributors to lobbying organizations contains three basic errors:

1. The Committee incorrectly states the constitutional criteria for requiring disclosure of such information;

2. The Committee makes an unwarranted distinction between making substantial contributions to a lobbying organization and supporting its lobbying efforts; and

3. The Committee ignores Supreme Court and other court decisions upholding the constitutionality of disclosing the identities of contributors to lobbying organizations.

I. The Proposed Amendment Fulfills the

[1] An organization is subject to the bill's registration and reporting requirements only: (1) if the organization retains a law firm, consulting firm, independent contractor, or an individual who is not an employee of the retaining organization, and pays the retained individual, firm, or organization more than $2,500 in a quarterly filing period to lobby on its behalf; and or (2) if one of more of the organization's own employees makes oral or written lobbying communications on all or part of each of 13 or more separate days in a quarterly filing period, or two employees each make such communications on all or any part of each of seven separate days or more and the organization spends in excess of $2,500 during the filing period to make lobbying communications.

Supreme Court's Criteria for Contributor Disclosures:

The Committee Report states that requiring the disclosure of contributors to lobbying organizations "is unwise constitutionally." Report at p. 53. It relies for this conclusion on the language of the Supreme Court in *Buckley* v. *Valeo*, 424 U.S. 1 (1976). Unfortunately, the Committee's references to the *Buckley* case are extremely misleading, as the quoted passages do not refer to constitutional limitations on statutes requiring disclosure of contributions.

At pp. 52–53 of the Report, the Committee states that *Buckley* requires that "independent contributors . . . required to disclose must have given contributions earmarked for political purposes or authorized or requested by a candidate or his agent . . ." and that money disclosed under the campaign law, must be "solicited, given and expended for the clear and express purpose of electing or defeating an identifiable candidate." The portion of the *Buckley* opinion relied upon by the Committee in those passages does not deal with contributions to political organizations or committees; it deals instead with expenditures made by individuals or groups on behalf of a candidate, which the Court sharply distinguished from contributions to political committees. *Id.* at 78–79.[2]

This important distinction is distorted by the Committee, which incorrectly applies the constitutional considerations from the *Buckley* expenditure discussion to the matter of contributions to lobbying organizations. When the *Buckley* contribution discussion is applied, as it should be, it is clear that requiring the disclosure of contributors to lobbying organizations meets the constitutional test.

In *Buckley*, the Court summarized its holding as follows:

"We construed [contribution] to include not only contributions made directly or indirectly to a candidate, political party, or campaign committee, and contributions made to other organizations or individuals but earmarked for political purposes, but also expenditures placed in cooperation with or with the consent of the candidate. . . . So defined, "contributions" have a sufficiently close relationship to the goals of the Act, for they are ocnnected with a candidate or his campaign." *Id.* at 78.

Thus, in *Buckley*, the Court's discussion of contributions to a campaign committee, the portion of the election law most directly analogous to the issue of contributions to lobbying organizations, is ignored in the Committee Report.

In *Buckley*, the Court held that all contributions to campaign committees (groups that spend a significant amount—defined as more than $1,000 per year—to influence the outcome of federal elections) must be disclosed regardless of whether they are specifically earmarked for an electoral purpose. *Id.* at 78.[3] Similarly, the Railsback-Kastenmeier amendment only requires disclosure of contributions to organizations, which the committee has determined engage in a significant amount of lobbying. Consequently, lobbying organizations, like the political committees in *Buckley*, consist of only those lobbying groups which spend more than a threshold amount of lobbying.[4] Thus, contrary to the Committee's assertion, *Buckley* supports the disclosure of contributions to lobbying organizations that engage in more than a minimal amount of lobbying activity.

II. There is a Substantial Relationship Between Making Large Contributions to a Lobbying Organization and Supporting the Organization's Lobbying Activities:

The Committee has expressed concern that "there is no rational relationship between the mechanical formula used to trigger disclosure and the purpose that disclosure in general is supposed to serve: the disclosure of significant amounts spent to directly influence the legislative process." Committee Report at p. 53. Although the disclosure requirement is limited to "major backers" of the lobbying organization, the Committee felt that there was not a connection between the giving of money to a particular organization and the contributor's intent to influence legislation for which that organization might lobby.

The Committee, in focusing narrowly on the contributors' motives, has distorted the purposes for which disclosure is needed. Disclosure of contributors is necessary so that the public and their representatives can know whose interests are being represented by lobbying organizations. While the immediate source of the funds an organization expends for lobbying is its own bank account, the ultimate sources are the contributors to that organization. For the Committee to adopt the view that it is only necessary to require the disclosure of expenditures to ascertain the influences brought to bear on Members of Congress is to ignore the essential fact that lobbying organizations represent those from whom they receive their funds. It is these interests that the Railsback-Kastenmeier amendment seeks to disclose, a kind of disclosure which the Supreme Court, in decisions overlooked by the Committee, has consistently found to be constitutionally permissible.

III. The Supreme Court and Other Courts Have Upheld the Constitutionality of the Disclosure of Contributors to Lobbying Organizations:

In *United States* v. *Harriss*, 347 U.S. 612 (1954), the Court held that the compelling governmental interest in maintaining the integrity of the legilative process supported the disclosure requirements in the 1946 Federal Regulation of Lobbying Act, 2 U.S.C. § 261, *et seq.*, which included contributors' identities, against a claim that the act infringed upon First Amendment rights.

In *Harriss*, the Supreme Court reasons:

"Present-day legislative complexities are such that individual members of Congress cannot be expected to explore the myriad pressures to which they are regularly subjected. Yet full realization of the American ideal of government by elected representatives depends to no small extent on their ability to properly evaluate such pressures. Otherwise the voice of the people may all too easily be drowned out by the voice of special interest groups seeking favored treatment while masquerading as proponents of the public weal. This is the evil which the Lobbying Act was designed to prevent.

'Toward that end, Congress has not sought to prohibit these pressures. It has merely provided for a modicum of information from those who for hire attempt to influence legislation or who collect or spend funds for that purpose. It wants only to know who is being hired, *who is putting up the money, and how much*. It acted in the same spirit and for a similar purpose in passing the Federal Corrupt Practices Act—to maintain the integrity of a basic governmental process. *See Burroughs v. United States*, 290 U.S. 534, 545, 54 S.Ct. 287, 290, 78 L.Ed. 484." *Id.* at 625. (Emphasis added).

In upholding the Act's reporting requirements, including disclosure of the identities of contributors of more than $500 per quarter to lobbying organizations, the Court concluded that:

"Under these circumstances, we believe that Congress, at least within the bounds of the Act as we have construed it, is not constiutionally forbidden to require the disclosure of lobbying activities. To do so would be to deny Congress in large measure the power of self-protection." *Id.*[5]

The Supreme Court has recently confirmed this decision, in sustaining a state court decision upholding the disclosure of major contributors to lobbying organizations. In *Fritz v. Gorton*, 83 Wash. 2d 275, 517 F. 2d 911 (1974), *appeal dismissed*, 417 U.S. 902 (1974), the Supreme Court of Washington state, citing Harris, held that lobby disclosure provisions of the state's political reform measure which included the disclosure of contributors of more than $500 annually to a lobbying organization, were constitutional:

"[The political reform law] was created by the people for the expressed purpose of fostering openness in their government. To effectuate this goal, it is important that disclosure be made of the interests that seek to influence governmental decision making. Thus, the requirements of registration . . . and reporting . . . are designed to exhibit in the public forum the identities and pecuniary involvements of those individuals and organizations that expend funds to influence government.

"Informed as to the identity of the principal of a lobbyist, the members of the legislature, other public officials and also the public may more accurately evaluate the pressures to which public officials are subjected. Forewarned of the principals behind proposed legislation, the legislator and others may appropriately evaluate the "sales pitch" of some lobbyists who claim to espouse the public weal, but, in reality represent purely private or special interests." 517 P. 2d at 931.

The United States Supreme Court's dismissal of the appeal in *Fritz* operates as a decision on the merits, thus affirming the opinion of the Washington court.[6]

As these opinions make clear, the compelling governmental interest in making both the public and the legislators aware of the interests which lobbying organizations represent has been determined to outweigh the incidental infringements upon the First

---

[2] Surely a provision requiring disclosure of those who give contributions to lobbying organizations should be viewed as analagous to one requiring disclosure of those who *contribute* to political committees, not those who *spend* money on a candidate's behalf.

[3] Only where money is contributed to a group other than a campaign committee (a group that spends less than $1,000 per year to influence the outcome of federal elections) does the Court require specific political earmarking before disclosure can be required. *Id.* at 80.

[4] It should be noted that, while under *Buckley*, it would be constitutionally permissible to require groups who do not spend the threshold amount to disclose the identities of those contributors who have earmarked their donations for lobbying, the proposed amendment does not go so far.

[5] The Court's reference to its own construction of the statute relates to the exclusion of mere public issue debate from the scope of the statute's registration and reporting requirements, 347 U.S. at 620–21. The Flowers-Railsback amendment would also exclude such activity from its definition of lobbying while including grassroots lobbying efforts.

[6] *See also New Jersey State Chamber of Commerce* v. *New Jersey Election Law Enforcement Commission*, Nos. A–199–75, A–350–75, A–366–75, Slip Op. at 8–12 (Super. Ct. App. Div. Dec. 20, 1977) ("No one in this case deprecates the important public interests served by reasonable legislative requirements of public disclosure of receipts and expenditures in the twin areas of elections and lobbying.")

Amendment rights of speech and petition. Similarly, in upholding campaign finance disclosure requirements in *Buckley* v. *Valeo*, the Court noted the potential threat to First Amendment rights inherent in disclosure statutes, but nevertheless acknowledged that:

"[D]isclosure requirements . . . appear to be the least restrictive means of curbing the evils of campaign ignorance and corruption that Congress found to exist." *Id.* at 68.

The Committee Report at p. 53 attempts to draw a distinction between the governmental interests to be served by campaign finance disclosure and those served by lobby disclosure. As stated above, any such distinction is artificial, for the Court has declared, in similar language, that both kinds of disclosure ultimately serve the purpose of insuring the integrity of "basic governmental processes," the electoral and legislative processes. *See Harriss, supra* at 625 and *Buckley, supra* at 66–68.

Just as the campaign disclosure provisions upheld in *Buckley* were narrowly drawn so as to constitute the least restrictive means of achieving a compelling governmental interest, so the Railsback-Kastenmeier amendment is equally narrowly drawn. The proposed disclosure requirement does not require a lobbying organization to disclose its membership list. Only major contributors must be revealed. While large contributors are no less subject to the potential chilling effects of disclosure than are small contributors, *see* Committee Report at p. 53, the interests in disclosure are more compelling for the former than for the latter.

In addition, only large contributors to organizations actually engaged in lobbying are affected by the amendment. Contributors to organizations which are merely involved in attempting to change community sentiment without contacting or urging others to contact legislators are not affected. *See United States* v. *Rumely*, 345 U.S. 41 (1953).

Finally, and very importantly, the amendment explicitly provides for a waiver of the disclosure requirements under certain circumstances of religious privacy, undue hardship, and potential harassment. This provision embodies the Court's concern for personal and religious privacy by incorporating the standards set out in *Buckley, supra* at 74.

IV. *Conclusion:*

While the Supreme Court has been, and should be, protective of the First Amendment right to associate by joining advocacy groups, *see, e.g., NAACP* v. *Alabama*, 357 U.S. 499 (1958), it has specifically upheld the validity of statutes requiring the disclosure of contributors in the political arena. The disclosure of significant contributors to lobbying organizations is essential for the electorate and governmental officials to be fully informed as to whose interests the organization is espousing. As the Court has noted in the *Harriss* and *Buckley* cases, the disclosure of contributors to lobbying organizations serves the same purpose as the disclosure of campaign contributors and does not unconstitutionally infringe upon First Amendment rights.●

## FEDERAL GUN CONTROL BY THE BACK DOOR

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Maryland (Mr. BAUMAN) is recognized for 5 minutes.

Mr. BAUMAN. Mr. Speaker, every one of us in this Chamber today share a concern that transcends all political alinements and philosophical positions. That concern is with the increase in the rate of violent crimes against innocent citizens in every part of this country. In spite of the determined efforts of law enforcement personnel, from the ranks of local police all the way through to the Federal authorities, the crime rate nationwide continues to spiral ever upward.

For this reason, I find it particularly perplexing that the advocates of more restrictive gun controls continue to seek new methods to implement their proposals on the Federal level. I am perplexed by these continuing efforts because gun control does not equal crime control. Registering the firearms of the innocent will not halt the violence of the guilty. Quite to the contrary, history, logic and commonsense all suggest that more restrictive gun control will serve only to make it that much more difficult for the innocent to protect themselves, their loved ones and their property.

New York City has for many years tried to enforce the Nation's toughest gun control statute, the famous Sullivan Law. In spite of the law on the books and the determination of New York authorities to enforce the law strictly, criminals in New York City are probably among the best armed and deadliest in America. Criminals by definition care not one whit for what the statute books say about the ownership of firearms. We do not call them "criminals" because they observe and respect the laws, but because they willfully violate the laws. To conter d that a new, more restrictive gun control approach will result in the wholesale conversion of criminals to a new-found respect for the law, even Federal law, is to draw upon a kind of logic "reason knows not of."

In addition to the history of New York's efforts to control firearms, the history of other localities in regard to this issue denies the contention of the gun control lobby that their proposals will reduce the crime rate. Since passage of the Federal Firearms Control Act of 1968, the national homicide rate has skyrocketed. Consider also the results of an innovative program attempted in Baltimore in 1974. That city offered to purchase firearms in an effort to get the guns off the streets. After several weeks of intensive publicity about the program, it was revealed that the number of gun-related murders actually rose by 50 percent during the program's existence.

It is my view that no gun control program, short of total confiscation of all private firearms such as is characteristic of totalitarian regimes, has ever or will ever operate as effectively as the advocates of such laws claim would be the case. Unfortunately, in spite of the facts and all logic, the gun control advocates are with us still and show every sign of having resolved to be with us until they have their way. Only now, instead of seeking to impose their will through the Congress, which seeks to represent the people and which has so often rejected gun control bills, the advocates now want the Federal bureaucracy to decree their proposals by executive fiat.

On March 16 of this year, Richard J. Davis, Assistant Secretary of the Treasury for Enforcement and Operations, announced the proposal of new firearms regulations which, if implemented, would amount to the creation, by bureaucratic regulations, of a national firearms registry.

These proposed regulations, published in the Federal Register of March 21, would require all federally licensed firearms dealers, manufacturers and importers to file quarterly reports on the production, acquisition and disposition of all firearms connected with their respected businesses with the Bureau of Alcohol, Tobacco and Firearms of the U.S. Treasury Department.

The introduction of this reporting requirement would amount to the creation of a national gun registration system, even though congressional history indicates that one of the two Houses of Congress or a committee thereof have specifically rejected Federal gun registration 13 times in the last decade.

On April 11, John M. Snyder, director of Publications and Public Affairs for the Citizens Committee for the Right to Keep and Bear Arms, of which organization I am honored to be a congressional adviser, and Morgan Norval, national director of the Firearms Lobby of America, met with Assistant Secretary Davis and his Special Assistant, Catherine Milton, and indicated that the proposed Treasury antigun regulations conflicted directly with publicly expressed congressional intent in this matter.

Mr. Snyder informs me that Secretary Davis simply denied that this recent Treasury action was in fact a gun registration scheme. Davis did admit, however, that the records kept by the Treasury Department, if the proposed regulations take effect, could be used by agents of the Bureau of Alcohol, Tobacco and Firearms to trace purchasers of firearms through the dealers' quarterly reports. During a later conversation with a member of my staff, Ms. Milton also acknowledged that the addition of private purchasers' names to the proposed regulations "was considered" before publication on March 21 and that such an action would be the next logical step in the computerized system.

Snyder's meeting with Davis and Milton would seem to confirm a fact which we in Congress have long been aware of; namely, that Federal bureaucrats, with no authority from the people or from Congress, continually seek to harass multitudes of law-abiding citizens of this Nation with more and more onerous and burdensome rules and regulations. Undoubtedly, it will be claimed that these rules and regulations will assist law enforcement personnel in their efforts to track down murderers. I would like to believe that, however, I do not see how a Federal computer in Washington, D.C., is going to help police in Los Angeles to track down the killer of an innocent person when the criminal used a gun illegally manufactured in New York and smuggled, again illegally, into California.

American citizens have until May 22 to protest these latest attempts to impose massive new restrictions on the

right to keep and bear arms. Letters should be addressed to Mr. Rex D. Davis, Director, Bureau of Alcohol, Tobacco and Firearms, Washington, D.C. 20026. Before writing, I would encourage all citizens to examine the fact sheet on these regulations which follows my remarks. Prepared by the staff of the Institute for Legislative Action of the National Rifle Association, the fact sheet demonstrates that the proposed regulations will only cost the taxpayers more millions of their hard-earned tax dollars while doing little to improve existing crime fighting capabilities among our law enforcement personnel.

The fact sheet follows:

NRA FACT SHEET—TREASURY DEPARTMENT PROPOSED FIREARMS REGULATIONS

The U.S. Department of the Treasury has published regulations (March 21 *Federal Register*) to establish a national computerized central firearms registration system.

The regulations, if allowed to go into effect, would require all transactions of all firearms within existing Federally licensed commerce to be reported quarterly to the Bureau of Alcohol, Tobacco and Firearms. Reporting would cover all dealer sales to individual citizens, as well as all transactions between manufacturers, importers, exporters, wholesalers, jobbers, distributors and dealers.

Based on BATF estimates of the 5.2-million new firearms in commerce in fiscal year 1977 and BATF claims that an average of four transactions occur before a dealer sale to an individual citizen occurs, the reporting requirements would conservatively total at least 25-million separate computer entries.

When used firearms are included in the equation, the number of firearms transactions which would be computerized would total between 35 and 40 million.

The system would require 688,000 quarterly reports yearly from 172,000 holders of Federal Firearms Licenses. BATF estimates that the paperwork costs to dealers would be $8-million yearly.

The Treasury Department claims that the startup cost of this massive system would run about $5-million, and, according to Assistant Secretary Richard Davis, funding would neither have to be appropriated nor authorized by Congress, but would be simply "re-directed" from existing BATF funding.

However, that $5-million estimate does not begin to jibe with past BATF firearms registration cost estimates. BATF Director Rex Davis has previously estimated a national handgun registration system would call for a $35 to $100 million startup cost, followed by $20-million per year in operational costs. This proposed registration by regulation would cover all firearms—rifles, shotguns, and handguns.

In both the March 16 Congressional and public briefing on the proposals, Richard Davis, Assistant Secretary of the Treasury declared that the regulations would give BATF authority to call in and computerize all existing Federal form 4473's (which list the name and address of each firearms purchaser) which have been filled out by individual firearms buyers since enactment of the 1968 Gun Control Act. Secretary Davis qualified that declaration in the Congressional briefing by saying that such an action today would be "politically unrealistic."

Assistant Secretary Davis's predecessor, David R. MacDonald, told Congress during 1975 House Judiciary Committee hearings that Treasury should not act to centralize existing dealer records without Congressional authority. Also in 1975, BATF estimated they could trace a firearm in 27 minutes under the existing recordkeeping system if it is a "priority". There can be no justification for the proposed centralization other than expansion of bureaucratic authority and a desire to in fact register firearms.

Although Treasury says the reporting requirements do not include the names and addresses of individual private firearms purchasers, officials maintain they can easily obtain such information under the proposed regulations with a telephone call from BATF to the dealer making such a sale.

The regulations would also order institution of a new "unique" system of identifying firearms with a common 14 digit serial code. With this serial number, which would be required for all firearms manufactured after the regulations are placed into effect, the BATF could computerize information as to make, model, barrel length, caliber and individual number of all firearms. With this information, the Treasury Department could locate the purchasers of any firearms or category of firearm it might declare prohibited in the future. BATF estimates that the cost to consumers would be $5 million for retooling.

Other provisions in the regulations include redefinition of import and export regulations (a detailed summary of this provision will follow), and a requirement that all firearms lost or stolen while in Federally licensed commerce be reported within 24 hours of discovery. Failure to record or report such loss or theft to the satisfaction of BATF would be a felony, punishable by 5 years in prison, and a $5,000 fine. In many instances, the failure to report a theft of a firearm could exact a far harsher penalty on a dealer than on the thief.

There are literally no provisions of these regulations which can be supported by the National Rifle Association, its membership and affiliates.

During the debate of the 1968 Gun Control Act, the issue of national gun registration was raised and soundly defeated by better than a 2 to 1 margin. Since that time, Congress has rejected all national gun registration schemes ,which have been proposed. Clearly, Congress has refused to give the firearms control bureaucracy this authority.

This proposed regulation—whether called registration or "reporting"—amounts to the same thing: centralized national firearms registration. It is the very clear policy of the National Rifle Association that we are unalterably opposed to firearms registration at any level of government.

(Printed in the March 21 *Federal Register*, the proposed regulations will be open to public comment until May 22, 1978. Comments must be submitted in *duplicate* to: Director, Bureau of Alcohol, Tobacco and Firearms; Washington, D.C. 20226; Attention: Regulations and Procedures Division.)

## DICKEY-LINCOLN SCHOOL LAKES HYDROELECTRIC PROJECT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Maine (Mr. COHEN) is recognized for 15 minutes.

Mr. COHEN. Mr. Speaker, one of the most important decisions facing the Congress this session is to decide the fate of the proposed Dickey-Lincoln hydroelectric project. As many Members of the House know, this project has a long and controversial history dating back to 1965 when it was initially authorized.

The Army Corps of Engineers and the Department of Energy have now filed the long-awaited draft environmental impact statements on Dickey-Lincoln. These extensive documents clearly provide the Congress with the requisite information upon which to base an informed and responsible decision on the project. I believe that the evidence presented in these statements demonstrates beyond question that the projected benefits of building Dickey-Lincoln are far outweighed by the environmental, economic, and social costs of the project.

On April 12, I appeared before the House Public Works Appropriations Subcommittee and requested that no further funds be provided for Dickey-Lincoln. I am inserting my testimony in the RECORD so that each Member of the House will be fully apprised of my reasons for opposing construction of the dams. My testimony follows:

STATEMENT OF CONGRESSMAN WILLIAM S. COHEN

Mr. Chairman and Members of the Subcommittee, I appreciate this opportunity to comment on the President's budget request for fiscal year 1979. I would like to begin by discussing the request for the Dickey-Lincoln School Lakes hydroelectric project.

As the members of this subcommittee know, the Dickey-Lincoln project has a long and controversial history dating back to 1965 when it was initially authorized. Post-authorization planning and design for the project were initiated in late 1965, and continued until late 1967 when activities were terminated due to lack of additional appropriations. A total of $2,154,000 was spent on this earlier effort.

In 1974, the energy crisis stimulated renewed interest in the Dickey-Lincoln project. With the support of this subcommittee, Congress approved funds for resuming planning and design. Since the fall of 1974, a total of $6,640,000 has been appropriated for the project, with the bulk of these funds earmarked for the completion of an environmental impact statement (EIS) as mandated by the National Environmental Policy Act of 1970.

Separate draft environmental impact statements (DEIS) have now been filed by the Army Corps of Engineers and the Department of Energy. With this information in hand, the Congress is now in a position to make an informed and responsible decision on the future of this controversial project. I fervently hope that the decision will be to terminate the project by rejecting the Administration's budget request for fiscal year 1979 for $1,756,000 for advance engineering and design, as well as any future requests for funding.

Mr. Chairman, the case against building the Dickey-Lincoln project is overwhelming. An objective review of the draft environmental impact statements can only lead to one conclusion: the economic, environmental and social costs of the project are too severe to justify its construction. Let me catalog for the subcommittee some of the project's most significant adverse impacts:

Construction of Dickey-Lincoln would severely erode the forest resource base of Maine. Nearly 111,000 acres of prime forest land would be taken out of commercial production, and another 196,400 acres would be effectively isolated from Maine by the lake created during construction. One report estimated that the expected income losses in Maine's forest economy as a result of the Dickey-Lincoln project would approach $1 billion.

278 miles of free flowing rivers and streams plus 30 lakes and ponds would be permanently destroyed by Dickey-Lincoln. In the words of the Regional Administrator for the Environmental Protection Agency, "there can be no more profound alteration of a free flowing river system than to impound 287

miles of its most significant reaches under 88,000 of flat water. The ecosystem of the free river is destroyed and replaced by an impoundment." The Regional Administrator also correctly noted that the excellent brook trout fishery in portions of the St. John River will be eliminated, and the wildlife under the impoundment totally destroyed. Finally, the recreational potential of the area will be permanently altered from a high quality fishery and national recognized wild river canoeing resource to a flat water lake with an unattractive shore line.

An estimated 161 families and 16 commercial facilities would have to be relocated as a result of the project. Unavoidable economic, physical, pyschological and social hardships would inevitably occur, and destroy the sense of community which now exists in the affected area.

Construction of Dickey-Lincoln would have a major lasting negative effect on the esthetics of this distinctive region. The visual quality of this portion of the St. John River Valley would be lost forever. The effects of construction would scar the region permanently.

The cultural resources of the region would be adversely affected by the project. Salvage of known archaeological and historical sites would be required to mitigate a total loss of these irreplaceable resources.

Some price inflation is likely to occur in the affected area due to the large infusion of funds into the economy during construction. Additionally, it is possible that municipalities which expand services to meet short-term needs during construction would not be fully compensated for these efforts. This could spell a tax increase for the permanent residents of the area.

According to EPA projections, the water quality of the impoundments will be poorer than that of the river and other comparable lakes in Maine. It is possible that violations of federal water quality standards will occur both during and after construction.

Critical as these findings are, there are additional factors which lead me to conclude that we should pursue other less costly and less damaging alternatives than the Dickey-Lincoln project. Not the least of these factors is the economics of the project.

At March 1977 price levels, the minimum federal investment required to build Dickey-Lincoln would be roughly $757.5 million, using a 3¼% interest rate which is clearly unrealistic. Given the fact that the actual costs of money for projects such as Dickey-Lincoln now approach 7%, coupled with the inevitable inflation and cost-overruns which would occur during construction, it is not unreasonable to conclude that the project, if built, would cost the federal government as much as $1 billion. For $1 billion, the federal government would be building a project which will provide only about 1% of New England's power needs in the middle of the next decade. By anyone's definition, that's mighty expensive energy. It is also a gross misallocation of federal tax dollars—dollars which are becoming increasingly scarce.

Mr. Chairman, it is particularly crucial that the impressive-sounding figures about Dickey-Lincoln's energy potential be carefully scrutinized. According to the draft environmental impact statement prepared by the Army Corps of Engineers, the project has the potential to replace 2.3 million barrels of oil annually. But by the year 1985, a year before Dickey-Lincoln would be completed, the United States will be consuming an estimated 25 million barrels of oil each day. In other words, the power Dickey-Lincoln would produce in a year would amount to little more than two hours' worth of our national needs.

For Maine, the measurable economic benefits of the Dickey-Lincoln project outweigh the costs by about $53 million over the 100-year lifetime of the project, according to a report prepared by the Commissioner of the Maine Department of Conservation. This amounts to about 50 cents per year in benefits for each living Maine resident for the life of the project. I feel confident that the vast majority of Maine citizens would prefer to forgo the 50 cents in benefits to keep the St. John River Valley in its present state.

It is worth noting that at a public hearing in the St. John River Valley on the draft environmental impact statement, 90 percent of those testifying opposed the project.

An additional important consideration which prompted me to oppose the Dickey-Lincoln project is my belief that there exist alternatives to the project which are less costly in all respects. As the Environmental Protection Agency observed in its comments on the draft environmental impact statement, "the peaking power segment of our energy demand is clearly the element which is most responsive to various load management and pricing alternatives." Dickey-Lincoln is, first and foremost, a peaking facility.

A recent Bangor Daily News editorial weighed the costs and benefits of conservation against those of Dickey-Lincoln. It is instructive to summarize the editorial:

"Assume that the $1 billion cost of Dickey were diverted instead to conservation by investing in $1,000 worth of insulation for each of 1 million homes. If the average savings for these 1 million homes was 500 gallons of fuel (about a third of what the average home in Maine burns annually), the total savings by investing in conservation would be 12 million barrels of oil per year. This is the equivalent of five times the energy output of Dickey-Lincoln. It also represents a savings of $250 million—enough to pay back the $1 billion conservation investment in just four years. A reduction in consumption of just 300 gallons of oil per home would work out to a savings of 7.2 million barrels of oil per year, or three times the annual output of Dickey-Lincoln. Even if the average home could save just 100 gallons of oil with a $1,000 investment, an unrealistically low figure, the total savings translated into kilowatt hours would still be equal to the expected output of Dickey-Lincoln, without the permanent loss of hundreds of thousands of acres of timberland. In addition, thousands of long-term jobs would be created in manufacturing and service industries, compared to the estimated 68 permanent jobs which would be created should the project be built."

Conservation is not the only attractive alternative to Dickey-Lincoln. Throughout New England, there are hundreds of existing small dams which can be economically put to work producing energy. In Maine, there are nine sites, excluding Dickey-Lincoln, which have a combined capacity potential of 675 megawatts and 1.3 billion kilowatt hours of energy annually. At current prices, these sites have the potential to save Maine consumers tens of millions of dollars in energy costs each year again without the massive destruction Dickey-Lincoln could cause. Our great forests in Maine and New England are yet another vast untapped source of energy for both home consumption and for powerplants. In Passamaquoddy Bay, we have the best potential site for a tidal power project in the United States.

Clearly, we do not face a choice of Dickey-Lincoln or nothing. We have viable alternatives which are less costly in every respect—alternatives which will preserve the natural resources options of future generations, rather than paying sole allegiance to the energy needs of today's society.

Mr. Chairman, in approving the necessary funds to complete the environmental impact statement on Dickey-Lincoln, the Congress said, in essence, let's give this much-debated project its rightful day in court. We have now fulfilled this obligation, and it's time to render a verdict. The funds requested by the President for Dickey-Lincoln are not needed to complete the environmental impact statement. To the contrary, these funds represent the initial commitment to construction—an action which is opposed by the vast majority of Members from New England.

Mr. Chairman, the citizens of Maine and New England expect and deserve a final decision on Dickey-Lincoln this year. No further studies are necessary, nor are they justified. The evidence has been presented, and the project has been found wanting. It's time to terminate Dickey-Lincoln and direct our attention to developing alternatives which are affordable and responsible. I look forward to working with the Members of the subcommittee in this critical effort.

## THE CONTINUING DANGERS OF UNILATERAL DISARMAMENT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Florida (Mr. SIKES) is recognized for 30 minutes.

Mr. SIKES. Mr. Speaker, last November 1, I took 30 minutes of the time of the House to discuss what I described as "the dangers of unilateral disarmament." At that time there was much concern and trepidation over information reported in the media concerning the levels to be proposed by the administration in the Defense budget for fiscal year 1979. Since this was to be the first comprehensive budget proposed by President Carter, it was viewed, and probably appropriately so, as a benchmark in gauging the direction of our defense capabilities for the next 4 years. At that time, the official proposals had not come to Congress. I reported my concern, however, at the low levels which the administration was expected to propose.

Just before the end of the year, Congress was given the administration's proposed budget for defense. In the view of many, myself included, it was even worse than the reports. Statements prior to and since its release that the administration would maintain a 3-percent growth rate in defense spending simply cannot be substantiated. This budget does not meet that goal—and 3 percent would be insufficient. In real terms, it increases spending for national defense by 2.7 percent, very little of it for modernization and procurement of weapons. People costs are the principal ingredient. In the words of the present Secretary of Defense, "The fiscal 1979 budget is an austere but adequate defense budget * * *." Austere is an optimistic word for this proposal.

As has been suggested on other occasions, however, perhaps it is not sufficient to analyze a defense budget, or any program, on the basis of funds allocated in previous budgets. It is more important to assess our needs based on the goals this Nation seeks and the commitments it must keep. We must have a national defense program adequate to meet the standards necessary to insure our security. Those standards, in

turn, can only be assessed on the basis of the threat to our national security from nations that seek world domination or who would change our way of life to one more compatible with theirs. Obviously the only real threat now is by the Soviet Union. An assessment of its capabilities, its improvements in technology, and increases in numbers of weapons by Russia should be a fair indication of what our Nation must do to meet the threat. As I said in my statement of November 1, "We do not need to keep step-for-step pace with Soviet military expenditures," but we must insure that our ability to protect ourselves both physically and economically is maintained.

Has the Soviet capability lessened or been enhanced? Have their outlays for armed forces been reduced? Everyone knows the answers. In the past 5 years the Soviets have achieved rough equivalence in strategic forces with the United States. In the past 2 decades the Soviet Union has virtually doubled its military spending. Their budget has gone up 3 or 4 percent each year since 1960, while ours has decreased to a level lower than it was 18 years ago. Years ago defense ceased to be the biggest spender in our Government. Inferior technology, by the Russians, heretofore the major factor keeping the United States in a position of superiority, is rapidly achieving comparability with our own. A report in U.S. News & World Report recently assessed the statement which Dr. William Perry, Under Secretary of Defense for Research and Engineering, made to the Congress on United States-Soviet technological comparison. The overall conclusion of the Pentagon study was that "our qualitative lead may have declined to the point where, in some cases, it may not offset the Soviet numerical superiority." Those areas where the Soviets presently equaled or have surpassed the United States include surface-to-air missiles, ICBM throw-weight, antimissile missiles, infantry combat vehicles, chemical warfare, antiship cruise missiles, mine warfare tanks, and the survivability of command/control/communications systems.

Given all of these factors, certainly well known to the President and the administration, what does this present defense budget propose to accomplish vis-a vis the Soviet buildup? In positive areas it proposes to beef up the NATO forces to a slight extent, adds substantially to the Army budget, begins procurement of the XM–1 tank, calls for continued procurement of the F–14 air superiority fighter. Overall aircraft procurement is up over $1 billion over fiscal year 1978. One billion dollars does not buy many first line fighters on today's market. On the negative side, the Navy's shipbuilding plans are reduced to levels which show a total lack of commitment to a Navy superior to all others on the oceans of the world. Instead of 30 ships as envisioned, we are left with 15. This disregards the fact the Russians are building 60 to 70 naval vessels per year.

The proposed budget calls for an overall drop of some 20,000 active military personnel, slashes away at Reserve forces, postpones timely development of important MX mobile missile, and calls for production of only one Trident ballistic missile launching submarine. The important new neutron bomb is left hanging in midair. The Russians are only a step away from a new submarine which will approximate the Trident in size and capability. With the strategic capabilities of the Soviet Union rising dramatically each year, the budget provides no funds for the Minute Man II upgrade program and does not increase by even one unit the number of available ICBM's.

Does such an overall program provide for the adequate defense of this Nation and our security? Listen to the Chairman of the Joint Chiefs of Staff, General George S. Brown in his report to Congress on the fiscal year 1979 defense budget:

> . . . In light of the extensive growth in the military capabilities of the Soviet Union, it is questionable whether what has been done is enough to assure the security and well being of our country in the coming years.

Recently the President seemed to be getting the message on what may be required for adequate defense of this Nation. His much-acclaimed speech at Wake Forest University was a tough and blunt statement of what U.S. intentions should be and the actions we must take while the Soviets continue to build up their forces. In my March 23 newsletter to my constituents I expressed satisfaction at the President's statement.

My article was as follows:

A Message the Russians Understand

At Wake Forest University in Winston-Salem recently, President Carter said the United States is determined not only to maintain a strategic balance with the Soviets but also is developing forces to counter any threats to our allies and our vital interests in Asia, the Middle East, and other regions of the world.

He stated further, "We will match, together with our allies and friends, any threatening power through a combination of military forces, political efforts and economic programs. We will not allow any other nation to gain military superiority over us."

This is a welcome statement. I applaud the President for his forthright stand. Regretfully, it is one that is long past due. It expresses an attitude which is not borne out in the current Defense budget, nor in the Defense budget for last year. Nevertheless, if vigorously followed through by appropriate action in the Administration and in Congress, it will again place our nation in position to earn the respect of the free world and to provide the leadership which is so desperately needed. Expanding areas of communist control throughout the world must be contained or countered.

The President's statement got the attention of the Soviets. It is language they understand. Their quick response through the Soviet News Agency Tass demonstrates their concern about the ability of the U.S. to be strong and to act strong, and our willingness to use procedures more effective than the meaningless notes which heretofore have been our characteristic response to Soviet aggression.

It is also very important that specific proposals for strengthening America's military defenses be taken now. Paper airplanes that school children manufacture from note paper are not formidable weapons. Speeches not backed by action are like paper airplanes.

Unfortunately, the Nation had to wait less than 1 week to find whether the President would back his words with action. On March 23 the administration revealed the long overdue 5-year Navy shipbuilding plan. It was intended to provide executive guidance to the Congress and the Nation on where our shipbuilding priorities belong.

To recapitulate, this year's budget proposal had cut shipbuilding in fiscal year 1979 from 29 or 30 ships to 15. In tough questioning the Secretary of the Navy told congressional committees that while this year's plan is lower than he would have preferred, it is a 1-year plan which he can live with. Asked about future years, the Secretary made it clear that additional years must see an increase in the shipbuilding plans. The number for the next budget has been estimated at 38 ships. Why not 30 this year? It takes years to build a modern warship. The administration's 5-year proposal? It will cut in half the Navy's previously stated requirements.

There are many experts who feel this program would reduce the Navy's ocean-controlling capability to a coastal protection role. In the face of an unabated Soviet shipbuilding program, this 5-year plan would provide 70 ships instead of the 156 envisioned by the Navy as critical to their needs. It reduces a previous goal of an 800-ship fleet in the 1980's to one of approximately 525 ships by the mid-1980's. There simply is no way to describe the plan as "adequate and realistic" or to feel that it would improve the Nation's ability to adequately deal with the Soviet threat. Fortunately, there are strong advocates of a more adequate program. They will provide more realistic plans when asked by the Congress for recommendations on the 5-year plan.

This is much more than a disappointing period for those of us who view the increasing Soviet threat with serious concern. It is a time when we must question the direction in which our defense capabilities are proceeding. One only has to review the lessons of the past four or five decades to see where this Nation could find itself in the not too distant future. World War I was described as the "war to end all wars." A generation of Frenchmen had perished in the conflict with Germany. No one in his right mind wanted to go through another war like that one. Yet, during the period of time from the signing of the Treaty of Versailles to the usurpation of power in Germany by Adolf Hitler, the allied nations had ample opportunity to prevent the second holocaust. But beginning with the peace treaty itself, the Allied nations consistently deluded themselves into believing that continued reticence in providing adequate armed forces would somehow invoke the same action in Germany. This policy did not prevent a war—it caused one. The delusion that peace is built through unilateral disarmament and the belief that opposing forces will show similar restraint is ludicrous. Nations throughout history have never ascribed to such a view and survived.

Winston Churchill provides an unmistakable lesson of the results of such folly in his incomparable narrative of World

War II, the first book of which is "The Gathering Storm." In describing the inactivity of the allies toward the continual German buildup, together with its ominous results he says:

There can hardly ever have been a war more easy to prevent than this second Armageddon. I have always been ready to use force in order to defy tyranny or ward off ruin. But had our British, American, and Allied affairs been conducted with the ordinary consistency and common sense usual in decent households, there was no need for Force to march unaccompanied by Law; and Strength, moreover, could have been used in righteous causes with little risk of bloodshed. In their loss of purpose, in their abandonment even of the themes they most sincerely espoused, Britain, France, and most af all, because of their immense power and impartiality, the United States, allowed conditions to be gradually built up which led to the very climax they dreaded most. They have only to repeat the same well-meaning, shortsighted behaviour towards the new problems which in singular resemblance confront us today to bring about a third convulsion from which none may live to tell the tale.

Commonsense today must tell us that our situation is deteriorating. When the Chairman of the Joint Chiefs openly questions our ability to defend our interests, what more do we need to hear? Until the Soviet Union ceases the escalation of the arms race, the United States must insure that our Defense Establishment is capable of maintaining our national security. Our forces must be adequate without question. They must be able to carry out and support our policies in all areas of national interest. Today's defense policies are invitations to disaster, perhaps not tomorrow or the next day, but somewhere in the years ahead, and not too far ahead.

John F. Kennedy summarized our national defense needs quite well:

The primary purpose of our arms is peace, not war—to make certain that they will never have to be used—to deter all wars, general or limited, nuclear or conventional, large or small—to convince all potential aggressors that any attack would be futile—to provide backing for diplomatic settlement of disputes—to insure the adequacy of our bargaining power for an end to the arms race.

It is highly regrettable that we continue in these dangerous times to be confronted by the dangers of unilateral disarmament.

## FBI MISCONDUCT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized from 5 minutes.

Mr. GONZALEZ. Mr. Speaker, back in 1964 most Americans probably thought of the FBI as a completely honest, straightforward and uncorruptible organization. This was the image that was portrayed on the television screen in the "FBI" show, a program that was produced with the active cooperation of the FBI. Director Hoover and his staff were careful to assure that the TV program always portrayed his outfit as handsome, clean, kind, courteous, brave—and not least, well-dressed and cleanshaven.

But the truth was that the FBI was Hoover's private empire, and if he did not get the conclusions he demanded, there was a fearful price to pay. If Hoover thought that it was midnight at noon, woe betide the individual who dared tell him otherwise.

So it was that in 1964 Hoover finally received a contrite memo from William Sullivan, who proposed a program of action to discredit Martin Luther King and replace him with some "suitable" leader acceptable to the FBI. This was to be done by discrediting King's moral integrity, which was the foundation and basis of his whole movement.

Hoover replied, "I am glad to see that the 'light' has finally, though dismally delayed, come to the Domestic Intelligence Division." Hoover insisted that, "I struggled for months to get over the fact that the Communists were taking over the racial movement.* * *"

Eleven months later the FBI mailed an anonymous letter to King, which was nothing more nor less than old-fashioned blackmail. This letter indicated that the sender had information about King that would destroy him; King read it as an invitation to suicide.

But Hoover was not just interested in King; he wanted to know everything about anybody who took part in or supported the civil rights movement.

For instance, on the afternoon of November 2, 1964, the San Antonio FBI office sent a teletype marked urgent to Hoover, himself. What was this urgent message? It was this:

On night of November 1 last (deleted) East Side politician and active CORE member in San Antonio, Texas, held open house honoring Congressman Henry B. Gonzalez. (deleted)

This was also routed to Sullivan, who at that time was heading up Hoover's blackmail campaign against King. Further, this teletype was reduced into a memorandum which the FBI marked "Confidential" and either distributed or intended to distribute to other agencies. The evidence that it was in fact distributed is persuasive—but to whom and for what purpose I can only guess. But I believe that since Hoover wanted to discredit people he disapproved of, this applied to me as much as anyone else, and he thought that sending out a phony confidential item on me would convince someone that I was less than honorable. In fact, of course, the event I attended was open and public and no surprise to anyone and no more subversive than a family picnic. It just happened that Hoover thought it might be used against me somehow.

It was crazy for the FBI to use its resources in such a way, when it should have been concentrating on real threats to public safety, but that is clearly what happened. the FBI mindlessly obeyed the dictates of the Director, who could do no wrong, and who had no master save his own decaying self.

Have things really changed? I have yet to receive any assurance that the FBI will clean up the files it has gathered on me, and delete the slanderous references that are in those files. I have renewed my request with the new Director, and include that request with my remarks.

HOUSE OF REPRESENTATIVES,
*Washington, D.C. April 17, 1978.*

Hon. WILLIAM H. WEBSTER,
*Director, U.S. Department of Justice, Federal Bureau of Investigation, Washington, D.C.*

DEAR MR. WEBSTER: I received and have read with growing amazement the contents of FBI files maintained on me, personally.

It is clear that the FBI reflected the whims and prejudices of its Director, and that these were, in turn, registered in files concerning me.

For example, whenever I made remarks that were deemed offensive to the Director, so-called background statements on me would include comments such as "a recipient of Communist Party support in his election campaigns. . . ." At the time of my election to Congress, a memorandum to Cartha De Loach advised the Director not to send me a letter of congratulations, "in view of his backing by the C.P." Even before that, the FBI placed in my file newspaper clippings regarding my activity in behalf of civil rights and I cannot imagine any reason for this since nothing could have been less subversive than attendance at a NAACP meeting in Seguin, Texas. Nor can I imagine why the FBI would have been interested in such prosaic items as a Drew Pearson broadcast that predicted I would be elected to Congress.

While the FBI carefully labeled me as one who had received Communist support whenever it was felt the Director would be unhappy with me, it did indicate that there were "cordial relations" whenever it was believed the Director would be pleased with what I had said or done. Thus, the Director—like the naked Emperor—was always to be told what we wanted to hear. I cannot imagine a more insidious behavior by a Federal police agency.

You indicate, as the files do, that I had no knowledge of whatever supposed support I ever received from any Communist. Yet, time after time, the files reflect that the FBI disapproved of me on the grounds of this supposed report which even the files show I knew nothing about, never solicited, and would not have tolerated if I had known of it. Throughout the files these references are, indeed, statements that are subject to broad erroneous interpretation and which therefore ought to be struck. Further, I am entitled to a complete apology.

If evidence is needed that the FBI was subject to the making of personal remarks and observations, you need only turn to a memorandum of December 31, 1970, in which a member of my staff was characterized as "a louse." Solely because that assistant declined to provide information that the Bureau wanted in order to check out a critical comment included in one of my speeches. I inquire specifically of you whether you believe it accurate to characterize a staff member as "a louse" when I am certain that FBI files on that individual will show that he is entitled to, and has received, some of the highest levels of security clearances of our government.

These are serious matters and thus far I have received only cavalier treatment from the FBI concerning them. This is not the kind of justice that I believe in and it is assuredly not the kind of justice that the FBI is supposed to stand for.

I am entitled to and again repeat—expect—that my records will be cleared, that derogatory statements in them will be deleted, and that I will receive an apology both full and public.

Sincerely yours,

HENRY B. GONZALEZ,
*Member of Congress.*

## DEFENSE PROCUREMENT: A FIRST-CLASS RECORD

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. CHARLES H. WILSON) is recognized for 5 minutes.

● Mr. CHARLES H. WILSON of California. Mr. Speaker, each year it is my pleasure to cosponsor, along with local chambers of commerce, a Federal procurement conference designed to acquaint businessmen and women in the Los Angeles area with the opportunities available to them through buying and selling to the Federal Government.

Featured at each conference is a prominent guest speaker who brings his own particular expertise and knowledge in the area of industry and Federal procurement procedures. This year, it was an honor to have as guest speaker, Dr. Allen E. Puckett, president of Hughes Aircraft Co. Dr. Puckett is a well-known and highly respected member of the industry. He has been in key management positions with Hughes for nearly three decades and has been honored on several occasions by his peers in the aerospace community. I am pleased today to submit for the review of my colleagues in the Congress a copy of Dr. Puckett's remarks at the conference. In addition, I would like to particularly make note of his comments on the success of defense procurement.

As he mentions, defense procurement is often cited as unnecessary and wasteful Government spending or as excessive profits for the defense industry. However, in comparison to other industries, aerospace and defense can take a great deal of pride in the strides they have made in the past 20 years.

The superior technical accomplishments of those years have not only strengthened our national defense effort, but have contributed to the economy in general—largely as a result of business participation in the procurement process.

Dr. Puckett's perspective on Federal procurement is sometimes lost in criticisms over high costs and error, but I urge all Members of Congress to take a close look at what he has to say on the beneficial relationship between Federal procurement in the defense area and the business community.

The speech follows:

### FEDERAL PROCUREMENT

(By Allen E. Puckett)

Each year this symposium on Federal Procurement, sponsored by Congressman Charles H. Wilson, presents a remarkable opportunity for the business people of this area, whether they represent large business or small, to meet and exchange ideas on their problems and their opportunities. You have been, and will be, exposed to a large amount of detailed and technical information on the problems of doing business with the Government. No doubt many of you feel as I do—that I wish doing business with the Government were not so complex. I wish there were not so many rules and regulations—so many forms and reports to fill out. If everything else were equal, we might even prefer, on occasion, to do business with someone other than the Government. But everything else is not equal, and doing business with the Government, particularly in the area of national defense, offers some very remarkable opportunities for a very satisfying and rewarding participation in a very special segment of U.S. industry.

This symposium also presents an opportunity to look philosophically for a moment at the nature of the Federal procurement system, and at the role of both industry and Government in that process. The magnitude of the Federal procurement budget is indeed enormous by any standards. The Defense Department procurement, which constitutes the largest part, will be about $32 billion in the 1979 budget. I should really add to that the research and development budget of $12 billion, which is another special type of procurement, making a total of $44 billion. The only industry in the country which exceeds that volume is the automobile industry—and not by much.

The dollars that are spent in this procurement program are taxpayers' dollars—yours and mine. The dollars are authorized and appropriated by members of Congress—such as Charlie Wilson, who plays a very special role as a ranking member of the House Armed Services Committee. These men, and in turn the officials in the Defense Department who must supervise and administer the expenditure of funds, bear an awesome responsibility to protect the public interest. They must not only get the most mileage out of every dollar, but they often have the incredibly difficult task of making the selection of which programs to pursue and which to abandon in the best interest of national defense and within an affordable budget.

It should not be surprising therefore, and indeed as taxpayers we should welcome the fact that the Federal procurement system is a target of constant scrutiny by an endless variety of committees, panels, various agencies of the Government, as well as self-appointed unofficial critics. We have had one after another blue ribbon panels, committees on Federal procurement, and similar groups, each of whom has wrestled conscientiously and agonizingly with the problem of devising a perfect and foolproof system of managing Federal procurement. It should not be surprising that each new group or committee discovers some better way to do the job, and invents a slightly different system. Each system, of course, involves rules and procedures, decision points and forms to be filled out, checks and balances to minimize errors in judgment and to insure that the Government gets its money's worth.

This intensive and completely appropriate effort to protect the taxpayer sometimes creates another unintended effect—the appearance or the suggestion that the procurement system is in trouble. There are critics who lose no opportunity to allude to "wasteful Government expenditure" on the one hand, or "enormous and excessive defense industry profits" on the other hand. We hear references to the "military-industrial complex" as though this were some evil team of conspirators determined to fleece the American public. It is time, I think, to correct the record, and to look at the real facts regarding the industry in which we are engaged.

The fact is, in my opinion, that the Federal procurement system, particularly in the defense area, has been remarkably efficient and effective. In order to reach such a conclusion, we must examine the results in relation to the nature of the job to be done. We must ask whether any other segment of the American industrial community has undertaken more difficult tasks with better results.

The most important feature of the national defense procurement program is that the very nature of national defense presents problems that are at the very limit of human capability and ingenuity to solve. Our objective is to preserve the security of the United States, and that requires that our means and methods of defense must match or exceed the best that our potential enemies may possess. This is truly a competition which we cannot afford to lose. It is a competition which will not necessarily be won by vast expenditure of money and materiel, but which can be won by the exercise of superior ingenuity and technical skill. As a result, the defense industry has been challenged by some of the most difficult technical assignments ever undertaken in our modern society. We have come to expect as a way of life the establishment of technical goals which are at the edge of the impossible. We undertake as a normal procedure the incredible process of scheduling inventions, and trying to estimate the price of doing something that no one really knows how to do at all.

Let us look at a few of the achievements of the last 20 years—mind blowing accomplishments which not too long ago were literally presumed by many wise men to be impossible. At the end of World War II, the Germans had a crude ballistic missile with a range of a few hundred miles and almost no accuracy worth mentioning. Today our ICBMs fly thousands of miles across the ocean and arrive at a designated target with incredible accuracy. At the end of World War II, no aircraft had flown at supersonic speeds, and the "sound barrier" was still a mystery. Today, we have operational military aircraft routinely flying at supersonic speeds. At the end of World War II there were a very few experimental electronic computers—incredibly clumsy and expensive, using vacuum tubes and large amounts of power. Today, almost every device that we build for military use has an electronic computer imbedded somewhere in its insides. The computer may help guide an ICBM, or control an aircraft, or process logistics data, or control the functions of a communications system. You and I can buy a pocket-size electronic computer which provides essentially all of the functions of a roomful of computer equipment in the 1950s. Our pocket computer is about 100,000 times smaller, 10,000 times cheaper, and 10,000 times more reliable than that computer of the 1950s.

In the 1950s, the only satellite we knew of was the moon. Today we have literally hundreds of satellites in orbit around the earth—some providing communications, some observing the weather, and still others observing a wide variety of things on the surface of the earth. We design these satellites to operate for a period of three to 10 years in space—with no opportunity to make repairs or replace parts. Where 25 years ago "space" was simply a word in the science fiction books, today it is a commonplace part of our everyday life.

The great pressure for technical superiority has lead to all of these achievements in the defense area—as well as to many more. The technological advances that have emerged in these various programs have also found their way into many aspects of the civilian economy, and indeed have created new industries. All of these remarkable and useful results have come out of the operation of our Federal procurement system, for all its complexities and shortcomings.

Other results have emerged that are less visible, but no less important. As military equipment has become more complicated, the need for greater reliability in complex equipment has multiplied accordingly. The procurement system very properly has imposed on us increasingly difficult standards of quality and reliability in everything we make whether it be a small component or an assembly of thousands of parts. We have complained and agonized over new and increasingly rigorous requirements which we must meet, but somehow we meet the challenge. We are rarely as good as we would like to be, but it is a fact that the reliability

of our equipment today is far beyond our wildest dreams of the 1950s. The new methods of manufacture, quality control, and testing that are required to achieve these high standards have in turn reflected into new higher standards and better products in much of the civilian economy.

We have, of course, in this industry had our share of mistakes. We have occasionally attempted something which truly could not be done at all, or for which the technology was not yet ready. We have occasionally been overly optimistic in projecting time schedules or cost. I do not excuse or condone our mistakes—but I suggest that if we did not occasionally overreach, we might not be reaching high enough.

As another measure of our performance, perhaps we should look at other more conventional industries and inquire what they have achieved and how they have performed in the same time period. Let us consider the housing industry—home construction, for example, which is a subject familiar to all of us. I do not detect any dramatic breakthroughs in the last 20 years—in fact, home construction has stayed pretty much the same. One even hears occasionally such comments as "They don't build houses like the used to."—And that does not mean that they are better today. When we come to schedule and price, any new home owner today will describe to you at great length how completion was three to six months behind schedule, and price was 20 percent above the original plan. And yet the house contained no new inventions, no surprises, no item of hardware which could not be priced to within one percent at the local hardware store. I do not intend to single out the construction industry for any special criticism, but merely to suggest that in most of our economic dealings we are accustomed to something less than the perfection which we demand in the areas of federal and specially defense procurement.

The theme of this story, of course, is that at the same time that our procurement system is being scrutinized and often criticized, we—the industry and the Government—have much to be proud of. Our record, on the average, is one of significant achievement. We might pause occasionally, as the difficulties of our business surround us, to take some quiet satisfaction in what we have accomplished.

An important factor in this record, I believe, is the spirit of teamwork which has generally existed between small business, big business, and the Government. No doubt operators of small business occasionally regard their big business customer as demanding and difficult to work with. The big business customer on the other hand must regard small business as his partner and his team member. We cannot exist and work together with an adversary relationship. The problems of small business must become the problems of its larger customer. The survival and the success of small business are essential to the health of the larger companies which they supply, and in turn to the Federal Government which procures their products directly or indirectly.

In the same way, the relationship between all of industry and Government must contain an element of partnership and teamwork. The problems which we must solve are far too difficult ever to be attacked successfully by two adversaries, each of whom is concerned primarily with how to obtain some advantage over the other. It is sometimes suggested in certain quarters that any appearance of partnership between industry and Government is somehow dangerous and conspiratorial. I reject categorically that concept, and suggest instead that some sense of partnership must exist in order for us to survive at all. The representatives of the Government must protect the taxpayers by ensuring equitable dealings between industry and Government, but the minute we forget that we are partners working together for the good of our nation we will have lost our greatest strength.

Men of good will, with common objectives, have historically worked together in the solution of our defense problems and have still managed to deal fairly and equitably with each other in a business sense.

The American free enterprise system does not need to be, and in fact cannot be a competitive jungle with every player like a predatory animal struggling only for his own survival. The survival of each of us is best protected by the survival of all others who can contribute to our common goals. That is why both Government and big business must have special concern for the health and opportunities of small business and of minority businesses. That is why the relationship between Government and industry must have an underlying pattern of teamwork to maximize our chance of survival.

At the same time the best insurance that each of us in industry has for our own success is our ability to perform. It must be our ingenuity, our efficiency, and our dependability that makes us successful suppliers to the Government. We may expect to be surrounded from time to time by new and apparently burdensome Government regulations and procedures. We should consider their purpose before we complain. We should protest when we believe the Government is paying more for paperwork than for hardware. But above all we must remember the great burden of responsibility that rests on both parties, and we in industry must respond to the limit of our ability as a member of the team.●

## VETERANS ARE CALLED TO ACTION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. CARNEY) is recognized for 5 minutes.

● Mr. CARNEY. Mr. Speaker, there is no man in the country more knowledgeable about veterans' needs, the laws concerning veterans' benefits and their administration, than the national commander of the Disabled American Veterans, Oliver E. Meadows.

As staff director of the House Committee on Veterans' Affairs for almost 25 years, Oliver played a major role in putting together every veterans' program implemented since World War II.

Oliver is a severely disabled veteran—having sustained his wounds in combat during World War II. When he says the VA medical system is in deep trouble, we all should listen. Members of the Disabled American Veterans, the American Legion, the Veterans of Foreign Wars, the Veterans of World War I, the AMVETS, and others are very concerned with funding levels being proposed by the administration and the House Budget Committee for benefits and services for veterans and their families. I certainly share their concern.

Commander Meadows recently issued a "Call to Action" in the April issue of the DAV magazine to all members of his organization. His comments follow:

CALL TO ACTION

If ever there was a time when all DAV and DAV Auxiliary members should act in unison to protect the VA medical system from sweeping, insensitive budget slashes, that time is right now!

If we don't take immediate action—every single one of us—we can be assured that the Administration and its Office of Management and Budget will further encroach on the scope and quality of VA health care we have earned the right to expect.

Right now a VA budget is being considered by the Congressional Appropriations Committees that would carve into the very muscle of the VA health care system with severe and damaging consequences. Of acute concern to us are cutbacks that would include:

Trimming 3,132 operating beds from the VA hospital system, a move that would result in a monetary loss of $32.3 million and the loss of 1,500 full-time jobs.

Elimination of medical, prosthetic, and rehabilitative research activities at 64 VA medical facilities, representing a monetary loss of $18.3 million, loss of 245 full-time jobs, and indirect creation of some rather grim problems in physician recruiting and other areas crucial to providing quality health care; and

A $236.5-million shortfall in programs for hospital construction and improvement of nursing care, outpatient, and domiciliary facilities.

These are serious problems. Each one of us must write to our Congressman and Senators, protesting these cutbacks in the strongest terms.

To make sure the DAV and DAV Auxiliary mount a stern and effective counter offensive against these frightening threats to the future of the VA medical system, I have initiated a program of action for our organizations. I have written to the leaders of the DAV and DAV Auxiliary at the Chapter, Unit, Department, and National levels, explaining the situation and what needs to be done.

But, your action—as an individual member—will be required also if we are to win this critical battle.

Write to your Congressman and Senators today. Don't put it off. It's urgent that you act immediately.

BED CUTBACKS

The reduction of 3,132 VA hospital operating beds that is proposed in the Carter Administration's budget amounts to the equivalent of eliminating six 500-bed hospitals. Hardest hit states are California, which is scheduled to lose 600 beds at nine VA medical facilities; New York, threatened with the loss of 317 beds at six installations; Michigan, facing the loss of 175 beds at four locations; and Illinois, which could lose 171 beds at six medical facilities.

Noting that the Administration is already discussing a cutback of an additional 2,100 beds in Fiscal Year 1980, I can only view the cutbacks proposed in the Fiscal Year 1979 VA budget as part of a master plan to destroy the VA health care system as a separate entity devoted exclusively to veterans.

This proposed reduction of more than 5,000 operating beds in a two-year period follows the loss of some 14,000 beds over the past decade. The situation is especially grave, since the demands placed on the VA medical system have increased steadily during this entire period of cutbacks.

I'm alarmed that such massive reductions could be seriously considered at a time when veterans of World War II are approaching retirement age in large numbers. Needless to say, the medical needs of this group of veterans are escalating rapidly, as is the severity of the service-connected disabilities suffered by 1.3 million World War II veterans.

I fail to see how the VA can possibly meet the mushrooming demands that the future will surely place on its medical system if one Administration after another insists on shrinking the system's size and capability.

I find the VA's arguments that these bed

closings are necessary to eliminate overcrowding, improve patient privacy, and correct fire and safety hazards completely unconvincing. In a limited number of cases, this may be true. But overall, I see these excuses as a smoke screen designed to disguise an attempt to weaken the VA medical system, making it an easy mark for predators in other Federal agencies.

Also unconvincing to me are the arguments of those VA officials who say they will be able to handle more patients with fewer beds because of increases in staff-to-patient ratios and further reductions in the length of patient stay. In fact, I think there may be a touch of subterfuge in the VA's very optimistic projections in these areas.

First, the VA says it will increase staff-to-patient ratios in its hospitals to 196 staff to each 100 patients during FY 1979. Taken at face value, that would seem a welcome improvement, though it still doesn't compare favorably with the approximate 250 staff to each 100 patients in most community general hospital systems.

According to figures released by the National Academy of Sciences in its "Health Care for American Veterans" report last summer, staff-to-patient ratios then stood at one staff member for each patient in VA psychiatric facilities and 1.5 staff for each patient in VA general hospitals. Considering the monumental problems the VA has in recruiting and keeping doctors on hospital staffs, it would be a real feat if they boosted these figures all the way to 1.96 staff for each patient by the end of FY 1979.

With the scheduled bed reductions and the resulting cut of 1,500 in staffing, it seems to me that the VA could only increase staff-to-patient ratios by decreasing the number of patients treated.

Our best calculations indicate that the VA will be able to reduce the average length of patient stay in its general medical hospitals from 19 to 18 days, and this will allow treatment of an increased number of patients. However, the impact this will have on the VA's ability to keep up with demand while reducing the number of available beds is not at all clear.

It's quite possible that increases in demand on the medical system will entirely outstrip the increases in available beds brought about by further reductions in the average length of patient stay.

Until something is done about bureaucratic problems such as this—problems that relate most indirectly to patient care—it seems unlikely that realistic and meaningful change on a large scale will be possible.

To keep you informed about how VA medical facilities in your area will be affected, I have included with this column a list of those hospitals that face bed closings and the number of beds scheduled to be cut at each. However, even if VA facilities in your area are not affected, you should still contact your Congressman and Senators, protesting the cutbacks in other areas.

Remember that such cutbacks, continued over the past ten years and into the years to come, will eventually decrease the quality as well as the quantity of medical care across the board in the entire VA health care system.

SLASHES IN RESEARCH

I've also included a list of the 64 VA medical facilities at which the Administration wishes to halt research activities. The elimination of this research will produce consequences that far outweigh the savings of $18.31 million that the VA budget proposes to accomplish with these cuts.

With funding in the current fiscal year of $111 million, the VA's health care research program is far and away the largest research effort of its kind in the nation. To continue this research at its current level in Fiscal Year 1979 would require approximately $130 million, while the Administration proposes to spend only $112 million. Funding cuts come to $2.2 million in rehabilitative research, $15.5 million in medical and prosthetic research, and $570,000 in other areas affecting health care research.

Like the cutbacks in operating beds, these funding reductions represent continuation of a trend that has carried over from past Administrations. If this trend continues, the medical professions and their clients . . . you and I . . . will not be able to expect the constant flow of high quality, innovative research that has flowed out of the VA medical system since World War II.

Curtailments of research into the causes and treatment of a number of service-connected disabilities are planned, and such curtailments will have an obvious and immediate effect on the disabled veteran population. But, I'm also deeply concerned that the declining quality of VA medical research programs will significantly inhibit VA efforts to attract the most talented doctors and other health care professionals into a system that doesn't pay competitive salaries.

Many of the VA's finest doctors have already left the system. And those who remain charge that it grows more difficult each year to attract young doctors and doctors of exceptional ability into the system. Without the incentive of money, the VA can only offer opportunities for rewarding research and the stimulation of the high intellectual atmosphere that quality research fosters in a hospital.

As these secondary incentives dwindle it's no wonder the VA finds it difficult to attract and keep its doctors. These concerns were expressed by Dr. Herbert Rose, president of the National Association of VA Physicians, with whom we'll work closely to get VA health care research funding restored to adequate levels.

The fact that two VA medical researchers were awarded the Nobel Prize last year attests to the value of the VA's health care research program—not only to veteran patients, but to everyone in our country and around the world. VA research is a national resource. It would be heinous to allow this crucial program to be ruined by a callousness that places budget savings at a higher premium than human needs.

SHORTFALLS IN CONSTRUCTION

An astonishing total of 36 major construction projects, including a badly needed general medical and surgical hospital in Camden, N.J., are slated to be eliminated in the VA's FY 1979 budget. The budget also includes a 67-percent cut in grants for construction of state extended care facilities.

You'll find a breakdown of the shortfalls in construction programs in a box with this column. Of course, the DAV will fight to have this funding restored. And, it's just as important that each of you write to your Congressman and Senators about this problem as well as the cutbacks in operating beds and medical research.

The major question I find myself asking when I consider these shortfalls in construction is this: What do these cutbacks mean in terms of the Administration's long-term commitment to the integrity of the VA medical system?

Quite frankly, I think these cutbacks show that commitment to be very weak, if it exists at all.

WHY MEDICAL PROGRAMS?

You're probably asking yourself why the Office of Management and Budget decided to descend on the VA's medical programs like a pack of hungry wolves? With Federal funds as tight as they are there is constant pressure on the Administration to cut back programs wherever it can get away with it.

When it comes to the VA budget, we find most of the outlays fixed by law. Disability compensation, pension, DIC, educational allowances, and the like must be paid at the rates set by Congress. Therefore, the only large segment of the VA's operations that offers any budgetary flexibility is the medical program, which thus becomes the natural target for the budget cutters.

The Veterans Administration can do very little to defend itself against cuts in its budget. The agency is, in fact, required to support the Administration budget before the Appropriations Committees of Congress—regardless of the private views of VA officials.

WE MUST ACT NOW!

Thus, the job of protecting the VA budget from unmerciful slashing falls upon us. We must let the budgeteers know that they can't get away with chopping our medical program away to nothing.

In the final analysis, it all comes down to a phrase all of us have heard before: The President proposes, but Congress disposes. The Administration will not get its way on these budget cuts if we put enough pressure on our representatives in Congress, presenting our case firmly and convincingly.

Congressman Ray Roberts (D-Tex.), chairman of the House Committee on Veterans' Affairs, has already taken the lead in this battle. Senator Alan Cranston (D-Calif.), who chairs the Veterans' Affairs Committee in the Senate, has always fought for adequate VA medical appropriations, and can be counted a firm ally in the current situation.

We have other staunch friends in Congress too. But, we must back them up with solid grassroots support. It's urgent that all of us act now! Write to your Congressman and Senators today! ●

---

## "FRIENDLESS" ERITREAN NATIONALISTS HAVE EARNED MEASURE OF RESPECT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Wisconsin (Mr. REUSS) is recognized for 5 minutes.

● Mr. REUSS. Mr. Speaker, the nationalist forces of tiny Eritrea have now been fighting for independence from Ethiopia for 17 years. Today, with Cuban and Soviet forces involved on the side of Ethiopia, whereas once they sided with the Eritrean nationalists, the Eritrean Peoples Liberation Front and the Eritrean Liberation Front are not surprisingly cynical and disillusioned about just who their friends are in the outside world—and indeed, whether they really have any friends, including the United States which the Eritreans regard as having favored absorption into Ethiopia in the past.

In a story in the Washington Post, Sunday, April 9, 1978, an EPLF spokesman was quoted as commenting that "the whole world is against Eritrea."

With all the blood and mayhem in Africa these days, I am reminded of an occasion involving a constituent of mine, when the Eritrean nationalist leaders showed themselves to be decent and compassionate toward innocent victims of the fights over territory, and set an example that some other national leaders could well follow today if they wish to establish credentials as responsible members of the international community.

In July of 1975, James Harrell of Milwaukee and another American were kidnaped from the Kagnew naval communications unit in Asmara, Eritrea. They were technicians innocent of any political involvement, and were simply caught

up in the conflict between Eritrea and Ethiopian occupation forces. I made extensive efforts through our State Department to secure the release of the two men, and was dismayed at the lack of interest on the part of our Government.

Subsequently, I contacted Osman Saleh Sabbe, leader of the Popular Liberation Front, in Damascus, Syria, and brought the plight of these two men to his attention. At the time, Mr. Sabbe wrote me:

We do not consider kidnapping innocent people who have not been involved directly against our people as a correct action. The history of our revolution has a clean record as far as its abiding by laws and regulation is concerned.

He promptly secured the release of these two men and restored them to their families in the United States.

Let the Eritrean nationalists know that I for one, and everyone involved in that affair, remember their attitude gratefully and wish to assure them that they are not without friends in the United States.●

## WAYS AND MEANS TRADE SUBCOMMITTEE EXTENDS DATE FOR SUBMITTING RECOMMENDATIONS FOR AMENDMENTS TO INTERNATIONAL TRADE PRACTICE LAWS

The SPEAKER pro tempore. Under a previous orders of the House, the gentleman from Ohio (Mr. VANIK) is recognized for 5 minutes.

● Mr. VANIK. Mr. Speaker, the Subcommittee on Trade, Committee on Ways and Means, today announced that the subcommittee is extending to May 15, 1978, the deadline, as previously announced in the press release of February 6, 1978, for all interested parties to submit recommendations on how U.S. laws (and regulations pursuant to such laws) should be amended to provide more expeditious, effective, and equitable relief for domestic industries from unfair practices affecting import competition.

The subcommittee is interested in recommendations for:

First. Amending the Antidumping Act of 1921, as amended by section 321 of the Trade Act of 1974;

Second. The countervailing duty statute (sections 303 and 516 of the Tariff Act of 1930, as amended by section 331 of the Trade Act of 1974):

Third. Provisions to deal with unfair methods of import competition (section 337 of the Tariff Act of 1930, as amended by section 341 of the Trade Act of 1974); and

Fourth. Responses to foreign export subsidies under section 301 of the Trade Act of 1974.

I hope that this extension will permit all interested parties sufficient time to complete statements and recommendations. It is my intention to schedule hearings late this spring based on the recommendations submitted to the subcommittee, and in particular to invite testimony from expert practitioners in this important area of trade law and regulations.

All comments and recommendations should be submitted to Mr. John M. Martin, Jr., Chief Counsel, Committee on Ways and Means, U.S. House of Representatives, Room 1102 Longworth House Office Building, Washington, D.C. 20515; telephone: (202) 225–3625 by May 15, 1978.●

## THE ROSE AS OUR NATIONAL FLOWER

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. HANLEY) is recognized for 5 minutes.

● Mr. HANLEY. Mr. Speaker, once again, as we all enjoy the great beauties of spring. I would like to express my strong support for House Joint Resolution 654, which would designate the rose as our national flower.

I have read recently a statement by Carter Lee of the New England Rose Socity, which I think states quite clearly the strong case for selecting the rose as the most appropriate national flower.

I offer that statement now for the consideration of my colleagues:

THE ROSE AS OUR NATIONAL FLOWER

Why should the rose be our national flower? Because it is both native and immigrant, simple and sophisticated, delicate and sturdy, persistent and adaptable, grown in a hundred forms from miniature to climber in all fifty states, typifying the qualities that make this country what it is.

Before the first settlements were made on American shores, the Reverend Jones Rosier, in the ship Archangel, touching at Monhegan Island in 1605, found "gooseberries, strawberries, wild pease and wild rose bushes." Edward Winslow reported from Plymouth in 1621, "an abundance of Roses, white, red and damask, single but very sweet indeed," and when the Puritans came to Salem in 1629, what did they find? "Ripe strawberries and gooseberries and sweet single roses." (Higginson's Journal)

The Encyclopedia Britannica lists 35 native American species of rose, and these are scattered throughout the length and breadth of the land—Rosa blanda and Rosa virginiana on our east coast, Rosa setigera, the prairie rose, and Rosa californica, to name but a few. And then there are such roses as R. laevigata, the Cherokee rose, imported from China, but so much at home here that it was first described botanically from American plants and is as southern as fried chicken.

The modern American rose is a hybrid product of many species so interbred as to make it hopeless accurately to trace their ancestry. Are we mistaken in believing that this very characteristic, far from making it alien, is rather typically American? The fact is that George Washington himself helped the process along, growing a hybrid derived from R. setigera, which was named Mary Washington and sold commercially. It is also true that while many species, native and imported, grow wild in the meadows, swamps, and hedgerows of this tremendously varied country of ours, the high centered, fashionably dressed hybrid tea is accustomed to a high standard of living. Who would dare say that this is un-American?

Finally, those who think of the rose as a foreign flower because of celebrated immigrants like "Peace" are forgetful of the genius of American hybridists like Eugene Boerner of New York, Herbert Swim, Walter Iammerts and Robert Lindquist of California, the Brownells of Rhode Island, Horvath of Ohio, the late great Dr. Van Fleet of the U.S.D.A., Griffith J. Buck of Iowa, and many others who have combined to put American roses at the top of the world's production in both quantity and quality.

Our founding fathers saw no reason why the American Eagle should worry because the Roman eagle preceded him. Shall we be more concerned about the English rose? Or shall we recognize the modern American rose, call it Hybrid Tea or Floribunda or Grandiflora or what you will, the very essence of the American spirit, which takes from all the world, mixes with native American soil and diversity of resource, and comes up with a progeny which is adaptable to all occasions, rich and beautiful beyond compare?

CARTER LEE.●

## TREASURY'S POSITION ON PROVISIONS OF SAFE BANKING ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Rhode Island (Mr. ST GERMAIN) is recognized for 5 minutes.

● Mr. ST GERMAIN. Mr. Speaker, today I am introducing legislation which incorporates the Treasury Department's current position on banking reform and improvements in the Federal regulatory structure.

This bill is the product of weeks of negotiations, study, and consultation between the Treasury Department and myself in an effort to broaden the consensus behind key provisions of the Safe Banking Act. This effort was begun shortly after the markup of the Safe Banking Act (H.R. 9600) was terminated near the end of the first session of the 95th Congress.

While I have placed the highest priority on moving the Safe Banking Act, I have delayed a rescheduling of the markup in this session to allow the Treasury Department and others in the administration to study the issues and to develop—as they see it—the best remedies to the defects in our present regulatory structure and current banking practices. At the outset of this task, we realized that there would undoubtedly be areas where we would be forced to continue to disagree, but I have felt that the work—and the wait—were well worth it if we were able to shore up support for so much as a single title.

As it turns out, we have done much better than that—although we will continue to agree to disagree on some very major areas.

Mr. Speaker, I am particularly pleased with the Treasury's strong position on two key titles. One of these gives the regulatory agencies specific authority to disapprove changes of control of banks when unsavory, fly-by-night operators attempt to move in. Treasury also endorses our strong recommendations for greater disclosure to the regulators of material facts when a takeover is attempted. In view of the evidence collected by the Financial Institutions Subcommittee in its investigation of the Texas Rent-A-Bank schemes and other bank takeovers. I am gratified that the Treasury has given its full endorsement to providing more tools for the regulatory agencies in this important area.

Even more important to the overall purposes of the safe banking legislation is the Treasury's support of new and

more meaningful disclosures by commercial banks in the areas of insider activity. This has been a key feature of the Safe Banking Act and I remain convinced that the "sunshine" provided in the disclosure section will have a very salutary effect on efforts to curb insider abuses. I am also pleased that the Treasury Department is willing to support disclosure of final "cease and desist" agreements and orders. The public and the stockholders should have this information and not be required to learn of it only through rare accidents and agency leaks.

Both the disclosure title and the change of control title, as proposed in the Treasury draft being introduced today, have been worked out in long discussions with the Treasury. The language, in my opinion, meets the basic thrust of the Safe Banking Act.

The Treasury has come up with a workable compromise which assures the full application of Clayton Act standards to interlocks among depository institutions and between depository institutions and other companies, including insurance companies.

Working with the subcommittee staff, the Treasury has developed new language on correspondent accounts prohibiting preferential terms on borrowings by insiders and requiring full disclosure of any loans where correspondent accounts exist.

The Treasury has also given its backing to the Safe Banking Act's title calling for the establishment of an Examination Council which provides for the development by the three Federal banking agencies of uniform standards and approaches to bank supervision.

Unfortunately, the Treasury draft does not address some key titles—those dealing with conflicts of interest in the regulatory agencies; Federal charters for mutual savings banks; tightening of holding company administration; and privacy of bank records.

The Treasury fails to address the conflict of interest question—the effort to slow down the revolving door between the regulators and the banking industry—on the grounds that the administration is supporting a general conflict of interest statute which would apply to all departments and agencies. It takes much the same position on the privacy question, preferring to await completion of pending efforts to develop a Government-wide approach to the issue. The Treasury does not oppose Federal chartering for mutual savings banks in principle; it states that it prefers, however, to deal with the question in the broader context of the role of thrift institutions. In addition, Treasury believes that bank holding company legislation should be deferred pending a further study of this area.

Mr. Speaker, it will be necessary for the subcommittee to address all four of these titles. They are issues which have been before the Banking Committee for many years and there is growing support for action. With all due respect to our friends in the Treasury, these four issues cannot be further delayed. Their time has come and we will have a vote on each of them during the safe banking markup.

Mr. Speaker, I regret to disagree with the Treasury's position on the insider limitations and most particularly its statutory definition of an insider. We were not able to convince the Treasury on our Safe Banking Act approach and, in all candor, I must state that I feel the administration fails to meet the issue head on—to the degree I think is required by the magnitude of the problem.

We have wrestled with the problems created by insider activity in banks for many years and we know that the overwhelming majority of failed and problem banks exhibit serious insider dealing. And I feel strongly that excessive insider dealing—particularly by directors—deprives banking institutions of the independent oversight of an objective board unencumbered by massive business dealings with the bank.

The Treausry draft fails in three respects in this area: First, it does not include limitations on borrowings by directors unless they are major stockholders or executive officers; second, it does not provide an overall limitation on aggregate borrowings by all insiders; and third, it does not include a specific and mandatory prohibition on the use of overdrafts by insiders. The Treasury argues that their proposals for general limitations on borrowings by executive officers and major stockholders and general prohibitions against preferential treatment are sufficient to deal with the overdraft problem.

I am happy, however, that the Treasury draft does incorporate the Safe Banking Act's language on new supervisory powers on removal of officers and that it includes limitations on loans to "political committees" controlled by insiders—as provided in H.R. 9600.

The Treasury draft also includes the Safe Banking Act's proposals for restructuring the National Credit Union Administration and the so-called FDIC "housekeeping" amendments. It also provides additional language on Comptroller of the Currency's "housekeeping" questions.

Mr. Speaker, the receipt of the Treasury's draft now opens the way for a resumption of markup. It is my intention to call an early caucus and then move immediately to markup of H.R. 9600. Where appropriate, the new language offered by Treausry will be considered as we reach the various titles in H.R. 9600. As we left the markup in October, we were on title I and I hope we will be able to move rapidly so that the legislation may be sent to the full committee and the House without delay.

While we do not agree with all the points, I am pleased with the fact that the Treasury Department, and particularly Deputy Secretary Robert Carswell and his staff, have been willing to listen to our arguments for a strong reform bill. Secretary Carswell has been open and fair in this process and I am happy that we have been able to be persuasive in some key areas. We are pleased to have Treasury moving with the basic outlines of safe banking on these points and, of course, we reserve the right to disagree on other areas.

Faced with the multiheaded Federal supervisory structure and its various constituencies, the Treasury has performed a difficult, and in many respects, rewarding job. It has made the effort, and the Carter administration should be commended for the manner in which it has approached congressional initiatives.

Mr. Speaker, I remain convinced that safe banking must be a priority item for this Congress. We should not adjourn without action in this area. In an election year, I realize that there will be many who believe that peace with the banking lobbies is preferable to dealing with the hard issues of reform. But, the public interest demands more than cosmetic efforts and peaceful coexistence. The public has not forgotten the banking problems that have received increasing media attention in recent years and weeks. The public expects action.●

## THE 82D BOSTON MARATHON—CONGRESSMEN ALEXANDER AND BYRON RUN WITH THE BEST OF THEM

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Massachusetts (Mr. MOAKLEY) is recognized for 5 minutes.

● Mr. MOAKLEY. Mr. Speaker, two of our colleagues joined the legion of long-distance runners assembled in Boston yesterday for the running of the 82d Boston Marathon. The gentleman from Arkansas (Mr. ALEXANDER) and the gentleman from Maryland (Mr. BYRON) rubbed elbows and blisters with international champions, Olympic hopefuls and weekend runners who qualified for the grueling event of more than 26 miles.

I am proud to report that both of our colleagues finished the race. The gentleman from Arkansas clocked a time of 3 hours, 53 minutes and 26 seconds, while the gentleman from Maryland finished in just over 4 hours. The finish of the gentleman from Arkansas was good enough to place him 3,792d in the field of 4,700.

Both competitors paid homage to the spectators at the annual event. The gentleman from Arkansas, in his first entry into the race, noted that—

> I have never experienced more enthusiastic spectators. To run in the Boston Marathon is to pay tribute to the people of greater Boston.

The gentleman from Maryland echoed those sentiments. "The good and zestful people of the Boston area who line the streets make the race the great amateur event it is. This was my sixth appearance and I am once again grateful for their enthusiastic urgings which carried me over Heartbreak Hill and on to the finish line."

Mr. Speaker, never let it be said that Members of the House of Representatives do not run with the best of them.●

## JAMES RESTON PRAISES CARTER'S DECISION ON NEUTRON WEAPONS

(Mr. SEIBERLING asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

• Mr. SEIBERLING. Mr. Speaker, a recent article by the distinguished New York Times writer Mr. James Reston, reprinted in the Akron Beacon Journal of April 11 is one of the most thoughtful and sensible statements yet about the controversial "Neutron Bomb" issue.

Mr. Reston points out that President Carter has been criticized here recently for "hesitating" to order the production of control warheads. As Reston says:

Why shouldn't he be troubled and "hesitant" when he considers where this alarming competition will end?

A half starved world is already spending over $350 billion a year on weaponry, and if Jimmy Carter is committed to anything—politically and philosophically—it is to try to get this arms race by the throat.

TO HESITATE

Mr. Reston points out that good military arguments can be made both for and against the neutron warhead but that in political and philosophical terms, it is hard to quarrel with Mr. Carter's caution and delay. Mr. Reston points out that the West Germans still have their doubts about deploying the use of weapons on their soil and that Secretary Vance is going to Moscow to renew the delicate negotiations for a second SALT Treaty. As Reston says:

The big question is not what is to be done about this particular weapon, but what is to be done about the whole reckless and expensive process of the world arms race.

The text of Mr. Reston's column follows these remarks:

ON NEUTRON "BOMB"—CARTER HAD REASON
(By James Reston)

WASHINGTON.—President Carter has been criticized here recently for "hesitating" to order the production of neutron artillery weapons. Even some members of his own White House staff and cabinet have wondered why he seems so troubled about giving the order to go ahead.

Why shouldn't he be "troubled" and "hesitant" when he considers where this alarming competition will end?

A half-starved world is already spending over $350 billion a year on weaponry, and if Jimmy Carter is committed to anything—politically and philosophically—it is to try to get this arms race by the throat.

So after hearing all the arguments for and against these handy little atomic weapons, he pauses, and temporizes, and thinks about compromising. And a good thing too.

If the Soviets go ahead with every devilish new device their science and imagination can conceive—and they have just about done this—and we do the same to match them, and then they raise the ante to match us and so on, who will break the ring?

And how will the nations ever progress toward a safer and more rational world?

As I understand all the fuss over whether Carter decided against the neutron weapons and then pulled back under pressure from his colleagues and allies, it is this philosophic question that has held him up.

Besides, what's the rush?

A good argument can be made on military terms for producing neutron shells—they are tank-killers that would minimize and maybe even neutralize an attack by the excessive communist forces in eastern Europe.

A counterargument can also be made, again on military terms, for not introducing them into the arsenal of the western alliance on the ground that, if used against a communist invasion, they might lead to an uncontrollable nuclear world war.

But in political and philosophical terms, it is hard to argue with caution and delay.

The West Germans still have their doubts about the wisdom of deploying these weapons years from now on their soil. They want the Dutch and the Belgians to approve such deployment, though it is not clear that the neutron weapons now on the drawing boards, with a range of less than 10 miles, could be used effectively from anywhere but West Germany.

Also, Secretary of State Vance is going to renew the delicate negotiations for a second strategic arms limitation treaty. So why decide the issue one way or another before he gets there?

Carter was not confronted by an either-or decision to produce or not produce these weapons.

There are many different stages in production of neutron weapons, with or without their neutron warheads. And many options on how and where and when they might be deployed after they were produced years from now.

So it is possible for him to compromise without banning the neutron weapons or rushing ahead with them. He could keep the neutron option open without rushing into it before Vance got to Moscow or the Allies had made up their minds.

The big question is not what is to be done about this particular weapon, but what is to be done about the whole reckless and expensive process of the world arms race. And here Carter no doubt differs with some of his advisers.

For him, the ever-expanding development of weapons is not only a military and political but a moral question.

He is more willing than his colleagues in the Defense Department to take risks for peace, even if he has to hold up the development of some new weapons in order to demonstrate his good faith and encourage the Soviets to do the same.

In his view, as I understand it, he can indicate his opposition to producing whatever new atomic weapon comes along, and then, if the Soviets insist on going ahead with all their own weapons, he can always, if reluctantly, go ahead with whatever new weapons he chooses.

Also, there are some political maneuvers going on in all this.

Carter has recently made a very tough speech about U.S.-Soviet relations.

He made clear at Winston-Salem, N.C., last month that Moscow could have a second strategic arms treaty, but not if they continued to use their conventional weapons and their Cuban mercenaries to change the political map of Africa.

Having done so, he also wanted to indicate that if there were a genuine reduction of tensions, the question of producing U.S. neutron weapons could be discussed.

At the same time, he wanted the West Germans to know that the neutron question was an Allied and not solely a U.S. decision. If West Germany wouldn't deploy it, there wasn't much point in Washington's producing it.

There is a great deal to be said about this neutron issue on all sides, but maybe it is not quite as urgent as it seems.

There is a long lead time in producing these weapons, and it will be longer still before they are put in place, if they ever are.

Meanwhile, Carter has a lot to discuss with Soviet leader Brezhnev after the Vance mission to Moscow about the larger question of the arms race and the political rivalries in the Middle East and Africa. And this also looms in Carter's mind, larger than the present dispute over this one important weapon.•

## EVEN WITH NEW PANAMA CANAL TREATY HOUSE WILL RETAIN POWERS UNDER CONSTITUTION'S ARTICLE IV, SECTION 3, CLAUSE 2

(Mr. METCALFE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

• Mr. METCALFE. Mr. Speaker, this evening the Senate of the United States will cast an historic vote on the Panama Canal Treaty of 1977. While the outcome of that vote is still in doubt at this hour, there is a distinct possibility that the United States will enter into a new relationship with Panama regarding the canal.

As I have stated on many occasions in this Chamber, I think that a new treaty relationship with Panama is essential for U.S. prestige around the world, and no less important, is a fair and just action for this country to take.

Despite my support for the Panama Canal treaties signed last September 7, there is one constitutional issue with the new treaty relationship that continues to concern me and the Subcommittee on Panama Canal, which I chair. The difficulty is that the 1977 Panama Canal Treaty makes no provision for subjecting the transfer of U.S. property in the Canal Zone to legislative authorization. The absence of such a provision contradicts the provision of the Constitution which specifically assigns to the Congress the power to dispose of U.S. property or territory, article IV, section 3, clause 2.

I hope that all appropriate officials, the general public, and above all, the Members of this legislative body, will not think that the House of Representatives has acquiesced or should acquiesce in the interpretation of the Constitution that property of the United States may be disposed by treaty alone and without any participation by the House of Representatives. There has been an adverse Senate vote on this question on April 5, there has been an adverse decision by the Court of Appeals for the District of Columbia Circuit on April 6, and, of course, the very wording of the treaty was adverse from the viewpoint of the House in that there was no provision for House consideration of the property issue. But, despite the recent actions of these other branches of Government in derogation of the powers of the House of Representatives, the only official actions that have emanated from the House or its committees continue to support the rightful role of the House in disposal of property.

Mr. Speaker, it is my personal conviction that the Constitution vests in Congress exclusive jurisdiction with regard to the disposal of U.S. property. This is based upon a careful evaluation of the testimony of numerous witnesses (pro and con) who have appeared before various committees of Congress during recent years and my own personal study of the issue.

Acting pursuant to my own convictions on the meaning of article IV, section 3, clause 2 of the Constitution, and acting pursuant to the expressed opinions of members of the Subcommittee on Panama Canal, I have consistently urged that the role of the House be respected.

In a speech on the Panama Canal Treaty issue given on May 19, 1977, I spoke in some detail on the property transfer issue. In the summer of 1977, I met with members of the House leadership and with Ambassadors Bunker and

Linowitz on this issue, and urged them to respect the role of the House in the transfer of U.S. property. In August, when the final drafting of the Panama Canal treaties was being done, I sent a telegram to President Carter conveying the same message, urging that the rights of the House under article IV, section 3, clause 2 be respected. In October 1977, I submitted a resolution and made a floor statement on the issue. The resolution stated that the Senate ought to pass the Panama Canal Treaty, but with a reservation which would subject the transfer of U.S. property, among other things, to a vote in the House. In January, during the Senate Committee markup of the Panama Canal treaties, I wrote to Senator SPARKMAN and members of the Senate Foreign Relations Committee urging them to respect the House role under article IV.

Mr. Speaker, I am happy to report that yesterday the Subcommittee on Panama Canal of the Committee on Merchant Marine and Fisheries unanimously endorsed a report on the meaning of article IV, section 3, clause 2 of the Constitution. The thrust of the report is that the power to dispose of U.S. property or territory is exclusively invested in the Congress, and that property of the United States in the Canal Zone may be transferred only by the legislative authority of the Congress.

The subcommittee report evaluates the important property disposal issue, which relates to the very fabric of the Constitution—the principle of separation of powers. If the House is to be circumvented in the transfer of U.S. property interests by treaty in this instance of the canal, you can be assured that the executive departments will invoke this standard whenever it deems it expedient to avoid the authority of the House of Representatives in the future.

Is it fair to assume that the constitutional framers, when they expressly granted to Congress the power to dispose of U.S. territory and property, ever contemplated that a disposition of billions of dollars of U.S. property could be conveyed without approval from the House of Representatives? I think not.

Could they have conceived of a situation where a majority of the Members of the House expressed in one fashion or another their desire to exercise their right to vote on the issue of disposal of U.S. property and their expressions went unheeded by the President and the Senate? I think not.

Could they have conceived of a situation whereby treaties involving the disposal of major U.S. property interests were subjected to a plebiscite in the recipient nation while the U.S. House of Representatives is denied the right to vote on the property disposal therein? I think not.

In my view, the report of the Subcommittee on Panama Canal is not an unusual assertion of the powers of the House of Representatives. The House of Representatives has continuously asserted its right to participate in the disposition of territory and property by treaty.

For example, in 1816, there was legislation concerning regulation of commerce between the United States and Great Britain. In consideration of the conference report on the legislation, the House conferees reported that their Senate counterparts agreed that treaties alone could not, among other things, cede territory.

In 1871, the practice of recognizing Indian interest in land by treaty was terminated by Congress. This resulted from a protest by House Members who felt that no interest in Federal lands could be decided without legislation.

In 1887, the House Judiciary Committee wrote a detailed report advancing the distinctions between the treaty advice and consent functions of the Senate on the one hand, and the treaty implementating functions in which the House must inevitably participate on the other.

As you can see, this is far from the first occasion on which it has been necessary to uphold the rights of the House.

While the Panama Canal subcommittee report strongly endorses the exclusive right of the Congress to dispose of U.S. property, I want to make clear that I do not view this constitutional issue as a device to defeat the Panama Canal treaties or emasculate them in any way. On the contrary, if the House were to vote today on the land disposal contemplated by the treaty, I would support the disposal. Of course, as I said, I strongly support the treaties. But the political and diplomatic necessity of the treaties does not overturn the Constitution.

The Panama Canal Subcommittee felt it was imperative to act yesterday so that the record for the House would be clear prior to the passage of the canal treaties. The House cannot afford to lose its power to dispose of U.S. property. The loss of this power would have adverse repercussions. We are trustees of the powers of the House of Representatives. If we fail to protect those powers, history will be our judge, and the judgment rendered may be none too favorable.

The report of this subcommittee, which received unanimous approval in the subcommittee, follows:

THE CONSTITUTIONAL ROLE OF THE CONGRESS IN THE DISPOSAL OF U.S. PROPERTY IN THE CANAL ZONE

(Mr. Metcalf, from the Subcommittee on the Panama Canal of the Committee on Merchant Marine and Fisheries, submitted the following report approved April 17, 1978)

LIST OF SUBCOMMITTEE MEMBERS

Ralph H. Metcalf, Ill., Chairman, John M. Murphy, N.Y. (Ex Officio), Robert L. Leggett, Calif., David R. Bowen, Miss., Carroll Hubbard, Jr., Ky., Bo Ginn, Ga., Leo C. Zeferetti, N.Y., Philip E. Ruppe, Mich. (Ex Officio), Gene Snyder, Ky., Robert K. Dornan, Calif.

(Pursuant to rule X(n)(8) of the Rules of the House of Representatives.)

CONCLUSION OF THE STUDY

The Subcommittee on Panama Canal exercises, on behalf of the Committee on Merchant Marine and Fisheries, legislative jurisdiction over the Panama Canal and the maintenance and operation of the Panama Canal, including the administration, sanitation and government of the Canal Zone. In consideration of its appropriate role in the implementation of a new Panama Canal Treaty, the Subcommittee has considered the authority of the Congress to dispose of property or territory as expressed in Article IV, Section 3, Clause 2 of the Constitution. The Subcommittee has also considered the authority to make treaties as bestowed in Article II, Section 2 of the Constitution. After studying the relationship between these two powers, the Subcommittee concludes that, because the power to dispose of U.S. property or territory of the United States is vested exclusively in Congress, U.S. property interests in the Canal Zone may not be transferred to the Republic of Panama by treaty, unless the full Congress enacts legislation enabling such a transfer.

RATIONALE FOR REPORT

Because of its responsibilities in connection with the operation and maintenance of the Panama Canal, the Subcommittee is frequently compelled to deal with the nature and distribution of U.S. operational authority regarding the waterway. Property rights are material to the manner and the extent to which such authority is exercised, and thus the Subcommittee has a vital interest in the substance of property rights and the constitutional procedures that govern their transfer. This is one key reason for the Subcommittee's interest in the authority exercised by Congress under Article IV, Section 3, Clause 2 of the Constitution.

Another compelling reason for the Subcommittee's interest stems from the overall importance of the Panama Canal to the United States and the magnitude of investment in connection therewith. Property of the United States in the Canal Zone has a book value of $1.5 billion,[1] and the replacement value of the improvements in that jurisdiction has been estimated at $9.8 billion.[2] All or nearly all of the property of the United States in the Canal Zone is related to the Canal itself due to the long-standing policy of this country, as declared in the Panama Canal Act of 1912, that "all land and land under water within the limits of the Canal Zone is necessary for the construction, maintenance, operation, sanitation or protection of the Panama Canal . . ."[3]

An issue of greater importance than the role of the Subcommittee, or even the Panama Canal itself, is connected with the contemplated disposal of the Panama Canal and the U.S. property within the Canal Zone by the year 2000. That issue is whether the transfer of such U.S. property interests by treaty alone and without the rightful participation of the House of Representatives will violate the separation of powers doctrine that is integral to our form of limited government.

The transfer of Panama Canal property by treaty—without enabling legislation—could well have a major impact on the future of United States foreign policy decisions as they relate to the domestic life of the country. In the future, increasing personal and political contacts across national boundaries may lead the United States to use with greater frequency treaties as instruments of policy. Since money and territory have long been the staples of some of the most important international agreements, and since there is no reason to believe these matters will not continue to be subjects of negotiation some time in the future, agreements dealing with U.S. property and territory could reoccur. Without the participation of the House of Representatives, those agreements attempting to transfer property or territory would not be subject to the will of the most democratic national body. It is important to recall that there is only one elected official in the foreign policy machinery of the Executive Branch, and that the Members of the Senate represent disproportionate numbers of persons.

In short, the Subcommittee is concerned

---

Footnotes at end of article.

and surprised that the Executive Branch has defended so strongly the concept of transferring Panama Canal property by treaty alone when the prior practice of the United States has generally included House and Senate authorization of transfer. If property is transferred by treaty alone in this instance, it may well become the established standard of the Department of State to avoid the authority of the House of Representatives whenever possible. The next obvious extension of the Executive encroachment on the rights of the Congress through the treaty power could be in the area of appropriations.

There is a danger that absent a record protesting transfer of property by treaty, the House of Representatives could be relegated to a purely second-class role in the dealing of the United States with other nations. This the Constitution never intended.

EXAMINATION OF THE ISSUE

In arriving at the conclusion that U.S. property interests in the Canal Zone may not be transferred to the Republic of Panama without the enactment of authorizing legislation, the Subcommittee divides the entire issue into two subsidiary questions: (1) Does the United States in fact have Article IV, Section 3, Clause 2 "property or territory" on the Isthmus of Panama to be transferred to Panama? (2) Does the Constitution give exclusively to the Congress, including the House of Representatives, the power to transfer property or territory?

U.S. PROPERTY INTERESTS IN THE CANAL ZONE

There does not appear to be serious dispute over whether the United States does possess in the Canal Zone "property or territory" which falls within the ambit of Article IV, Section 3, Clause 2 of the U.S. Constitution.

In the recent court case involving a suit brought by 60 Members of Congress against the President (*Edwards* v. *Carter*, No. 78-1166, U.S.C.A.D.C., April 6, 1978, hereinafter referred to as *Edwards*) to obtain a declaratory judgment that Congress alone may dispose of U.S. property, Department of Justice counsel for the defendant did not contend that property to be transferred by the Panama Canal Treaty of 1977 was other than U.S. property. The United States Court of Appeals for the District of Columbia Circuit therefore assumed the property belonged to the United States (*Edwards*, opinion of the Court, note 3, at page 5).

In the Senate debate on the Panama Canal Treaty of 1977, during discussion of an amendment to require the enactment of enabling legislation prior to disposal of Canal property, opponents of the amendment did not dispute the existence of U.S. property interests.[4]

In hearings, speeches and papers following the September 7, 1977 signing of the Panama Canal Treaties, the Executive Branch has not sought to deny the property interests of the United States in the Canal Zone, although some officials have denied that the U.S. had sovereignty over the Zone.[5] The Subcommittee takes this opportunity to note that who holds theoretical "sovereignty" over the Canal Zone is immaterial to whether the United States has property interests under Article IV of the Constitution.

Indeed, there are several court opinions which address the existence of U.S. property interests in the Canal Zone. In the important case of *Wilson* v. *Shaw* (204 U.S. 24, 33, 1907), the U.S. Supreme Court observed—

"It is hypercritical to contend that the title of the United States is imperfect, and that the territory described does not belong to this Nation, because of the omissions of some of the technical terms used in ordinary conveyances of real estate."

In the recent case of *United States* v. *Husband R (Roach)* 453 F. 2d 1054 (5 Cir. 1971), cert. denied 406 US 935 (1972), the Fifth Circuit Court of Appeals asserted that, "The Canal Zone is an unincorporated territory of the United States."

The statements of the courts and the Executive Branch are acknowledgements of the abundant historical evidence and legal precedent demonstrating the considerable property interest of the United States in the Canal Zone. Indeed, the history of United States policy to construct and operate an interoceanic canal across the Americas is bound up with efforts to acquire and maintain the property rights necessary for the major investment and national and international responsibilities that such a canal entailed. In fact, the act pursuant to which President Roosevelt had negotiated the Hay-Bunau Varilla Treaty of 1903 was the 1902 Spooner Act, legislation which authorized the President to *acquire* the property of the New Panama Canal Company and to acquire from Colombia *control of a strip of land* for the construction of an interoceanic canal (emphasis supplied).[6]

In order to make the record as clear as possible concerning U.S. interests, the Subcommittee notes that property interests of the United States in the Canal Zone includes 647 square miles of land and land under water and improvements acquired at a total cost of $1.6 billion, of which about $171 million represents the cost of the real property and about $1.4 billion represents adjuncts.[7]

The derivation of title or interest of the United States to the real property in the Canal Zone is as follows:

| *Type of title or derivation* | *Area (sq. mi.)* |
|---|---|
| 1. Fee titles purchased from French Canal Company pursuant to authorization of articles VIII and XXII of the 1903 treaty | 101 |
| 2. Fee titles purchased from Panama Railroad Company pursuant to authorization of articles VIII and XXII of the 1903 treaty | 104 |
| 3. Private titles of miscellaneous owners purchased under authority of articles VI and XV of the 1903 treaty | 83 |
| 4. Usufruct in Public Lands of Republic of Panama granted by articles II and III of the 1903 treaty | 359 |
| Total area | [8] 647 |

In its desire to obtain clear legal rights to the real property in the Canal Zone, the United States has paid deadly. The United States paid $40 million to the French Canal Company for its assets in 1904. Payments to Panama for the grants contained in the 1903 Treaty include a lump sum payment of $10 million, annual payments through 1977 of $58.9 million, and transfers of real property with a total value of $34.7 million. In addition, the United States has paid Colombia $25 million under a 1922 treaty for the settlement of differences arising out of the 1903 events involved in the construction of the canal in Panama. Finally, the United States paid $4,728,889 to private landowners, landholders and others, including squatters, who claimed property interests in the Canal Zone. The total amount of these payments stands at $173,346,775.[9]

Of the $1.4 billion in improvements and assets in the Canal Zone, the acquisition cost of property (other than real property), plant and equipment of the Panama Canal Company and Canal Zone Government is shown on the books of those agencies as $958,134,622. Other assets of the two agencies are valued at $103,913,359.[10]

Appropriations for military construction[11] in the Canal Zone from 1904 to 1977 are reported as $321,201,000, bringing the total original cost of U.S. Government property in the Canal Zone and the value of other assets to $1,556,595,756.

The property, plant and equipment of the two agencies include the following principal categories.[12]

[Cost in millions]

| | |
|---|---|
| Panama Canal Company: | |
| Canal excavations, channels, etc | $323.8 |
| Locks | 111.5 |
| Vessel repair facilities | 16.4 |
| Dams and spillways | 10.1 |
| Marine bunkering facilities | 9.2 |
| Harbor terminals | 19.5 |
| Housing | 52.2 |
| Retail stores | 11.4 |
| Railroad | 13.3 |
| Electric power system | 43.8 |
| Water system | 15.8 |
| Communications system | 8.6 |
| Warehouses | 2.2 |
| Schools | 29.2 |
| Roads, streets, and sidewalks | 21.5 |
| Hospitals and clinics | 17.3 |

A significant element in the value of many of the properties of the Panama Canal Company is that they are elements of going business-type, revenue producing activities.

All of the property interests cited, in both the sphere of real property as well as that of improvements, are to be transferred to the Republic of Panama under terms of the Panama Canal Treaty of 1977. The language of the Treaty would attempt to transfer these interests without reference to enabling legislation. Further the Executive has given clear indication that the exchange of treaty ratification instruments with Panama, six months after which the Treaty would take effect, would not be dependent upon legislation to authorize transfer of U.S. property.

Paragraph 2 of Article XIII of the Panama Canal Treaty states:

"The United States of America transfers, without charge, to the Republic of Panama all right, title and interest the United States of America may have with respect to all real property, including non-removable improvements thereon, as set forth below:

"(a) Upon the entry into force of this Treaty, the Panama Railroad and such property that was located in the former Canal Zone but that is not within the land and water areas the use of which is made available to the United States of America pursuant to this Treaty. However, it is agreed that the transfer on such date shall not include buildings and other facilities, except housing, the use of which is retained by the United States of America pursuant to this Treaty and related agreements, outside such areas.

"(b) Such property located in an area or a portion thereof at such time as the use by the United States of America of such area or portion thereof ceases pursuant to agreement between the two Parties.

"(c) Housing units made available for occupancy by members of the Armed Forces of the Republic of Panama in accordance with paragraph 5(b) of Annex B to the Agreement in Implementation of Article IV of this Treaty at such time as such units are made available to the Republic of Panama.

"(d) Upon termination of this Treaty, all real property and non-removable improvements that were used by the United States of America for the purposes of this Treaty and related agreements and equipment related to the management, operation and maintenance of the Canal remaining in the Republic of Panama."

THE CONSTITUTIONAL IMPERATIVES REGARDING TRANSFER OF U.S. PROPERTY AND TERRITORY

Having established that there are U.S. property interests in the Canal Zone which are of great interest to the Subcommittee and which fall under the aegis of Article IV of the U.S. Constitution, an examination of

Footnotes at end of article.

the arguments which have been raised concerning transfer of U.S. property by treaty is in order. Prior to examination of the arguments, the Subcommittee notes (1) the superior procedure involved in submitting a treaty for effectuation by legislation and (2) the ability of the Congress to vitiate the effect of a treaty by subsequent legislation.

Assuming arguendo that the Executive Branch is proceeding on a constitutionally sound basis in attempting to dispose of U.S. property interests to Panama without the consent of the House of Representatives, there is nonetheless no question that the passage of legislation by the Congress to dispose of U.S. property is a democratically superior procedure. The advantages of a more democratic procedure to the body politic are self-evident. Justice MacKinnon, in his dissenting opinion on April 6, 1978 in *Edwards* v. *Carter* (as to what provisions the treaty should have with respect to effecting property transfer) stated: "If there is any policy inherent in this decision, it should be to determine that at least a majority of the nation's representatives who have been elected on a one man-one vote apportionment support the property disposition portions of the treaty." (dissenting opinion, p. 13)

In order to emphasize the importance of the Congress subsequent to the ratification process, we need only note that Acts of Congress may supersede treaties. Article VI of the Constitution considers both treaties and statutes to be the Supreme Law of the land. In the event of a conflict between a treaty and a statute, the most recent is controlling.

Although completion of the ratification process and the subsequent exchange of ratifications will bind the United States to a treaty with a foreign nation in terms of international law—a treaty's effectiveness as domestic law will, in some cases be dependent upon passage of implementing legislation. Such legislation is required either (1) when terms of the treaty call for passage of legislation, or (2) in the more nebulous situation that exists when a treaty affects a power exclusively delegated to Congress.

If the treaty affects a power not in either of the above categories, the treaty is self-executing: that is, such a treaty is effective, as a matter of domestic law, upon ratification. While the Supreme Court has never issued an opinion comprehensively specifying the exclusive powers of Congress, the Executive and Senate have traditionally sought House consent (through implementing legislation) for those treaties that require appropriations or changes in revenue laws.

The Subcommittee recognizes that the scope of the treaty power is very broad, extending to all matters usually considered to be the subject of negotiation and relations between nations. Treaties have addressed political, military, economic, cultural and scientific, and a host of other matters. The Constitution contains no express limitations on the treaty power. However, the Supreme Court has indicated on numerous occasions that the treaty power is limited, in the sense that ". . . a treaty cannot change the Constitution or be held valid if it be in violation of that instrument." [13]

This Subcommittee does not contest the power of the Executive Branch to negotiate with other nations. Nor does the Subcommittee suggest that the House may intrude upon the advice and consent powers of the Senate. But House as well as Senate approval of the disposition of U.S. property must be obtained prior to the transfer of U.S. property as necessitated by the concepts, cited above, that the treaty power is limited by other parts of the Constitution and that treaties may not violate the Constitution and still be valid.

The Subcommittee views the Article IV power to dispose of and make all rules and regulations for U.S. property and territory as a distinct limitation on the effect of the treaty power despite testimony given by the Departments of State and Justice before the Committee on Merchant Marine and Fisheries on January 17, 1978.[14] On that date the Departments repeated and embellished arguments made previously by departmental representatives before the Committee on August 17, 1977 [15] and before the Panama Canal Subcommittee on November 29 and December 2, 1971.[16] As will be discussed, the testimony of the Departments on these four occasions contradicts many assertions of the Executive in previous years. The recent testimony of the Departments that the power to dispose of U.S. property by treaty is "concurrent" with that of the Congress was based upon selective case law dicta, general interpretations of the intention of the constitutional framers and some inapplicable prior treaty practices.

*The constitutional text*

The two provisions of the Constitution which relate to the constitutionality of transferring U.S. property by treaty are Article II, Section 2, Clause 2 which provides:

"He [the President] shall have the power, by treaty and with the Advice and Consent of the Senate, to make Treaties, provided two thirds of the Senators present concur;" and Article IV, Section 3, Clause 2, which states:

"The Congress shall have Power to dispose of and make all Rules and Regulations respecting the Territory or other Property belonging to the United States; . . ."

It is the position of the Executive Branch that the "treaty power" of Article II, because of the arguably permissive manner in which it reads and the location it enjoys in the Constitution, authorizes the disposition of United States property interests in the Canal Zone despite the fact that such interests fall squarely within the ambit of Article IV, Section 3, Clause 2 of the Constitution.

The Subcommittee believes the constitutional text itself, the plain language of the Constitution, gives no reason to assume that the power to dispose of property may be exercised other than by statute.

Witnesses from the Executive Branch and some others before the Committee on Merchant Marine and Fisheries and other committees, have asserted that the wording of the disposal power is indicative of its supposed "concurrent" nature.[17] These witnesses contrast the permissive language of Article IV, Section 3, Clause 2 ("The Congress shall have the Power . . .") with the more mandatory language used in the grants of power recognized as exclusive.

Thus, "All bills for Raising Revenue shall originate in the House of Representatives; . . . ", and, "No Money shall be drawn from the Treasury, but the Consequence of Appropriations made by Law; . . .". While these witnesses assert the disposal power is phrased in permissive language, they ignore the power of the Congress under the same clause of Article IV to make "all Rules and Regulations".

Those who believe that the disposal power is "concurrent" in nature readily admit that for certain purposes the effectuation of a treaty must depend upon the enactment of a statute because those powers are invested in the Congress by the Constitution. Yet, these theorists overlook the fact that the text in the Constitution governing such powers, e.g., to impose taxes or to declare war, is no different from the textual framing of the Article IV power.

The language of Article I, Section 8, Clause 1, "The Congress shall have the Power to levy and collect taxes . . ." is no broader than the text of Article IV, Section 3, Clause, 2, "The Congress shall have Power to dispose of and make all needful Rules and Regulations . . . " Similarly, the Article II general power of Congress "To declare war . . ." is not textually stronger than that of the disposal clause under Article IV.

The Subcommittee on Panama Canal is not persuaded that the wording of individual grants of power in the Constitution can or should be used to categorize the nature of those powers. Indeed, even the President's treaty power is phrased in the permissive "He shall have the power . . .". Certainly much firmer evidence is needed in order to categorize any power as either concurrent or exclusive.

If the permissive wording of the treaty power is broad enough to encompass the right to dispose of United States property then it can likewise be argued that the Congress can be circumvented in the declaration of war, the right to levy taxes, and in the matter of appropriations, because these powers are written in permissive terms. The very fabric of the Constitution is at stake since the issue goes to the entire question of separation of powers.

Another argument posed by Executive witnesses is that the "concurrent" nature of the disposal power permits disposal to take place by treaty or statue.[18] This interpretation of the Constitution leaves it to the whim of the Executive as to which method of disposal (by treaty or Act of Congress) shall be utilized. This textual interpretation is difficult to accept because it seems just as proper, if not more proper, to recognize the specific grant of the disposal power to Congress in Article IV as an implied limitation on the treaty power. The general rule of statutory construction set forth in *Swiss National Insurance Co.* v. *Miller* [289 F. 570, 574 (DCC 1923)] seems applicable here.

Thus, "The specific power of disposition, in which the House of Representatives must concur, governs the general provisions authorizing the President and Senate to make treaties", by virtue of the settled rule that a specific provision must govern as against a general provision. Second, "The grant of the disposition power to Congress . . . excludes its exercise by Senate and President" by reason of the canon that "express mention signifies implied exclusion." [19]

It would be an easy matter for this Subcommittee to state that the Constitution clearly declares that the disposal power is exclusive, and to support that statement with selectively culled statements from the Constitution and the writings and records of the framers. Some of the general rules of construction support exclusivity. We prefer, however, to recognize the uncertainty that pervades this area. To state that the Constitution's text clearly provides that the disposal power is clearly concurrent or exclusive, would be highly misleading, and this Subcommittee will not take that approach. It is this Subcommittee's opinion, then, that the sources and text of the Constitution do not provide a clear statement of the nature of the disposal power.

*Location in the Constitution*

Although it has been argued by Department witnesses and others that the disposal power in Article IV is not applicable to an international situation because Article IV deals with federal-State relationships,[20] this argument belies the fact that neither the Supreme Court nor constitutional scholarship in general deems location in the Constitution to be any determinant of exclusivity.

If the contention were to be allowed that the location of the disposal power somehow restricts it as against the effect of treaties, then it could also be contended that the treaty power could encroach upon other powers granted to Congress outside Article I. Under this specious reasoning, could not the powers granted under Articles II and III

Footnotes at end of article.

to declare punishment for treason, regulate the Supreme Court's appellate jurisdiction, or to choose electors be invaded?

Indeed, the contention regarding location in the Constitution has arisen as a defense of the "concurrent" theorists against the exclusivity of the disposal power, because there are so many strong court opinions which make the disposal power unlimited. It appears significant to the Subcommittee that no court (save the recent Circuit Court of Appeals for the District of Columbia) has ever limited the disposal power so as to not include the treaty power.

The Supreme Court of the United States and the lower Federal courts have repeatedly and consistently affirmed the exclusivity of Congress' power to dispose of U.S. territory. Reference to just a few of the decisions that have been handed down by the Supreme Court over the years will amply demonstrate this constitutional principle.

Thus, in *Wisconsin Central RR Co.* v. *Price*, 133 U.S. 496, 504 (1890), the court declared that Article IV, Section 3, Clause 2 "implies an exclusion of all other authority over the [public] property which could interfere with this right [of Congress] or obstruct its exercise."

In the case of *Sioux Tribe of Indians* v. *United States*, 316 U.S. 317, 326 (1942), the Supreme Court flatly asserted that—

"Since the Constitution places the authority to dispose of public lands exclusively in Congress, the Executive's power to convey any interest in the lands must be traced to congressional delegation of its authority."

Referring to the territorial clause of Article IV, Justice Hugo Black stated for the Court in *United States* v. *California*, 332 U.S. 19, 27 (1947), that—

"The constitutional power of Congress in this respect is without limitation. Thus neither the courts nor the executive agencies could proceed contrary to an act of Congress in this congressional area of national power."

See also *Gibson* v. *Chouteau*, 80 U.S. (13 Wall.) 92, 99 (1872), where the Supreme Court stated that this "power is subject to no limitations."

And, in *Utah Power & Light Co.* v. *United States*, 243 U.S. 389, 404 (1916), a unanimous Supreme Court attested that—

"The settled course of legislation, congressional and state, and repeated decisions of this court, have gone upon the theory that the power of Congress to dispose of United States territory is exclusive, and that only through its exercise—in other words, Congress' exercise—in some form can rights in lands belonging to the United States be acquired."

Although the case law cited is material which falls under the judicial precedents yet to be discussed, the opinions of the court in major cases do not view the disposal power in restrictive terms.

In the recent divided opinion of the United States Court of Appeals for the District of Columbia Circuit in the case of *Edwards* v. *Carter*, the Court made reference to one of the cases cited [*Wisconsin Central RR Co.* v. *Price County*, 133 U.S. 496, 504 (1890)]. The majority opinion implied the location of the disposal power was important in stating: "We think that the most reasonable interpretation of such dicta, occurring in the context referred to, is that there is a lack of any constitutional basis for exercise of authority by individual states over United States property." (*Edwards*, opinion of the court, p. 17). The Court did not make reference to the long line of cases on exclusivity, nor did it bring forward analysis to support its statement.

Why does the disposal power appear in Article IV of the Constitution? This is a difficult question to answer definitively, because it must be remembered that the vagaries of the history of the Convention leave much in doubt.

One reason for the placement of the disposal power in Article IV may be its effect of protecting the Federal legislature. The first paragraph of Section 3 of Article IV protects the integrity of the state boundaries by forbidding the formation of new states out of territory of existing states without the consent of the state legislatures involved. In the next sentence (Article IV, Section 3, Clause 2) the framers apparently applied the same theory by analogy to the territories and property of the United States, i.e., property of the United States cannot be disposed of without the consent of the legislature involved, the Congress.

It is the Subcommittee's conclusion that there are exclusive powers of Congress in articles other than the first of the Constitution, and that the disposal power is one of those.

The Subcommittee finds support for this view of applicability of the disposal power in the *Federalist Papers*. James Madison, long recognized as our prime source of information as to the events at the Constitutional Convention, placed the disposal power in a miscellaneous category of powers, rather than in the category concerning restrictions on state authority.[21] Madison's placement of the disposal power seems to provide weight for the view that the disposal power is exclusive.

*Intention of the framers*

It is difficult to discern the intention of the authors of the Constitution with precision, because the entire debates and proceedings were not transcribed. The history of discussion on the treaty power and property clause is sparse and indecisive as to their relationship and a study of the unofficial transcripts as reported by distinguished delegates does not shed much additional light on the relationship of the two clauses.

With this caveat in mind, it is perhaps noteworthy to point out that James Madison, who more than anyone else is entitled to the name the "founder of the Federal Constitution",[22] was adamant that the scope of the treaty power does not include the disposal power. The following statement was attributed to Mr. Madison in the debate during the Virginia Convention:

"The king of Great Britain has the power of making peace, but he has no power of dismembering the empire, or alienating any part of it. Nay, the king of France has no right of alienating part of its domain to any power whatsoever. The power of making treaties does not involve a right of dismembering the Union." [23]

During the discussion at the Constitutional Convention of the question of the power of the Legislature to dispose of territory and property of the United States, no mention was made of *an exception* for disposition under the treaty power.

This Subcommittee does not find references to the debates at the Constitutional Convention to provide evidence supporting the "concurrent" nature of the disposal power. To be certain, while there was some limited debate over the disposal power at the Constitutional and State Ratifying Conventions, it hardly seems possible to make a categorical assertion as to the intentions of the Founding Fathers on this issue. Indeed, a close study of the entire debate over the disposal—not an examination of individual sentences selected out of context—indicates that it is more likely that the Framers intended that the disposal power be exercised exclusively by the Members of Congress most close to their constituents, i.e., Members of the House of Representatives.

The recent majority opinion of the District of Columbia Circuit Court of Appeals leans heavily on the intent of the constitutional fathers, and concludes that "the disposition of property pursuant to the treaty power and without the express approval of the House of Representatives was both contemplated and authorized by the makers of the Constitution." (*Edwards*, opinion of the court, p. 16) The Court took this view even though some of the most ardent advocates of the "concurrent" theory have found the debates filled with references setting the alienation of territory above all other drastic effects which could be obtained through an unbridled treaty power. There is no discussion in the Court opinion which has not been raised and replied to with equally valid precedents on behalf of exclusivity. For example, at page 12 of the decision, the Court noted comments of a Mr. Grayson, using his remarks to prove the limited nature of Article IV, Section 3, Clause 2. The Court remarked:

"This issue arose in a debate over the treaty clause that was not unlike the controversy before this court. Governor Randolph of Virginia stated that he could 'conceive that neither the life nor property of any citizen, nor the particular right of any state, can be affected by a treaty.' He then argued that Art. IV, Sec. 3 must be intended to protect against the dismemberment of the Union. Mr. Grayson replied that [t]his clause was inserted for the purpose of enabling Congress to dispose of, and make all needful rules and regulations respecting, the territory, or other property, belonging to the United States, and to ascertain clearly that the claims of particular states, respecting territory should not be prejudiced by the alteration of the government, but be on the same footing as before; that it could not be construed to be a limitation on the power of making treaties." [*Elliot's Debates in the Several State Conventions on the Adoption of the Federal Convention*, 504–05 (1907).]

In fact, Mr. Randolph was urging adoption of the Consttiution and was defending the scope of the treaty power. On June 17, 1788, Mr. Grayson and Patrick Henry selected the Article IV power as one that might be unwisely exercised under the treaty power. James Madison replied that the treaty power did not include the power to dismember the empire. Governor Randolph concluded that day's debate by referring to Article IV as one that would save the Union for dismemberment.

The next day, June 18, 1788, Mr. Grayson referred to the previous day's debate. He stated his belief that Article IV did not limit the treaty power since, in his belief, the power referred only to back lands owned by the United States. In fact, Grayson claimed that no power should permit cession of U.S. territory. Mr. George Mason commented that the power to cede territory must rest somewhere in the governmental structure—but that the power should not rest with the President and Senate alone, and further that a vote of three-fourths of *both* the House and Senate should be required for such action. Mr. Corbin commented that in the case of the dismemberment of the Mississippi Territory the cession should occur only by common (self-executing) or commercial (non-self-executing) treaty. Corbin concluded that an attempted cession by self-executing treaty would be void, and if none by non-self-executing treaty, argued Corbin, then legislative interference would be secured.[24]

Therefore, we reiterate that events at the Constitutional Convention may not be seen as providing a clear answer to this issue.

*Judicial precedents*

As indicated previously, the Supreme Court has decided in many cases that the power of the Congress to dispose of property is "exclusive" and "without limitation." [25] In none of these cases is such language quali-

Footnotes at end of article.

fied, *nor does the Court even suggest that the Article IV power is not "without limitation" when it conflicts with the treaty power.* Although these cases did not directly deal with the treaty power, they clearly and unequivocally express the rule in the broadest and most encompassing terms (i.e., "Exclusive" is "exclusive" is "exclusive.")

Except in the recent case of *Edwards* v. *Carter*, which is now being appealed to the Supreme Court, no court has ever held that the congressional disposal power under Article IV, Section 3, Clause 2 is not exclusive. Nor has any court, save one, ever sustained the "concurrent" theory propounded by the Executive. The Executive Branch relies heavily on the dicta in *Holden* v. *Joy*, [17 Wall (84 US) 211 (1872)] but Professor Raoul Berger referred to this as "the purest, shearest unadulterated dicta," because the case dealt with a *congressionally* authorized Indian treaty which did not even involve a disposal of United States property, but rather a purchase and sale or an exchange of property.[28] Furthermore, the cases cited in *Holden* to sustain the dictum were either irrelevant or concerned "reserves" where no title passed to the United States, but was, in fact, retained by the Indians.

The only other major case often cited to sustain the "concurrent power" theory is *Jones* v. *Meehan*. (175 US 1, 1899. This case involved the leasing by Chief Moose Dung, the younger, of a 10-foot strip of land out of "lands of an Indian tribe" *reserved* to Chief Moose Dung, the elder. This area was part of a reservation set apart for the Chief in exchange for his ceding by his mark to the United States of a large tract of land in Minnesota. This case is insufficient authority indeed to support an assertion so important as to sustain a limitation on the Article IV powers of the Congress.

The continuous reference to Indian treaties by those who believe that the disposal power is concurrent is marred by the several factors which fundamentally distinguish such cases from the transfer of U.S. property in the Canal Zone to the Republic of Panama. The Indian treaty cases play a unique role in U.S. case law because the principals in those cases have a unique status.

These cases constitute a recognition of pre-existing Indian rights and do not involve a disposition of United States property. Most of these cases involved "reserved" lands under which no title passed to the United States, but remained in the Indians. It was the tribe that ceded land to the United States.

Further, the status of the Indians was unique, since they were treated as "wards of the nation," "in a state of pupilage," and "dependent political communities."[27]

Even if the Indians had fee title in some of the cases cited, the United States maintained its residual right of eminent doman which is not the case in a clear transfer of property to a foreign government, such as that which would be effected by the Panama Canal Treaties of 1977.

The acquiescence of Congress in agreements with the Indian treaties constituted an implied delegation by Congress of its authority. Such acquiescence was oftentimes celarly expressed by statute, as with the Cherokee Treaty of 1835.[28] Such acquiescence has never been exhibited as regards the dispositions of United States property in the Canal Zone. In fact, the House has consistently been aware of its role in such matters and the Senate has supported a role for the House in the disposal of property.

Finally, the practice of concluding treaty agreements with the Indians on land matters ceased with the Indian Appropriations Act of 1871. The Congress was well aware of its prerogatives in the disposal of U.S. property in bringing a halt to the treaty practice with Indians.[29]

The aforementioned ruling of the Court of Appeals in the case of *Edwards* v. *Carter* deserves attention because it concerns the very issue the Subcommittee is addressing, i.e., whether *Congress* alone has the authority to alienate U.S. property in the Canal Zone. The majority opinion of the three-member Court found that the power to dispose of U.S. property was "concurrent" and therefore allow transfer of the Canal Zone by treaty. This opinion contained many unexplained contentions. It is interesting to note that the dissenting opinion contained extensive supportive documentation. Although the Court recognized the dependence of many treaties on legislation, no distinction was made in the majority opinion between the negotiation and ratification of a treaty so as to make a binding international agreement on the U.S. on the one hand, and the constitutional procedure to make a treaty effective in domestic law on the other hand. The blurring of this distinction will hopefully be avoided when the Supreme Court hears the issue.

While case law presents persuasive evidence of the exclusivity of the disposal power, there are several opinions written by officials of the Executive, which currently is propounding the "concurrent" doctrine of property disposal, that lend additional weight to our view.

In 1899, the Attorney General of the United States, John Grigg, declared in a formal opinion: "The power to dispose permanently of the public lands and public property in Puerto Rico rests in Congress, and in the absence of any statute conferring such power, cannot be exercised by the executive department for the Government." (22 Op. Atty. Gen. 544, 545.) Attorney General Harlan Fiske Stone, who later became Chief Justice of the Supreme Court, declared in 1924, that—

"Property once acquired by the government may not be sold, or title otherwise disposed of, except under the authority of Congress . . . This authority may be generally expressed or may be specifically granted to permit the disposition in whole or in part of particular property rights. But until that power is given by Congress expressly or impliedly, the Executive is without power to act." (34 Op. Atty. Gen. 322–23.)

The 1977 opinion of the Attorney General indicating that the President may dispose of the Canal Zone without the participation of the House of Representatives, is at variance with the thrust of earlier opinions of the Attorney General.[30]

*Treaty practice*

Although the Constitution is not amended by practices inconsistent therewith, the Executive Branch continuously alludes to a "practice" of disposing of United States properties by reference to certain treaties with foreign nations. If such precedents were meaningful to the constitutional question involved, they are all nevertheless clearly distinguishable from the disposal of property contemplated by the Panama Canal Treaties of 1977.

This Subcommittee will note each of the cases which have been listed by the Department of State as an instance whereby property or territory has been disposed without authorizing legislation. This Subcommittee has thoroughly examined the treaties and finds no merit in such a contention. In fact, most of the cited treaties do not even involve disposals of what was clearly U.S. property, but rather were in the nature of settlement of disputed claims.

1. The Cherokee Treaty of 1835.—

Article III of this treaty stated that the lands were conveyed ". . . according to the provisions of the Act of May 28, 1830." The State Department urges that an 1872 Supreme Court ruling (to the effect that the particular disposal exceeded the scope of the Act) be taken as evidence of a disposal without congressional consent. Such reasoning is specious. The Executive Branch inserted statutory justification for the disposal in the treaty. The Court noted that the intent and purpose of the Act and treaty were the same. Therefore, the clearly expressed intent of the President to rely on statutory authority, later found to be misplaced, does not indicate a disposal without reliance on Act of Congress.

2. The Chippewa Treaty of October 2, 1863.—

The State Department claims that this treaty demonstrates an occasion of the conveyance of land to an individual Indian without Act of Congress. Given the unique status of the Indian Tribes in relation to the United States Government, and understanding that transfers of territory between sovereign nations do not usually affect rights of individual property owners, it is difficult to understand how this treaty can be considered a disposal. The Indians reserved property out of lands they were ceding to the United States. The United States had previously recognized that the Chippewa possessed use and occupancy rights over the land. Since the Indians did not believe in the concept of individual property ownership, the reservation seems an attempt to confirm U.S. recognition of certain rights the Indians were entitled to under international law. At most, this is a clearing of title.

3. The Spanish Treaty of 1819 (12 Bevans 528).—

The 1819 treaty with Spain was an exchange whereby the United States received substantially all of Florida in return for the relinquishment of our claim to disputed territory west of the Mississippi. The said territory was never in American possession and Spain never agreed that it belonged to us. Furthermore, the Act of March 3, 1819 was passed "for the purpose of executing the treaty, in all those parts which are susceptible of immediate execution, and for establishing a provisional government in Florida."[31] Similar legislation was reenacted by Congress in 1821. This treaty, like many others cited by the Department of State for the proposition of disposal of property by treaty alone, actually involved a boundary dispute. It is well settled that "A treaty for the determination of a disputed line operates not as a treaty of cession, but of recognition."

4. Treaties with Great Britain in 1842 (12 Bevans 82) and 1846 (11 Bevans 95).—

These treaties settled our northern boundary with Canada. As they involved the settlement of a disputed boundary, they too are not cessions of property in the terms of Article IV. The disputed property allocated to Great Britain in the Webster-Ashburton Treaty of 1842 did not even belong to the United States but to Maine and Massachusetts. The Webster-Ashburton Treaty was expressly conditioned upon the consent and compensation of these states.

In the 1846 Treaty, conflicting claims in the Oregon territory were settled with Great Britain at the 49° parallel boundary. The 1848 Act of Congress implemented the settlement by providing for the organization and government of the newly defined Oregon Territory.

5. Treaties with Mexico in 1933 (9 Bevans 976), 1963 (15 UST 21) and 1970 (23 UST 371).—

The lands transferred as the result of these treaties were at the time of the signing of the treaties not owned by the federal government. All three treaties recognized that the lands would have to be acquired by the respective governments prior to the transfer. Prior to the transfer, Congress passed legislation authorizing the acquisition of those lands. Therefore, nothing in these transfers supports the view that the disposal power

Footnotes at end of article.

is "concurrent." Further, these treaties were called for as a result of a physical change in the course of the Rio Grande River, a situation that is distinctly different from that of the Panama Canal.

6. Treaties with Japan (23 UST 447) and Honduras (23 UST 2631).—

The 1971 treaty with Honduras was a treaty of recognition not disposition—the United States claiming through the Guano Act and Honduras claiming title through Spain. There was no congressional opposition since the Swan Islands had no intrinsic value to the United States.

The congressional act upon which the United States' claim was based by virtue of guano deposits also provided that nothing in it obliged the United States to retain possession "after guano have been removed from the same." It was pursuant to this statutory authority that the Honduran claim was recognized long after the guano operation had closed. The Senate Foreign Relations Committee described the islands in the following manner in minimizing their value:

"The Swan Islands are rock keys located in the Caribbean about 98 miles off the coast of Honduras. The islands have no intrinsic value to the United States and the largest of the two islands is only two miles long and one-half mile wide. The only U.S. interest in these islands is the operation and maintenance of a meteorological observation and telecommunications facility and an air navigation beacon. The islands are populated by approximately six Americans who operate the facilities and a dozen Honduran nationals and British subjects who work for the United States facilities or raise cattle." (S. Rept. No. 92–94, 92d Cong. 2d Sess., 1 (1972).) Similarly, the Ryuku and Daito Islands were returned to Japan pursuant to the 1971 treaty, apparently in reliance upon statutory authority. The United States never claimed ownership nor was there any congressional opposition to the reversion of these islands to Japan. It is also interesting to note that certain United States property interests were "sold" to Japan for some $320 million.

7. The 1955 Treaty between the United States and Panama (6 UST 2283).—

Much has been made of the fact that the legislation authorizing the transfer of property under the 1955 Treaty with Panama failed to include specific reference to the transfers contemplated by Articles VI and VII of the treaty, although all the transfers in Article V were mentioned in the authorizing legislation. Since the Department of State had expressed the view at the Senate hearings on the treaty that legislative authority was required for all the property transfers including those contemplated by Articles VI and VII, the failure to include the latter in the 1957 Act could have been an oversight.

When the Assistant Secreary of State for Inter-American Affairs testified before the Senate Committee on Foreign Relations on implementing the 1955 Treaty, the following language was contained in the written text:

Legislation Required to Implement Proposed New Agreements with Panama.—

Legislation will be required to implement the following provisions of the treaty and memorandum of understanding reached:

(5) Articles V, VI, and VII, of the treaty and item 2 of the memorandum.—

Transfer of certain lands and improvements to Panama.—Authorizing legislation is required.

Necessary replacements would require appropriations.[32] Despite the likelihood of oversight in the treaty implementing bill, these Articles dealt with boundary changes between the Canal Zone and Panama established by a prior Executive Agreement and it can be concluded that essentially these Articles are matters of recognition rather than disposition.

Thus, the Executive in the cases it has cited, has not substantiated the proposition that the treaty practice of the United States supports the "concurrent" nature of the disposal power. As a matter of fact, many of the treaties cited by the State Department show exactly the opposite: That is, the House of Representatives has been involved in many previous cessions of territory and property.

*Historical precedent—Panama*

Assuming arguendo that there are conflicting practices, case law and textual interpretations of the Constitution are unable to resolve the issue of the exclusivity of the disposal power, the best guideline for determining the constitutional procedure for relinquishing the Canal Zone would be the past practice concerning the disposal of Panama Canal properties. A study of this practice demonstrates a complete reliance on Congress for authority to transfer property to Panama.

In 1932, in order to build a legation building on land that had been a part of the Canal Zone, Congress authorized the Secretary of State to modify the boundary line between Panama and the Canal Zone. Even in connection with a boundary line modification between Panama and the Canal Zone, an Act of Congress was obtained.[33]

The Act of July 10, 1937 authorized the Panama Railroad Company to sell certain lands and release reversionary interests of Panama.[34]

In 1942, a House Joint Resolution permitted the transfer to Panama, free of cost, of the sewers and waterworks systems of Colon and Panama City, as well as certain railroad lots. This Resolution was passed in the Senate despite some objection that the transfer should have been accomplished by treaty without House participation. In the debate that confirmed this important legislative requirement, the then Chairman of the Senate Foreign Relations Committee, Senator Connally, stated:

". . . under the Constitution of the United States, Congress alone can vest title to property which belongs to the United States. The Constitution itself confers on Congress specific authority to transfer territory or lands belonging to the United States . . . The House of Representatives has a right to a voice as to whether any transfer of real estate or other property shall be made either under treaty or otherwise." [35]

Again, in the 1955 Treaty providing, among other things, for the transfer of real property to Panama, Article V states:

"The United States of America agrees that, subject to the enactment of legislation by the Congress, there shall be conveyed to the Republic of Panama free of cost all the right, title and interest held by the United States of America or its agencies in and to certain lands and improvements in territory under the jurisdiction of the Republic of Panama when and as determined by the United States to be no longer needed for the operation, maintenance, sanitation or protection of the Panama Canal or of its auxiliary works, or for other authorized purposes of the United States in the Republic of Panama."

and Congress did in fact pass legislation.[36]

CONCLUSION

The Subcommittee's conclusion, from a study of the available analysis, case law and historical precedent is that the evidence strongly supports the view that the power to dispose of U.S. property and territory is exclusively vested in Congress, and that transfer of the Canal Zone and Canal-related property by treaty alone would be an unwholesome precedent for the separation of powers in our Government.

In upholding the view of the disposal power as exclusive, this Subcommittee's actions are historically consonant with those of many previous Congresses.

The claim that the House has a right to involvement in disposals of Federal territory and property is not a new concept. As long ago as 1816, that view was acknowledged by the Congress. In February of that year, House managers sought to explain the differences between Senate and House Conferees on a bill concerning the regulation of commerce between Great Britain and the United States. In their report, they noted some areas of common understanding. House Conferees reported that their opposite numbers appeared:

. . . to acknowledge the necessity of legislative enactment to carry into execution all treaties which contain stipulations requiring appropriations, or which might bind the nation to lay taxes, to raise armies, to support navies, to grant subsidies, to create States, *or cede territory*, if indeed this power exists in the government at all.[37]

Later in the ninteenth century, during a debate over a provision in the Indian Appropriations Act of 1872 that ended the practice of concluding treaties with the Indian tribes, supporters of the legislation vigorously asserted that the power to dispose of territory was vested exclusively in Congress, and that the treaty power did not encompass the authority to cede land.[38]

We have already cited the assertion of congressional prerogatives in connection with previous disposals of portions of Panama Canal property. We must recognize as earlier Congresses did that we are the trustees for the preservation of the powers vested in us.

We agree with the actions of previous Congresses which consistently called for House participation in transfers of Panama Canal properties. In such instances relatively unimportant properties were transferred and yet House approval was sought. No less should be required when we are dealing with the disposal of the major United States property interests in Panama involving billions of dollars.

Considering past treaty practice generally (in which implementing legislation was required), and in particular considering the nature of previous disposals to Panama in the Zone area, we have sufficient reason for finding the power to dispose of Federal territory and property to be exclusively vested in the Congress. Considering that this view has been long held by our predecessors in the House, we feel an obligation to this body to state our conclusion firmly and clearly. Any attempt to transfer U.S. interests in the Canal Zone without congressional authorization, must be considered as being beyond the scope of the treaty power and therefore unlawful.

## FOOD RESEARCH—INVESTING IN THE FUTURE

(Mr. JENRETTE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

● Mr. JENRETTE. Mr. Speaker, the House Agriculture Subcommittee on Investigations, Oversight, and Research, chaired by my good friend and colleague Congressman DE LA GARZA, has been looking at the implications of the reduced funding levels for agricultural research that have been presented in the administration's fiscal year 1979 budget. The budget levels proposed are highly inconsistent with the strong mandate that the Congress has provided to increase the Federal support for agricultural research. The congressional intent of title XIV of the Food and Agricultural Act of 1977 stresses the important role and the necessity of investing in the future by providing more funds for food and agricultural research.

I should like to call to the attention of the Congress an article that appeared in the AFL–CIO Federationist magazine entitled "Food Research: Investing in the Future." It seems very appropriate to remind the Congress of the substance of this article. It was well received and has been reprinted in several magazines ranging from the Catholic Digest to, most recently, the Virginia Tech Report on Agriculture and Forestry in their fall 1977 issue.

It is particularly noteworthy that this, the first issue of Virginia Tech Report,, chose to lead their publication with Mr. Cordaro's article on food research. Mr. Cordaro's skill for conveying technical information in easily understandable terms is to be commended. His article warns that unless adequate funds are made available for food and agriculture research, the United States and the world will not be able to meet the challenge of producing adequate amounts of good-quality food for the present and future population.

I know that the ranking minority member of the House Agriculture Committee, Congressman WAMPLER, will appreciate this article, as he has been the leader for increased support for agricultural research funding. Mr. Speaker, I encourage my colleagues to read this article so that they might appreciate the necessity of providing increased funds to match the congressional intent to support agricultural research. U.S. national security and global policy depend upon our capability to produce food and to make sure that the backbone of that system—namely, our agricultural research network—continues to be strong and viable. We must look ahead. Today's decision will shape tomorrow; our future capability to produce food depends upon whether the 95th Congress takes the steps to restore the integrity of title XIV of the 1977 Food and Agricultural Act. Let us make it work.

The article follows:

FOOD RESEARCH—INVESTING IN THE FUTURE

(By J. B. Cordaro)

Fluctuations in world food supply over the last decade resemble the path of a roller coaster, up and down from year to year, country to country and crop to crop.

In the mid 1960s, severe droughts threatened starvation on the Indian sub-continent, but U.S. food surpluses helped to save millions of lives. Some prophets saw worldwide famine as inevitable by the mid-1970s. However, shortly thereafter, the effect of the "Green Revolution," the increased yield of wheat and rice obtained by using new seed and technology, spread an euphoric glow across the globe. Much of the increased yield came in areas of need—Pakistan, India, Turkey, Indonesia, North Africa, and about 20 other developing countries.

A decade later, the euphoria has passed. The difficulty of reforming the agriculture sector and improving food production is fully exposed. Following production drops in 1972–1973, worldwide stockpiles of grain were reduced to their lowest point in 21 years, barely a month's supply. However, two bumper crops in South Asia have since averted a serious famine and bought more time to solve the problem.

Now, unlike the 1960s, countries do not feel the United States always can be counted on as the supplier of last resort. Nearly all of U.S. arable land has been brought into production, and with the next severe dip of the roller coaster the United States may be hard pressed to bail out other countries.

Present technologies place a limit on U.S. food production capability. The U.S. seems to be realizing these production levels, while also having to recognize new constraints. The energy costs of machine-powered farming, the environmental costs of chemicals to control weeds and pests, and the sheer availability and expense of fertilizers produced from petroleum—all present serious problems. In short, the very elements that furnish the backbone of the modern farming systems are being challenged. To complicate matters further, climatic fluctuations, which are beyond U.S. control, create both uncertainty and unease.

The world faces the challenge to produce adequate amounts of good quality food for its present population while at the same time preparing for a future world whose population is expected to double sometime early in the 21st Century.

This will not be as easy now as it has been in the past. But at least these goals must be sought:

Developing technologies which use the least possible amounts of non-renewable resources such as water, land, energy, and fertilizer.

Holding environmental damage to a minimum and improving the environment when possible.

Improving the nutritional quality of food and encouraging better dietary habits.

Assuring a more equitable distribution of food.

The food production system we count on to achieve these objectives is enormously complex. In crop production, for example, land, water, seed, fertilizer, machinery, credit, and hard work all go into the first stage, with uncertain weather mixed in. After harvest, transportation, marketing, processing, packaging, wholesaling and retailing are added before food gets to the consumer. If the commodity goes abroad new factors of international trade, tariffs, port facilities, market development and politics are involved. Throughout the process, such matters as regulations, taxes and subsidies must be dealt with.

Science, at the heart of this complex, has previously met our needs. Agricultural research has laid the golden eggs of increased production. For instance, research has demonstrated that hens which once laid 100 eggs a year can now lay about 250, with 300 to come soon. One new vaccine alone cut poultry losses from disease by 70 percent and saved consumers $200 million a year. Introducing hybrid corn and adding other improvements have enabled the United States to increase corn yields almost fivefold in 40 years, from 22 to nearly 100 bushels per acre. It would have required twice the acres, five times the labor, and 50 percent more machinery to produce the same crop without the research breakthrough. The list of benefits could go on and on.

But research can be a slow process. It may take a long time to make and adapt useful discoveries—24 years to develop hybrid corn, for example. Then too, yields have leveled off in several important commodities, indicating there are natural limits to what can be accomplished. Moreover, we are becoming more aware of the complicated process of getting food from seed to the consumer's stomach, particularly in developing countries. Problems with the cost of energy and fertilizer, the availability and use of patterns of land and water, and the loss of food through poor processing, storage, and pest control are of paramount importance; yet little research is going on in these areas.

In terms of purchasing power, the United States has been investing less and less in food research for more than a decade, but it is still recognized as the finest system in the world. This is the system that has reduced the time it takes to produce a bushel of corn from 130 to 6 manhours and built a $24 billion export industry. American farmers outproduce their French counterparts four to one, and as a consequence U.S. consumers still have among the least expensive food supplies in the world, although the amount of income spent on an adequate diet will continue to rise.

BASIC RESEARCH

Research can be divided between applied and basic research. Applied research consists of studies and demonstrations that have immediate utility; for example, how to adapt corn to a particular climate or soil or how to combat an infestation of insects. Basic research, on the other hand, probes into the unknown, seeking knowledge, not immediate results. Basic research is the wellspring from which has come the food-growing miracles of the past.

The system is also dependent on a network which moves the research results to the farmers. Without this component research would collect dust on shelves.

The lead time required to make basic research pay off is often 10, 15 or more years. Thus, the system demands a constant stream so that the well continues to run deep. The productivity of our food system for the year 2000 depends upon research begun today. If, as many believe, the storehouse of "on the shelf" knowledge from the past basic research is about exhausted, very serious consequences to present and future populations can be expected.

The U.S. continues to provide the most support among all nations for research and development of all types. But that's not true in agriculture, where support has declined steadily since 1960. At present, it is about 2 percent of the total federal research budget. Among foreign governments which do provide funds for agricultural research, only Italy, with 1 percent, provides a smaller proportion of its centrally appropriated funds than the United States. Canada, at 19 percent, is the leader.

A study by the congressional Office of Technology Assessment reveals that, while funds for overall research have barely kept pace with inflation over the last decade, funds for basic research have actually declined substantially.

Most other countries have recognized the need and made the commitment to increased funding for agriculture research. In the United States, federal funding for overall research and development has increased from $21 billion in 1976 to $28 billion requested for 1978. However, agriculture's share of this 33 percent increase has been small, showing an increase from $444 million in 1976 to only $496 million in 1978. This equals one half of 1 percent (0.5 percent) of the value of farm sales and only one quarter of 1 percent (0.25 percent) of what Americans spent on food in 1975. Discussions in Congress in 1976 concluded that a substantial boost in agricultural research funding was urgently needed. It was noted that while very real problems of world malnutrition and hunger attract attention, much less attention is paid to agricultural research, the foundation on which efforts to feed a hungry world must be based. It was also stressed that in 1940, 40 percent of the federal research and development funds went for agrricultural research. In 1970, less than 2 percent went to agriculture. General Motors spends twice as much on its private research. The national defense research budget for fiscal year 1977 was almost $10.5 billion—about 20 times the amount spent on agricultural research.

In agricultural research, the areas of greatest potential are research on direct food production—from plants, animals and fish—and research on such indirect but essential factors as weather, energy, water, and the processing of foods.

PLANTS

Among all of these, making plants more productive is still the most important and promising place to begin, since plants provide, directly or indirectly, 95 percent of the world's food supply. Cereal grains alone constitute 60 percent of the world's calories and 50 percent of the world"s protein.

Many scientists cite three ways to make dramatic breakthroughs in plant productivity: first, improve the process by which plants convert light into food and energy (photosynthesis); second, improve the way plants collect and use nitrogen (nitrogen fixation); and third, improve the quality of plants through genetic engineering research.

Two important sources of food in America, corn and soybeans, display the potential. Corn yields have increased fivefold since the 1930s because of the application of nitrogen fertilizer and the development of new, disease-resistant hybrids through genetic improvement. Yields of soybeans, on the other hand, have been nearly static for two decades, at roughly 30 bushels per acre.

Simply put, if each of these plants could learn from the other, food production could improve dramatically. Soybeans are fairly lazy plants. They photosynthesize during one part of the day, then take the rest of the day off. Corn, on the other hand, goes on photosynthesizing all day. Scientists believe it is possible to increase the efficiency of the photosynthesis process in soybeans. If they could achieve a 50 percent increase, food cost savings could amount to $1 billion per year in the United States alone.

Soybeans, however, are very efficient in their use of nitrogen because they gather and absorb nitrogen from the environment and are therefore not dependent on expensive nitrogen fertilizers. Corn is very inefficient and doesn't even use the applied fertilizers very well. Modifying corn to use nitrogen in nature and in fertilizers more efficiently could cut costs, increase productivity and give poor countries a food source they cannot now afford.

As it is, breakthroughs made with hybrid corn have already been the single most spectacular scientific achievement in agriculture. Hybrid corn has provided increases in yields ranging from 200 percent in Mexico between 1945 and 1965 to 500 percent in the United States since the 1930s. Similar gains occurred in West Germany and other northern European countries.

New high yield varieties of rice and wheat also showed remarkable production increases between 1965 and 1975, although there have been some problems recently in such second generation products of the Green Revolution.

Hybrid wheat is becoming a reality. High yielding, hard-winter types with good milling qualities are now being produced and marketed on a limited scale from the winter wheat regions of Texas, Oklahoma and Kansas. The anticipated yield increases of about 20 percent would be another major breakthrough for U.S. agriculture.

A man-made cereal, triticale, seems close to being used by farmers around the world. The best selections of both durum and bread wheat, triticale types now out-produce older strains of wheat by 15 to 20 percent.

Similar future enhancements of yield are near in other major crops such as sugar cane, soybeans, potatoes, sugar beet, sorghum, millet, pigeon peas and peanuts. Such oil seeds as cottonseeds, sunflour, safflour, rapeseed, sesamie seed and palm, olive and coconut oils offer other opportunities to increase the total amount of food available.

LIVESTOCK, POULTRY AND FISH

Since many of these plant varieties can also be used as grain feeds, their development has a potential effect on the production of livestock and poultry—which provide about 25 percent of the protein requirements and about 10 percent of the calories for people around the world.

The number of livestock in the world is more than double the human population. Domestic animals produce meat, milk and eggs from nutrients derived from crops, forages, and byproducts that have less value elsewhere. In the United States alone, they produce two-thirds of the protein, one-half of the fat, one-third of the energy, four-fifths of the calcium, and two-thirds of the phosphorous consumed by man.

Ruminant livestock, the cud-chewers like cattle and sheep who have complicated, four-part stomachs, provide one of the major sources for more food. To increase their role, three interrelated research efforts must be pursued simultaneously with stepped up attention to production and utilization of feeds, animal health and genetic improvement.

One food area in which the U.S. lags far behind is in fishery products. Elsewhere, fish provide a large part of the non-vegetable diets—40 percent in China; 38 percent in India; 22 percent in Indonesia. But in the United States fish provide about 5 percent and a relatively small amount of research effort has been devoted to improving that percentage.

Improved crop and livestock productivity—while ranking very high—is only part of the story of better food production. Besides, the problems of feeding people are far more complicated than just increased food production; there are other concerns in that long process from plant seeds to the consumer's stomach.

CLIMATE

The remarkable increase in U.S. food production over the last 20 years is rightly attributed to improved technology, founded in agriculture research. But these have also been years of unusually favorable climate in the United States, which is also blessed with good soils.

Stephen Schneider, climatologist and author of The Genesis Strategy, writes: ". . . many argue that our technologies had not been put to an adequate test of determining the vulnerability of our crops to weather fluctuations. In fact, in 1974 corn yields were reduced by 20 to 30 bushels per acre due to weather fluctuations."

Schneider argues that we have every reason to believe that the climate of the immediate future will be more variable than the past and that we must take steps such as improving soil conservation, increasing water storage and building reserves to protect against an uncertain future.

Research must play the essential part. To cite one example, researchers at a U.S. Department of Agriculture (USDA) research facility in Peoria, Ill., have developed "super slurper," a blend of manmade materials and starch that can absorb 5.300 times its weight in distilled water. Seeds can be coated with "super slurper," enabling them to germinate even in dry conditions. Better "greenhouse" agriculture and chemicals that speed up or slow down growth would also help.

ENERGY, LAND AND WATER

Energy, particularly from fossil fuels, is another major contributor to modern agriculture that must be re-evaluated. Dr. John Steinhart of the University of Wisconsin has demonstrated how food production has virtually leveled off in the United States despite substantial increases in energy uses. This may suggest that, at least when it comes to energy, the U.S. agricultural system is becoming less efficient and approaching the point of diminishing returns. Research could help to discover means of reducing dependence on energy in food production in this country while helping poorer countries avoid the expense of the American system.

Land is a good investment, the old joke says, "because they ain't making any more of it." The same is true of fossil fuels—a fact we've known for a long time but has been forcefully brought home to us only in recent years.

As a result, efficient use of land and energy are important parts of future U.S. agricultural plans. Annually, more prime agricultural land base is disappearing into non-agricultural uses and is being seriously degraded by erosion. In the United States alone, more than 3.6 billion tons of topsoil were eroded in the one year of 1976.

Also, the need to use energy more efficiently dictates new technologies for crop irrigation. Ninety percent of all water that is withdrawn from U.S. streams and ground water storage is consumed in irrigated agriculture. Irrigation is vital since it is used in the production of 81 percent of sugar beets, 70 percent of fruits and vegetables, 40 percent of cotton and sorghum, 30 percent of alfalfa, 25 percent of barley, and 10 percent of corn and wheat produced in the United States. Globally, up to 30 percent of the food consumed by mankind is produced on 12 to 15 percent of the cultivated lands that are irrigated. Major world countries like China, Russia and India all have a higher percentage of their crop land under irrigation than the United States does.

Drought, a major factor in the instability of U.S. food supplies, can be offset somewhat with adequate research into new techniques such as drip or trickle irrigation, which can also help in preserving water and energy while increasing output. These new methods have reduced by as much as 50 percent the amount of water now used through conventional irrigation systems. They also facilitate the use of marginal land, making it possible to use more low quality water, as well as ending the waste of land from building irrigation ditches. Two environmental problems—nutrient leaching and water pollution—are also reduced by the new irrigation methods.

In the South, sub-surface water levels are dropping and soil moisture is low. At the same time the supply of water from mountain snowfields in the West is, in some places, 15 percent of normal. Moreover, some climatologists believe more drought conditions are on the way.

Research could help "teach" crops to live on less water. Also, irrigation systems can be improved to prevent the return of chemically affected water to our rivers. Irrigation systems that demand less fossil fuel must be developed. While water management is a political question, research could help make the tough decisions on the horizon a little less ominous.

FERTILIZER AND NUTRITION

As fertilizer becomes more expensive, it must be stretched further; yet plants are comparatively inefficient in absorbing fertilizer. Only 50 percent of the nitrogen and less than 35 percent of the phosphorus and potassium applied as fertilizer in the United States are now being used by crops. In the tropics only about a quarter to a third of the nitrogen applied to rice is actually used. It is possible to increase the efficiency of fertilizer through research, but a concerted, coordinated effort is lacking.

Just as plants are inefficient and wasteful of food, so are humans; and for some reason we know less about the nutritional needs of our own bodies than, for example, those of chickens. Animal research is easier than human research, being free of many of the ethical questions involved in human experimentation. With humans, habits and prejudices get in the way. It is known, for instance, that obesity and overconsumption are U.S. health problems, but we know very little about the chemical and psychological factors that inspire overeating. Nutrition and nutrition education are other areas where research is needed.

HOME GARDENS

Food expert Sylvan Wittwer of Michigan State University believes the greatest unexploited area for food production in the United States is in home gardening. Today 51 percent of U.S. families are involved in the nation's 37 million garden plots—the highest participation rate since World War II. This may be the only trend that is running counter to U.S. agriculture development into a large-scale, capital-intensive industry.

Wittwer is concerned that too few of the many scientific developments from commercial food crop production have been adapted to home gardening. One notable area of neglect has been the use of plant varieties that are high quality, disease resistant, high yielding and early maturing, as hybrid carrots, squash, tomatoes and sweet corn.

For all the achievements in agricultural research in the United States, the nation is still in the midst of an agricultural food production revolution, with much more to be accomplished. Modern food production technology has barely touched vital areas like tropical and sub-tropical agriculture, which offer great potential. Many major food crops of the earth—seed legumes, sweet potato, cassava and the millets—have received only token attention. The science of home food gardening, small-scale agriculture and farming systems have scarcely been addressed. In the developing countries, some of the technologies needed will be labor-intensive, with a minimum need for resource capital—quite the opposite of the U.S. story. And in some areas, the technologies must be created from scratch.

Waste can be eliminated at every step, from nitrogen loss in the field to food quality loss from improper packaging. With present knowhow, scientists project only a 5 to 20 percent improvement in crop yields but a 35 percent saving in energy consumption. Food losses from pests, predators, disease and the like could account for as much as a third of the world food output. New methods of pest control focus on using less energy and harming the environment less by finding chemicals that can be used on a large scale but in extremely low doses. Overall elimination of waste could save as much as 50 percent, about what would be needed to fill in the gap in calorie consumption for the world.

FEDERAL FUNDING

Still, the realization of the U.S. potential rests on adequate federal action, especially increased funding.

Primary funding of the U.S. food research system is provided by the federal government, private sources and state government, about $2 billion a year in all. About half of that $2 billion comes from state and federal government; the other half from private industry. While the federal funding provided to the states is only about one-fourth the total, it is vital because as in so many other U.S. undertakings, federal funding is the catalyst.

In fiscal year 1977, for example, $450 million was provided by USDA to agricultural research. From that, the states were given $129 million, with that investment generating another $400–500 million of additional research money from other sources.

Eighty-five percent of federal food research appropriations go to USDA, where five agencies perform agricultural research: the Agricultural Research Service, the Forest Service, the Farmer Cooperative Service, the Economic Research Service and the Statistical Reporting Service. A sixth USDA agency, the Cooperative State Research Service, administers federal funds for the agricultural research that is conducted nationwide at 55 state agricultural experiment stations, 15 schools of forestry, the 16 land grant universities of 1890, and Tuskegee Institute.

The remaining 15 percent of federal food and agricultural research appropriation is distributed by the National Science Foundation, National Institutes of Health, the U.S. Agency for International Development, the Departments of Commerce, Interior, Labor and Defense, the Environmental Protection Agency and the Food Drug Administration.

Dr. Jim Anderson, director of the experiment station at Mississippi State University, cites several reasons why the state agricultural experiment stations (SAES) have not done very well over the last 10 years in securing adequate federal funding for agricultural research. He says the SAES have not been able to convince Congress and the Office of Management and Budget that they are efficient, well-coordinated and capable of eliminating duplication when necessary. Consequently they have not been able to sell the benefits of proposed new research. Instead of lining up allies in support of an overall agricultural research program, Anderson says the SAES tend to pull apart in promoting their own individual projects.

Like all researchers in quest of federal funds, agricultural interests must make their case in terms of cost-benefit. One study of the benefit from public investment in food and agricultural research, made by Dr. Robert Edelman, also of Mississippi State, notes that growth in U.S. agricultural output from increased efficiency in resource use has been about 1.8 percent annually since 1939, mostly from application of new and improved technologies. These can be very expensive to develop and disseminate well enough to assure widespread acceptance and use.

Such research is short term in its payout and only long range in its return, but Edelman concludes that "not only does agricultural research pay off in benefits to people in all walks of life, but it pays very well. The results compare very favorably with other types of public investments. Future productivity growth in U.S. productions of agriculture will depend to a large extent on the level of research and education expenditures that the federal government and the states are willing to support."

The wait is particularly long on returns from basic research, or efforts in new areas, in contrast to the returns from applied research on established practices. For example, research to develop hybrid corn produced nothing for 24 years, but then returned

$700 for every $1 spent in a short period as discovery was rapidly adopted around the country. One University of Chicago study by T. W. Schultz puts the benefit from applied research at 30 to 40 percent of the investment, while basic research can yield returns as much as 17 to 23 times greater than the returns from applied research.

A report by the Joint Economic Committee of Congress in October 1976 included a study in which Dr. Edwin Mansfield reviewed a number of projects and found rates of return from agricultural research of 53, 57, 50 and 42 percent, with the average rate generally in the neighborhood of 40 to 50 percent. Mansfield stresses the risk in oversimplification of these numbers, but concludes that the available evidence suggests the rate of return from agricultural research and development has been high.

The declining share of funding for the U.S. research system shows in the decline of professional personnel in the USDA's Agricultural Research Service (ARS), the state experiment stations and extension service complex. Much of the loss is among junior level scientists, whose departure robs senior scientists of efficiency for today and of replacements for tomorrow. Thus the amount of time scientists can spend in important research areas has declined as the research system has been caught between a stagnant budget and rising costs.

Another telling indicator is the condition of federal research facilities. A survey of ARS facilities in 1975 found that only 49 percent were in satisfactory condition. More than 50 percent needed significant repair and 14 percent were in such bad shape as to be a safety hazard. Many of the 55 state agricultural experiment stations are experiencing similar problems.

Any complex of the size and scope of the U.S. agricultural network invites its share of criticism. However, the studies cited and others, while noting deficiencies, tend overall to prove the system is healthy and serving the U.S. and world consumers well. It's the future that worries agricultural researchers and the situation in world food supply dictates that support levels for research be increased; that closer scrutiny be given to the impacts of agriculture and food processing on the environment and society; that the role of agricultural scientists be upgraded and that the coordination between researcher and the ultimate food user be improved.

More funds must be directed to basic research and to previously neglected areas such as energy use, climate and home gardening; more work in the United States should be tied to developing countries; and clearly younger men and women who look to the future must be brought into the system.

At present, a novel "target" concept is being considered. This funding idea establishes the sense of Congress that at least one half of one percent (0.5) of the total value of personal consumption expenditures for food in the United States, plus one half of one percent (0.5) of the gross value of agricultural exports for the preceding calendar year would be available each year for agricultural research funding. If it had been in effect for 1976, the base funding level for food and agriculture research would have been over $1 billion instead of $450 million.

The funds derived from this formula would be used to support existing agencies and programs and to initiate new program activities throughout the federal government's food and agriculture research and extension system.

Expanded funding, through this vehicle or some other, is essential if agricultural research is to focus on human needs—for it is the human family's nutritional needs that are ultimately served.

The United States must also consider the quality of food, nutritional concerns and public health consequences. The U.S. recognizes that its greatest malnutrition problem is obesity and that over-consumption is a contributor to six of the 10 leading causes of death—heart disease, cancer, cardiovascular disease, diabetes, arteriosclerosis, and cirrhosis of the liver.

U.S. researchers have done quite well with animal work because it's so much easier than researching human nutrition needs. For example:

Human nutrition involves more than "maximum feed efficiency," the single objective that makes animal research easier;

The population is more heterogeneous than typical animal populations;

Humans are among the very few omnivorous animals, which adds additional variable to the research effort than with animals who eat only meat, or no meat;

Human nutrition on the theoretical level is concerned with sustenance but in reality human food selection and consumption is far more complicated;

Human experimentation is a very sensitive issue.

With human beings, efficiency cannot be the only goal. Social considerations demand human beings not become just a "trade-off" or various types of research. Thus nutritional needs must be adjusted to the world in which the human lives—involving the cultural preferences necessary to a democracy, but also the environment, energy supplies and the weather.

The declining commitment to agricultural research can perhaps be traced to concern about overproduction. While the government was paying farmers not to produce, it was understandable that no great emphasis was given to find ways to produce more.

The miracle of U.S. agricultural research has been based more in technology than in science. Science has not been extensively tapped. But the present is and the future will be fundamentally different. To meet the demands on the food system will require that science be more effectively employed—that the mysteries of photosynthesis, nitrogen fixation and other areas that require a scientific breakthrough be given increased attention.●

## LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. CORMAN (at the request of Mr. WRIGHT), between 12:45 and 2 p.m. today, on account of official business.

Mr. RODINO (at the request of Mr. WRIGHT), for today, on account of illness in the family.

Mr. DELLUMS (at the request of Mr. WRIGHT), after 1:15 p.m. April 17, this week on account of a death in the family.

Mr. JONES of North Carolina (at the request of Mr. WRIGHT), for today, on account of official business.

## SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. MARKS) to revise and extend their remarks and include extraneous matter:)

Mr. CONTE, for 30 minutes, today.

Mr. CORCORAN of Illinois, for 5 minutes, today.

Mr. GREEN, for 5 minutes, today.

Mr. WHALEN, for 5 minutes, today.

Mr. SEBELIUS, for 5 minutes, today.

Mr. RAILSBACK, for 5 minutes, today.

Mr. GOLDWATER, for 5 minutes, today.

Mr. BAUMAN, for 10 minutes, today.

Mr. COHEN, for 15 minutes, today.

(The following Members (at the request of Mr. BARNARD) to revise and extend their remarks and include extraneous matter:)

Mr. SIKES, for 30 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Mr. GONZALEZ, for 5 minutes, today.

Mr. CHARLES H. WILSON of California, for 5 minutes, today.

Mr. CARNEY, for 5 minutes, today.

Mr. REUSS, for 5 minutes, today.

Mr. VANIK, for 5 minutes, today.

Mr. HANLEY, for 5 minutes, today.

Mr. ST GERMAIN, for 5 minutes, today.

Mr. RYAN, for 60 minutes, April 19.

## EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. METCALFE, and to include extraneous matter notwithstanding the fact that it exceeds two pages of the RECORD and is estimated by the Public Printer to cost $2,053.

Mr. JENRETTE, and to include extraneous matter notwithstanding the fact that it exceeds two pages of the RECORD and is estimated by the Public Printer to cost $958.50.

(The following Members (at the request of Mr. MARKS) and to include extraneous matter:)

Mr. FINDLEY.

Mr. BURKE of Florida.

Mr. BROYHILL.

Mr. CUNNINGHAM.

Mr. WAMPLER.

Mr. SARASIN.

Mr. GILMAN in three instances.

Mr. WALSH.

Mr. MOORE.

Mr. HAGEDORN in two instances.

Mr. HOLLENBECK.

Mr. GOLDWATER in two instances.

Mr. BEARD of Tennessee.

Mr. QUILLEN.

Mr. MCCLOSKEY in two instances.

Mr. DORNAN in four instances.

Mr. ROUSSELOT in three instances.

Mr. SPENCE.

Mr. BAFALIS.

Mr. CEDERBERG.

Mr. YOUNG of Florida in two instances.

Mr. HANSEN.

(The following Members (at the request of Mr. BARNARD) and to include extraneous matter:)

Mr. MAZZOLI in three instances.

Mr. CHARLES H. WILSON of California.

Mr. EDWARDS of California in two instances.

Mr. JENRETTE.

Mr. TEAGUE in two instances.

Mr. OTTINGER.

Mr. MILFORD.

Mr. WAXMAN in two instances.

Mr. CLAY.

Mr. GEPHARDT.

Mr. MCDONALD.

Mr. APPLEGATE in four instances.

Mr. BARNARD.

Mr. ROSENTHAL.

Mr. KRUEGER.

Mr. PATTISON of New York.
Mr. STARK in two instances.
Mr. FASCELL in two instances.
Mr. RYAN.
Mr. RICHMOND in two instances.
Mr. SOLARZ.
Mr. DOWNEY.

## ADJOURNMENT

Mr. SIKES. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 12 minutes p.m.), under its previous order, the House adjourned until Wednesday, April 19, 1978, at 12 o'clock noon.

## EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

3887. A Communication from the President of the United States, transmitting proposed supplemental appropriations for fiscal year 1978 for the Small Business Administration (H. Doc. No. 95–321); to the Committee on Appropriations and ordered to be printed.

3888. A letter from the Chairman, Advisory Council on Historic Preservation, transmitting a draft of proposed legislation to amend the act of October 15, 1966 (80 Stat 915), as amended, establishing a program for the preservation of additional historic properties throughout the Nation, and for other purposes; to the Committee on Interior and Insular Affairs.

3889. A letter from the Chairman, Development Coordination Committee, transmitting the 1977 annual report of the President on actions of the United States affecting the development of low-income countries, pursuant to section 640B(d) of the Foreign Assistance Act of 1961, as amended; to the Committee on International Relations.

3890. A letter from the Secretary of Transportation, transmitting the eighth annual report on operations under the Airport and Airway Development Act of 1970, pursuant to section 24 of the act; to the Committee on Public Works and Transportation.

3891. A letter from the Acting General Counsel of the Treasury, transmitting notice of the determination of the Secretary of the Treasury to temporarily waive countervailing duties on nonrubber footwear imports from Uruguay which are subject to bounties or grants, together with the reasons therefor, pursuant to 88 Stat. 2051 (19 U.S.C. 1303(e)) (H. Doc. No. 95–322); to the Committee on Ways and Means and ordered to be printed.

3892. A letter from the Deputy Fiscal Assistant Secretary of the Treasury, transmitting the 22d annual report on the financial condition and results of the operations of the highway trust fund, covering fiscal year 1977, pursuant to section 209(e)(1) of the Highway Revenue Act of 1956, as amended (H. Doc. No. 95–323); to the Committee on Ways and Means and ordered to be printed.

3893. A letter from the Deputy Fiscal Assistant Secretary of the Treasury, transmitmitting the seventh annual report on the financial condition and results of the operations of the Airport and Airway Trust Fund, covering fiscal year 1977, pursuant to section 208(e)(1) of the Airport and Airway Revenue Act of 1970, as amended (H. Doc. No. 95–324); to the Committee on Ways and Means and ordered to be printed.

3894. A letter from the Secretary of Agriculture, transmitting the fiscal year 1978 global assessment report of food production and needs, pursuant to section 408(b) of Public Law 83–480, as amended (91 Stat. 552); jointly to the Committee on Agriculture and International Relations.

3895. A letter from the Comptroller General of the United States, transmitting a report on the National Aeronautics and Space Administration's Landsat project (PSAD–78–58, April 17, 1978); jointly, to the Committee on Government Operations and Science and Technology.

## REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. MAHON: Committee on Appropriations. H.R. 9279. A bill to amend title 5, United States Code to provide for retention of grade and pay for certain employees, and for other purposes (Report No. 95–991, Pt. II). Referred to the Committee of the Whole House on the State of the Union.

Mr. KASTENMEIER: Committee on the Judiciary. H.R. 9400. A bill to authorize actions for redress in cases involving deprivations of rights of institutionalized persons secured or protected by the Constitution or laws of the United States; with amendment (Rept. No. 95–1058). Referred to the Committee of the Whole House on the State of the Union.

Humphrey Fellowship in Social and Political Thought at the Woodrow Wilson International Center for Scholars at the Smithsonian Institution and to establish a trust fund to provide a stipend for such fellowship (Rept. No. 95–1062). Referred to the Committee of the Whole House on the State of the Union.

Mr. MEEDS: Committee on Rules. House Resolution 1139. Resolution providing for the consideration of H.R. 8494. A bill to regulate lobbying and related activities (Rept. No. 95–1063). Referred to the House Calendar.

Mr. THOMPSON: Committee on House Administration. Senate Joint Resolution 106. Joint resolution to provide for the reappointment of A. Leon Higginbotham, Jr., as a citizen regent of the Board of Regents of the Smithsonian Institution (Rept. No. 95–1064). Referred to the House Calendar.

Mr. THOMPSON: Committee on House Administration. Senate Joint Resolution 107. Joint resolution to provide for the reappointment of John Paul Austin as a citizen regent of the Board of Regents of the Smithsonian Institution (Rept. No. 95–1065). Referred to the House Calendar.

Mr. THOMPSON: Committee on House Administration. Senate Joint Resolution 108. Joint resolution to provide for the appointment of Anne Legendre Armstrong as citizen regent of the Board of Regents of the Smithsonian Institution (Rept. No. 95–1066). Referred to the House Calendar.

Mr. THOMPSON: Committee on House Administration. S. 2220. An act to authorize the Secretary of the Treasury to designate an Assistant Secretary to serve in his place as a member of the Library of Congress Trust Fund Board (Rept. No. 95–1067). Referred to the House Calendar.

## PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANDERSON of California (for himself, and CHARLES H. WILSON of California):

H.R. 12168. A bill to amend title 28 of the United States Code to provide that the U.S. District Court for the Central District of California may be held at Long Beach; to the Committee on the Judiciary.

By Mr. ANDERSON of California (for himself, Mr. ALLEN, Mr. ASHLEY, Mr. BINGHAM, Mr. FORD of Tennessee, Mr. GREEN, Mr. HANLEY, Mr. HANNAFORD, Mr. RANGEL, and Mr. WON PAT):

H.R. 12169. A bill to regulate the trapping of mammals and birds on Federal lands, and for other purposes; jointly, to the Committees on Merchant Marine and Fisheries, Interstate and Foreign Commerce, and the Judiciary.

By Mr. BRODHEAD (for himself, Mr. Moss, Mrs. BURKE of California, Mr. STARK, and Mr. DELLUMS):

H.R. 12170. A bill to provide for reimbursement to States experiencing high rates of insured unemployment; to the Committee on Ways and Means.

By Mr. BROOKS:

H.R. 12171. A bill to strengthen the right of access of the Comptroller General to public and certain private records, to allow for limited auditing of unvouchered expenditures, and for other purposes; to the Committee on Government Operations.

By Mr. CONABLE:

H.R. 12172. A bill to amend the Internal Revenue Code of 1954 to permit a church plan to continue after 1982 to provide benefits for employees of organizations controlled by or associated with the church and to make certain clarifying amendments to the definition of church plan; to the Committee on Ways and Means.

By Mr. CONABLE (for himself, Mr. ARCHER, Mr. BURKE of Massachusetts, and Mr. SCHULZE):

H.R. 12173. A bill to reinstate the tax treatment with respect to annuity contracts with reserves based on a segregated asset account as they existed prior to issuance of Revenue Ruling 77–85; to the Committee on Ways and Means.

By Mr. ROBERT W. DANIEL, JR.:

H.R. 12174. A bill to provide for the addition of Eppes Manor to Petersburg National Battlefield, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. GAYDOS:

H.R. 12175. A bill to provide special consideration by CETA prime sponsors for Opportunity Industrialization Centers to provide, in cooperation with private industry, new preskills training and skills training opportunities, and to other national community-based organizations, to provide comprehensive employment services, to create new training and job opportunities in the private sector; to the Committee on Education and Labor.

By Mr. GEPHARDT (for himself, Mr. HOLLAND, Mr. STEIGER, Mr. FRENZEL, Mr. FORD of Tennessee, Mr. TUCKER, and Mr. DUNCAN of Tennessee):

H.R. 12176. A bill to amend the Internal Revenue Code of 1954 to clarify standards for determining status of individuals for em-

ployment tax purposes; to the Committee on Ways and Means.

By Mr. GRASSLEY:

H.R. 12177. A bill to postpone for 1 year (until January 1, 1979) the effective date of the recently enacted provision which eliminates the monthly earnings test under section 203 of the Social Security Act; to the Committee on Ways and Means.

By Mr. LEACH:

H.R. 12178. A bill to limit the validity of passports issued to Federal officers, employees, and their dependents, for use in their official duties, to the period of the officer's or employee's official status; to the Committee on International Relations.

H.R. 12179. A bill to amend the Internal Revenue Code of 1954 and the Social Security Act to provide an exemption from coverage under the social security program, through a tax refund procedure, for employees who are members of religious faiths which oppose participation in such program, and to provide a similar exemption on a current basis (pursuant to waiver certificates filed in advance) for employers engaged in farming and their employees in cases where both are members of such faiths; and to make the existing exemption for self-employed members of such faiths available to certain additional individuals; to the Committee on Ways and Means.

By Mr. MATHIS (for himself and Mr. HALL):

H.R. 12180. A bill to insure a comprehensive, periodic review of U.S. participation in the World Bank and the International Monetary Fund; to the Committee on Banking, Finance and Urban Affairs.

By Mr. NEAL:

H.R. 12181. A bill to recognize the importance of small business by providing the Administrator of the Small Business Administration with the attributes of members of the Cabinet of the President and by including the Administrator in Cabinet meetings; jointly, to the Committees on Government Operations, and Small Business.

By Mr. PICKLE:

H.R. 12182. A bill relating to tax treatment of qualified dividend reinvestment plans; to the Committee on Ways and Means.

By Mr. RAHALL (for himself, Mr. CLAY, Mr. CHAPPELL, Mr. VENTO, and Mr. STOKES):

H.R. 12183. A bill to amend title 5 and title 28, United States Code, to provide for the reclassification of positions of deputy U.S. marshal, to include supervisory and managerial or specialists positions, and for other purposes; jointly, to the Committees on the Judiciary, and Post Office and Civil Service.

By Mr. ROE (for himself, Mr. LONG of Maryland, Mr. PEPPER, Mr. ROYBAL, Mr. CHAPPELL, Mr. DAVIS, Mr. AUCOIN, Mr. MOFFETT, and Mr. WEAVER):

H.R. 12184. A bill to increase the authorization for the Local Public Works Capital Development and Investment Act of 1976; to the Committee on Public Works and Transportation.

By Mr. STEERS:

H.R. 12185. A bill to provide for unbiased consideration of applicants to medical schools; to the Committee on Interstate and Foreign Commerce.

By Mr. STOCKMAN:

H.R. 12186. A bill to amend the Internal Revenue Code of 1954 to provide for tax reform, and for other purposes; to the Committee on Ways and Means.

By Mr. STUMP (for himself, Mr. RUDD, Mr. JOHNSON of Colorado, Mr. LLOYD of California, Mr. KRUEGER, Mr. BADHAM, Mr. HIGHTOWER, Mr. KETCHUM, Mr. EVANS of Georgia, Mr. ROBERTS, Mr. BEVILL, Mr. HANSEN, Mr. SYMMS, Mr. WATKINS, Mr. ENGLISH, Mr. GOODLING, Mr. MARRIOTT, and Mr. SEBELIUS):

H.R. 12187. A bill to remove residency requirements and acreage limitations applicable to land subject to reclamation law; to the Committee on Interior and Insular Affairs.

By Mr. UDALL (for himself, Mr. SIMON, Mr. STEERS, Mr. RICHMOND, Ms. MIKULSKI, Mr. KEMP, Mr. EDWARDS of California, Mr. LUKEN, and Mr. BRADEMAS):

H.R. 12188. A bill to amend title 5, United States Code, to promote proper and efficient activities of the Government, and to protect Federal employees disclosing situations in which such activities are not proper or efficient; to the Committee on Post Office and Civil Service.

By Mr. WAMPLER (for himself, Mr. HIGHTOWER, Mr. THONE, and Mr. SKELTON):

H.R. 12189. A bill to provide for the regulation by the U.S. Department of Agriculture of transactions in, and the movement of, biological control organisms in the United States so as to prevent and eliminate hazards to the agricultural community and to enhance the production of food and fiber, to the Committee on Agriculture.

By Mr. CHARLES H. WILSON of California (for himself and Mr. NIX):

H.R. 12190. A bill to amend the provisions of title 39, United States Code, relating to the mailing of solicitations disguised as invoices or statements of accounts; to the Commmittee on Post Office and Civil Service.

By Mr. YATRON:

H.R. 12191. A bill to amend the Railroad Retirement Act of 1974 to eliminate the reduction of Railroad Retirement annuities by amounts payable as social security benefits in cases of persons who had current connections with the railroad industry, had at least 5 years of service, and had attained the age of 65 as of the effective date of such act; to the Committee on Interstate and Foreign Commerce.

By Mr. YOUNG of Missouri (for himself, Mr. BURLISON of Missouri, Mr. GEPHARDT, Mr. ICHORD, Mr. VOLKMER and Mr. COLEMAN):

H.R. 12192. A bill to add mileage to the Interstate System for a route along a segment of Missouri Route 725; to the Committee on Public Works and Transportation.

By Mr. ANNUNZIO:

H.R. 12193. A bill to amend the Consumer Credit Protection Act to establish rights, remedies, and responsibilities for all participants in the utilization of electronic funds transfer services; and to protect consumers in the utilization of credit cards; and for other purposes; to the Committee on Banking, Finance, and Urban Affairs.

By Mr. BEDELL (for himself, Mr. BINGHAM, Mr. BONIOR, Mr. EDGAR, Mr. GIBBONS, Mr. LAGOMARSINO, Mr. LENT, Mr. PATTISON of New York, Mr. STARK, and Mr. CHARLES WILSON of TEXAS):

H.R. 12194. A bill to create a solar and renewable energy sources loan program within the Small Business Administration; to the Committee on Small Business.

By Mr. BIAGGI (for himself, Mr. ZEFERETTI, and Mr. MILLER of California):

H.R. 12195. A bill to amend the Rehabilitation Act of 1973 to improve the formula for State allotments under part B of that act, and for other purposes; to the Committee on Education and Labor.

By Mr. BROOKS:

H.R. 12196. A bill to provide for cost-of-living adjustments in the annuity of a retired Comptroller General and for other purposes; to the Committee on Government Operations.

By Mr. BUTLER (for himself, Mr. GAMMAGE, Mr. KILDEE, Mr. LEVITAS, Mr. MAGUIRE, Mr. RINALDO, and Mr. STANTON):

H.R. 12197. A bill to require the preparation of small business impact statements in connection with Federal agency rules, and for other purposes; to the Committee on Small Business.

By Mr. CEDERBERG:

H.R. 12198. A bill to amend the Tariff Schedules of the United States to provide a temporary suspension of the duty on polystyrene foam; to the Committee on Ways and Means.

By Mr. HARSHA:

H.R. 12199. A bill to regulate and restrict the use of fuel adjustment clauses by federally regulated, and State regulated, electric and gas utilities, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. HOLLAND:

H.R. 12200. A bill to amend section 422 of the Internal Revenue Code of 1954; to the Committee on Ways and Means.

By Mr. HOLLAND (for himself, Mr. BROYHILL, Mr. DUNCAN of Tennessee, Mr. STUDDS, Mr. HEFNER, Mr. FLYNT, Mr. QUILLEN, Mr. JONES of Tennessee, Mr. JENKINS, Mr. ZEFERETTI, Mrs. LLOYD of Tennessee, Mr. DAVIS, Mr. BARNARD, Mr. BEARD of Rhode Island, Mr. BURKE of Massachusetts, Mr. DAN DANIEL, Mrs. HECKLER, Mr. BAFALIS, Mr. NICHOLS, Mr. YATRON, Mr. MCDADE, Mr. WAGGONNER, and Mr. VANDER JAGT):

## PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BROWN of California:

H.R. 12215. A bill for the relief of Mrs. Bessie E. Baldwin; to the Committee on the Judiciary.

By Mr. HAMILTON:

H.R. 12216. A bill for the relief of Foundry United Methodist Church; to the Committee on Ways and Means.

By Mrs. SPELLMAN:

H.R. 12217. A bill for the relief of Dana D. Browdy; to the Committee on the Judiciary.

## AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 1

By Mr. WIGGINS:

On page 13, strike lines 9–25 and on page 14 strike lines 1–5.

Insert on line 9:

"(C) The Comptroller General shall review each year, on a randomly selected basis, not less than 5 per centum of the reports filed in that year under section 4."

H.R. 8494

By Mr. GARY A. MYERS:

Page 39, insert the following after line 7:

(8) If any lobbying communication was made on the floor of the House of Representatives or adjoining rooms thereof, or on the floor of the Senate or adjoining rooms thereof, a statement that such lobbying communication was made.

By Mr. RAILSBACK:

At page 38, lines 24–25 and page 39, lines 1–2, strike existing subsection (6) and substitute the following new subsection (6):

"(6) a description of the issues concerning which the organization filing such report engaged in lobbying communications and upon which the organization spent a significant amount of its efforts, disclosing with respect to each issue any retainee or employee identified in paragraph (5) of this subsection and the chief executive officer, whether paid or unpaid, who engaged in lobbying communications on behalf of that organization on that issue. However, in the event an organization has engaged in lobbying communications on more than 15 issues, it shall be deemed to have complied with this subsection if it lists the 15 issues on which it is spent the greatest proportion of it efforts. For purposes of this paragraph the term "chief executive officer" means the individual with primary responsibility for directing the organization's overall policies and activities;"

On page 39, after line 7, add a new paragraph:

(c) The report covering the fourth quarter of each calendar year shall also include a separate schedule listing the name and address of each organization or individual from which the registered organization received an aggregate of $3,000 or more in dues or contributions during that calendar year and listing the amount given, where (i) the dues or contributions were expended in whole or in part by the registering organization for lobbying communications and solicitations and (ii) the total expenditures reported by the organization under section 6(b)(2) during the year preceding the year in which the registration is filed exceed 1 percent of the total annual income of the organization: *Provided*, That the organization may, if it so chooses, instead of listing the specific amount given, state the amount, in the following categories: (A) amounts equal to or exceeding $3,000, but less than $10,000; (B) amounts equal to or exceeding $10,000, but less than $25,000; (C) amounts equal to or exceeding $25,000, but less than $50,000; (D) amounts equal to or exceeding $50,000. *Provided further*, That any organization registered under this Act or any organization or individual whose contribution to a registered organization would otherwise be disclosed under this paragraph may apply for, and the Comptroller General may grant, a waiver of the reporting requirements contained in this paragraph upon a showing that disclosure of such information would violate the privacy of the contributor's religious beliefs or would

be reasonably likely to cause harassment, economic harm, or other undue hardship to the contributor."

By Mr. SANTINI:

Page 32, line 21, strike out "organization" and all that follows through "employees)," on page 33, line 5.

Page 33, line 6, insert the following after "individuals": ", except that the term "organization" does not include any organization of State or local elected or appointed officials, any Federal, State, or local unit of government (other than a State college or university as described in section 511(a)(2)(B) of the Internal Revenue Code of 1954), any Indian Tribe, any national or State political party or any organizational unit thereof, or any association comprised solely of Members of Congress or Members of Congress and congressional employees".

By Mr. WIGGINS:

On page 38, line 4, after the word "event" insert "to the reporting organization".

On page 38, line 21, after the word "expenditures" insert "for the purpose of engaging in the activities in section 3(a)".

By Mr. YOUNG of Florida:

On page 35, line 4, insert the following:

(3) An identification of any individual who has contributed $2,500 to the organization or an affiliate during any calendar year and who spends all or part of 13 days in any quarterly filing period engaged in lobbying activities described in section 3(a) on behalf of that organization.

On Page 39, after line 7, insert the following:

(8) A listing of the names of each Federal officer or employee whom such organization has sought to influence respecting any activities described in section 3(a).

On page 39, line 8, insert the following:

LIMITATIONS OF LOBBYING IN AREAS PROXIMATE TO THE HOUSE OR SENATE CHAMBERS

SEC. 7. (a) No person who is—

(1) an ex-Member of the House of Representatives or the Senate;

(2) a former Parliamentarian of the House or Senate; or

(3) a former elected officer or minority employee of the House or Senate,

shall, in violation of rule XXXII of the Rules of the House of Representatives, appear in the Hall of the House or adjacent rooms as a representative of an organization which is required to register under this Act during the consideration of a measure in which they have a direct interest.

H.R. 11504

By Mr. VOLKMER:

On page 24 of title II, insert in subsection (d) after "*Provided, however,*" the following: "that such limitation shall be reduced to the extent of the principal of any loans outstanding to the borrower under Title I of the Consolidated Farm and Rural Development Act: *Provided, further,*".

H.R. 11941

By Mr. WIGGINS:

Strike "candidates for Congress," in the title of H.R. 11941.

On page 2 lines 3–4 strike "and any individual who becomes a candidate in any election for the office of Member".

On page 2 lines 14–15 strike "other than an individual who becomes a candidate in any election for the office of Member,"

On page 2 strike line 25 and on page 3 strike lines 1–25.

On page 4 lines 1–2 strike "or an individual who is a candidate for the office of Member"

On page 14 strike lines 21–25 and on page 15 strike lines 1–6. On page 15 strike lines 14–17.

On page 15 line 7 redesignate 2 as 1 on line 9, 3 as 2, on line 18(5) as (3), on line 21(6) as (4), on line 23(7) as (5), and on page 16 line 10 redesignate (8) as (6), on line 11(9) as (7), on line 14(10) as (8), and on page 17 line 11 redesignate (11) as (9).

On page 6, line 5, after the word "than" insert "current employment income received".

On page 7, line 2, after the word "source" insert "(other than from the United States Government)".

On page 7, line 6, strike "$2,500" and insert "$5,000".

On page 7, lines 15–16, strike "any loan secured by an automobile" and insert "any loan secured by household furniture or appliances."

On page 8, line 2 after the word "year" insert ", excluding any deposit in a personal savings or checking account which bears interest."

On page 8, line 4, after the word "property" insert "which was used primarily for commercial or investment purposes," and on line 6 after the word "property" insert "which was used primarily for commercial purposes,".

On page 8, line 9, after "sale" strike all that follows through line 15.

On page 8, line 15, after the word "individual" insert the new paragraph:

"(8) The identity of all positions held as an officer, director, trustee, partner, proprietor, representative, employee, or consultant of any corporation, company, firm, partnership, or other business enterprise, any nonprofit organization, any labor organization, and any educational or other institution: Provided, that this paragraph shall not require the reporting of positions held in any religious, social, fraternal, charitable, or political entity."

On page 8, line 15, after "individual". insert:

"(9) A description of the date, parties, to, and terms of any agreement or arrangement with respect to: (A) future employment; (B) a leave of absence during the period of the reporting individual's Government service: (C) continuation of payments by a former employer other than the United States Government; and (D) continuing participation in an employee welfare or benefit plan maintained by a former employee."

On page 8 strike lines 21–25 and on page 9 strike 1–3. Insert in lieu thereof:

(1) not more than $2,500,

(2) greater than $2,500, but not more than $5,000,

(3) greater than $5,000, but not more than $10,000,

(4) greater than $10,000, but not more than $25,000,

(5) greater than $25,000.

On page 10, strike lines 16–25, and on page 11 strike 1–4.

On page 11, lines 16–17 strike the words "may be required" and insert in lieu thereof "shall be required".

On page 11, line 17, after the word "name" insert ", occupation,".

On page 11, line 17, strike the word "and".

On page 11, strike lines 16–24. On page 12, strike lines 1–3. On page 12, strike lines 7–14.

On page 12 strike lines 4–6 and insert:

"(d)(1) Any report filed under this title shall be available for public inspection for a period of five years, so long as the reporting individual remains in a position designated in section 2, after which the report shall be destroyed;

"(2) If the individual who filed the report is no longer within any position designated in section 2 and so notifies the office designated in section 6 holding his report, the report shall, one year after such notification, no longer be available for public inspection. Such report shall be retained by the office designated in section 6 for the remainder of the seven-year period after which it shall be destroyed;

"(3) If the individual specified in subsection d(2) returns to any position designated in section 2 during such seven-year period, his report shall again be made available for public inspection for the remainder of that seven-year period."

On page 12, line 7, strike "inspect,".

On page 12, line 8, strike "or".

On page 12, line 10, after the word "purpose" strike the semicolon, insert a comma and the language "other than by news and communications media for dissemination to the general public;".

On page 12, line 14, after the word "any" strike "political, charitable or other".

On page 12, line 14, after the word "purpose" strike the period, insert a comma and the language "other than for a political purpose."

On page 12, line 19, after "$5,000." insert the following new paragraph:

"(f) This section does not require public availability of information pertaining to the holdings and sources of income of a trust or other financial arrangement designed to insulate the reporting individual, his spouse, or dependent child from knowledge of the holdings and sources of income of such trust or arrangement if such trust or arrangement has been approved under regulations prescribed by the Civil Service Commission, with the concurrence of the Attorney General, as necessary to avoid potential or apparent conflicts of interest under section 208 of title 18, United States Code, and other applicable laws and regulations: *Provided*, That if reported, the instrument or agreement establishing the trust or arrangement and the identity and category of value of assets initially placed in the trust or arrangement shall be made available to the public under this section."

On page 13, line 8, after "reported" insert:

"(c) In order to carry out their responsibilities under this Act the Committee on Standards of Official Conduct of the House of Representatives, and the Select Committee on Ethics of the Senate, have power, within their respective jurisdictions, to render any advisory opinion, in writing, to persons covered by this title.

"Notwithstanding any other provisions of law, the individual to whom an advisory opinion is rendered in accordance with this paragraph, and any other individual covered by this title who is involved in a fact situation which is indistinguishable in all material aspects, and who acts in good faith in accordance with the provisions and findings of such advisory opinion shall not, as a result of such act, be subject to any sanction provided in this act."

On page 14, line 7, after "SEC. 8." strike all that follows through "(b)" on line 12.

On page 14 line 18 strike "$5,000" and insert in lieu thereof "$10,000".

H.R. 12050

By Mr. MIKVA:

Strike out all after the enacting clause and insert:

SECTION 1. SHORT TITLE.

This Act may be cited as the "Tuition Tax Deferral Act of 1978".

SEC. 2. DEFERRAL OF INCOME TAX FOR CERTAIN TUITION.

(a) IN GENERAL.—Subchapter B of chapter 62 of the Internal Revenue Code of 1954 (relating to extensions of time for payment of tax) is amended by adding at the end thereof the following new section:

"SEC. 6168. EXTENSION OF TIME FOR PAYMENT OF TAX WHERE TAXPAYER HAS PAID CERTAIN TUITION.

"(a) EXTENSION PERMITTED.—In the case of an individual who pays tuition for the calendar year in which the taxable year begins to one or more eligible educational institutions for himself, his spouse, or any of

his dependents, such individual may elect to pay in installments part or all of so much of the tax imposed by chapter 1 for such taxable year as does not exceed such tuition.

"(b) DOLLAR LIMITATIONS—

"(1) PER YEAR.—The maximum dollar amount of tuition which is paid for any calendar year for any individual and which may be taken into account under subsection (a) shall not exceed the applicable amount determined under the following table:

| "In the case of a calendar year: | The applicable amount is: |
|---|---|
| Beginning after 1977 but before 1982 | $1,000 |
| Beginning after 1981 but before 1986 | 1,500 |
| Beginning after 1985 | 2,000 |

"(2) AGGREGATE AMOUNT.—The aggregate amount of tuition for any individual which may be taken into account under subsection (a) for all taxable years may not exceed $6,000.

"(c) DEFERRED INSTALLMENT PAYMENTS.—

"(1) IN GENERAL.—The amount of tax for any taxable year which a taxpayer elects to pay in installments under subsection (a) and which is attributable to tuition for any one individual shall be payable in 10 equal annual installments. The first such installment shall be paid on or before the 15th day of the 4th month of the first taxable year following the first taxable year (after the taxable year for which the taxpayer makes the election) during which the individual is not a full-time student. Any succeeding installment shall be paid on or before the date which is one year after the date prescribed by this paragraph for payment of the preceding installment.

"(2) INTEREST AT RATE OF 3 PERCENT.—Interest on any tax payable in installments under this section (including any deficiency prorated to installment payable under this section) shall be paid at a rate of 3 percent (in lieu of the rate specified by section 6601 (a)) for any period before the date such tax is required to be paid under this section. For purposes of section 6601(b)(1), any election to pay tax in installments under this section shall be treated as an extension of time for payment of such tax.

"(3) DETERMINATION OF UNDERPAYMENTS AND OVERPAYMENTS.—In determining the amount of any underpayment or overpayment for the taxable year, any amount payable in installments in subsequent taxable years by reason of this section shall not be treated as tax due for the taxable year.

"(d) TUITION PAYMENTS TAKEN INTO ACCOUNT.—

"(1) WHEN PAYMENTS MUST BE MADE AND EDUCATION FURNISHED.—Payments of tuition shall be treated as paid for any calendar year—

"(A) FOR 1978.—In the case of calendar 1978, if such payments—

"(i) are made on or after August 1, 1978, and before February 1, 1979, and

"(ii) are for education furnished on or after August 1, 1978, and before January 1, 1979, or

"(B) AFTER 1978.—In the case of calendar 1979 or any calendar year thereafter, if such payments—

"(i) are made during such calendar year or during the 1-month period before or the 1-month period after such year, and

"(ii) are for education furnished during such calendar year.

"(2) GRADUATE STUDENTS EXCLUDED.—

"(A) IN GENERAL.—Tuition attributable to a course of instruction which is not a general course of instruction shall not be taken into account under subsection (a).

"(B) GENERAL COURSE OF INSTRUCTION DEFINED.—For purposes of subparagraph (A) the term 'general course of instruction' means a course of instruction for which credit is allowable toward a baccalaureate or associate degree by an institution of higher education or toward a certificate of required course work at a postsecondary vocational school but does not include any course of instruction which is part of the graduate program of the individual.

"(3) INDIVIDUAL MUST BE FULL-TIME STUDENT.—

"(A) IN GENERAL.—Amounts paid for the education of an individual shall be taken into account under subsection (a) for any calendar year only if such individual is a full-time student for such calendar year.

"(B) FULL-TIME STUDENT DEFINED.—For purposes of this section, the term 'full-time student' means any individual who, during any 4 calendar months during the calendar year, is a full-time student at an eligible educational institution.

"(4) TUITION FOR FIRST YEAR EXCLUDED.—Tuition paid for any individual which is attributable to education furnished during the first year of a general course of instruction shall not be taken into account under subsection (a).

"(5) ELECTION.—Amounts paid for tuition for any individual for any calendar year may be taken into account by the taxpayer under subsection (a) only if (and only to the extent) the taxpayer elects to apply this section to such tuition.

"(e) TUITION DEFINED.—

"(1) IN GENERAL.—For purposes of this section, the term 'tuition' means tuition and fees required for the enrollment or attendance of a student at an eligible educational institution, including required fees for courses.

"(2) CERTAIN AMOUNTS NOT INCLUDED.—The term 'tuition' does not include any amount paid, directly or indirectly, for—

"(A) books, supplies, and equipment for courses of instruction, or

"(B) meals, lodging, transportation, or similar personal, living, or family expenses.

"(3) AMOUNTS NOT SEPARATELY STATED.—If an amount paid for tuition includes an amount for any item described in subparagraph (A) or (B) of paragraph (2) which is not separately stated, the portion of such amount which is attributable to such item shall be determined under regulations prescribed by the Secretary.

"(f) DEFINITIONS.—For purposes of this section—

"(1) ELIGIBLE EDUCATIONAL INSTITUTION.—The term 'eligible educational institution' means—

"(A) an institutfon of higher education, or

"(B) a postsecondary vocational school.

"(2) INSTITUTION OF HIGHER EDUCATION.—The term 'institution of higher education' means an institution described in section 1201(a) or 491(b) of the Higher Education Act of 1965 (as in effect on January 1, 1978).

"(3) POSTSECONDARY VOCATIONAL SCHOOL.—The term 'postsecondary vocational school' means—

"(A) an area vocational education school as defined in subparagraph (C) or (D) of section 195(2) of the Vocational Education Act of 1963 (as in effect on January 1, 1978), which

"(B) is located in any State.

"(4) DEPENDENT.—The term 'dependent' has the meaning given to such term by section 152.

"(5) MARITAL STATUS.—The determination of marital status shall be made under section 143.

"(6) TAX IMPOSED BY CHAPTER 1.—The term 'tax imposed by chapter 1' means the tax imposed by chapter 1 reduced by the sum of credits allowable under subpart A of part IV of subchapter A of chapter 1 (other than the credits allowable under sections 31, 39, and 43).

"(g) SPECIAL RULES.—

"(1) TREATMENT OF CERTAIN SCHOLARSHIPS AND VETERANS' BENEFITS.—

"(A) IN GENERAL.—For purposes of this section, any amount received as a nontaxable scholarship or educational assistance allowance with respect to any individual—

"(i) shall reduce the limitation applicable to such individual under subsection (b)(1) for the calendar year in which such amount is received and

"(ii) shall be treated as used on a ratable basis for all expenses of the recipient for which such scholarship or allowance may be used, with the amount so used for tuition treated as an amount not paid by the taxpayer.

"(B) NONTAXABLE SCHOLARSHIP OR EDUCATIONAL ASSISTANCE ALLOWANCE DEFINED.—For purposes of subparagraph (A), the term 'nontaxable scholarship or educational assistance allowance' means—

"(i) a scholarship or fellowship grant (within the meaning of section 117(a)(1)) or similar award which is not includible in gross income, and

"(ii) an educational assistance allowance under chapter 32, 34, or 35 of title 38, United States Code.

"(2) TAXPAYER WHO IS A DEPENDENT OF ANOTHER TAXPAYER.—Amounts paid for any calendar year for tuition for the taxpayer may not be taken into account under subsection (a) by such taxpayer if such taxpayer is a dependent of any other person for a taxable year beginning in the calendar year in which the taxable year of the taxpayer begins.

"(3) SPOUSE.—Amounts paid for any calendar year for tuition for the spouse of the taxpayer may not be taken into account under subsection (a) by such taxpayer unless—

"(A) the taxpayer is entitled to an exemption for his spouse under section 151(b) for the taxable year beginning in such calendar year, or

"(B) the taxpayer files a joint return with his spouse under section 6013 for such taxable year.

"(h) DENIAL OF PERSONAL EXEMPTION AND CERTAIN TAX DEDUCTION.—

"(1) DENIAL OF PERSONAL EXEMPTION.—If the taxpayer elects for any taxable year to take into account under subsection (a) tuition paid for any dependent, no exemption shall be allowed under section 151(e) to such taxpayer for such taxable year with respect to such dependent.

"(2) DENIAL OF DEDUCTION.—If any tuition is taken into account under subsection (a) by the taxpayer, no deduction shall be allowed under chapter 1 for such tuition.

"(i) Acceleration of Payments; Etc.—

"(1) ACCELERATION OF PAYMENTS.—If—

"(A) the taxpayer dies during the taxable year, or

"(B) any installment under this section is not paid on or before the date prescribed for its payment (including any extension of time for the payment of such installment),

the unpaid portion of the tax payable in installments under this section shall be paid on notice and demand from the Secretary. If the tax payable in installments under this section is attributable to any taxable year for which the taxpayer made a joint return under section 6013 with his spouse, subparagraph (A) shall not apply if the spouse survives the taxpayer.

"(2) PRORATION OF DEFICIENCY TO INSTALLMENTS.—If an election is made under subsection (a) to pay any part of the tax imposed by chapter 1 in installments and a deficiency has been assessed, the deficiency may (at the election of the taxpayer and subject to the limitations provided by this section) be prorated to the installments payable under subsection (a). The part of the deficiency so prorated to any installment the date of payment for which has not arrived shall be collected at the same time as, and as a part of, such installment. The part of

the deficiency so prorated to any installment the date for payment of which has arrived shall be paid upon notice and demand from the Secretary. This paragraph shall not apply if the deficiency is due to negligence, to intentional disregard of rules and regulations, or to fraud with intend to evade tax.

"(3) ELECTION.—Any election under this section shall be made at such time and in such manner as the Secretary may prescribe.

"(j) REGULATIONS.—The Secretary shall prescribe such regulations as may be necessary to carry out the provisions of this section."

(b) SUSPENSION OF RUNNING OF PERIOD OF LIMITATIONS.—Section 6503 of such Code (relating to suspension of running of period of limitations) is amended by redesignating subsection (i) as subsection (j) and by inserting after subsection (h) the following new subsection:

"(i) EXTENSION OF TIME FOR PAYMENT OF TAX WHERE TAXPAYER HAS PAID CERTAIN TUITION.—The running of the period of limitations for the collection of any tax payable in installments under section 6168 shall be suspended for the period during which there are any unpaid installments of such tax."

(c) DISREGARD OF EXTENSION OF TIME FOR PAYMENT OF TAX.—Any election by an individual to pay tax in installments under section 6168 of the Internal Revenue Code of 1954 shall not be taken into account for purposes of determining the eligibility of such individual or any other individual for benefits or assistance, or the amount or extent of benefits or assistance, under any Federal program of educational assistance or under any State or local program of educational assistance financed in whole or in part with Federal funds.

(d) CLERICAL AMENDMENT.—The table of sections for subchapter B of chapter 62 of such Code is amended by adding at the end thereof the following new item:

"Sec. 6168. Extension of time for payment of tax where taxpayer has paid certain tuition."

(e) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years ending on or after August 1, 1978.

SEC. 3. STUDY

The Secretary of the Treasury or his delegate and the Secretary of Health, Education, and Welfare or his delegate shall each conduct a study of the operation and effects of section 6168 of the Internal Revenue Code of 1954 (as added by this Act), and prepare and transmit to the Congress, during the first quarter of calendar 1980 and during the first quarter of calendar 1982, a report containing the results of such study with respect to the period elapsing before such quarter during which such section 6168 was in effect. Each report transmitted to the Congress under the preceding sentence shall be published in the Federal Register.

Amend the title so as to read: "A bill to amend the Internal Revenue Code of 1954 to provide a deferral of income taxes where the taxpayer pays certain tuition."

# SENATE—*Tuesday, April 18, 1978*

*(Legislative day of Monday, February 6, 1978)*

The Senate met at 7:30 a.m., on the expiration of the recess, in executive session, and was called to order by Hon. QUENTIN N. BURDICK, a Senator from the State of North Dakota.

## PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Almighty God, who in former times didst lead our fathers, we bow in Thy presence once more to offer ourselves—souls, minds, and bodies, in Thy service, knowing that when we first love Thee we best serve our country. Give us clean hands and pure hearts. Deliver us from sham and pretense and hypocrisy. Conquer our weariness. Refresh our spirits. Keep our motives pure, our purposes worthy of a great and good people. In these days which try men's souls may we submit ourselves to Thee, discern what is Thy will and do it. With Thy benediction upon us may we face what we must face this day with clear thinking, honest dealing, and the inner assurance we have done our best to do justly, love mercy and walk humbly with our God, in whose holy name we pray. Amen.

## APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The assistant legislative clerk read the following letter:

U. S. SENATE,
PRESIDENT PRO TEMPORE,
*Washington, D.C., April 18, 1978.*

*To the Senate:*

Under the provisions of rule I, section 3, of the Standing Rules of the Senate, I hereby appoint the Honorable QUENTIN N. BURDICK, a Senator from the State of North Dakota, to perform the duties of the Chair.

JAMES O. EASTLAND,
*President pro tempore.*

Mr. BURDICK thereupon assumed the chair as Acting President pro tempore.

## SPECIAL ORDERS

The ACTING PRESIDENT pro tempore. The Senator from West Virginia.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that I may yield my 15 minutes under the order to Mr. DECONCINI.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask Mr. DECONCINI if he will yield a couple of minutes to me.

Mr. DECONCINI. Yes, I yield.

## THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that, as in legislative session, the legislative Journal be approved to date.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

## THE CALENDAR

Mr. ROBERT C. BYRD. Mr. President, there is one joint resolution on the calendar which, I understand, is cleared. I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 672.

Mr. BAKER. Mr. President, reserving the right to object, and I will not object, that item is cleared on our calendar, and we have no objection to proceeding to its consideration at this time.

## WHITE HOUSE CONFERENCES ON THE ARTS AND ON THE HUMANITIES

The joint resolution (H.J. Res. 649) to authorize the President to call a White House Conference on the Arts, and to authorize the President to call a White House Conference on the Humanities, was considered, ordered to a third reading, read the third time, and passed.

● Mr. HASKELL. Mr. President, today I am pleased to join with my colleagues in support of House Joint Resolution 649 which creates a White House Conference on the Arts and the Humanities.

The purpose of the Conference will be to develop recommendations relating to the appropriate growth of the arts and humanities in all parts of the Nation.

I am a representative from a part of this country that was once considered by inhabitants east of St. Louis to be a barren outpost for those seeking cultural endeavors.

Opera houses and repertory theaters born in western gold rush towns and frontier farming communities were not always recognized as significant contributors to America's budding cultural and artistic reputation.

Today we all recognize the strength and variety of our artistic accomplishments and resources throughout the Nation. Colorado is particularly grateful for the Federal assistance we have received in recent years for a broad spectrum of artistic activities. Federal funds have assisted us in the continuation of our cultural traditions as well as in the initiation of new artistic expressions. Coloradans may enjoy activities ranging from mountain arts and crafts fairs to the superior Denver symphony now at home in the new and architecturally innovative Boettcher Concert Hall in downtown Denver.

House Joint Resolution 649 provides for State conferences from which delegates will be sent with their recommendations to the National Conference.

Colorado will be proud to host such a conference and will endeavor to explore and examine meaningful ways to support and develop the arts and the humanities throughout the Nation.●

Mr. KENNEDY. Mr. President, today we are considering a resolution which

calls for separate White House Conferences on the Arts and Humanities. As a member of the Senate Subcommittee on Education, Arts and Humanities, I am especially pleased to lend my support to this measure.

In recent years, public interest in the arts has grown at a tremendous rate. In communities all over the country, audiences and arts groups have increased dramatically, demonstrating vividly that the arts are no longer supported only by a small elite, but by a broad, cross section of enthused Americans. Unfortunately, however, available financial and moral support have not always been sufficient to help that interest thrive.

We long ago recognized that if the arts are to flourish in our society, the active support and participation of our Federal, State, and local governments are necessary. The White House conferences we are considering today will help define what public role should be developed to deal with the Nation's cultural issues. The Conferences will focus public attention on what supportive action—in both the public and private sector—is necessary and appropriate, by serving as forums where priorities in cultural policy can be examined and from which new recommendations and fresh insights can emerge. Of particular importance, the resolution before us today calls for preliminary State conferences which will assure the nationwide and diverse participation of those concerned with the arts and humanities—artists, community cultural groups, educators, local arts administrators, and other interested individuals.

President Kennedy said:

If we can make our country one of the great schools of civilization . . . then on that achievement will surely rest our claim to the ultimate gratitude of mankind . . . I am certain that, after the dust of centuries has passed over our cities, we will be remembered not for our victories or defeats in battle or politics, but for our contributions to the human spirit.

The White House Conference on the Arts and Humanities will demonstrate the importance our Nation places on its cultural life and I urge my colleagues to give it their support.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the joint resolution was passed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95-736), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE LEGISLATION

House Joint Resolution 649, as amended, calls upon the President to convene a White House Conference on the Arts and a White House Conference on the Humanities both to be held in 1979.

The President would appoint a National Conference Planning Council for each of the White House Conferences. The task of the two Councils would be to direct the planning of the two Conferences.

Each Department and agency of the Federal Government shall provide such cooperation and assistance to the Councils, including the assignment of personnel, as may be necessary.

Grants may be made to each State, upon application, to assist the State in the cost of conducting the Conferences within the State. In order to receive a grant, however, the State must assure broad and maximum public participation.

The Councils will submit reports on the Conference to the President and to Congress no later that 180 days following the dates on which the final Conferences, to be held in Washington, D.C., are called. The reports will include recommendations for any legislative actions necessary to implement the recommendations in the reports.

BACKGROUND

The National Foundation on the Arts and the Humanities Act established, in 1965, the National Endowment for the Arts and the National Endowment for the Humanities to encourage and support cultural activities in the United States. Since that time Federal assistance for the arts and the humanities through these two agencies has grown considerably. During their first year, the Endowments each received an appropriation of $2.5 million to carry out their programs. Now in their 13th year, the Arts Endowment is funded at $123.5 million (appropriations for fiscal year 1978) and the Humanities Endowment has a funding level of $121 million (appropriations for fiscal year 1978).

While Federal support for the arts and the humanities has expanded, public interest in and enthusiasm for cultural programs have risen. Witnesses testifying on the legislation under consideration spoke of the growth in audiences at plays and concerts, the extension of informal education programs at libraries and universities and the increased numbers of Americans visiting museums as examples of the expanding interest in cultural activities in the United States.

During its hearings, the committee noted that in addition to support from the National Endowment for the Arts and the Humanities, assistance was also provided for the arts and humanities from programs of other Federal such as those of the Office of Education, the Art in Architecture program of the General Services Administration, the activities of the Institute of Museum Services, and others.

The effect of this support is considerable; however, the committee found that there are many issues concerning the future of the arts and the humanities in American life that remain to be discussed and analyzed. A White House Conference on the Arts and a White House Conference on the Humanities should, the committee believes, give concerned individuals the opportunity to exchange ideas about and propose approaches to dealing with these issues.

## TREATY BETWEEN THE UNITED STATES AND THE REPUBLIC OF BOLIVIA—REMOVAL OF INJUNCTION OF SECRECY

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the injunction of secrecy be removed from the Treaty between the United States of America and the Republic of Bolivia on the Execution of Penal Sentences which was signed at La Paz on February 10, 1978 (Executive G, 95th Congress, second session), transmitted to the Senate by the President on Friday, April 14, 1978; and ask that the treaty be considered as having been read the first time, that it be referred to the Committee on Foreign Relations and ordered to be printed, and that the President's message be printed in the RECORD.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The message from the President is as follows:

*To the Senate of the United States:*

With a view to receiving the advice and consent of the Senate to ratification, I transmit herewith the Treaty between the United States of America and Bolivia on the Execution of Penal Sentences which was signed at La Paz on February 10, 1978.

I transmit also, for the information of the Senate, the report of the Department of State with respect to the Treaty.

The Treaty would permit citizens of either nation who had been convicted in the courts of the other country to serve their sentences in their home country; in each case the consent of the offender as well as the approval of the authorities of the two Governments would be required.

This Treaty is significant because it represents an attempt to resolve a situation which has inflicted substantial hardships on a number of citizens of each country and has caused concern to both Governments. The Treaty is similar to those with Mexico and Canada, to which the Senate gave advice and consent last year. I recommend that the Senate give favorable consideration to this Treaty at an early date.

JIMMY CARTER.

THE WHITE HOUSE, *April 14, 1978.*

## THE PANAMA CANAL TREATY

Mr. ROBERT C. BYRD. Mr. President, the final hour of debate on the Resolution of Ratification for approval of the treaties will begin at 5 p.m. today.

UNANIMOUS-CONSENT AGREEMENT

Mr. President, I ask unanimous consent that if there is any time prior to 5 o'clock that is available for debate, in other words, if time has been saved prior to that time, prior to the hour of 5, so that a few minutes exist, in addition to the 1 hour, that those minutes be equally divided and placed under the control of Mr. LAXALT and Mr. SARBANES.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, has the final hour of debate today, which will run between 5 and 6 o'clock, been divided, and, if so, how?

The ACTING PRESIDENT pro tempore. The first 15 minutes are allotted to the proponents of the treaty, the next 30 minutes are allotted to the opponents, and the final 15 minutes to the proponents.

Mr. ROBERT C. BYRD. I thank the Chair and I thank the distinguished Senator for yielding to me.

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from Arizona (Mr. DECONCINI) is recognized, as in legislative session, for not to exceed 30 minutes.

Mr. ROBERT C. BYRD. Mr. President, I have taken 2 minutes of the Senator's time, but I yielded him 15 minutes in the beginning.

## CLARIFICATION OF AN ASPECT OF SENATE DEBATE ON PANAMA CANAL TREATIES

Mr. DECONCINI. Mr. President, I ask this Chamber's indulgence for a few moments to help clarify an aspect of the Senate debate on the Panama Canal treaties that has become, in my view, extremely distorted.

An amazing amount of controversy has surrounded the language I asked the Senate to add to the resolution of ratification on the Neutrality Treaty. The language, which has become known as the DeConcini amendment, is meant to clarify certain rights that the United States retains under the new arrangement that will govern the Panama Canal.

What puzzles me, Mr. President, is that suddenly the public debate has focused on whether it is appropriate for the United States to retain the right to keep the canal open regardless of the reasons that may lead to its closure. Frankly, I believed that there was no disagreement in principle on this point. I believed that it was accepted by the Panamanians, that it was accepted by the administration, and that it was accepted by the Foreign Relations Committee and the Senate leadership. It has come as quite a shock to me that this is apparently not the case.

Let me be more specific, Mr. President. On February 3, the Senate Foreign Relations Committee ordered its report on the Panama Canal treaties to be printed and distributed to Members of the Senate to aid them in their consideration of the treaties. Since only Senator GRIFFIN dissented from the report and appended minority views, I must assume—as I believe all of us assumed—that the rest of the Foreign Relations Committee agreed with the report.

As it turns out, Mr. President, a number of Senators who are fairly senior members of that committee have publicly raised serious questions about the principle behind the DeConcini amendment. The reason why this is perplexing, Mr. President, is that the Senate Foreign Relations Committee report on the treaties endorsed that principle.

On page 6 of the "star print," the committee begins its discussion of the so-called leadership amendments to the treaty. After stating that the committee recommended the adoption of the "leadership amendments," it goes into a statement of the intention behind those amendments.

The report states:

> The meaning of these amendments is plain. The first amendment relates to the right of the United States to defend the Canal . . . It allows the United States to introduce its armed forces into Panama whenever and however the Canal is threatened. Whether such a threat exists is for the United States to determine on its own in accordance with its constitutional processes. What steps are necessary to defend the Canal is for the United States to determine on its own in accordance with its constitutional processes. When such steps shall be taken is for the United States to determine on its own in accordance with its constitutional processes. The United States has the right to act as it deems proper against *any* threat to the canal, internal or external, domestic or foreign, military or non-military. Those rights enter into force on the effective date of the treaty. They do not terminate.

How much plainer could the report of the Foreign Relations Committee be? One thing is certain, however. The Foreign Relations Committee—and, again, I assume that includes all its members save Senator GRIFFIN—asserts broader rights than were asserted in the DeConcini amendment. In other words, the Foreign Relations Committee report goes beyond the rights asserted by my simple clarification.

Perhaps, it could be argued that these rights asserted by the Foreign Relations Committee are partially eliminated by the second paragraph of the "leadership amendment" which reasserts the American intention not to intervene in the internal affairs of Panama. Here again, the Foreign Relations Committee report makes it clear that such is not the case. Referring to the paragraph I just quoted, the report says:

> The above-described rights are not affected by the second paragraph of the amendment, which provides that the United States has no 'right of intervention . . . in the internal affairs of Panama,' and which prohibits the United States from acting 'against the territorial integrity or political independence of Panama.'

The report goes on to be more specific. It states that:

> The prohibitions set forth in the second paragraph do not derogate from the rights conferred in the first.

It then asserts that:

> Even if a conflict were somehow to arise between the two paragraphs, because the United States has the right to act against "any . . . threat directed against the Canal", there is no question that the first would prevail. The rights conferred therein are stated in absolute terms and must therefore be construed as controlling.

It is interesting, Mr. President, that the principle endorsed by the Foreign Relations Committee is now being called into question. The impression in some segments of the media is that these American rights are novel inventions of the DeConcini amendment.

Quite frankly, although I am flattered by the attention of the media during the last few days, I believe it is quite unwarranted. What I proposed in the DeConcini amendment was merely a clarification of the principle articulated by the Foreign Relations Committee. It was my feeling—and the feeling of a number of my colleagues—that the "leadership amendment" was not sufficiently clear. Regardless of what the intent of the amendment was, the actual words seemed to be subject to a variety of interpretations. Because it was merely a clarification and not a change in American policy—policy apparently agreed to, according to the Foreign Relations Committee report, by the Panamanians themselves—none of the parties involved, including the administration or the Senate leadership had much difficulty accepting my amendment to the instrument of ratification.

It was only after the amendment was accepted overwhelmingly by the Senate that the controversy arose. Reports from Panama have indicated that the amendment ran counter to the meaning and intent of the treaty, and the Panamanian Goverment took the unusual step of circulating a note among the members of the United Nations implying that the rights asserted by the DeConcini amendment were possibly outside the scope of the United Nations Charter.

In response to the Panamanian reaction, the administration, the Senate leadership, and individual members of the Foreign Relations Committee have suggested that it is imperative that the DeConcini amendment be somehow moderated or modfied, or the treaty would either become unacceptable to the Panamanians or to certain members of the Senate who do not want to be associated with the notion that the United States has the right to act independently to keep the canal open.

It seems to me, Mr. President, that the only truly legitimate area of debate is whether the wording of the DeConcini amendment is or is not necessary to achieve the objectives described by the Foreign Relations Committee and which I have extensively quoted. It seems to me that those objectives are not in question. The American people and the majority of Senators believe that we have those rights and that they are both legitimate and sanctioned by the Panamanian Government. It is unfortunate that so much time has been expended debating an issue which should not be in contention.

Let me, Mr. President, restate my concerns. What led me to introduce—and what I believe led the Senate to accept—my reservation was a sense that the "leadership amendment" was somewhat unclear on a number of points, most especially those relating to American rights to keep the canal open if the threat to it were internal rather than external. Now, it should be noted, once again, that this right is asserted by the Foreign Relations Committee as inherent in the leadership amendment, and is endorsed by them. Thus, the question is whether the actual treaty and amendment language makes this right sufficiently clear.

At the time that I introduced my amendment, I made the following statement:

> I believe I speak for all Senators in stating that it is not our expectation that this change gives to the United States the right to interfere in the sovereign affairs of Panama. The United States will continue to respect the territorial integrity of that Nation. My amendment to the resolution of ratification is precautionary only; and it is based on the long history of American stewardship of the canal. It recognizes the very special relationship that the Panama Canal has to American security. I certainly hope, Mr. President, that if this right is attached to the treaty it will never need to be exercised. Yes, it is important that the American people know that should the need arise, the United States has sufficient legal sanction to act.

Those, Mr. President, were my words at the time the amendment was introduced and acted upon. They continue to be my sentiments today. Furthermore, I know there is nothing in my reservation that goes beyond the words of the Foreign Relations Committee, and I believe those words reflect the intent of the Congress. My only quarrel today as well as in the past has been what I perceive as

ambiguity in the drafting of the leadership amendment. The Foreign Relations Committee report believes that the leadership amendment accomplishes the stated objectives; I do not. However, I assert no new right, but neither will I accept any changes in those words that derogate from the rights we have clearly established in our action on the Neutrality Treaty.

I thank the Chair, I yield back the remainder of my time, and I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

## ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there be a period for the transaction of routine morning business.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

## ORDER FOR RECOGNITION OF CERTAIN SENATORS ON TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow Mr. JAVITS, Mr. PERCY, Mr. STAFFORD, and Mr. MATHIAS each be recognized for not to exceed 15 minutes following the prayer.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, that will be after the recognition of Mr. MORGAN, for whom an order has already been entered for tomorrow.

(Routine morning business transacted and additional statements submitted are printed later in today's RECORD.)

## CONCLUSION OF MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, is there further morning business?

The ACTING PRESIDENT pro tempore. Is there further morning business? If not, morning business is closed.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum, without prejudice to the orders for Senators to be recognized.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Under the previous order, the Senator from Indiana (Mr. LUGAR) is recognized for not to exceed 15 minutes.

## S. 2931—URBAN HOMESTEADING LEGISLATION

Mr. LUGAR. Mr. President, strong neighborhoods, conservation of urban housing stock, pride of homeownership, improved Federal-local relationships are among the goals of many Americans who are seeking strong alternative policies for our cities.

One alternative comes from the success of a HUD experiment, the urban homesteading program. This program, which has encouraged ongoing, self-help housing programs, has enjoyed a 3-year history of success. It provides an inexpensive, lasting method for restoring housing stock and improving blighted neighborhoods and engendering a pioneer spirit among individual homesteaders with the opportunity for homeownership.

In urging the expansion of the urban homesteading program, I seek to boost a program that I know from personal experience is practical and successful. As mayor of Indianapolis, I initiated an urban homesteading program. The Indianapolis program chose three neighborhoods: Forest Manor, Brookside, and Fountain Square. Each of the neighborhoods were good neighborhoods weakened by housing abandonment. The city of Indianapolis recognized the strength of those neighborhoods and was able to use the urban homesteading program to attack successfully the abandonment problem.

The program in Indianapolis has worked well, but it can work better. It needs to be expanded. It needs to have a more certain source of rehabilitation funds, and it needs to include properties that are not owned by HUD. S. 2931 addresses all of those problems and provides attractive incentives for cities of all sizes to participate in the urban homesteading program.

The Nation's cities need homeowners establishing roots in neighborhoods. This has become increasingly difficult as median home prices have risen above $54,000. Housing prices have risen twice as fast as incomes. Low- and middle-income families have diminishing hopes for buying houses in today's market. Young families find it difficult, if not impossible, to accumulate enough savings for downpayments and "point" requirements.

Urban homesteading offers an opportunity for young, lower income families to purchase homes. The experience so far has shown that the average homesteader is young, 33.5 years old, and has an income significantly below that of the typical homebuyer. Homesteader incomes averaged $12,300 for the 23 demonstration cities.

Homeownership is an important ingredient for healthy neighborhoods and the urban homesteading program has been able to provide that homeownership. It has provided renovation and stability in deteriorating neighborhoods. Sound concept and effective administration have led to the success of the urban homesteading program. Nevertheless, there still are difficult problems to be resolved if this helpful program is to be expanded and enhanced.

The urban homesteading program can and should be expanded. There is enthusiasm across the Nation for the program. Currently 39 cities participate in the HUD program, but another 61 have applied for participation or have begun the application procedure. Many of these cities run non-HUD urban homestead programs, but have only been able to establish small, limited programs due to difficult obstacles facing implementation.

Not only is there institutional support from the cities for the program, but thousands of individuals have shown their support. When the first demonstration cities advertised for urban homesteaders, the cities received over 22,000 applications for 881 properties. In city after city there is growing enthusiasm for this program that has shown success with problems that have sometimes seemed intractable.

The urban homestead program as currently administered transfers abandoned houses acquired by HUD through foreclosures to local governments. The local government locates families who are willing to rehabilitate the abandoned houses and to live in the houses for at least 3 years. These homesteaders receive the houses for as little as one dollar and are responsible for the rehabilitation and the cost of the rehabilitation.

Mr. President, today I, along with Senators BROOKE, GRIFFIN, HEINZ, and GARN introduce S. 2931 to help solve some of the very difficult problems that have confronted urban homesteaders and the cities that have utilized this program.

This bill will expand the present program to include Veterans' Administration foreclosures, city-owned foreclosures, and predictable levels of funding for rehabilitation and administration.

This expansion is vital if we are to capitalize upon the success of this program and to make this a significant housing program nationwide.

As of January 1978, HUD and VA had inventories of over 20,000 houses suitable for homesteading. S. 2931 would provide funds for 3,500 HUD and VA transfers per year. By increasing the funding under this section from an average of $5,000 per property to $7,500 per property, more of this bulging inventory of abandoned housing can be renovated economically.

Administrative costs for urban homestead programs can be a problem for already strained city budgets. Successful programs demand close attention to every aspect of home renovation and financing. Participating cities have had to utilize their already overburdened community development entitlements to finance these costs. This bill provides grants of up to $60,000 per year per city to spur the establishment of more than 100 new programs in cities across the country.

As important as the HUD and VA properties are to the homestead program, the most important abandonments are those that could be or have been acquired already by city tax foreclosures. There are more than 300,000 abandoned houses that could be converted to safe and sound housing for low- and moderate-income families. There are many obstacles to the successful renovation of these houses, but cities have shown remarkable creativity and diligence in overcoming these obstacles. To aid cities in acquiring those properties and to avoid undue loss of tax revenues, S. 2931 will pay back taxes and other legitimate liens on properties ac-

quired for homesteading. Payments up to $5,000 per property could be paid after proper certification has been made to HUD.

Finally, this bill addresses the most important obstacle confronting urban homesteading programs—predictable, adequate rehabilitation funding. Such funds are essential to a successful program. S. 2931 provides $148 million of additional section 312 loan authority which is to be used to provide an $8,000 reservation for each urban homestead.

This reservation of rehabilitation funds provides a linkage between the successful urban homesteading program and the successful section 312 loan program. Since 1964, the section 312 loan program has provided $450 million in loans for rehabilitation of housing in blighted neighborhoods. Loans have been initiated, not grants, for rehabilitation, and these loans have been repaid on a sound basis. Out of the $450 million of outstanding loans, HUD has declared only $128,000 worth of the loans as uncollectable, only $128,000 in bad loans in spite of HUD's admission that little has been done to service the loans or to insure repayment.

Under this new legislation, a city would establish an urban homestead program. If it transferred 20 houses in the first year, it would be entitled to $160,000 in section 312 funds. As an incentive to arrange private sector funding, cities could transfer their reserved funds to other suitable section 312 purposes on a dollar-for-dollar basis. For instance, if an urban homestead house needed $8,000 worth of repairs and the city was able to locate $4,000 in private loans, then the city could utilize $4,000 of the section 312 loan reservation for another urban homestead unit or for a regular section 312 loan. Predictable financing encourages urban homesteading. Permitting the transfer of the section 312 loan reservation encourages private financing of inner city rehabilitation.

The cumulative effect of this bill will be to expand the urban homesteading program from a budget request level of less than 2,000 units per year of HUD-owned transfers to 18,500 units per year of HUD, VA, and city-owned properties. The program will expand from participation by 39 cities currently to participation by 150 cities.

This bill is important for the Nation, for the cities, and for individual families. As housing costs continue to rise, individual initiative will grow in importance as families search for alternatives to suburban tract houses which they cannot afford. The best Federal housing policy will be one which encourages this individual initiative for prospective homeowners to do much of their own construction and renovation in cities.

The Federal Government does not have the resources or the ability to solve the Nation's housing problems on its own. One of its best roles will be to facilitate housing development and rehabilitation by individuals taking pride in homeownership of houses that would otherwise be abandoned and would contribute to a loss of hope in cities.

Mr. President, I ask unanimous consent that a list of cities currently participating in the urban homestead program be printed in the RECORD following these remarks; and, second, that a list of cities which have applied or expressed interest in participating in the urban homestead program be printed in the RECORD following these remarks.

There being no objection, the lists were ordered to be printed in the RECORD, as follows:

CITIES CURRENTLY PARTICIPATING IN THE URBAN HOMESTEAD PROGRAM

Phoenix, Ariz., Compton, Calif., Los Angeles, Calif., Oakland, Calif., Wilmington, Del., Atlanta, Ga., Decatur, Ga., Chicago, Ill., East St. Louis, Ill., Joliet, Ill., Rockford, Ill., Gary, Ind., Indianapolis, Ind. and South Bend, Ind.

Baltimore, Md., Boston, Mass., Springfield, Mass., Minneapolis, Minn., Kansas City, Mo., St. Louis, Mo., Omaha, Nebr., Jersey City, N.J., Newark, N.J. and Plainfield, N.J.

Freeport, N.Y., Hempstead, N.Y., Islip, N.Y., Nassau County, N.Y., New York, N.Y., Rochester, N.Y., Cincinnati, Ohio, Cleveland, Ohio, Columbus, Ohio, Dayton, Ohio, Toledo, Ohio, Philadelphia, Pa., Dallas, Tex., Tacoma, Wash., and Milwaukee, Wis.

CITIES WHICH APPLIED FOR OR EXPRESSED INTEREST IN PARTICIPATING IN THE URBAN HOMESTEAD PROGRAM

Lafayette, La., Buffalo, N.Y., Youngstown, Ohio, Inkster, Mich., Cordele, Ga., Memphis, Tenn., Grand Rapids, Mich., Louisville, Ky., Washington, D.C., Huntington, N.Y., Waco, Tex., Chattanooga, Tenn., Pontiac, Mich., Romulus, Mich., Columbia, Mo., Stockton, Calif., Houston, Tex., Fort Wayne, Ind., Las Vegas, Nev., New Haven, Conn., Camden, N.J., St. Paul, Minn., Flint, Mich., Menlo Park, Ga., Ft. Worth, Tex., Muskegon, Mich., Riverside, Calif., Pomona, Calif., Brunswick, Ga., Ann Arbor, Mich., Saginaw, Mich., Waukegon, Ill., and East Chicago Heights, Ill.

King County, Wash., Detroit, Mich., Tampa, Fla., Orlando, Fla., Clearwater, Fla., St. Petersburg, Fla., Orange County, Fla., Sanford County, Fla., Augusta, Ga., Columbus, Ga., Ft. Lauderdale, Fla., Pittsburgh, Pa., Harrisburg, Pa., Chester, Pa., Lancaster, Pa., Reading, Pa., Los Angeles County, Calif., Hartford, Conn., Bridgeport, Conn., Portland, Oreg., Seattle, Wash., Inglewod, Calif., New Brunswick, N.J., Brown County, Ohio, Ironton County, Lorain, Ohio, Euclid, Ohio, and Cuyahoga County, Ohio.

Mr. LUGAR. Mr. President, I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2931

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That (a) section 810 of the Housing and Urban Development Act of 1974 is amended—

(1) by redesignating subsection (g) as subsection (j)); and

(2) by inserting after subsection (f) the following:

"(g) The Secretary is authorized to make a grant of not to exceed $60,000 to each unit of general local government, State, or designating agency participating in the urban homesteading program under this section to cover administrative costs incurred by that unit of general local government, State, or designated agency in carrying out its urban homesteading program.

"(h) The Secretary is authorized to make grants to facilitate the homesteading of properties acquired by communities as a result of abandonment, tax foreclosure, or otherwise. The amount of any grant under this subsection to any unit of general local government, State, or designated agency for any fiscal year shall not exceed the product of $5,000 and the number of properties described in the preceding sentence which are made available to the urban homesteading program during that year. The aggregate amount of grants under this subsection shall not exceed $75,000,000.

"(i) The Secretary is authorized to acquire from the Administrator of Veterans' Affairs title to any property held by the Administrator which is suitable for inclusion in the urban homesteading program, and to reimburse the Administrator in an amount to be agreed upon by the Administrator and the Secretary for each such property.".

(b) Subsection (j) of such section, as redesignated, is amended by adding at the end thereof the following: "In addition, to carry out subsections (g) and (h), there are authorized to be appropriated not to exceed $110,000,000 for fiscal year 1979.".

SEC. 2. Section 312(d) of the Housing Act of 1964 is amended by adding at the end thereof the following: "In addition, there are authorized to be appropriated for fiscal year 1979 not to exceed $148,000,000, which shall be available solely for loans of $8,000 for each property conveyed in connection with an urban homesteading program under section 810 of the Housing and Community Development Act of 1974. Any amount available to a unit of general local government, State, or designated agency under the preceding sentence but not used for such purpose shall be available for not to exceed one year for the rehabilitation of other properties in accordance with this section.".

Mr. GRIFFIN. Mr. President, today I join with Senators LUGAR, BROOKE, and HEINZ in introducing the Urban Homesteading Act Amendments of 1978—a measure designed to expand opportunities for homeownership now denied to many thousands of Americans.

It was 29 years ago that Congress first set forth the national housing goal of "a decent home in a suitable living environment for every American family."

In reality, of course, no act of Congress was required to establish such a goal—because the aspiration for a better place to live is deeply engrained in the American character.

A vital part of that goal and aspiration is the dream of homeownership. It is a dream which has now become a reality for two-thirds of all American families.

But for many families among the other third—those who aspire to homeownership but have been unable to afford or achieve it—having a place of their own remains at best a distant dream.

And the dream becomes more distant year by year as the costs of homeownership continue to climb at alarming rates:

The median price of all new homes sold in the last quarter of 1977 reached $51,600, up 13.4 percent in just 1 year.

The median price of existing homes sold in the same period was $44,340, an increase of 14.1 percent from the previous year.

Home values in major metropolitan areas have been increasing almost twice as fast as the incomes of their owners.

The startling conclusion is that most people who now own their own homes could not afford to buy them at today's prices. And too many of the families who are on the outside looking in, face staggering obstacles in achieving homeownership.

Paradoxically, however, even as the costs of homeownership continue to climb, our Nation faces a severe problem of deterioration and abandonment in its housing stock:

Nationwide, it is estimated that over 300,000 homes stand vacant and abandoned.

The U.S. Department of Housing and Urban Development, now the Nation's largest landlord, owns over 28,000 abandoned properties.

Almost 6,000 of these properties are located in my own State of Michigan.

In the city of Detroit alone—not counting empty lots or homes scheduled to be demolished—HUD owns approximately 2,000 dwellings that are vacant and barricaded.

In 1974, drawing on the experience of a number of forward-looking local governments which had initiated programs of their own, Congress established a nationwide urban homesteading demonstration program.

The demonstration program as currently administered works like this:

HUD transfers abandoned houses from its inventory to selected participating cities.

The local government then locates families who are willing to "homestead" the abandoned houses, rehabilitate them, and live in them for at least 3 years.

These homesteaders receive the houses for as little as $1 and are responsible for the work and the cost of rehabilitation.

The local government provides technical assistance and essential city services to the homesteaders, many of whom have undertaken the rehabilitation work themselves in the time-honored tradition of "sweat equity."

The urban homesteading demonstration program, although limited at present to only 39 cities, has compiled a 3-year record of remarkable success.

It has provided an inexpensive, lasting method for restoring housing stock and improving blighted neighborhoods. And it has tapped and encouraged a pioneering spirit of self-help among the individual homesteaders to whom it has provided a long-awaited opportunity for homeownership.

Urban homesteading has offered an especially attractive opportunity for young, low- and moderate-income families to own their own homes. The average homesteader is young—33.5 years old—and his average income of $12,300 is significantly below that of most home buyers.

The current urban homesteading program, because it was designated as a demonstration, has been relatively small and limited in scope. Yet if there is one chief complaint about the demonstration, it is that it has not been large enough to meet the demand for the opportunities it offers.

Beyond the 39 cities now participating, another 61 have applied or are applying. In fact, in my own State, none of the nine cities that have sought to participate in the demonstration program—including Detroit, with the Nation's largest inventory of HUD-owned properties—have been chosen.

And when the first demonstration cities advertised for urban homesteaders, the cities were flooded with over 22,000 individual applications for the total of 881 properties that were available.

Based on its success and popularity to date, the urban homesteading program is ripe for expansion. That is the purpose of the bill we introduce today.

The bill, S. 2931, would permit expansion of the present program from 39 cities to as many as 150 cities.

It would allow the transfer of 18,500 homes to homesteaders each year instead of just 2,000, by bringing into the program not only HUD-owned properties but also units owned by the Veterans' Administration and city government.

And to raise the quality of federally owned houses to be transferred to homesteaders under the program, the bill contemplates payments to the insurance reserve fund of $7,500 per property transferred, rather than the present $5,000.

The bill also would make it easier and more attractive for more cities to develop meaningful urban homesteading programs.

For example, administrative costs for homesteading programs can be a problem for already strained city budgets. Successful programs demand close attention to every aspect of home renovation and financing. Participating cities have had to utilize their already overburdened community development entitlements to finance these costs. Accordingly, this bill would provide grants of up to $60,000 per year per city to defray administrative costs.

As important as the HUD and VA properties are to the urban homesteading program, by far the greatest bulk of the Nation's 300,000-plus abandonments are those that could be or have been acquired by city tax foreclosures. To aid cities in acquiring such properties and to avoid undue loss of tax revenues, S. 2931 would provide for payment of back taxes and other legitimate liens on properties acquired for homesteading. Payments up to $5,000 per property could be made after proper certification has been made to HUD.

Finally, this bill addresses the most important obstacle confronting urban homesteading programs—securing the predictable, adequate rehabilitation funding which is essential to a successful program. S. 2931 provides $148 million of additional section 312 loan authority which is to be used to provide an $8,000 reservation for each urban homestead.

This reservation of rehabilitation funds provides a linkage between the successful urban homesteading program and the successful section 312 loan program. Since 1964, the section 312 loan program has provided $450 million in loans for rehabilitation of housing in blighted neighborhoods, of which only $128,000 has been declared uncollectable.

Under the proposed legislation, if a city transferred 20 houses in the first year of its urban homestead program, it would be entitled to a special reservation of $160,000 in section 312 funds. As an incentive to arrange private sector funding, cities could transfer their reserved funds to other suitable section 312 purposes on a dollar-for-dollar basis. For example, if an urban homestead house needed $8,000 worth of repairs and the city was able to locate $4,000 in private loans, then the city could utilize the other $4,000 of the section 312 loan reservation for another urban homestead unit or for a regular section 312 loan. Predictable financing encourages urban homesteading. Permitting the transfer of the section 312 loan reservation encourages private financing of inner city rehabilitation.

Mr. President, a program that is clear and simple in its concept—that takes a resource now being wasted and puts it to productive use—that improves the living environment of our cities and their deteriorating neighborhoods—that encourages self-help and opens doors of opportunity to families who have been on the outside looking in—such a program surely deserves our attention and support.

Indeed, an approach that can accomplish so many things at once becomes more than a program—it becomes a policy that holds great promise for contributing to the solution of many of our Nation's urban ills.

For the words of the ancient Greek poet Alcaeus are as true today as when they were written over 2,500 years ago:

> Not houses finely roofed or the stones of walls well-builded, nay nor canals and dockyards, make the city, but men able to use their opportunity.

Mr. LUGAR. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. HELMS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

## SENATOR HAYAKAWA'S VIEW OF AMERICA'S FOREIGN POLICY

Mr. HELMS. Mr. President, regardless of how the distinguished Senator from California (Mr. HAYAKAWA) votes on the treaty later today, I think the American people should have as a matter of record a splendid letter that the Senator wrote to the President of the United States, bearing the date of April 13, in which the able Senator from California discussed a very broad view of the foreign policy of this Nation.

So that this letter will indeed be a matter of record, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WASHINGTON, D.C.,
*April 13, 1978.*

The PRESIDENT,
*The White House,*
*Washington, D.C.*

MY DEAR MR. PRESIDENT: Believing as I do in bipartisanship in foreign affairs and believing also that the Panama Canal treaty of 1903 is hopelessly out of date, I have up to now faithfully supported the Canal treaties presently under discussion, despite the fact that I am not satisfied with them in all respects. They are, however, a vast improvement over what now exists; conse-

quently I have continued to support them despite enormous pressure from my home state.

At this juncture, I want you to know how very difficult it is for me to continue to support your foreign policies. I was appalled to learn in the past three days of your decision to postpone (cancel?) the neutron bomb program—a humane weapon (if any war weapon can be said to be humane) in that it makes possible the destruction of enemy troops without at the same time killing tens of thousands of civilians, as was done in Dresden and Hiroshima.

The postponement of the neutron bomb, along with the cancellation of the B–1 bomber program, has at least thrown away a valuable bargaining chip. It has also probably destroyed what technological advantages we had over the Soviets to offset their advantage in manpower, tanks, and proximity to their major target, which presumably is Western Europe.

I have been equally appalled at your support of the guerrilla movements led by Joshua Nkomo and Robert Mugabe and your characterization of the coalition being formed by Ian Smith and Bishop Abel Muzorewa and their allies as "illegal". Illegal under what laws, Mr. President? The world has witnessed with horror the disaster that befalls newly independent African nations when they have insisted on instant "majority rule," which has meant throwing the British out of Nigeria, the Belgians out of the Congo, the Portuguese out of Angola. In instances like these, the immediate result has been chaos and civil war, along with genocide—one tribe systematically exterminating another—a kind of genocide that the United Nations never condemns, or seems to notice.

Whatever may be the faults of Ian Smith and Muzorewa and their allies, they have remained in the country to try to solve its problems by peaceful evolution rather than violent revolution. They have agreed on a plan for the orderly transfer of power from whites to blacks, with shared authority during the transitional period. The plan could work, given moral support by the United States and Great Britain. Why then does the U.S. support Joshua Nkomo, who refuses to join the coalition unless the present Rhodesian army is disbanded and he is invited to re-enter Rhodesia with his own army? Why does the U.S. give aid and comfort to Robert Mugabe, who openly boasts of his Marxism-Leninism and vows to create in Rhodesia a "socialist" society, whatever he may mean by that?

Why is the Administration silent about the more than a billion dollars' worth of military equipment and the 12,000 (15,000?) Cuban troops which are being supplied to Ethiopia by the U.S.S.R.? If a war between Ethiopia and Somalia is none of America's business, it is none of the Soviet Union's business either—and still less Cuba's business.

Why are we anxiously conducting SALT talks with the Soviet Union, while the Soviet Union steadily enlarges its empire: Angola, Ethiopia, Rhodesia next, and military advisers in twenty or more African nations? Why do we find no more to criticize in the Soviets' behavior than their treatment of Sharansky?

And Cambodia! One of the world's great bloodbaths has been going on there ever since the Communist takeover of that unhappy nation. Even the left-wing New York Review of Books was viewing this slaughter with alarm almost a year ago. But the Administration, with all its concern for human rights in friendly countries like Chile and Brazil, appears to be looking the other way.

The greatest objection to the Panama Canal treaties is the charge that the "give away" is a revelation of American weakness—of the decay of national pride and national purpose. I have tried to argue that the new arrangements regarding the Canal show the strength and self-confidence of a great nation that is willing to change an old and unequal treaty in order to treat the Republic of Panama as a partner and equal in the family of nations. But how can I maintain this position, Mr. President, when there is nothing in our foreign policy that shows anything but silence or timid acquiescence in the face of determined Communist aggression?

I await your reply with great anxiety and concern.

Respectfully yours,

SAM HAYAKAWA.

## SPECIAL ORDER

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from Kansas (Mr. DOLE) is recognized until 8:30 a.m.

## THE INTERNATIONAL SCOPE OF REHABILITATION

Mr. DOLE. Mr. President, since coming to the Senate in 1969, it has been my custom to speak annually on April 14 addressing some topic of concern regarding the handicapped. Unfortunately, the Senate was not in session this year on April 14, so I could not deliver this on the customary date. It was on April 14, 1945, that I was injured and began to learn firsthand what it meant to be disabled.

Last year on this date, I introduced a bill to set up teletypewriters in the Capitol for deaf constituents to use when calling their Congressmen. I am pleased that my amendment was accepted to this year's Senate legislative appropriations bill to allow for the purchase of these machines. The sergeant-at-arms is making progress in his arrangements to set up a teletypewriter communications center.

This year, I want to address again a problem in communications, only one which deals not so much with discussion between individuals, but between countries. The World Health Organization estimates there are 400 million disabled persons in the world. If this figure is correct—and some experts say there are even more—it means that 10 percent of the Earth's population is disabled. Because of the enormity of these figures, there is no question but that diagnosis, treatment, and rehabilitation for these individuals is of critical importance.

### U.N. DECLARATION

In recognition of the problems involved, in 1975 the United Nations General Assembly approved a "Declaration on the Rights of Disabled Persons." This declaration set forth the basic human rights which handicapped individuals are entitled to. These include the right to respect for human dignity; the right to medical, educational, social, and vocational rehabilitation; the right to employment opportunities; and the right to protection from discrimination.

More recently, the U.N. General Assembly voted to proclaim 1981 as the "International Year for Disabled Persons." Again, the purpose of this declaration is to draw attention to the fact that many handicapped persons are not accorded full citizenship rights, because of their disability.

I support these basic rights, and believe the United States has an obligation to support a worldwide effort to rehabilitate the handicapped. Many years ago, Congress passed the International Rehabilitation Act. It is my understanding that this bill was designed to promote and coordinate rehabilitation research overseas. Regretably, it was never funded.

I am not advocating that the United States should underwrite foreign research, but it has been brought to my attention that there is too little exchange of information between foreign countries on the subject of rehabilitation. There are persons dedicated to this goal, however. One organization, Rehabilitation International, has worked for years promoting the exchange of information in areas involving international rehabilitation efforts.

### REHABILITATION INTERNATIONAL

Rehabilitation International serves 62 different countries, and is the only international organization that deals with all aspects of disability and rehabilitation. Rehabilitation International, U.S.A., is based in New York City, and provides international rehabilitation services to the United States, in addition to supporting Rehabilitation International. I am pleased to serve on its board of directors.

Because of my association with RUISA, I am familiar with the successes and difficulties they have encountered when working in the field of rehabilitation. Rhode Island has six standing commissions to deal with rehabilitation from a medical, vocational, educational, social, technical, and administrative approach.

### ICTA

Of these commissions, probably none has surpassed the achievements of the commission on technology. Called the International Commission on Technical Aids, Housing and Transportation—ICTA—it has focused its work on developing aids and facilities for use by those with motor disabilities. It also provides information on new developments in science, technology, and technical aids. ICTA is working to promote this exchange of information so that duplication of efforts can be avoided.

In any one country, there will be only a limited market for aids for handicapped consumers. Many experts feel that to stimulate production of technical aids, a worldwide market should be developed. In order to promote the efficient production of rehabilitation devices, there is a clear need for coordination of effort between companies and countries.

### BENEFITS TO UNITED STATES

I think it would be beneficial for the United States to participate more actively in such endeavors. While we have amassed a wealth of technology, by no means do we have a corner on the market. It is not just the lesser developed countries which stand to benefit from such an exchange. For instance, Germany is regarded as having developed the most advanced orthopedic devices.

Great Britain has created total hip and knee replacements, which would be of immense help to many persons with lower limb mobility problems, whether they live in the United States or in Africa.

As an example of this type of cooperation, I call attention to the successful development of the myoelectric arm. It is a prosthetic device which uses brain waves to increase the current generated from thought to operate the electrical device which moves the artificial arm. This project has been accomplished since World War II, with the United States, the U.S.S.R., Canada, Austria, Italy, and other countries all contributing to its creation. This is the type of exchange that needs to be carried out.

CENTER INDUSTRIES

Another example which is somewhat closer to me deals with the success story of Center Industries in Sydney, Australia. Center Industries is able to employ severely disabled individuals, because it learned to adapt industrial equipment to fit the capabilities of handicapped persons. In 1972, Australia hosted the 12th World Conference of Rehabilitation International. Jack Jonas, of Wichita, Kans., was one of the delegates, and while there, he visted Center Industries. Jonas was so impressed with their production that he went back to Kansas and started another Center Industries.

Center Industries in Wichita has also been a tremendous success, and attracts visitors from all over the United States, as well as from England, India, Mexico, and other countries. Because of the successfulness of the Wichita employment project, many handicapped workers have been attracted to the city. A new housing project is under construction so that these employees can have accessible housing. The Wichita experience is proving that handicapped persons make good workers. Center Industries is a perfect example of the benefits of shared information.

BEDFORD INDUSTRIES

Also located in Australia is Bedford Industries, which offers an array of rehabilitative services to 800 clients. The main division is situated on 7½ acres of land, where several workshops offer training in 70 different occupations. Training is offered not only for repetitive work skills, but also for professional skills such as marketing, accounting, industrial engineering, social work, and public relations.

Other components of Bedford Industries include a resort hotel for handicapped guests; a public seaside hotel operated by handicapped workers; an independent living center; and Gorge Farm. Gorge Farm is a 200-acre farm where clients are rehabilitated through agricultural and horticultural training. There is a large almond grove and vineyard, plus a purebred sheep breeding ranch on the farm.

Out-of-season fruits and vegetables are grown in hothouses, and the farm sells canned and processed foods under its own label. It is quite an impressive operation.

Elsewhere in the world, the Ghana Society for the Blind operates a home training program for rural blind women who are unable to leave their homes for institutional training. A London-based organization has set up a "toy library" for handicapped children, so that rehabilitative toys can be used constructively by the disabled child at play. The United States and Yugoslavia have worked together on projects using external electrical stimulation. Now, this knowledge is being used to stimulate functional patterns of movement for a number of persons with mobility problems.

CONCLUSION

These are but a few examples of projects being carried on around the world. The results of these experiences need to be shared with other persons and organizations working in the field of rehabilitation, so that more persons can benefit from shared information. In the Congress, we take pride in the fact that legislation affecting the handicapped is one of the few nonpolitical issues we deal with. Even in a global setting, disabilities should transcend national differences, for the handicapped have needs, struggles, and goals in common. I firmly believe that a vigorous effort to synchronize rehabilitation efforts should be made, and hope that the United States will take the lead in a renewed commitment to the area of international rehabilitation.

## COMMITTEE MEETINGS

(The following proceedings occurred later in the day.)

Mr. ROBERT C. BYRD. Mr. President, the time has run out for three committees to meet today. Will the Senator yield me 30 seconds?

Mr. SARBANES. I yield.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Committee on Commerce, Science, and Transportation be authorized to meet during the session of the Senate today, to hold hearings on S. 1896, the Hazardous Materials Transportation Act; that the Subcommittee on Environment and Pollution of the Committee on Environment and Public Works be authorized to meet during the session of the Senate today from 11 a.m. until 1 p.m., to hold hearing on oil spill liability legislation; that the Committee on Energy and Natural Resources be authorized to meet during the session of the Senate today to consider fiscal year 1979 Department of Energy authorization.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Judiciernmental Affairs Committee be authorized to meet during the session of the Senate today to consider S. 991, the Department of Education Act.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Judiciary Committee be authorized to meet until 12 noon during the session of the Senate today to consider the Justice Department authorization bill, which must be reported to the Senate by May 15 under the Budget Act.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Committee on Armed Services be authorized to meet during the session of the Senate today to consider the military procurement authorization bill, which must be reported to the Senate by May 15 under the Budget Act.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Select Committee on Small Business be authorized to meet from 11 a.m. until 1 p.m. during the session of the Senate today to hold hearings on S. 2259, the Small Business Procurement Expansion and Simplification Act.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Health and Scientific Research Subcommittee of the Human Resources Committee be authorized to meet until 1 p.m. during the session of the Senate today to consider National Science Foundation nurse training and health services extension legislation.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Employment, Poverty, and Migratory Labor Subcommittee of the Human Resources Committee be authorized to meet until 1 p.m. during the session of the Senate today to consider the community services authorization.

The PRESIDING OFFICER. Without objection, it is so ordered.

## THE PANAMA CANAL TREATY

The ACTING PRESIDENT pro tempore. Under the previous order the Senate will now resume consideration of the resolution of ratification of the Panama Canal Treaty which the clerk will state.

The legislative clerk read as follows:

*Resolved* (two-thirds of the Senators present concurring therein), That the Senate advise and consent to the ratification of the Panama Canal Treaty, together with the Annex and Agreed Minute relating thereto, done at Washington on September 7, 1977 (Executive N, Ninety-Fifth Congress, first session).

The Senate resumed consideration of the resolution of ratification of the Panama Canal Treaty.

The ACTING PRESIDENT pro tempore. The Senator from Kansas is recognized to call up a reservation on which there will be 30 minutes of debate equally divided between the Senator from Kansas and the manager of the treaty with vote in relation thereto to occur at 10:25 a.m. this morning.

The Senator from Kansas.

UP RESERVATION NO. 33

Mr. DOLE. Mr. President, I send to the desk an unprinted treaty reservation for the resolution of ratification and ask that it be stated.

The ACTING PRESIDENT pro tempore. The reservation will be stated.

The legislative clerk read as follows:

The Senator from Kansas (Mr. DOLE) proposes unprinted reservation No. 33.

Mr. DOLE. Mr. President, I ask unanimous consent that reading of the reservation be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The reservation is as follows:

Strike out the period at the end of the resolution of ratification and insert in lieu thereof the following: "subject to the following reservation:

"Before the date of exchange of the instruments of ratification of the Treaty, the two Parties shall have agreed that the Panama Canal Commission shall reduce the amount of the annuity payable to the Republic of Panama under paragraph 4(b) of Article XIII of the Treaty by the product of such amount and a fraction, the numerator of which is the number of days during the calendar year the Canal is not navigable and the denominator of which is 365.".

Mr. DOLE. Mr. President, very briefly and very quickly, because the Senator from Kansas knows there is a mountain of work ahead of us today before the final vote on the Panama Canal Treaty, as my colleagues are well aware, article XIII of the Panama Canal Treaty provides, for the Government of Panama, "a fixed annuity of 10 million U.S. dollars to be paid out of canal operating revenues." The reservation I am proposing would simply condition Senate ratification on the following point—that this fixed annual annuity shall cease during any period in which the canal is inoperable. That is, the annuity would be reduced by an amount proportionate to the number of days of the year that the canal is not open for transit.

Mr. President, it would clearly be unfair and irresponsible to guarantee continued payments to Panama during a time in which the canal is closed, since that payment is understood to come from canal toll revenues in the first place. This is a logical reservation on our part, and one that I am sure any rational Panamanian would understand.

There are any number of reasons why the canal could be closed for temporary periods during the next 22 years. It could be a result of a natural catastrophy, such as an earth slide or earthquake. It could be due to a functional breakdown involving the intricate machinery of the lock system. Or it could be the result of intentional sabotage by either internal or external sources. Certainly, we hope none of these conditions develops. But if they should it is likely that the canal would be closed to all traffic for several days, during which time there would be no operating revenues derived from the canal. Why, then, should the Panama Canal Commission be held financially liable by the Government of Panama, just as though the canal was operating as usual?

ECONOMIC BURDEN

In any such instance where the canal should be closed, the United States would almost certainly be expected to bear the major economic burden of reopening the canal. Whether or not this liability would be binding in a legal sense, there is no question that we would feel duty-bound to pay the costs of reopening it for our own defense and economic purposes. Panama certainly would not bear the economic burden.

Furthermore, let me remind my colleagues of all the other economic benefits Panama will continue to receive under the terms of this treaty, regardless of whether or not the canal remains open: Panama receives free title to all real property in the Canal Zone, with an estimated replacement value of $9.8 billion. Panama receives $10 million annually for public services in the former Canal Zone, including police and fire protection, street maintenance, and garbage collection. And, of course, the administration has proposed a separate economic and military assistance package totaling $345 million. So, Panama does quite well, financially, beyond the fixed annuity proposed under article XIII.

It simply does not make sense to promise to continue paying Panama for a passage route that is temporarily nonexistent. The present treaty makes no provision for such a contingency, and both the United States and the Panama Canal Commission must be protected on this point. This reservation may even help discourage any intentional sabotage of the canal. Under the provisions of this proposal, if the canal is shut down for 1 month, the $10 million annuity will be reduced by one-twelfth.

This is fair, this is logical, this is rational, and this is justified. It is something the American people can understand, and the Panamanian people can understand. It does not involve rewriting the treaty, but only attaches a "condition" to our ratification of the treaty.

I trust that there will be appropriate support for the reservation.

Mr. President, I reserve the remainder of my time.

Mr. SARBANES addressed the Chair.

The ACTING PRESIDENT pro tempore. The Senator from Maryland.

Mr. SARBANES. Mr. President, I rise in opposition to the reservation. In explaining that opposition I want to detail the nature of the payments to be made to Panama.

There are two other payments to Panama that would be directly affected in a very negative way by any disruption of canal activity. One is the payment of 30 cents per Panama Canal net ton which is directly related to the amount of tonnage which moves through the canal. So to the extent that the canal is not functioning that payment would be immediately impacted. The other is the contingency payment, which again is related to producing sufficient revenues in excess of expenditures, to have enough money left over in order to make that payment.

So both of those payments are directly related to the amount of tonnage moving through the canal which is, of course, related to the canal operating to the maximum extent possible.

Under the present arrangement we pay Panama a fixed annuity, and there is no provision under the present arrangement for any discounting of that fixed annuity. That annuity is $2.3 million, but it has not been adjusted in over 20 years for inflationary impact. It is a flat payment that is now made.

The $10 million that we are talking about here that is contained in paragraph 4(b) of article XIII of the treaty is comparable to the fixed annuity now paid to the Republic of Panama.

That figure is well within the capacity of the Panama Canal Commission, or will be well within its capacity. You have a fixed annuity partly to make sure that you do not have total shock or extreme up and down fluctuations in the revenues to be received by Panama since it will be relating its own activities to such revenues.

However the bulk of what they expect to receive from the canal operation will, in fact, be affected by an interruption of service. If there is such a disruption there will be a severe diminution in what they will be receiving as a consequence of the disruption.

To seek to extend that loss even further, to go to the basic $10 million annuity payment, it seems to me, is to overreach in the sense of the balance which this treaty has struck between ourselves and the Republic of Panama.

Furthermore, the amendment as it is worded would result in the discount even if after a closure period you more than made up for what had been lost through intensive operation of the canal for the open period of time. In other words, you could have an earth slide which threw the canal out of operation for a short period of time. You could make that up subsequently. In fact, you might run the canal on such an intensive basis that you had a better year financially even though there had been a closing down for a limited period of time than you might have in a year in which there was no closing down, and yet even though there was such a better year you would have to discount the fixed annuity payment. It would simply be required by the terms of this amendment. If you think about that it is not really a fair arrangement. It, in fact, impedes trying to obtain maximum operation and maximum functioning of the canal.

I want to touch on one other point which was made by the distinguished Senator from Kansas. He said $345 million of separate military and economic assistance would be provided. I emphasize the point that this is simply a proposal on the part of the administration. None of that assistance is provided for by these treaties. In fact that point has been made very clear by amendments to the articles of ratification, both to the Neutrality Treaty and to the Panama Canal Treaty. Such aid, if it is to be given and in the amounts it is to be given, is subject to congressional review and, if we choose to act, subject to congressional action.

So that simply is a proposal that exists separate and apart from the treaties. It is not a proposal that will be implemented or effectuated by the treaties. In fact, the amendments added to the articles of ratification make it very clear that will not be the case.

That is something we can address separately and make our judgments accordingly at the time that we do so.

So for all of those reasons, Mr. President, I oppose the amendment which the Senator from Kansas has proposed, and I reserve the remainder of my time.

The ACTING PRESIDENT pro tempore. Who yields time? If no one yields

time, time runs equally against both sides.

Mr. DOLE. Mr. President, I think the issue here has been presented, I hope, thoughtfully and, I think, it has been answered thoughtfully, and I do not know of any reasons to take additional time. It is not a major issue, but it is one I felt should be addressed.

I have been trying to suggest that maybe somebody else might come over and start the next proposal. But, in the absence of that, I think it is significant that if we just try to isolate $10 million, that in itself is no great amount. But there is a long time between now and the year 2000, and you would get up to a pretty good chunk of money, about $220 million, which is a little more than pocket change even in Washington.

But it is possible, whether it be some internal strife or strike or landslide or earthquake or whatever, of course, and it could be closed for a long period of time and we would continue to pay.

There is a great deal of resentment still in America about the treaty, and even some who favor the treaty itself feel we have been less than—maybe responsible is not the right word—but less than cautious as a business proposition in some of the provisions in the treaty itself.

This Senator would assume that the treaty will pass despite all the rumors and all the posturing and other things that may be going on. It seems to me the votes are here to pass the treaties, and I am just suggesting that if that is the case then we should be as certain as we can that we are not going to be asked to make payments when the canal is not in operation.

But having said that and having made the case, the Senator from Kansas is willing to suggest the absence of a quorum out of my time. I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. SARBANES. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. DOLE. Mr. President, will the Senator from Maryland yield?

Mr. SARBANES. I yield to the Senator.

Mr. DOLE. I assume at some appropriate time the yeas and nays will be ordered on all the amendments; is that correct?

Mr. SARBANES. I think we obtained unanimous consent yesterday that it should be in order at any time to order the yeas and nays, and I think at an opportune time we will do that.

Mr. President, I ask unanimous consent that it be in order to proceed to the Thurmond amendments.

The ACTING PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

UP RESERVATION NO. 34

Mr. DOLE. Mr. President, on behalf of the distinguished Senator from South Carolina (Mr. THURMOND) I send an unprinted amendment to the desk and ask for its immediate consideration.

The ACTING PRESIDENT pro tempore. The clerk will report.

The legislative clerk proceeded to read the amendment.

Mr. DOLE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The amendment is as follows:

Strike out the period at the end of the resolution of ratification and insert in lieu thereof a comma and the following: "subject to the following reservation:

"The President shall not exchange the instrument of ratification of the Treaty if, after the date of adoption of this resolution of ratification, the Republic of Panama includes in its instrument of ratification of the Treaty or of the Treaty Concerning the Permanent Neutrality and Operation of the Panama Canal a reservation which must be accepted by the United States of America to become binding on the United States of America or any amendment to either Treaty, unless the Senate of the United States of America has given its advice and consent to such amendment or such reservation."

Mr. DOLE. I only say as a matter of preliminary explanation that the amendment is being called up for the distinguished Senator from South Carolina in order to expedite the business before the Senate. It is my understanding that the distinguished Senator from Maryland will speak in opposition to the reservation, and by the time that is concluded the distinguished Senator from South Carolina will be present to speak in favor of it.

The ACTING PRESIDENT pro tempore. The Senator from Maryland.

Mr. SARBANES. Mr. President, I understand that the able and distinguished Senator from South Carolina will be here shortly and will speak to his amendment.

In anticipation of some of his arguments—although I must confess I am sufficiently respectful, of his powers of argument and persuasion to recognize I cannot fully anticipate his arguments—I would like to point out that under American law and practice there is no way that another country could, in effect, make amendments or reservations of any substance to the instruments of ratification and, therefore, in effect, change the treaty which the Senate has advised and consented to it without those changes having to be returned to the Senate for its further advice and consent.

That requirement of Senate advice and consent, which is necessary with respect to all treaties, would in fact be missing under a procedure whereby the other party, the other country, attached substantive changes to the instruments of ratification. The only way the United States then could enter into a changed arrangement from what had received the advice and consent of the Senate would be for the Senate to again have the matter under consideration, and to advise and consent to it including such changes.

For that reason, it seems to me that this amendment is clearly not necessary.

There are a number of examples throughout our history of cases in which treaties were returned to the Senate for its advice and consent in the light of substantive changes which the other party sought to make in the instruments of ratification through substantive reservations, amendments, or understandings. Of course, that is the standard practice and fully protects the position of the Senate with respect to the treaty-making power, and therefore enables the Senate to fully protect the interests of the Nation.

For that reason, I would oppose the amendment to the articles of ratification which has been called up by the distinguished Senator from Kansas on behalf of the distinguished Senator from South Carolina.

Mr. President, since the distinguished Senator from South Carolina is now here, I will reserve the remainder of my time on this amendment, and yield the floor so that the Senator may have an opportunity to speak directly to his proposed amendment.

The ACTING PRESIDENT pro tempore. The Senator from South Carolina.

Mr. THURMOND. I thank the able Senator from Kansas (Mr. DOLE) for calling up my amendment.

Mr. President, this reservation would make clear to the President to the United States that this treaty must be resubmitted to the Senate under certain conditions.

The condition referred to in the reservation would include the addition to the treaty by Panama of any amendment or reservation binding on the United States.

Mr. President, it is my understanding that the addition of an amendment by Panama would require the resubmission of the treaty to the Senate. But whether or not a reservation added by Panama would require its resubmission is apparently at the discretion of the President.

In looking back over the debate during the close of action on the Neutrality Treaty a number of the membership gave great weight to several reservations passed by the Senate. In view of the weight given reservations by this body, it seemed the wisest step to have the Senate simply affix to the treaty a condition that it be resubmitted if Panama adds a reservation.

Of course, Panama is free to act as it chooses on any reservations, amendments, or understandings this body might add to the treaties.

However, as matters stand now the President and others with whom he may choose to consult could decide whether or not to resubmit the treaties if Panama adds a reservation binding on the United States.

They may feel the reservation is not of sufficient importance for resubmission, whereas there may be many in the Senate who would disagree.

Therefore, to avoid any such conflict, I propose to add a reservation requiring the President to resubmit the treaties if a reservation or reservations are added by Panama and are binding on the United States.

In this manner the Senate can evaluate the reservation and decide if it has changed the treaty in a meaningful way, and if so, whether that change is sufficient to require further Senate action.

This approach will remove from the President the burden of having to decide

what to do and possibly making a decision which would not serve the cause of good relations with Panama.

Mr. President, there should be no objection to this reservation, as it is binding only on the United States and does not require any action by Panama.

I urge my colleagues to evaluate it carefully, and once having done so, I believe it can be fully supported by all.

I would be surprised, Mr. President, if those proposing these treaties would not accept this reservation. It is a reasonable reservation, it should be accepted, and I hope that it will be.

The PRESIDING OFFICER (Mr. MORGAN). Who yields time?

Mr. CHURCH. Mr. President, this reservation, proposed by the Senator from South Carolina (Mr. THURMOND), is utterly unnecessary. Should Panama, by any action it takes, attempt to effect any substantive change in the treaty, the question of whether or not that substantive change is acceptable must necessarily be considered by the President and by the U.S. Senate. So the reservation is superfluous. It constitutes nothing more than a reiteration of the existing state of the law with respect to the ratification treaties.

The Senate, in connection with its ratification of the Neutrality Treaty a month ago and while considering the pending treaty, adopted certain amendments to the articles of ratification. Some of these amendments have the effect of conditioning the Senate's consent, if that consent is granted by this afternoon's final vote upon the acceptance of those amendments by the Government of Panama. That acceptance would take the form of the instrument of ratification that is exchanged with the United States.

Just as Panama must decide whether or not they will accept the conditions that the Senate has attached to the resolution of ratification, so the United States, through its constitutional process, would have to accept or reject any substantive change made by the Government of Panama. Since our Constitution requires the Senate to consent to any treaty before it takes full force and effect, it necessarily follows that any substantive change that might be proposed by the Government of Panama would come back to the Senate for its advice and consent.

I have received from the administration not only a confirmation of that statement of the law, but also a commitment on the part of the administration to submit any such reservation to the Senate in accordance with the law. The letter comes from the Office of the Legal Adviser of the Department of State. It is addressed to the Honorable JOHN J. SPARKMAN, the chairman of the Senate Commitee on Foreign Relations. It is signed by Herbert J. Hansell, the Legal Adviser, Department of State, and is dated April 18, 1978. It confirms what I said with reference to the law and the procedures that will be followed in the event that Panama were to adopt a reservation to this treaty.

I ask unanimous consent, Mr. President, that the full text of this letter be printed at this point in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXHIBIT 1

THE LEGAL ADVISER,
DEPARTMENT OF STATE,
*Washington, April 18, 1978.*

Hon. JOHN J. SPARKMAN,
*Chairman, Senate Foreign Relations Committee, U.S. Senate.*

DEAR MR. CHAIRMAN: This will confirm our prior advice to you that under United States law, substantive amendments and reservations to the Panama Canal Treaties put forth by Panama that would affect United States rights or obligations under the Treaties cannot be accepted by the United States unless approved by the President and the Senate.

The American Law Institute, in the Restatement of the Law (Second) of the United States Foreign Relations Law, at page 423, states:

"If the other state has made a reservation at signature or at ratification prior to the President's transmittal of the treaty to the Senate, in all likelihood the Senate will have official notice of the reservation in the message of transmittal and take it fully into account in acting on the treaty. The situation may arise, however, in which the Senate has given its consent to the treaty before the other state makes its reservation. In such a case Senate consent to the acceptance of the reservation is required."

I trust the foregoing provides the information you desire.

Very truly yours,

HERBERT J. HANSELL.

Mr. CHURCH. For that reason the reservation proposed is objectionable. I see no purpose to be served in arguing the matter, since, on its face, it is clear that what the Senator proposes to do would happen automatically if the Government of Panama made any substantive change in the treaty.

Mr. President, it is pointless for the Senate to adopt this reservation, and I would hope that the Senate will reject it.

The PRESIDING OFFICER. Who yields time?

Mr. CHURCH. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. THURMOND. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without object, it is so ordered.

Mr. THURMOND. Mr. President, how much time remains on this reservation, and then how much time is there on the next reservation? The next item is an understanding.

The PRESIDING OFFICER. There is a total of 1 hour on both.

Mr. THURMOND. Mr. President, I would just like to make the point that the Senate has adopted two amendments and four or five reservations, but Mr. Torrijos will not hold a plebiscite so his people can address those changes which the leadership says change the treaty.

We feel in this matter the President having the discretion of whether to submit it back here is going too far. We think if there is any change, it should be submitted back to the Senate.

The distinguished Senator from Alabama had something to say. Was it on this reservation or on the understanding to be taken up next?

Mr. ALLEN. I would like to address my remarks to the amendment having to do with the requirement that the Senate pass on any reservation.

Mr. THURMOND. Mr. President, I yield 5 minutes to the distinguished Senator.

Mr. ALLEN. Will the Senator yield 10 minutes?

Mr. THURMOND. I do not believe I have that much time.

Mr. ALLEN. Very well, 5 minutes.

Mr. President, I support the reservation of the distinguished Senator from South Carolina (Mr. THURMOND).

The procedure after the Senate approves the treaty, if it does—and that is by no means a certainty at this time as I feel there is an excellent chance that the treaty will be defeated by the vote this evening—in the event the Senate does approve the treaty, the reservation of the distinguished Senator from South Carolina (Mr. THURMOND) would require that if Panama in the exchange between the heads of state of the two countries should put reservations in their note of ratification qualifying their acceptance of the Senate's reservations, then the reservations of Panama would have to be submitted to the Senate for approval.

This is only logical, it is only fair, it is only in accord with regular procedure and other. The Senate of the United States has the right to advise and consent with respect to treaties, and then if Panama should seek to nullify the reservations which the Senate of the United States has placed in the resolution of ratification, the Senate would be deprived of its right and duty to advise with respect to the treaty. It could nullify the action of the Senate.

If Torrijos does not submit the treaty to another plebiscite—and clearly, he should, because it has been changed greatly—if he accepts the resolution of ratification with its possibly 10 or more reservations but he qualifies his acceptance by adding reservations of his own, the President should not be allowed to accept those reservations without the consent of the Senate. Otherwise, the Senate would be circumvented in the discharge of its duty and its obligation. So this is a reasonable reservation. It would require submission to the Senate for its approval of any reservations that Panama might add to their note of ratification.

Mr. President, speaking generally on the treaties, we were assured that these treaties were necessary for the conduct of a good neighbor policy with Panama; that if we did not approve these treaties there would be demonstrations and riots in Panama. But we find that just the opposite is the case. We find that they are rioting and demonstrating in Panama in prospect of these treaties being approved by the Senate. So it is an anomalous situation. What was supposed to create an era of good feeling between the United States and Panama is turning into just the opposite. It is quite clear, Mr. President. that these treaties are opposed by the majority of the people of the United States and they are opposed by a majority of the people of Panama. Yet we are being called upon the approve these treaties.

The PRESIDING OFFICER. The Senator's 5 minutes have expired.

Mr. ALLEN. I thank the Chair and I thank the distinguished Senator from South Carolina for yielding.

The PRESIDING OFFICER. Who yields time?

UNDERSTANDING NO. 16

Mr. THURMOND. Mr. President, I just have 19 minutes remaining now. I wish to call up the understanding I have offered and I ask for its immediate consideration. It is understanding No. 16.

The PRESIDING OFFICER. The clerk will state the understanding. The assistant legislative clerk read as follows:

The Senator from South Carolina (Mr. THURMOND) proposes an understanding numbered 16.

Mr. THURMOND. Mr. President, I ask unanimous consent that further reading be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The understanding is as follows:

Strike out the period at the end of the resolution of ratification and insert in lieu thereof a comma and the following: "subject to the following understanding, which is to be made a part of the instrument of ratification of the Treaty:

"The United States of America, in exercising its right under paragraph 2(d) of Article III to establish and modify tolls for the use of the Panama Canal—

"(1) shall examine the economic effects of any proposed toll increase on each of the ports of the United States of America, and on each type of commodity transported to or from such port; and

"(2) shall prescribe systems and levels of such tolls which will minimize any disproportionate effect on the commerce of any port of the United States of America, on any regional group of ports, or on a particular type of commodity.".

Mr. THURMOND. Mr. President, this understanding relates to the need for the commission to evaluate the effects of tolls on U.S. ports and commodities.

This understanding, which requires no action by Panama and in fact should be highly acceptable to them, reads as follows:

The United States of America, in exercising its right under paragraph 2(d) of Article III to establish and modify tolls for the use of the Panama Canal—

"(1) shall examine the economic effects of any proposed toll increase on each of the ports of the United States of America, and on each type of commodity transported to or from such port; and

(2) shall prescribe systems and levels of such tolls which will minimize any disproportionate effect on the commerce of any port of the United States of America, on any regional group of ports, or on a particular type of commodity.

Mr. President, what is the economic situation relating to the canal today? Although the canal opened 63 years ago, canal toll rates did not increase until 1974. During those 60 years toll rates actually declined, as no adjustment was made even for inflation. The higher canal costs were met because traffic through the canal was rising faster than expenses. That is no longer the case.

Canal traffic has declined 6 percent annually for the past 3 years, as tolls were increased 40 percent since 1974. Further, the canal has experienced deficits for the first time in its history.

If canal costs continue to inflate at current rates, the American Management System study states the canal will soon become insolvent despite attempts to cut costs and despite one or two toll hikes of 25 to 50 percent.

Mr. President, much has been said as to how much tolls will have to be raised to pay Panama plus meet rising operating costs. Last week I offered an amendment to the treaty to require operating costs be paid prior to payments to Panama, but only 39 Senators opposed tabling my amendment,

The Senate must recognize, regardless of one's position on the treaties, that likely toll increases may cause severe economic dislocations in this country.

BENEFITS ALL

This understanding should benefit all parties concerned about the effect of the treaties, that is, the ports, the shippers, those who export and import goods using the canal, and Panama herself. It is not a proposal which Panama would find troublesome because it merely urges that the United States and the Canal Commission consider a tolls approach which will not destroy the traffic upon which the economic life of the canal depends.

Some commodities are toll sensitive, others are not. Some ports, especially the gulf coast and Atlantic coast ports, could be more adversely affected by the treaties than, say, west coast ports.

DOES NOT SET TOLLS

The understanding does not attempt to set toll rates or place upon the United States or the Commission an arbitrary guideline. It merely advises that in setting toll increases the United States should carefully examine the economic effects on U.S. ports and commodities moving to and from those ports. It provides that the United States prescribe systems and levels of such tolls which will minimize any disproportionate effect on the commerce of any port, group of ports or particular commodity.

The essence of the understanding is that it would insure that any toll increase would be studied carefully as to its effect on the ports and commodities it might impact upon.

Gov. H. R. Parfitt, head of the Canal Zone Government, testified before the Senate Armed Services Committee, laying out the fact that the treaty would force tolls higher. He testified that a Canal Company-State Department study indicates that—

Canal traffic is sensitive to toll increases beginning at 15% up through the maximum increase possible of between 75% and 100%, the point where diminishing returns set in. Sensitivity also increases over time with the full impact of the increase occurring about seven years following its implementation.

Governor Parfitt continued;

Increases of more than 50% would result in little additional revenue. In fact, it is estimated that the very maximum amount of additional revenue obtainable is about 40%, and this would require a toll increase of between 75% and 100%.

TOLL HIKES INEVITABLE

Mr. President, in the face of the inevitable toll increases, vast amounts of trade between east and gulf coasts and the Pacific Basin countries, could shift to rail and truck movement from west coast ports across the United States. Declining business in these ports could seriously impact on the economies of the ports and States involved.

OIL REVENUES QUESTION MARK

The hope of holding toll increases to a modest level until 1984 is dependent upon movement of oil from the Alaska fields by tankers through the canal. However, the approximately $40 million annually these ships will be bringing the canal is likely to decline in 1984 when a mid U.S. pipeline is expected to become operational for transit of the Alaska oil.

A number of question marks impact on the quantity of oil moving through the canal after 1984. It could continue at a high level if the pipeline is not built, or it could decline if it is built. Of even greater adverse consequence would be a change in the law which now prohibits the sale of Alaska oil to Japan.

BRANDIS STUDY

The Ely Brandis study by International Research Associates, so often quoted by proponents of this treaty, focuses on how much tolls can be increased without losing too much business. It is no study of costs and income. The 1974 study by Brandis deals with the impact of tolls on South America as a region and individual countries in South America.

This study points out that a toll hike of 50 percent by 1985 would cost South American countries an additional $5 million for imports and $8 million for exports, most of the latter cost to be borne by the recipient countries.

At least three types of commodities involved in South American exports and imports are sensitive to toll changes.

PETROLEUM

Petroleum is sensitive to increases and the IRA study predicts that, in case of a 50 percent increase, the reduction in traffic would be substantial. The study estimates such an increase would reduce shipments from the west coast to the east coast via the canal by as much as 2.6 million tons.

IRON ORE

Iron ore, mainly from Chile and Peru, would also be sensitive to toll increases. Mr. Brandis estimates a 50 percent toll increase would reduce iron ore exports in 1985 via the canal from 2.3 to 1.7 million tons. Even lesser toll increases will result in some traffic losses.

BANANAS

Exports of bananas are quite sensitive to toll increases. Shipments are expected to more than double by 1985, assuming no toll hikes. These shipments are from Ecuador to the U.S. east coast and Europe.

However, a 50 percent toll increase by 1985 is expected to cut exports 400,000 tons. Dut to competition, all the increases could not be passed on to customers, as tolls already represent a significant portion of the value of bananas.

Mr. President, of course, the Senate recognizes that when toll increases are fixed, the additional cost must be paid by either the buyer or the seller of the tonnage moved through the canal. With respect to South American exports and imports, the study estimates most of the

tolls are likely to be paid by the buyers or importers.

TOBACCO

Tobacco, one of many commodities exported from my State out of the Port of Charleston, could be placed in a competitive situation by these higher tolls. Some 33 percent of the South Carolina tobacco crop is exported and agricultural exports overall from South Carolina amount to 29 percent of production.

TOLL IMPACT ON U.S. PRODUCTS

Mr. President, the U.S. Department of Agriculture has reported that $8.5 billion of total agricultural exports of $23 billion go to Asian markets. Of these exports, 70 percent pass through the Panama Canal. The price of these products in markets in the Orient depends upon both reliable service through the canal and low tolls, so that shippers down the Mississippi River can compete with Canadian exports out of their Pacific coast port of Vancouver and Australian foodstuffs sent north over open seas.

HIGHER FREIGHT RATES

In a study produced by the Economic Research Service of the Agricultural Department, Floyd D. Gaibler states quite bluntly that—

Provisions in the new proposed Panama Canal Treaty have caused concern over probable impacts they will have on agricultural commodities transported from U.S. Atlantic and Gulfports through the Canal to Asian markets.

Dr. Gaibler believes the new payments to Panama will immediately "add approximately 2 percent to the freight rate for transporting heavy grains from the U.S. Atlantic and gulfports to Japan." Of course, the higher cost in transporting goods reduce their competitive position and lower still further the very narrow profit margin on foodstuffs. Dr. Gaibler further notes that with the inflaticnary escalator clauses in the treaties, tolls could rise up to eight additional times in the next 22 years and after 1999 Panama will have complete discretion over what they desire to charge customers.

Mr. President, these same concerns have resulted in opposition to the treaties by a number of groups such as the Gulf Ports Association, the Mid-Gulf Seaports Marine Terminal Conference, and the Port of New Orleans.

Representing these groups in House testimony, Herbert R. Haar, Jr., associate port director, told the Panama Canal Subcommittee:

It is strongly recommended that the Senate not ratify the new proposed Panama Canal treaty unless it is amended so that there will not be an adverse economic impact on American shipping and the American consumer.

More specifically, Mr. Haar stated—

The major commodities to and from our area that would be impacted by an increase in tolls are petroleum, coal, grain, steel and bauxite.

He also pointed out that the Government had directed industries to convert to coal and he anticipates importation of large quantities from Australia to both New Orleans and Texas ports. On the other hand, the Port of Mobile is concerned because higher costs of exporting coal through the canal may affect the competitiveness of this coal with Australian and Canadian coal going to Japan.

GROWING BURDEN

Mr. President, there is no end to the concerns expressed by U.S. leaders as to the economic impacts of the treaties. James J. Reynolds, president of the American Institute of Merchant Shipping, expresses similar concerns. He predicts "a greater and greater burden on those operators and cargoes for which there is no alternative to using the canal."

Melvin Shore, representing the American Association of Port Authorities, favored payment of the diplomatic costs of the treaties be placed on the Government and not shippers and others. He said this should be done "in recognition of the adverse impact that drastic toll increases will have upon our ocean commerce and consequently the ports of the United States."

DISASTER FOR EAST COAST

W. J. Amoss, Jr., chairman of the Liner Council of the American Institute of Merchant Shipping, warned the proposed toll increases spell "sheer economic disaster for operators east of the canal."

Mr. President, I wonder if the Members of the Senate realize there is no cost and income study on the effects of this treaty for the period beyond—I repeat, beyond—1983? The State Department and the administration are the proponents of this treaty, it is their responsibility to show it will break even and deficits will not have to be paid from the pockets of the American taxpayer.

NO STUDY PAST 1983

Figures provided by the administration have not shown that the proposed Panama Canal Commission will be able to break even after 1983.

The most important study commissioned by the administration, that made by the International Research Associates, is a study of revenues only during the 1978–2000 period. It does not attempt to project Commission costs and does not estimate profits or deficits at all.

The Arthur Anderson study for the State Department covered only Commission costs and income for the period 1979 to 1983. It does not provide any basis for the conclusions concerning the period after 1983.

STUDIES LIMITED TO 1979–83

Likewise, the memorandum signed by Secretary of State Cyrus Vance, Defense Secretary Harold Brown, and Army Secretary Clifford Alexander of February 10, 1978, and the later reply from the State Department deal only with the Commission's ability to break even in the years 1979 to 1983.

Mr. President, I am convinced if these treaties pass, there will either be significant toll increases before and after 1985 or the United States will have to absorb a sizable operating deficit for the canal.

My understanding merely lets the Canal Commission know the Senate desires that the effects of tolls on U.S. ports and commodities of all nations be evaluated carefully.

The Panama Canal will need ships to keep it open and viable. We cannot afford to let it die an economic death. To do so would injure our own economy and deny us a vital defense waterway essential to our strategic policy.

An economically dead canal is no better than a closed canal. I urge the Senate to accept this understanding. It will benefit the Panamanian people as well as U.S. citizens.

The PRESIDING OFFICER. Who yields time?

If neither side yields time, the time is charged equally to each side.

Mr. SARBANES addressed the Chair.

The PRESIDING OFFICER. The Senator from Maryland (Mr. SARBANES).

Mr. SARBANES. Mr. President, I think the concern which the Senator has expressed regarding the possible impact of toll changes is one that I share and which is shared widely in the Senate. But it is a concern that has already been addressed by the distinguished Senator from Louisiana (Mr. LONG) by the understanding which he offered to the Neutrality Treaty and which was accepted to the Neutrality Treaty.

That proposal dealt with this matter of the regional impact of toll changes. It, in fact, would require the United States and Panama to consider other economic factors, such as the maintenance of the domestic fleets of the two countries, the competitive position of the canal in relation to alternative means of transportation, the interests of both nations in maximizing their international commerce, and the impact of any adjustment in tolls on the various geographical areas of each of the two parties.

That understanding was added to the Neutrality Treaty and, as a consequence of being added to the Neutrality Treaty, it has the advantage that it is permanent in its application since the Neutrality Treaty is permanent.

Second, the Neutrality Treaty takes effect simultaneously with this treaty and, therefore, the provision which was offered by the able Senator from Louisiana on this issue would come into play right away, at the time that the treaties first came into play, and would continue indefinitely into the future.

In that sense, it is far more protective of our interests than the proposal which is before us, and I think it is extremely important to underscore that.

Finally, during the life of the Panama Canal Treaty, which is from now, from the time it takes effect until the end of the century, the setting of tolls will be done by the Panama Canal Commission. That Commission will be controlled by the United States.

Its board will consist of nine members—five Americans and four Panamanians—all appointed by the United States. It will have the power to set tolls. Congress, through legislation, will have the power to impact on the work of the Commission and the board. So that is an additional protection available to us during the remainder of this century.

Our protection is first of all, in terms of the composition of the board and the Commission and the authority it has; second, a protection which flows from the power of Congress to deal with cer-

tain of these matters through legislation; third, and most important, the protection which already has been provided to us by the understanding, the very carefully worked-out understanding, offered by the able Senator from Louisiana, which was incorporated into the articles of reservation of the Neutrality Treaty and which therefore applies from the moment these treaties take effect, indefinitely into the future.

For all those reasons, Mr. President—the greater protections that are afforded to us under that approach—I oppose the understanding which has been offered by the Senator from South Carolina.

I again stress that the concerns to which this understanding is addressed is one which I and many others share, but we feel that this concern has been fully and adequately responded to by the understanding of the Senator from Louisiana, by the arrangements for the Panama Canal Commission, in the sense that it will be controlled by the United States of America and by the fact that Congress, through its legislative power, retains the authority to impact on this question through statutory enactment.

Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. THURMOND. Mr. President, the distinguished Senator from Maryland has said that they already have accepted the amendment of the distinguished Senator from Louisiana, which is similar to this. I point out that, generally, that amendment and this understanding have a similar purpose. That is true. However, the Long understanding speaks to the adjustment of tolls in a general sense, while my understanding is more specific. My understanding is more specific in that it speaks directly to the point of evaluating the economic effects of toll increases on, first, each port of the United States; second, regional or groups of ports; and, third, commodities transiting the canal.

The Thurmond understanding also suggests that other methods rather than the current method for setting tolls be considered. My understanding suggests that rather than merely raising tolls based solely on tonnage, new systems and levels may be used to avoid harm to U.S. ports and commodities.

So there is a difference. This understanding is specific. It certainly can do no harm, and it might do a lot of good. I hope the distinguished Senator from Maryland will see fit to accept it.

Mr. SARBANES. Mr. President, I will respond very briefly to the Senator from South Carolina.

The breadth of the Long understanding is an advantage, not a disadvantage, because it encompasses the matters which the distinguished Senator from South Carolina has put forward, as well as other matters. Therefore, it is to our advantage not to seek to limit or restrict it or cut it down. It serves our purposes, very frankly, to have a broad, general criterion of matters to be considered.

As I pointed out, the Long understanding applies not only in the period from now to the end of the century but beyond that as well; therefore, it provides protection for these matters indefinitely into the future. That is of extreme importance, because during the period ahead of us, from now to the end of the century, which is the period to which the understanding of the Senator from South Carolina is addressed, we in fact control the Panama Canal Commission and the setting of tolls and, therefore, the factors which they will consider. Congress, through legislation, can impact upon the decisionmaking process of the Commission.

Therefore, while I am sensitive to and share the concerns which the Senator has outlined, I think this approach may needlessly limit or restrict our control to act in this matter. It is for that reason, as I indicated earlier, that I oppose the Senator's understanding.

Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. The Senator from South Carolina has 1 minute remaining.

(Remarks by Mr. DOLE at this point are printed later in today's RECORD.)

The PRESIDING OFFICER. The Senator from Maryland has 7 minutes remaining.

Mr. SARBANES. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. Is there objection?

Without objection, the clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. STONE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

RESERVATION NO. 15

Mr. STONE. Mr. President, I call up my reservation and ask for its immediate consideration.

The PRESIDING OFFICER. Is there objection?

Without objection, the reservation will be stated.

The assistant legislative clerk read as follows:

The Senator from Florida (Mr. STONE) proposes on behalf of himself, Mr. PAUL G. HATFIELD, Mr. DECONCINI, and Mr. BROOKE, a reservation numbered 15.

Strike out the period at the end of the resolution of ratification and insert in lieu thereof a comma and the following: "subject to the following reservation:

"The Panama Canal Commission may not incur any debt arising out of the operation or maintenance of the Panama Canal or encumber the Panama Canal with any lien, unless the United States of America by legislation authorizes the Commission to incur such a debt or encumber the Canal with such a lien.".

Mr. STONE. Mr. President, this amendment will require that before the new canal agency can encumber the canal property, the agency property, with liens or with debts that both Houses of Congress would be required to act. In other words, the agency would have to obtain the concurrence of Congress. I am not certain that either the present law or the current draft of the proposed implementing legislation is sufficiently explicit to insure that Congress will have that authority to control the borrowing powers of the to-be-established Panama Canal Commission.

This is of particular concern to me because under article XIII of the Panama Canal Treaty the United States would turn over the canal property to Panama free of all debts and liens.

Mr. CHURCH. Mr. President, I thank the able Senator from Florida for raising the proposed amendment.

First of all, let me say that the Panama Canal Commission would be an agency of the U.S. Government subject to the laws of the United States and immune from the jurisdiction of the Republic of Panama.

The proposed amendment, therefore, deals solely with the internal law of the United States, and I respectfully suggest would be better addressed in the legislation implementing the treaty.

Now, the draft implementing legislation prepared by the administration does, in fact, provide for the continuing application to the Commission of current law under which expenditures and obligations of the Panama Canal Company as a wholly owned U.S. Government corporation are subject to the control and approval of Congress.

Nonetheless, I understand the Senator's concern, and it can be accommodated.

I have spoken to the responsible officials in the administration, and they are agreeable to including language similar to the Senator's amendment in the legislation which will be submitted and considered by Congress for purposes of implementing these treaties.

I can say on the part of the floor managers that we also will do everything in our power to endeavor to guarantee that this step will be taken.

Mr. President, I do hope this will vitiate the need for the amendment offered by the able Senator from Florida. I sincerely believe that the best way to take care of his concern is through the enactment of appropriate provisions in the implementing legislation.

Mr. STONE. I thank the distinguished floor manager, the Senator from Idaho.

I am gratified, as are the cosponsors of this amendment, to receive the assurances not only of the floor managers but of the administration that this prior consent of both houses of Congress, before allowing the new agency to create liens or debts, would be accomplished in the implementing legislation.

I would say further that the reason for the need for this is that just as the people of Panama have asked for assurances that prior to any transfer there are no unwarranted encumbrances put on there just in order to encumber the property otherwise turned over, so the taxpayers of the United States need that same protection.

If it is in the implementing legislation they can get that protection, and with the assurances, therefore, of the floor managers and the administration, I will ask that the amendment be withdrawn.

Mr. CHURCH. I thank the Senator very much, and I commend him for the

responsible course he has taken in this matter.

Mr. STONE. I thank the distinguished Senator.

The PRESIDING OFFICER. The amendment is withdrawn.

UP RESERVATION NO. 35

The PRESIDING OFFICER. The Senator from Nevada (Mr. CANNON).

Mr. CANNON. Mr. President, I call up my unprinted reservation No. 35 and ask that it be stated.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will report.

Mr. CANNON. Mr. President, I ask unanimous consent that the reading of the reservation be dispensed with, and I will explain very briefly what it does.

The PRESIDING OFFICER. Without objection, it is so ordered.

The reservation is as follows:

Strike out the period at the end of the resolution of ratification and insert in lieu thereof the following: "subject to the following reservation:

"After the date of entry into force of the Treaty, the Panama Canal Commission shall be obligated to reimburse the Treasury of the United States of America, as nearly as possible, for the interest cost of the funds or other assets directly invested in the Commission by the Government of the United States of America and for the interest cost of the funds or other assets directly invested in the predecessor Panama Canal Company by the Government and not reimbursed before the date of entry into force of the Treaty. Such reimbursement of such interest costs shall be made at a rate determined by the Secretary of the Treasury of the United States of America and at annual intervals to the extent earned, and if not earned, shall be made from subsequent earnings. For purposes of this reservation, the phrase 'funds or other assets directly invested' shall have the same meaning as the phrase 'net direct investment' has under section 62 of title 2 of the Canal Zone Code.".

Mr. CANNON. Mr. President, the subject of my reservation is interest payments and recovery of the U.S. investment. I was privileged to chair hearings in the Senate Armed Services Committee on the financial impact of the proposed Panama Canal Treaty. One of our witnesses was Elmer B. Staats, Comptroller General of the United States, who discussed the financial issues. He made the assumption that the forthcoming implementing legislative package will relieve the Panama Canal Commission of the obligation to pay interest to the Treasury on the interest-bearing portion of the U.S. investment. This assumption is in line with the administration's statements that the commission will be relieved of this obligation. The U.S. investment in the canal is sizeable and amounts to about $318 million. When figured at the rate of long term treasury bonds the interest amounts to around $20 million a year. The Panama Canal Company has the statutory obligation to pay. At $20 million per year over 22 years this would amount to a $440 million loss to the Treasury over the life of the treaty. I might note that Comptroller General Staats, stated that this $20 million estimated annual interest payment "could be substantially more" per year over the next 22 years. Since the interest rate is based on the U.S. Treasury average rate for long-term issues and "as that portfolio turns over, these rates are bound to go up, and I do not believe that this has been fully taken into account in these projections." According to an Armed Services Committee staff study, Mr. Staats estimated the total loss to the Treasury over the next 22 years at $505 million.

I have quite a problem accepting the forgiveness of this obligation. As a matter of fact, I cannot accept it. On February 1, 1978, President Carter in a nationally televised address to the American people stated:

Are we paying Panama to take the canal? We are not. Under the new treaties payments to Panama will come from tolls paid by ships which use the canal.

On December 28, 1977, the President said:

We wanted a treaty that did not put a financial burden on the American taxpayer, and we got it.

On September 26, 1977, Secretary of State Vance in testimony before the Senate Foreign Relations Committee stated concerning the cost of the treaties:

The treaties require no new appropriations nor do they add to the burdens of the American taxpayer.

Well in line with this spirit of not imposing upon the taxpayer, I submit my reservation to not relieve the Panama Canal Commission of this statutory interest obligation because if the Commission is relieved of that obligation obviously it would impose a burden on the American taxpayer by the loss of those revenues of at least $20 million a year for the next 22 years.

So, Mr. President, I submit my reservation.

(Mr. ZORINSKY assumed the chair.)

Mr. SARBANES. Mr. President, I assume we will address this reservation later in the day when we can pick up additional time. I simply want to make this one additional comment: We have reserved full control over this matter in this legislation in the Congress, and we can do as we choose about it.

RESERVATION NO. 18

The PRESIDING OFFICER. The hour of 10 o'clock having arrived, under the previous order, the Senate will proceed to vote on the question of agreeing to the reservation (No. 18) of the Senator from North Carolina.

Mr. CHURCH. Mr. President, I move that the reservation be laid on the table, and I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion to lay on the table. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota( Mr. ABOUREZK), the Senator from Hawaii (Mr. MATSUNAGA), the Senator from Rhode Island (Mr. PELL), the Senator from Georgia (Mr. TALMADGE), the Senator from New Jersey (Mr. WILLIAMS) are necessarily absent.

The result was announced—yeas 56, nays 39, as follows:

[Rollcall Vote No. 104 Ex.]

YEAS—56

| | | |
|---|---|---|
| Anderson | Gravel | Mathias |
| Baker | Hart | McGovern |
| Bayh | Haskell | McIntyre |
| Bellmon | Hatfield, Mark O. | Metzenbaum |
| Bentsen | Hathaway | Moynihan |
| Biden | Hayakawa | Muskie |
| Bumpers | Heinz | Nelson |
| Byrd, Robert C. | Hodges | Pearson |
| Case | Hollings | Percy |
| Chafee | Huddleston | Proxmire |
| Chiles | Humphrey | Ribicoff |
| Church | Inouye | Riegle |
| Clark | Jackson | Sarbanes |
| Cranston | Javits | Sasser |
| Culver | Kennedy | Sparkman |
| Danforth | Leahy | Stafford |
| Durkin | Long | Stevenson |
| Eagleton | Magnuson | Stone |
| Glenn | | Weicker |

NAYS—39

| | | |
|---|---|---|
| Allen | Goldwater | Packwood |
| Bartlett | Griffin | Randolph |
| Brooke | Hansen | Roth |
| Burdick | Hatch | Schmitt |
| Byrd, Harry F., Jr. | Hatfield, Paul G. | Schweiker |
| Cannon | Helms | Scott |
| Curtis | Johnston | Stennis |
| DeConcini | Laxalt | Stevens |
| Dole | Lugar | Thurmond |
| Domenici | McClure | Tower |
| Eastland | Melcher | Wallop |
| Ford | Morgan | Young |
| Garn | Nunn | Zorinsky |

NOT VOTING—5

| | | |
|---|---|---|
| Abourezk | Pell | Williams |
| Matsunaga | Talmadge | |

So the motion to lay on the table reservation No. 18 was agreed to.

Mr. CHURCH. Mr. President, I move to reconsider the vote by which the motion was agreed to.

Mr. HOLLINGS. Mr. President. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. CHURCH. Mr. President, I ask unanimous consent that Miss Maureen Norton of the staff of Senator HUMPHREY may have the privileges of the floor during the remainder of today.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BIDEN. Mr. President, I ask unanimous consent that Joy Shub of my staff be accorded the privileges of the floor throughout the proceedings on the Panama Canal Treaty.

The PRESIDING OFFICER. Without objection, it is so ordered.

RESERVATION NO. 19

The question is on agreeing to the Curtis Reservation No. 19. The yeas and nays have not been ordered.

Mr. CURTIS. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the reservation of the Senator from Nebraska (Mr. CURTIS). The yeas and nays have been ordered and the clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), and the Senator from Rhode Island (Mr. PELL) are necessarily absent.

The result was announced—yeas 33, nays 65, as follows:

[Rollcall Vote No. 105 Ex.]

YEAS—33

| | | |
|---|---|---|
| Allen | Glenn | Schmitt |
| Bartlett | Goldwater | Schweiker |
| Burdick | Hansen | Scott |
| Byrd, Harry F., Jr. | Hatch | Stennis |
| | Helms | Stevens |
| Cannon | Johnston | Talmadge |
| Curtis | Laxalt | Thurmond |
| DeConcini | Lugar | Tower |
| Dole | McClure | Young |
| Eastland | Morgan | Zorinsky |
| Ford | Randolph | |
| Garn | Roth | |

NAYS—65

| | | |

| Hart | McIntyre | |

NOT VOTING—2

| | |
|---|---|
| Abourezk | Pell |

So the reservation (No. 19) was rejected.

Mr. CHURCH. Mr. President, I move to reconsider the vote by which the reservation was rejected.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP RESERVATION NO. 33

The PRESIDING OFFICER. Under the previous order, the question now is on the unprinted reservation of the Senator from Kansas (Mr. DOLE), unprinted Reservation No. 33.

The yeas and nays have not been ordered.

Mr. CHURCH addressed the Chair.

Mr. DOLE. Mr. President, I ask for the yeas and nays.

Mr. CHURCH. I move to lay the unprinted reservation on the table, and I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion to lay on the table the unprinted Reservation No. 33 of the Senator from Kansas (Mr. DOLE). The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK) and the Senator from Rhode Island (Mr. PELL) are necessarily absent.

The result was announced—yeas 56, nays 42, as follows:

[Rollcall Vote No. 106 Ex.]

YEAS—56

NOT VOTING—2

| | |
|---|---|
| Abourezk | Pell |

So Mr. DECONCINI's reservation No. 20 was agreed to.

Mr. CHURCH. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. LAXALT. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER (Mr. CHILES). Under the previous order, the Senator from Oklahoma (Mr. BARTLETT) is recognized to call up an amendment, with the time until the hour of 11:45 a.m. to be equally divided thereon.

RESERVATION NO. 3

Mr. BARTLETT. Mr. President, my reservation to the resolution of ratification of the Panama Canal Treaty withholds consent of the Senate to ratification until the President of the United States has determined that the people of Panama have approved by a plebiscite all of the changes, reservations, and limitations which have been attached to the Panama Canal Treaty. This reservation is similar to the reservation which I proposed earlier to the treaty of neutrality. As I shall point out, the wisdom of that earlier reservation, designed to reduce tensions between Panama and the United States, is made clearer each day as Panama expresses its dissatisfaction with changes made by the United States to that earlier treaty.

Let me remind my colleagues of the issue. For many years, there has been dissatisfaction in Panama over the 1903 Panama Canal Treaty which gave the United States the right to operate and protect a transoceanic canal in the Canal Zone across the Isthmus of Panama. Since 1903, the Governments of Panama and the United States have negotiated several treaties designed to meet some of the demands of the Panamanians while also insuring that the Panama Canal would be maintained efficiently and securely for the use of the world.

The PRESIDING OFFICER. Will the Senator send his amendment to the desk?

Mr. BARTLETT. I have not called up my amendment yet. I thought I would call it up later.

In recent years, Panama has mounted a major diplomatic effort to secure a treaty with the United States which would grant sovereign rights and operational control of the canal to Panama. Anticipating such a treaty, and remembering the dissatisfaction with the manner in which the 1903 treaty was negotiated, the new Panamanian Constitution of 1972 provided that treaties relating to the Panama Canal must be approved by a plebiscite of the people of Panama. On the 23d of October last year, the people of Panama gave their approval in a plebiscite to the versions of the two Panama Canal treaties originally negotiated. At the time of that plebiscite, the people of Panama were not voting on future amendments, reservations or other changes which might be made by the U.S. Senate.

I would like to remind my colleagues also that the White House, the State Department, and the leadership of this body have consistently made a major effort to avoid most perfecting amendments, some, in part on the ground that they would require a second plebiscite in Panama. Fear of a second plebiscite in Panama grows out of apprehension that the people of Panama might reject the changes made to the treaties or that they might even reject their own government for having inadequately represented their interests.

Nevertheless, there are many of us who feel that good relations with Panama will be possible only when there is agreement and satisfaction as to the terms of the new treaties. We are also concerned that a treaty improperly ratified will be found wanting under international law or under the law of Panama. Furthermore, we feel that changes in the Panama Canal treaties should be dealt with in a straightforward and honest manner, by both nations.

Let us take a closer look at the provisions of the Panamanian Constitution to which I refer. Article 274 of the 1972 Constitution of Panama reads as follows:

> Treaties which may be signed by the Executive Organ with respect to the Panama Canal, its adjacent zone, and the protection of the said Canal, and for the construction of a new Canal at sea level or of a third set of locks, shall be submitted to a national plebiscite.

This requirement for a plebiscite applies only to treaties dealing with the old Panama Canal or a new canal, but not to other types of treaties. It reflects the simple fact that the Panama Canal is as important to the people of Panama as it is to the people of the United States. The detail with which this article of the Panamanian Constitution sets out the kind of treaties which are covered shows that the highest national interest of Panama centers around the geographical importance of Panama's location on the narrow isthmus separating two great oceans.

The 1946 Constitution of Panama, which preceded the 1972 Constitution, contained no such detailed instructions as to treaties dealing with the Panama Canal. That earlier Constitution was written just 1 year after the conclusion of the Second World War. During that war, all Panama could see that great naval powers were involved around them

and that the Western democracies found the canal vital to carrying on a two-front war. Those times were very different from the circumstances preceding the 1972 Constitution.

The 1972 Constitution was written to provide a legal basis for the strongman rule of Gen. Omar Torrijos. Four years before, Torrijos had seized power with the help of the Panamanian National Guard and had established a so-called revolutionary government. Much of Torrijos' strength grew from his promises to wrestle control of the Panama Canal from the United States. In the previous 10 years, there had been several instances of violence as a result of the red hot canal issue, and Panama had even rejected a treaty negotiated with the United States during the Johnson administration. Thus, when the 1972 Constitution of Panama was being drafted, the possibility of a revolutionary, new treaty governing the Panama Canal was foremost in the minds of everyone in Panama.

The provision requiring a plebiscite for ratification of any new Panama Canal treaties clearly reflects the concerns of many Panamanians that a treaty might be negotiated which was unacceptable. Certainly, many Panamanians have expressed the view that the 1903 Treaty was negotiated in an irregular manner. Their fears that a new treaty might also be presented in a less-than-straightforward manner can only have been increased by efforts on the part of the Governments of Panama and the United States to prevent a second plebiscite on changes in the proposed Panama Canal treaties.

Failure to present changes in the proposed treaties to a plebiscite of the Panamanian people raises the possibility that the Supreme Court of Panama might void the treaties on the ground that they were not ratified in accordance with the Constitution. Under the 1972 Constitution, there have thus far been no legal cases dealing with the treaty ratification process. However, much of the 1972 Constitution is modeled after the 1946 Constitution, and there, precedent does exist. As recently as the 1960's, there were three court cases which dealt with the constitutionality of the ratification process. In fact, the "Geneva Convention of August 12, 1949" was declared unconstitutional on the grounds that the text considered during ratification debate in the National Assembly was "truncated and therefore incomplete."

In the case of the present treaties, we have seen changes made which were not a part of the documents and understandings being considered at the time of the October plebiscite. Much has been made of the fact that the joint statement by General Torrijos and President Carter was made public in Panama prior to the plebiscite. That is true. But the joint statement was not included in the document considered. In fact, it was excluded because only documents concluded on September 7, 1977, were considered. Certainly, if the Supreme Court of Panama could declare the entire Geneva Convention of August 12, 1949, void on the grounds that the summary of it presented in the official Gazette was not complete, that court could easily find that agreements not considered during the plebiscite would also not be constitutional.

That view has been expressed by several professors of law in Panama, notably Drs. Julio Linares and Cesar Quintero. Both made it clear that the two so-called leadership amendments to the first Panama treaty, the Treaty of Neutrality, were not a part of the original treaty and could not be considered binding under Panama's Constitution. They have repeated that view most emphatically with respect to the now famous DeConcini reservation. Dr. Quintero's interpretation, widely publicized in Panama, holds that the Government of Panama may reject the treaties, but only a second plebiscite can approve the added reservations and amendments. Quintero, who is dean of the Law and Political Science School of Panama University, is not alone in this opinion. On March 28, one Panamanian editorial expressed the situation this way:

> We want to be totally clear regarding the reservations, understandings, and amendments to the treaty which have passed the great test before the U.S. Senate. In light of the constitutional provisions which authorized the plebiscite for approving or disapproving the Torrijos-Carter treaties we consider that any addenda to those treaties made by the the U.S. Senate will have to be submitted to a plebiscite in Panama. (FBIS, 29 Mar. 78, N1).

Logic points inescapably toward the view that changes to the proposed Panama Canal treaties, whether technically in the form of amendments, reservations, or understandings, should, in accordance with article 274 of the Panamanian Constitution, be submitted to a plebiscite of the people. Not to do so would leave the treaties open to challenges in the Panamanian courts and to widespread popular dissatisfaction in Panama. I believe there is also some question as to whether they would be binding under international law.

Some members of this body have said that the question of a second plebiscite is strictly an internal matter of interest only to Panama. That view is clearly incorrect. My reservation directs the President to determine whether the treaties as altered are ratified in Panama in accordance with their proper procedures for ratification because the failure to ratify these treaties properly could prevent them from being binding under international law. We have reviewed this issue during discussion of the Neutrality Treaty, but let me briefly highlight the problem again.

International law recognizes that treaties are usually made by heads of state and that the source of power to negotiate may come from a constitution or from some force of arms, as in some dictatorships. Thus, international law tends to avoid consideration of the internal affairs of states. But, with respect to certain issues such as the ratification of treaties, international law does not divorce itself completely from the consideration of domestic law. In his classic "International Law", Professor Oppenheim summarizes the situation:

> Sec. 497. Although the Heads of States are regularly, according to International Law, the organs that exercise the treatymaking power of the State, such treaties concluded by Heads of States or other organs purporting to act on behalf of the State, as violate constitutional restrictions do not bind the State concerned. This is so for the reason that the representatives have exceeded their powers in concluding the treaties.

Some members of this body have cited article 46 of the 1970 Vienna Convention on the Law of Treaties as supporting the notion that we should not be concerned about the ratification procedures of the Panamanians, but again I believe they have been misled. Article 46 reads as follows:

> 1. A state may not invoke the fact that its consent to be bound by a treaty has been expressed in violation of a provision of its internal law regarding competence to conclude treaties as invalidating its consent unless that violation was manifest and concerned a rule of its internal law of fundamental importance.
>
> 2. A violation is manifest if it would be objectively evident to any State conducting itself in the matter in accordance with normal practice and in good faith.

First, I should comment that the United States has not yet ratified the 1970 Vienna Convention and that, under the terms of that convention, it does not apply to any treaties concluded by parties prior to ratification by those parties of the Vienna Convention. Nevertheless, article 46, I believe, actually supports my case.

According to article 46, a treaty could be invalid if a violation of internal law were "manifest and concerned a rule of its internal law of fundamental importance". Article 46 defines manifest as follows: "A violation is manifest if it would be objectively evident to any State conducting itself in the matter in accordance with normal practice and in good faith."

The requirement for a plebiscite is stated very clearly in the "fundamental law" of Panama, namely, in article 274 of the Panamanian Constitution. Panama's chief negotiator, Romula Escobar has even called the requirement for a plebiscite with respect to the treaties "an essential requirement" and "a basic condition". That a failure to have a second plebiscite to consider changes involving the treaties would be a manifest violation is made clear by the testimony of Panamanian jurists and at least one Panamanian negotiator.

Mr. President, international law is a complex field, but its basic principles are similar to the contract law that citizens in both Panama and the United States understand. In business transactions, each side puts forth offers which are either accepted or rejected by the other side. An agreement or deal is consummated when both parties agree to the same terms and express that agreement in language acceptable to both. Basically, the same applies to treaties.

In altering the treaty language as originally negotiated and as originally approved in Panama by plebiscite, the Sen-

ate is, in effect, rejecting an offer from Panama while at the same time countering with an offer of its own. As I see it, Panama may either reject the offer, or submit it to the people of Panama for ratification by plebescite. This view is supported by one of Panama's negotiators, Carlos Alfredo Lopez Guevara, in his discussion with Panamanian media representatives of the significance of the reservations which the Senate has attached to the proposed treaties. Let me quote one Panamanian television account.

Lopez Guevara explained the meaning of the word reservation, as it is used in international law. He said that it means a counterproposal made by one party to the other. This counterproposal can be accepted, rejected or negotiated upon by the other party. If one of the parties rejects the counterproposal or reservation and at the same time presents another, this must be done before the exchange of notes because one cannot participate in the exchange ceremony with reservations.

This was reported on the 30th of March, and the account continues:

In giving his opinion as a lawyer, he stressed that if the amendments and reservations introduced by the Senate and included in the ratification resolution involve substantial changes to the treaties approved by the Panamanian people, then another plebiscite would have to be held.

The PRESIDING OFFICER. All the time of the Senator from Oklahoma has expired.

Mr. BARTLETT. Mr. President, according to the clock, I have used 15 minutes. It is my understanding that there are 40 minutes equally divided.

The PRESIDING OFFICER. The time was until 11:45, the time to be equally divided.

Mr. SARBANES. Mr. President, I yield to the Senator 5 minutes.

Would 5 additional minutes accommodate the Senator from Oklahoma?

Mr. BARTLETT. Yes, that will do it.

Mr. SARBANES. I yield the Senator 5 additional minutes.

Mr. BARTLETT. I thank the Senator.

Mr. CHURCH. Mr. President, will the Senator yield to me for a question?

Mr. BARTLETT. Yes.

Mr. CHURCH. For 30 minutes now, I have been trying to oblige the Senator from Texas, who wanted to use 2 minutes of our time. I wonder if the Senator from Oklahoma would object if he might use those 2 minutes, with the understanding that anything he says will appear at another place in the RECORD. Then the Senator might proceed. It is just an accommodation to the Senator from Texas.

Mr. BARTLETT. I shall be happy to accommodate the Senator from Texas just as soon as I finish in 1 minute.

Mr. CHURCH. I thank the Senator.

Mr. BARTLETT. Lopez Guevara is supported by the best legal scholarship. For example, Prof. J. L. Brierly's "The Law of Nations" expresses it this way:

In accepting a treaty a state sometimes attaches a "reservation", that is to say, it makes the acceptance conditional on some new term which limits or varies the application of the treaty to itself. Such a qualified acceptance is really a proposal for a treaty different from that agreed on, and if the reservation is persisted in and is not accepted by the other states concerned it amounts to a rejection.

Or, in the words of Professor Oppenheim:

That occasionally a State tries to modify a treaty while ratifying it cannot be denied; but conditional ratification is not ratification at all, but is equivalent to refusal of ratification coupled with a fresh offer which may or may not be accepted.

Clearly, to give the proposed Panama Canal treaties their maximum legitimacy, they must be submitted along with all changes to the people of Panama in accordance with article 274 of the Panamanian Constitution of 1972. Failure to take this step would leave the treaties vulnerable to refutation by subsequent Governments of Panama, or for that matter the United States, and might reduce the binding effects of the treaties under international law. In my opinion, such a loophole could work to the advantage of Panama in the future.

Although the government of Panama is undoubtedly a dictatorship, the rule of law has not completely ceased in Panama. Article 274 of their constitution clearly requires a plebiscite prior to ratification of any treaty dealing with the Panama Canal, and the present government of Panama has already acted once in accordance with that provision. Certainly, when confronted with a changed document, the right of the present government to rule would be seriously called into question if the new language were not submitted to a plebiscite.

But above all, it is important that we not commit ourselves to an irreversible treaty, parts of which some Panamanian Government, present or future, might repudiate. Differences between the 1946 and 1972 Panamanian Constitutions underscore the importance of getting the treaties off on the correct legal footing. Article 4 of title I of the 1946 Constitution read quite simply:

The Republic of Panama respects the rules of international law.

Article 4 of title I of the 1972 Constitution reads quite ominously:

The Republic of Panama respects the universally recognized rules of international law which are not prejudicial to the national interest.

In this language is contained great danger for Panamanian-American relations in the future. Clearly, we must insure that any new treaties are made legitimate under Panamanian law. I believe that this means a second plebiscite on the Panama Canal treaties.

The seriousness of this issue can be illustrated by two questions: Do you believe that Panama would accept a treaty that had not been ratified by the U.S. Senate in accordance with our Constitution, when such ratification is required by the language of the treaty itself? And would you, as an elected representative of the American people, give your consent to ratification of a treaty whose language has been changed subsequent to first consideration of the document? I think that the answer to both of those questions is no.

It would be an injustice to the people of the United States if the Senate were to ignore its treaty responsibilities, and it would be an injustice to the people of Panama, about whose human rights and democracy we have been greatly concerned, not to expect that the treaties as amended would be resubmitted to a plebiscite of the people of Panama.

The reservation I propose makes consent to ratification "subject to the reservation that before the date of the exchange of the instruments of ratification the President shall have determined that the Republic of Panama has ratified the treaty, as amended, in accordance with its constitutional processes, including the process required by the provisions of article 274 of the Constitution of the Republic of Panama."

In effect, the reservation I propose makes clear to the President that the Senate does not consent to ratification of a potentially invalid treaty. It instructs the President to determine that the Republic of Panama has properly considered our amendments as required by the Constitution of Panama.

In short, the reservation I propose makes explicit the recognition that a new plebiscite is required in Panama to deal with changes already made or pending to the Panama Canal Treaty. A new plebiscite in Panama is necessary to:

First. Conclude a new agreement between the United States and Panama in the manner of a contract, which we all understand;

Second. Guarantee United States and Panamanian rights under the treaty;

Third. Comply with international law;

Fourth. Reduce the likelihood of misunderstandings with the Panamanians;

Fifth. Reduce the chances that subsequent Panamanian regimes will refute the treaty;

Sixth. Comply with the Panamanian Constitution and insure that the Supreme Court of Panama does not void the agreement;

Seventh. Support our policy of standing up for political and human rights around the world; and

Eighth. Show the American people that the "reservations" passed by the Senate are not a political maneuver designed to camouflage real flaws in the treaties so that General Torrijos and the administration will not suffer political embarrassment and defeat.

Panamanian-American diplomatic relations are unlikely to be smooth in the years ahead. Our interests and policies are simply too diverse on too many issues. For example, in 1976, on 36 issues before the United Nations in which the Soviet Union and the United States were on opposite sides, Panama voted with the Soviet Union 31 times and with the United States only 5 times. I understand that the record last year was even worse. Ambiguities in the Panama Canal Treaty and uncertainty over the impact of the implementing legislation are likely to lead to additional problems. For these reasons, I believe that the United States should protect itself by insuring that it does not commit itself to an irreversible treaty which may fall apart before it has

run its course. My reservation on a second plebiscite in Panama will help prevent some of those problems that can be avoided.

Mr. President, I reserve the remainder of my time.

Mr. BENTSEN. Mr. President, even in a Senate clearly and deeply divided over the Panama Canal treaties, I think we could establish a broad consensus on at least one important point: our overriding national interest in Panama is to keep the Panama Canal open, neutral, operating efficiently, and accessible to U.S. vessels at all times.

The basic question we have been debating for the past 2 months is whether this objective is best served by a new order in the Canal Zone or by clinging desperately to the status quo.

Mr. President, no treaty, past or present, can guarantee the future of the Panama Canal. In the final analysis the future of the canal, and our ability to use it freely, will be determined by the degree to which Panama and the United States of America are prepared to work together to achieve mutually acceptable objectives.

The treaties before the Senate give us a framework, an acceptable framework in my opinion, for future cooperation with the Government and people of Panama. The treaties are not an indication of the decline and fall of the United States. They are, instead, an important symbol of our willingness, as the most powerful and compassionate nation in the world, to deal with lesser powers from a position of fairness and mutual respect.

The Panama Canal treaties, as originally negotiated and sent to the Senate, were vague on the important questions of canal neutrality and priority passage for U.S. vessels in time of need. The Senate amended the treaties to provide appropriate assurances on these important points. The significance of these amendments has been fully appreciated by the American people.

Poll after poll, in Texas and across the country, has demonstrated that when the people understand the assurances contained in the leadership amendments to the treaty, the majority of them support treaty ratification. Without the leadership amendments such support would be clearly lacking.

I have heard about the Opinion Research Organization being quoted time and time again here on the floor and it is a fine research organization. But they did not quote the figures for Texas, I notice. Those figures for Texas show that 79 percent of Texans in February were opposed to that treaty; only 11 percent for it, until something very important happened. When the two amendments were attached to it, as approved by the leadership and by the Senate, a dramatic shift in public opinion in Texas occurred. After that, 49 percent approved the treaty with those two amendments attached. Thirty-three percent were then opposed and the rest were undecided.

Like many Members of the Senate, I traveled to Panama and Latin America earlier this year to learn firsthand about the treaties and their ramifications. I came away from my meetings with American and Panamanian officials, with Archbishop McGrath of Panama City, with the Presidents of Costa Rica, Venezuela, and Colombia, firmly convinced that those would rejoice most at Senate rejection of the Panama Canal treaties would be Communist and leftist elements in Latin America opposed to our interests and our friends in the area. That they would use the charge of colonialism to advance the cause of Castro and other Communist elements throughout Latin America and the Caribbean.

I came away with the conviction that one of the best ways to keep the Panama Canal open is to give the people of Panama an economic self-interest in its continuing operation and to relieve nationalist strains in Panama with a new treaty that is consistent both with our national interests and Panamanian national pride.

There are risks inherent in Senate approval of the Panama Canal treaties, Mr. President. Let us acknowledge this fact honestly and openly. But there are also risks—in my opinion greater risks—in Senate refusal to approve the treaties. Our choice today is not between the new treaties and the status quo in the Canal Zone. Rather, it is between the treaties as negotiated and amended by the Senate and the potential Panamanian reaction if the treaties are rejected.

Mr. President, I support Senate approval of the Panama Canal treaties because I believe ratification is in the best interest of the United States of America, because I am sincerely convinced that the treaties, as amended by the Senate, provide adequate assurances for our vital national security and economic interests; because I believe the treaties will serve to keep the canal open and accessible to U.S. vessels; and finally, because I feel this Nation is strong enough, confident enough, and decent enough to conclude such an agreement.

Mr. CHURCH. Mr. President, I do not believe that the distinguished Senator from Oklahoma has called up his amendment. I ask him at this time if it is his purpose to call up the amendment so that the Senate may proceed to a vote at 11:45.

Mr. BARTLETT. Yes, my purpose is to call it up and have a vote.

Mr. CHURCH. I have not seen the amendment in its final version. I wonder if the Senator would send it to the desk so I can read the amendment before commenting on it.

RESERVATION NO. 3

Mr. BARTLETT. Mr. President, I call up my amendment, reservation No. 3.

The PRESIDING OFFICER. The reservation will be stated.

The assistant legislative clerk read as follows:

The Senator from Oklahoma (Mr. BARTLETT) proposes a reservation numbered 3:

Before the period at the end of the resolution of ratification, insert a comma and the following: "subject to the reservation that before the date of the exchange of the instruments of ratification the President shall have determined that the Republic of Panama has ratified the Treaty, as amended, in accordance with its constitutional processes, including the process required by the provisions of Article 274 of the Constitution of the Republic of Panama".

Mr. CHURCH. Mr. President, this reservation would require that the President of the United States certify to the U.S. Senate that the Government of Panama has complied with the laws of Panama.

I have little doubt how we would react if a similar reservation was adopted by Panama and directed toward the United States. We would regard it as the height of presumption.

Furthermore, there is no way that the President of the United States can positively certify that Panama has complied with Panamanian laws.

This is a matter that can be authoritatively determined only by the Government of Panama, and, furthermore, it is the business of Panama.

Now, article II of the treaty provides as follows:

This treaty shall be subject to ratification in accordance with the constitutional procedures of the two parties.

I submit, Mr. President, that this language is all the guarantee we need. In the normal course of comity between nations, Panama would certify that its own constitutional processes, its own laws, had been complied with, and we in turn would certify that our laws had been complied with.

I do not think that it is within the competence of the Presidency or of the Senate to construe or to interpret Panamanian law for the Panamanians.

It has been argued that since the Senate has adopted certain reservations to these treaties it is necessary to hold a second plebiscite under Panamanian law. Mr. President, that is for the Panamanians to determine.

The PRESIDING OFFICER. The time of the Senator from Idaho has expired. The Senator from Oklahoma has 1 minute.

Mr. CHURCH. Therefore, the time having expired, I hope that the Senate rejects this amendment. It is my plan to make a motion to table the amendment as soon as the time of the Senator from Oklahoma has expired.

Mr. BARTLETT. Mr. President, my reservation simply says that before it gives consent to this treaty, the Senate advises the President that he take precautions to insure that it is a valid treaty.

We want to know legally what the Panamanians do believe the understanding to be. We do not want a pig in a poke. We want to know what they believe in a legal manner according to international law.

As it stands now, we know that there are those in Panama who believe there should be a plebiscite. There are those in Panama who believe that provisions, reservations, amendments, understandings added to the treaty have not been done so with the support of Panamanians, that the Panamanians do not support those provisions that have been added in the Senate.

So I think it is important that we be assured legally that we and the Pana-

manians have the same understandings so that there will not be a confrontation down through the years as we approach the end of the year 1999.

The PRESIDING OFFICER. All time on the amendment has expired.

Mr. BARTLETT. Mr. President, I ask for the yeas and nays.

Mr. CHURCH addressed the Chair.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. CHURCH. Mr. President, I move to lay the amendment on the table and ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion to lay on the table reservation No. 3 of the Senator from Oklahoma (Mr. BARTLETT). The yeas and nays have been ordered and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK) is necessarily absent.

Mr. STEVENS. I announce that the Senator from Wyoming (Mr. WALLOP) is necessarily absent.

The result was announced—yeas 63, nays 35, as follows:

[Rollcall Vote No. 110 Ex.]

YEAS—63

| | | |
|---|---|---|
| Anderson | Haskell | Moynihan |
| Baker | Hatfield, | Muskie |
| Bayh | Mark O. | Nelson |
| Bellmon | Hathaway | Packwood |
| Bentsen | Heinz | Pearson |
| Biden | Hodges | Pell |
| Bumpers | Hollings | Percy |
| Byrd, Robert C. | Huddleston | Proxmire |
| Case | Humphrey | Ribicoff |
| Chafee | Inouye | Riegle |
| Chiles | Jackson | Sarbanes |
| Church | Javits | Sasser |
| Clark | Johnston | Sparkman |
| Cranston | Kennedy | Stafford |
| Culver | Leahy | Stevenson |
| Danforth | Long | Stone |
| DeConcini | Magnuson | Talmadge |
| Durkin | Mathias | Weicker |
| Eagleton | Matsunaga | Williams |
| Glenn | McGovern | Zorinsky |
| Gravel | McIntyre | |
| Hart | Metzenbaum | |

NAYS—35

| | | |
|---|---|---|
| Allen | Goldwater | Nunn |
| Bartlett | Griffin | Randolph |
| Brooke | Hansen | Roth |
| Burdick | Hatch | Schmitt |
| Byrd, | Hatfield, | Schweiker |
| Harry F., Jr. | Paul G. | Scott |

| Domenici | Lugar | Tower |
| Eastland | McClure | Young |
| Ford | Melcher | |
| Garn | Morgan | |

NOT VOTING—2

| | |
|---|---|
| Abourezk | Wallop |

So the motion to lay on the table reservation No. 3 was agreed to.

Mr. SARBANES. Mr. President, I move to reconsider the vote by which the motion to lay on the table was agreed to.

Mr. BUMPERS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER (Mr. HARRY F. BYRD, Jr.). The Senator from Maryland has the floor.

Mr. SARBANES. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

(The following occurred earlier in today's proceedings and are printed at this point by unanimous consent:)

Mr. DOLE. Mr. President, I wonder whether the Senator from Kansas can have some time. I have a noncontroversial matter, just to make some nonlegislative history, which will take about 3 or 4 minutes.

Mr. THURMOND. I yield the 1 minute I have remaining to the distinguished Senator from Kansas, if that will help.

Mr. DOLE. I thank the distinguished Senator from South Carolina.

Mr. President, I ask unanimous consent that the statement I am about to make appear following the six votes at 10 o'clock.

The PRESIDING OFFICER. Without objection, it is so ordered.

Does the Senator ask that this time not be charged against the amendment?

Mr. DOLE. That it be charged against the amendment, but that the comments made by the Senator from Kansas appear following the votes.

The PRESIDING OFFICER. The time of the Senator from South Carolina has expired, and the Senator from Maryland would have to yield time.

Mr. DOLE. Will the Senator from Maryland yield 3 minutes, so that I may make some legislative history? It is not on the amendment.

Mr. SARBANES. I yield 3 minutes to the Senator.

### PROTECTION OF LAND HELD BY MASONIC LODGE IN CANAL ZONE

Mr. DOLE. Mr. President, I call the attention of my colleagues to a small, but not insignificant aspect of the current Panama Canal Treaty debate, which should not go unnoticed before we complete our work on this matter. It involves the unique situation of the only privately owned real property lying within the present Panama Canal Zone—land purchased and held continuously by Sojourners Lodge of the Ancient Free and Accepted Masons for 57 years.

Sojourners Lodge, located in Cristobal, Canal Zone, and under the jurisdiction of the Grand Lodge of Massachusetts, holds clear title to a tract of land and a building which sits upon it, at the southwest corner of the intersection of Bolivar Avenue and Eleventh Street. Its purchase of the property from the Panama Railroad Company in 1921 was authorized by an act of Congress the previous year (41 Stat. 948). In fact, all other real property in the Canal Zone is owned by the Government of the United States, and will be transferred to the Government of Panama under the provisions of the treaty now under consideration.

Naturally, there has been concern among the members of Sojourners Lodge about the possible effect of the new treaty upon their legal right, and their practical ability to retain ownership of their property and their building once all surrounding land in the Canal Zone has been turned over to Panama.

The draft treaty of 1967, which never reached the Senate floor for a vote, contained specific reference to the understanding that the Lodge's title to this property would not transfer to the Republic of Panama. Despite the fact that this matter was again brought to the attention of the U.S. negotiating team last year, no similar provision was contained within the present Panama Canal Treaty proposal.

Although State Department officials have stated their clear understanding that the new treaty in no way alters or affects the property title held by Sojourners Lodge, the members have sought a precise statement to this effect by the Government of Panama itself.

With the cooperation of our State Department and the Embassy of Panama located in Washington, D.C., the Senator from Kansas has been able to secure a clear, precise, and unambiguous commitment from an authorized representative of the Panamanian Government that the private deed to this property in Cristobal will continue to be honored in perpetuity. This statement conveys the understanding that Panama will in no way attempt to induce Sojourners Lodge to vacate their land or building, nor levy any charge for their continued occupancy of the property. I am advised that this commitment has been cleared with the highest authorities in the Government of Panama.

So that there may be no question on this point now, or at any future date, I believe this should be made a matter of record in the legislative history of the Panama Canal Treaty now proposed for ratification. Therefore, Mr. President, I ask unanimous consent that the letter from the chargé d'affaires to the State Department legal adviser, dated April 14, 1978, be printed in the RECORD at the conclusion of my remarks, along with correspondence from the State Department and Panama Canal Zone Government confirming their agreement with this position.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

APRIL 14, 1978.

Mr. HERBERT J. HANSELL,
*Department of State,*
*Washington, D.C.*

DEAR MR. HANSELL: In response to your verbal inquiry, I hereby notify you that we recognize the validity of the title now held by the Sojourners Lodge, of the Ancient Free and Accepted Masons, to the tract of land comprising lots numbered 641, 643, 645 and 647 located on the southwest corner of the intersection of Bolivar Ave. and 11th Street in Cristobal and to the improvements thereon. The entry into force of the Panama Canal Treaty of 1977 will not in any way impair the validity of this title.

I avail myself of this opportunity to renew to you the assurances of my consideration.

R. A. BILONICK PAREDES,
*Chargé d'Affaires, a.i.*

DEPARTMENT OF STATE,
*Washington, D.C., February 21, 1978.*

Mr. WHITFIELD W. JOHNSON,
*Tremont Street,*
*Boston, Mass.*

DEAR MR. JOHNSON: The Secretary has asked me to respond to your letter of January 27, concerning the effect which approval of the Panama Canal Treaty of 1977 would have on title held by the Sojourners Lodge A.F. and A.M. to a tract of land in Cristobal.

Your letter correctly notes that the 1977 Treaty does not specifically confirm the Lodge's ownership of the tract in question. Contrary to your assumption, however, the Treaty does not divest the Lodge of its title or convey title to the Republic of Panama.

Article XIII(2) conveys to Panama (with certain exceptions) all right title and interest of the United States in real property located in the Canal Zone. This provision does not purport, nor was it intended to disturb in any way the present title of the Sojourners Lodge.

Nor is the Lodge's title affected by the termination of the 1903 Treaty. Prior to entry into force of the 1903 Treaty, title to the tract deeded to the Masons was held by the Panama Railroad Company; accordingly, the rights it held (and ultimately conveyed to the Masons) did not arise under the provisions of that agreement, and would not be affected by its termination.

The provisions of the Panama Canal Treaty of 1977 concerning applicable law and law enforcement insure that the present title of the Lodge will not be subject to question under Panamanian law. Under paragraph 1 of Article XI of the 1977 Treaty, Panama agrees that its law "shall be applied to matters or events which occurred in the former Canal Zone prior to the entry into force of this Treaty only to the extent specifically provided in prior treaties and agreements." It seems clear, therefore, that the validity of the 1921 conveyance would not be subject to question under Panamanian law, since it concerns a matter or event occurring prior to entry into force of the 1977 Treaty, the regulation of which is not specifically provided to Panama under earliest treaties. Accordingly, it does not appear that there should be any serious difficulty in obtaining recognition by Panama of the Masons' deed to their land in Cristobal. Upon entry into force of the Teraty, the Lodge should register its deed with the Panamanian authorities in order to formalize their ownership under Panamanian law.

If you require any further information or assistance in connection with this matter, feel free to contact me.

Sincerely,

MICHAEL KOZAK,
*Acting Assistant Legal Adviser for Inter-American Affairs.*

---

OFFICE OF THE GOVERNOR.

CERTIFICATE

I, Joseph J. Wood, Chief, Administrative Services Division (Agency Records Officer) and legal keeper of the records of the Panama Canal Company and Canal Zone Government, do hereby certify that the attached document, described herein, as a true and correct copy of the official record of such document contained in the files of the Panama Canal Company and Canal Zone Government:

Signed and notarized copy, dated April 19, 1921, of the indenture made between the Panama Railroad Company and officers of Sojourners Lodge of the Ancient Free and Accepted Masons of Cristobal, Canal Zone, for the building known as the Masonic Temple and the land upon which the building rests.

I further certify that the office of the Agency Records Officer possesses no official seal.

In witness, here I have hereunto set my hand at Balboa Heights, Canal Zone, on this 17th day of February, A.D. 1978.

JOSEPH J. WOOD,
*Chief, Administrative Services Division, Agency Records Officer, Panama Canal Company, Canal Zone Government.*

---

OFFICE OF THE GOVERNOR,
*September 23, 1977.*

Mr. JAMES E. BREDENKAMP,
*Chairman, Building Committee, Sojourners Lodge, A.F. & A.M., Cristobal, Canal Zone*

DEAR MR. BREDENKAMP: This is in response to your letter of September 19 concerning omission in the proposed Panama Canal Treaty of 1977 and related agreements of specific treatment of lots 641, 643, 645 and 647 in Cristobal, Canal Zone which were conveyed to Sojourners Lodge, A.F. & A.M. by the Panama Railroad Company pursuant to Congressional authorization (41 Stat. 948). As requested, this will confirm that the singular status of title to the lots was brought to the attention of the United States negotiations team. With regard to our conversation, this will also confirm that specific treatment was accorded this property in the 1967 draft treaty.

Sincerely yours,

J. PATRICK CONLEY,
*Executive Secretary.*

(Conclusion of proceedings which occurred earlier.)

UP AMENDMENT NO. 36

Mr. ROBERT C. BYRD. Mr. President, on behalf of myself, the distinguished minority leader, Mr. DECONCINI, Mr. CHURCH, and Mr. SARBANES, I send to the desk an amendment to the resolution of ratification and ask that it be stated by the clerk.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from West Virginia (Mr. ROBERT C. BYRD), for himself and Mr. BAKER, Mr. DECONCINI, Mr. CHURCH, Mr. SARBANES, Mr. SPARKMAN, Mr. JAVITS, Mr. LEAHY, and Mr. GRAVEL, proposes an unprinted amendment numbered 36.

Before the period at the end of the resolution of ratification, insert a comma and the following: "subject to the reservation that: Pursuant to its adherence to the principle of non-intervention, any action taken by the United tSates of America in the exercise of its rights to assure that the Panama Canal shall remain open, neutral, secure, and accessible, pursuant to the provisions of this Treaty and the Neutrality Treaty and the resolutions of advice and consent thereto, shall be only for the purpose of assuring that the canal shall remain open, neutral, secure, and accessible, and shall not have as its purpose nor be interpreted as a right of intervention in the internal affairs of the Republic of Panama or intereference with its political independence or sovereign integrity."

Mr. ROBERT C. BYRD. Mr. President, this amendment reaffirms the principle of nonintervention, a principle which is and should remain a cardinal principle of U.S. foreign policy.

The amendment would make absolutely clear that the United States does not claim and does not seek any right of intervention in the internal affairs of Panama. The United States respects the sovereign integrity and the political independence of Panama.

Our interest is an open, secure, neutral, and accessible canal. We have no interest in the internal affairs of the Republic of Panama.

Mr. President, the language contained in this amendment is the result of many, many hours of discussion, involving many Senators on both sides of the aisle. These discussions have involved Senators who have adverse viewpoints, diverse viewpoints, and differing viewpoints.

The final text of the amendment represents a consensus which developed out of those discussions with the many Senators on both sides of the aisle.

On this Sunday, the past Sunday, together with the distinguished floor managers of the treaties, Mr. SARBANES and Mr. CHURCH, met with the Panamanian Ambassador, Mr. Gabriel Lewis, in the company of Warren Christopher, the Deputy Secretary of State, and showed to the Panamanian Ambassador the proposed text of the amendment.

Following our discussion, Ambassador Lewis relayed the contents of the proposed amendment to his government. Later in the day, Mr. SARBANES and Mr. CHURCH, and I were informed through the State Department that the Panamanian Government considered the amendment to be a "dignified solution to a difficult problem."

Mr. President, as I have said throughout the course of this debate, these treaties are consistent with the best and most worthy of American values and principles. They serve and promote our national interests.

This amendment is totally in accord with those goals and principles, and it demonstrates our respect for and our concern for the pride and sensitivities of the people of Panama.

This amendment is the concrete expression of policy based upon respect for the sovereignty of our treaty partner.

This amendment and these treaties represent a fair and honorable course for our country and for Panama. I strongly urge the adoption of the amendment.

Mr JAVITS. Mr. President, will the Senator yield?

Mr. ROBERT C, BYRD. Yes, I yield.

Mr. JAVITS. I think it more appropriate for the Senator to yield to Senator BAKER.

Mr. ROBERT C. BYRD. Yes, I yield.

Mr. BAKER. Mr. President, I thank the Senator from New York. I will not take very long, and I thank the majority leader for yielding.

Mr. President, I support this proposal. I would point out, as my colleagues know, that it is a product for much effort, as the majority leader indicated, following in the wake, as it did, of expressed discontent by the Panamanian Government and many people of the Republic of Panama, of the text and tone of the so-called DeConcini reservation.

Early on I conferred with the distinguished majority leader and I indicated to him at that time it was my view that the so-called leadership amendment to the Neutrality Treaty had in many respects the same equivalent effect in that it provided that the United States has the right to protect the regime of neutrality and the free, open access of this

canal to American traffic on a priority basis, and traffic of all nations permanently, but that I would have no objection to some effort to devise language, which would be consistent with the leadership amendment, which did not significantly diminish the rights of the United States to protect that regime of neutrality, and that I would await the negotiations that might be conducted on the majority side of the aisle and, indeed, with the Government of the Republic of Panama.

The majority leader very kindly kept me advised of the progress of those negotiations, and following the course of those negotiations, as described by the majority leader, I indicated to him that I found this language acceptable, and I would be pleased to cosponsor it.

I do not believe this language diminishes in any respect the rights of the United States, nor does it impugn the authority of the Republic of Panama. I think it materially improves the potential for a good relationship between the countries, and I think it is a constructive measure that I hope will be adopted by the Senate.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished minority leader both for his support of the amendment, his cosponsorship of it, and his supporting statement.

Mr. President, before I yield to the distinguished Senator from New York, I ask unanimous consent that the distinguished chairman of the Committee on Foreign Relations (Mr. SPARKMAN) be added as a cosponsor.

The PRESIDING OFFICER (Mr. HARRY F. BYRD, Jr.). Without objection, it is so ordered.

Mr. JAVITS. Mr. President, I would like to make the same request, that I be added as a cosponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JAVITS. Mr. President, I have always believed very deeply that this was a test of the American policy, certainly the Americas, for the foreseeable future. I hope it lasts for a century or more.

It involves very deeply our relations with the other countries in the Americas, and the formula which you have used in this amendment "open, neutral, secure, and accessible" is the proper formula to be used, and the formula respecting intervention is taken almost verbatim from the words of the Carter-Torrijos agreement, an understanding upon which we based our ratification of the first treaty.

Mr. President, I think a very creditable job has been done for our country in dealing with what I believe were the very legitimate objections to the original DeConcini amendment which, in my judgment, gave a hunting license to any American President, and had to be unacceptable to the people of Panama.

I voted against it; a number of others voted against it, who have been constant and indefatigable supporters of the treaty, because I believe it nullified—not the words, not the agreement, but nullified—the purpose, the intent, and the motive for the United States entering into this treaty.

Nobody pretends this is an advantageous treaty to the United States over and above 1903. But, Mr. President, it is a necessary agreement, an engagement by the United States that we live in 1978, not in 1903, and that in this time even the rights of small nations have to be respected and regarded as sovereign and equal in significance and solemnity with the respect with which we expect to be accorded to the sovereignty of big nations, including superpowers like the United States.

So I believe this reservation has now dealt in the most practical and direct way with the two problems: First, the real purpose of the United States to have a canal which is open, neutral, secure, and accessible, and I hope these words will ring in history—they are exactly the right test; and, second, that under no circumstances are we going to allow any American President or any American Congress to dream up some incident which will enable us to determine how Panama should be run or who should govern it.

For those reasons, Mr. President, I very strongly support this reservation.

Mr. President, I ask unanimous consent that article II of the Panama Canal Treaty and article VIII of the Neutrality Treaty be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

PANAMA CANAL TREATY

ARTICLE II

RATIFICATION, ENTRY INTO FORCE, AND TERMINATION

1. This Treaty shall be subject to ratification in accordance with the constitutional procedures of the two Parties. The instruments of ratification of this Treaty shall be exchanged at Panama at the same time as the instruments of ratification of the Treaty Concerning the Permanent Neutrality and Operation of the Panama Canal, signed this date, are exchanged. This Treaty shall enter into force, simultaneously with the Treaty Concerning the Permanent Neutrality and Operation of the Panama Canal, six calendar months from the date of the exchange of the instruments of ratification.

2. This Treaty shall terminate at noon, Panama time, December 31, 1999.

---

TREATY CONCERNING THE PERMANENT NEUTRALITY AND OPERATION OF THE PANAMA CANAL

ARTICLE VIII

This Treaty shall be subject to ratification in accordance with the constitutional procedures of the two Parties. The instruments of ratification of this Treaty shall be exchanged at Panama at the same time as the instruments of ratification of the Panama Canal Treaty, signed this date, are exchanged. This Treaty shall enter into force, simultaneously with the Panama Canal Treaty, six calendar months from the date of the exchange of the instruments of ratification.

Done at Washington, this 7th day of September, 1977, in duplicate, in the English and Spanish languages, both texts being equally authentic.

The PRESIDING OFFICER. Who yields time?

Mr. LAXALT. Mr. President, will the Senator yield for a question or two?

Mr. JAVITS. Certainly.

Mr. LAXALT. If I understand the Senator from New York's observations, the so-called DeConcini reservation was objectionable to the Senator on the basis that it granted the United States a so-called hunting license.

Mr. JAVITS. Right.

Mr. LAXALT. I gather that whatever is being expressed in the new reservation propounded by the leadership changes that results; is that correct?

Mr. JAVITS. That is correct.

Mr. LAXALT. Is the Senator saying to all of us then that the effect of this reservation is to diminish the effect of the DeConcini reservation?

Mr. JAVITS. Not at all. On the contrary, it is to lay down the ground rules by which it should be used, and which are the only ground rules that are practicable for a nation like our own.

What concerned me about the original DeConcini reservation is that it was susceptible to abuse, and this, the ground rules here laid down, it seems to me, removes that danger.

Mr. LAXALT. To the extent then this is a limiting factor, a moderating factor, certainly at least to that extent then it has to diminish the thrust of the DeConcini amendment or do I misunderstand the observations of the Senator from New York?

Mr. JAVITS. I think the Senator does misunderstand my observations. It diminishes nothing. It increases our stature, but it diminishes absolutely nothing about what the purpose of the agreement between Carter and Torrijos, which was incorporated in the previous treaty, was intended to attain, and that is under any circumstances, even if it means stepping upon the territory of Panama, under any circumstances, even if it means guerrillas or organized troops who are operating out of Panama, we have the obligation to keep that canal open, neutral, accessible and secure.

Mr. LAXALT. But——

Mr. JAVITS. If I may just finish, the Senator asked me a question.

Mr. LAXALT. Yes, sure.

Mr. JAVITS. What it does prevent is the abuse of that particular provision for some national purpose which is unworthy of us and which is not within the purpose or intent of this agreement or the reason why I am hopeful the Senate will ratify it today. It simply is a protection against abuse.

May I give the Senator an example—

Mr. LAXALT. Surely.

Mr. JAVITS. —because I know we would like to be very precise about this.

I go out of town, I have a lawyer, I give my lawyer a power of attorney. I tell him, "Look, I am giving you this power because I want you to pay my bills; when the dog has to go to the vet I want you to take the dog and pay the vet," and so forth. I do not give him any power of attorney to empty out my safe deposit box but, nonetheless, he does.

Now, Mr. President, is that a limitation on his power if I write in the power of attorney, "I am sorry but I do not want you to empty out my safety deposit box," or is it simply to prevent abuse? That is what I am saying.

I am saying that we are adopting now a reservation which will prevent the

abuse of a reservation we previously adopted, which was susceptible of abuse.

Mr. LAXALT. The Senator used the power of attorney example. If I may say so, knowing the Senator's reputation for careful and precise language, I was intrigued by his choice of words, particularly of the term "hunting license."

To me, that indicated, if we are going to talk about the analogy of a power of attorney, something akin to a general power of attorney.

What we have here, if I understand the thrust of this amendment, is a limited and special power of attorney, so that you have begun with a general power of attorney, but have now come in with a reservation seeking to limit that to a special power of attorney; is that not correct?

Mr. JAVITS. I do not agree with that at all, and I think it is a complete misreading of the intent of this particular reservation.

The PRESIDING OFFICER. The Chair would inquire as to who is yielding time at this point.

Mr. LAXALT. The Senator from Nevada is yielding time at this moment. May I ask a further question?

Mr. JAVITS. On your time, yes.

Mr. LAXALT. This treaty expires, does it not, on December 31, 1999?

Mr. JAVITS. That is correct.

Mr. LAXALT. The DeConcini reservation to the Neutrality Treaty takes effect, under its terms, on January 1, 2000, does it not?

Mr. JAVITS. Correct.

Mr. LAXALT. I fail to understand, since this discussion has arisen, how in the world a provision of this kind can be operative on the first treaty, when, by the terms of the pending treaty, it expires on December 31, 1999.

Mr. JAVITS. The reservation expresses a policy of the United States, and a policy which we believe now, from what the majority leader has said, is acceptable as the policy which will guide United States actions under these treaties toward the Republic of Panama.

It seems to me, therefore, that the purpose and intent of the reservation being clear to both parties, if acceptable to both parties, it may be incorporated in this document without vitiating its effectiveness, because really it is binding on us.

In other words, what it is is a guideline as to the actions of the President of the United States, the Commander in Chief of our Armed Forces——

Mr. LAXALT. Well, Senator——

Mr. JAVITS. If I may just finish, I think, notwithstanding the fact that this treaty runs out, as it were, under its terms, in respect of this activity it is a totality. Both treaties are a totality and a link. One treaty does not become effective until the other treaty becomes effective, and the terms of each treaty say that. Therefore that link, it seems to me, fully justifies the wording of this reservation.

Mr. LAXALT. Without being elementary or fundamental here, as a matter of simple contract law, is it not true that the treaties are tantamount to contracts?

Mr. JAVITS. I can agree to that.

Mr. LAXALT. All right. Is it not also true that under the terms of the treaty now under consideration, it expires on December 31, 1999? How in the world can this reservation be operative in a treaty that takes effect after this treaty expires?

Mr JAVITS. I just explained that, Senator. Both treaties are linked as a unit by the provision in each treaty that neither treaty shall be effective unless the other is. It is because of that link, in my judgment, that we have a right to adopt this reservation and this reservation is, in my judgment, binding.

If the two treaties were absolutely insulated one from the other, the Senator's question might have some pertinence; but even then, I doubt that the argument would be effective, because this represents a guideline to the President of the United States and to future Congresses.

It seems to me that that question is completely resolved, even on the texts of the treaties, by the relation between the two contracts.

Mr. McCLURE. Mr. President, will the Senator yield?

Mr. LAXALT. Surely

Mr. McCLURE. Certainly the Senator from New York has again demonstrated the validity of the comment I made to him yesterday, that if I have a very weak case in court I want him as my lawyer, because he is capable of making a very good argument where there is no possibility of a valid argument. I commend him for that, but certainly the Senator from New York knows the difference between a general power of attorney and a limited or special power of attorney. I think the Senator from Nevada is precisely correct, that this is a limitation and a reduction in the scope of the original DeConcini amendment.

I think it is also worthy of noting that the Senator is exactly correct with regard to the expiration of the terms of this treaty at the end of this treaty. The Senator from New York is now arguing that the two are linked, when the managers of the treaties refused to allow a linkage between the two treaties when that was discussed, and when amendments were offred earlier to do precisely that. So there is not the linkage now being argued; there is a separation, and an ending of the first treaty. I commend the Senator from Nevada for having made those points.

Mr. SCOTT. Mr. President, will the Senator yield briefly?

Mr. LAXALT. I am pleased to yield to the Senator from Virginia.

Mr. SCOTT. I appreciate the Senator's yielding.

I voted against the original DeConcini reservation because I had doubt that it would have any valid or binding effect upon the treaty; and to me this amendment to the reservation merely expresses a concern for the people of Panama.

I would think that we, as U.S. Senators, should be concerned about the people of the United States far more than we should be concerned about the people of Panama. They demonstrate a little bit in the street and we fly to pieces about it; but the American people are opposed to this treaty, and I believe the important thing here is to do what is best for the United States. The distinguished Senator from New York spoke of enhancing the American image by adopting something of this nature. The American image and the American leadership in the free world will be shown by strength; and we are not becoming stronger by giving away this vital artery of commerce.

I am retiring from the Senate, as Senators know, at the end of this term. In my judgment, other Senators will retire involuntarily come the general election in November.

Mr. HELMS. Mr. President, I yield to the able Senator from Alabama.

Mr. ALLEN. I thank the distinguished Senator from North Carolina for yielding to me.

Mr. President, I do not know why the amendment before the Senate now has been shrouded in such secrecy. I was able to obtain a copy of this amendment at 12 minutes after 12, to have an opportunity to study it. Why the need for all this secrecy? What has become of the old principle of "open covenants openly arrived at"?

What this amendment seeks to do is to get this treaty and the other treaty off the horns of a dilemma caused by the administration and the leadership themselves. They accepted the DeConcini reservation. They embraced it, they endorsed it, and in fact it became a leadership-administration amendment.

Now they seek to water down, in this treaty which expires on January 1 of the year 2000, a reservation to the other treaty, which is in perpetuity.

The distinguished Senator from New York spoke of the words here being the words of the memorandum between the President and the dictator, which later became the leadership amendment. That is true. The Neutrality Treaty did have the leadership amendment. This amendment now is a pseudo-leadership amendment. It seeks to graft onto this treaty, which expires at the end of this century, the provisions of the leadership amendment.

That being true, let us see what the DeConcini reservation says: notwithstanding the provisions of article V or any other provision of the treaty, if the canal is closed, or its operations are interfered with, the United States has a right unilaterally to take whatever action is necessary to keep the canal open and operating even to the point of using military force.

The Neutrality Treaty had the leadership amendment in it. Yet the DeConcini amendment says irrespective of the leadership amendment, irrespective of that limitation, this unilateral right to use military force to keep the canal open will be a right that the United States reserves under the treaty.

So, Mr. President, how could you, by inserting a provision in this treaty, affect the provisions of the DeConcini amendment which is not effective, even by the terms of the leadership amendment which forms part of the Neutrality Treaty?

How can you put something in another treaty that is not effective to diminish the

DeConcini rights reserved to the United States which are contained in the very treaty as to which the DeConcini reservation was made?

Obviously, with the treaty before us, the Panama Canal Treaty, giving the canal away, with that expiring on the dawn of the 21st century, anything contained in this treaty falls. It is dead. It has become functus officio. It has performed its function. It has no further standing.

What we are doing here, Mr. President—and I hope all will understand, all on both sides of this treaty—is we are seeking to placate the Panamanians without angering those of us who want to see that we do have a right to keep the canal open. It is something in the nature of a sop, a sop to the Panamanians. It is a mighty weak effort, it seems to me, to try to tie, in effect, the leadership amendment to the Neutrality Treaty also on the Panama Canal Treaty. If those words are not effective in the Neutrality Treaty, how in the world can they be effective in the Panama Canal Treaty, which is an entirely different document?

The difficulty that the administration and the leadership are having in diminishing the DeConcini amendment is that the Neutrality Treaty has been acted upon by the Senate. The leadership and the administration had absolute control of every single word that went into that treaty, and this treaty as well. They had absolute control. They controlled every single word that went into both of these treaties here on the floor of the Senate. Now they are seeking to tear down the force and effect of the DeConcini amendment.

But the DeConcini amendment cannot be touched. That Neutrality Treaty has been acted upon by the Senate. The time for reconsideration of the action by the Senate has expired. It has become part of history, Mr. President.

I am reminded of the verse from the Rubaiyat of Omar Khayyam as to the Neutrality Treaty.

> The Moving Finger writes; and having writ moves on; Nor all your Piety nor Wit Shall lure it back to cancel half a Line Nor all your Tears wash out a Word of it.

So, Mr. President, that is the effect of the Neutrality Treaty and the DeConcini amendment. It is there. It is part of history. It is a fait accompli.

The moving finger of history has written, and having written moves on. "Nor all your Piety"—and I think that is an apt word to use under the state of affairs with respect to this effort—"nor all your Piety nor Wit Shall lure it back to cancel half a Line Nor all your Tears wash out a Word of it."

So, Mr. President, it would seem to the Senator from Alabama if the Panamanians took offense at the DeConcini reservation, and they obviously did because they are demonstrating down in Panama right now against it, the matter has not been rectified by this language.

I know the leadership will pass the amendment. There is no doubt about that. I have a couple of amendments to offer to it later on in the day.

It can be passed. As I say, they have control of every word going into the treaty. But not a line of the DeConcini amendment can be changed by any action on this treaty which expires on January 1, in the year 2000.

So this is a sop and a mighty poor sop to the Panamanians. The administration got itself into this difficulty and they are now saying that this will solve things. Well, it will not solve a thing. The Panamanians are expecting the United States to back off the DeConcini amendment when it cannot be done.

This is, as I say, a mighty poor sop for the Panamanians.

Do Senators wonder where the word "sop" comes from? It is something that puts you in mind after the roast is gone, after the meat served at a meal is gone. Then when you sop up the gravy on a biscuit and hand that to the Panamanians, that is what is being given here to the Panamanians. It is not the real thing which is being given to them; it is just a sop to Panama.

I am reminded of something Jesus said in the sermon on the mount:

> What man of you if his son asks for a loaf will give him a stone? Or if he asks for a fish, will give him a serpent?

So, Mr. President, even though the leadership has the power to put this reservation in, it is giving a might poor sop to the Panamanians, because the moving finger has written and it has moved on.

The DeConcini reservation, accepted by the leadership, endorsed by the leadership and the administration, has become a part of history. These little assaults on the DeConcini reservation are going to fall—not by vote of the Senate, because the Senate is going to approve this or anything else that is recommended by the leadership. But what will it accomplish? It will accomplish nothing, because the rights reserved to the United States in the DeConcini amendment will continue to be reserved.

I have two amendments that I shall offer later. I hope that Members of the Senate will register their protest to this reservation, which was negotiated, certainly, in secrecy from the rank and file Members of the Senate, its contents carefully guarded, Members unable to get copies of the reservation.

What did they fear? Was it the bright light of logic? Did they fear that? I rather believe so.

Did they fear the bright light of scrutiny? I believe so.

But the DeConcini reservation, impervious as it is to the leadership amendment in the Neutrality Treaty, will be impervious to efforts in this treaty to water down or to diminish it. It is going to be part of the treaty between the United States and Panama, no matter what we do in this treaty.

I hope that those on both sides will understand that that is the case. I hope the Panamanians, looking for a way out and expecting more than this little sop from the administration and from the leadership, in order to give the Panamanians some reassurance, will vote this amendment down, will vote the treaty down, which would cause the defeat of the Neutrality Treaty and will allow these treaties to go back to the negotiating table so that treaties acceptable to Panama and the United States can be agreed upon. Because, as I see it, neither the people of the United States nor the people of Panama approve of this treaty. I hope the so-called leadership amendment, which was pointed out as being so defective when it was added to the Neutrality Treaty and which is just as defective now, will be voted down by the Senate.

I yield the floor.

Mr. LAXALT. I thank the Senator from Alabama. I yield to the Senator from Utah.

Mr. HATCH. I thank the distinguished Senator from Nevada. I should like to ask some questions in order to establish some legislative history concerning this particular reservation. Maybe I can ask them of the floor manager of the treaty, the distinguished senior Senator from Idaho.

Does this reservation mean that the United States may not use military force to defend the canal?

Mr. CHURCH. No.

Mr. HATCH. Does the United States have the unilateral right, pursuant to this reservation, to send troops to keep the canal open under this reservation, or must the Panamanians agree to such sending of troops?

Mr. CHURCH. Each country, under the treaty, has the obligation to keep the canal open and, in accordance with the terms of the leadership amendments as well as the terms of the pending reservation, that choice can be made by each government.

Mr. HATCH. Can it be made unilaterally is my question; and can we, without Panama's permission, send in troops?

Mr. CHURCH. I think I answered the question.

Mr. HATCH. Specifically, I think I interpret your answer to be that we can.

Mr. CHURCH. The Senator is correct.

Mr. HATCH. If the canal were to be closed and the Panamanians were to be opposed to an effort to send in troops, would this amendment prevent us from sending such troops?

Mr. CHURCH. This reservation does not undo the previous action of the Senate. It clarifies the purpose for which the United States would act. I do not envision a circumstance where the canal was actually threatened, and where the Government of Panama was unable to cope with the character or the magnitude of the threat and did not ask for the assistance of the United States so that both governments could fulfill their mutual obligation under these treaties.

Mr. HATCH. However, in order to establish legislative history here, if Panama were opposed—and that may be hypothetical and probably is, in nature, and I hope so; I hope that they will not be. But if they were opposed to an American effort to send troops to Panama to open the canal, would this reservation prevent us from sending troops into Panama to keep the canal open?

Mr. CHURCH. The answer is no, but the purpose for which the United States would act, and, therefore, the character of its action, would be limited strictly to the obligation that it assumes under the treaty; namely, to keep the canal open,

neutral, secure, and accessible. This is the same obligation that the Government of Panama undertakes. I think it is only reasonable to assume that both governments would act in concert to adhere to their mutual obligation under the treaty.

In fact, if either government refused to keep the canal open, neutral, secure, and accessible, that, in itself, would constitute breach of treaty.

Mr. HATCH. I am glad to have that information. With regard to that precise issue, if American troops land on Panamanian soil solely for the purpose of keeping the canal open, neutral, secure, and accessible pursuant to this reservation, and the Panamanians oppose the landing of our troops, would such a landing constitute an intervention into the internal affairs of Panama?

Mr. CHURCH. I think the answer to that question is expressly written into the terms of this reservation.

Mr. HATCH. What would the answer be, yes or no?

Mr. CHURCH. I quote from the terms of the reservation as follows:

> Any action taken by the United States of America in the exercise of its rights to assure that the Panama Canal shall remain open, neutral, secure, and accessible, pursuant to the provisions of this Treaty and the Neutrality Treaty and the resolutions of advice and consent thereto, shall be only for the purpose of assuring that the canal shall remain open, neutral, secure, and accessible, and shall not have as it purpose nor be interpreted as a right of intervention in the internal affairs of the Republic of Panama or interference with its political independence or sovereign integrity.

Mr. HATCH. That is fine, except that I have added a little element to it, which is that if the Panamanians oppose our entry and we assert that the entry is in the exercise of our rights to assure that the canal shall remain open, neutral, secure and accessible, the language of the reservation in question, would such a landing under those circumstances constitute an intervention into the internal affairs of Panama?

Mr. CHURCH. The answer is "No."

Mr. HATCH. I appreciate the Senator's candor.

If the Government of Panama were to fall under the control of an anti-American dictatorship or other type of political leadership and the quality of service for the transit of the canal declined to the point that, although the canal remained open in theory but closed in essence, would the United States be free under this reservation to open the canal with military force and contrary to the expressed wishes of the Panamanian Government?

Mr. CHURCH. I say to the Senator that it is difficult to speculate on all of the hypothetical situations that may be conjured up. I can only say that whatever may develop will be judged at that time by the Governments of the United States and Panama in relation to the obligations each has assumed under these treaties.

Now, I cannot foretell the future and neither can the Senator from Utah. Therefore, it is impossible for me to answer every hypothetical question.

When the time comes, if it ever comes, and that I doubt very much——

Mr. HATCH. Let us assume the time does come—excuse me.

Mr. CHURCH (continuing). That the United States is called upon to keep the canal open, neutral, secure, and accessible, our Government then will decide whether the facts of the case warrant an action by the United States pursuant to the terms of this treaty.

I cannot speak for any future President. I can only say that he will make his assessment of the situation in the light of the provisions of this treaty and, in compliance with the terms of the treaty, do what he feels is in the best interests of the United States.

Mr. HATCH. I am not asking the distinguished Senator from Idaho to speak for the future, but I am asking him to speak for the present, as the distinguished floor manager of this treaty, and that is, assuming that there is an anti-American government—to make it easier to understand, an anti-American subversive government in Panama, and that because of it considerable service to the canal may not be shut down to the point——

Mr. CHURCH. I will say to the Senator that he now has the floor. I will speak for this reservation on my time, but I am not going to start interpreting what constitutes a shutdown of the canal when he himself cannot define it in a credible manner.

Mr. HATCH. I will be glad to define it.

Mr. CHURCH. The words to which both countries will adhere are controlling. And the words specify that the canal shall remain open, neutral, secure, and accessible.

Those are the test words against which future Presidents will measure any decision or action they might take in accordance with our rights under the treaty.

I will be happy to take the floor in my own right in a few minutes and explain my understanding of this reservation. But I can go no further than the guidelines actually set forth in the treaty, or use words different from the words in the treaty. Certainly, the Senator would not ask me to do so.

Mr. HATCH. I am not asking the Senator to do that, but I am asking the Senator to assist me in formulating the legislative history with regard to this.

But let me move on to the next question.

If the Panamanians are unable to operate the canal, for any reason, would the United States have the right under this reservation to come into the canal and operate it even if the Panamanians oppose our entry?

Would the distinguished Senator from Idaho answer that question for me?

Mr. CHURCH. In the first place, Mr. President, we shall control the Commission that operates the canal from now until the end of the century.

It shall be our responsibility to see to it that Panamanian personnel are adequately equipped and trained to maintain and operate the canal in order to effect an orderly transition at the end of the century.

So I do not envision any circumstance which would leave the Panamanians unable to operate the canal. I think it is an unreasonable and unrealistic presumption.

Furthermore, if the Senator believes that we can operate the canal by moving in the Marines under some fanciful circumstance in the future, then I invite his attention to a recent article in the Washington Post in which our own military authorities point out that neither our own Marine Corps nor our own Army have the competence to do so.

Mr. HATCH. I am willing to accept that.

Mr. CHURCH. Therefore, I feel that the question the Senator poses can be answered in no other way.

Mr. HOLLINGS addressed the Chair.

The PRESIDING OFFICER. Who yields time?

Mr. HOLLINGS. Will the Senator yield to me?

Mr. CHURCH. I am happy to yield to the distinguished Senator from South Carolina.

Mr. HOLLINGS. Mr. President, I learned long ago that when the judge rules with you, do not question the ruling. It is in that spirit that I accept this amendment drawn by the leadership.

I commend the leadership working out the language which would satisfy those who had misgivings about the DeConcini amendment down in Panama, and some of us who have been supportive of the DeConcini amendment up here.

It has been a very tenuous task to get the parties together. I think Senator CHURCH, Senator SARBANES, Senator ROBERT C. BYRD, and Senator CRANSTON have done an outstanding job.

So I intend to support this language. But I think it behooves us at this particular moment in the record to clear the record with respect to the DeConcini amendment. This was really an emphasis of the leadership amendment, and the leadership amendment in turn was only an emphasis of those amendments submitted by the Foreign Relations Committee. They were withheld by the committee at the request of the leadership, although the committee was ready to adopt them.

The genesis of the Foreign Relations Committee amendments dated back to October 14 when President Carter and Gen. Omar Torrijos met at the White House to clarify the misunderstandings. I should remind everyone of the record at that particular time. The chief Panamanian negotiator was stating publicly, and some of his colleagues down there, in the press and the media, that we had no such rights under article IV of the Neutrality Treaty to go in on our own initiative. The question of invitation was what was in issue at the particular time. It was so obscured and confused that it was then that President Carter asked General Torrijos to come by the White House on his return from London.

We sat in the Foreign Relations Committee room that afternoon with Ambassador Sol Linowitz and he submitted then the language of clarification.

At that particular time, it was thought that the language of clarification stating the intent of article IV, would put to rest

all concern. But on that very evening at 8 o'clock General Torrijos on his arrival back in Panama said publicly:

Look, I signed nothing. I didn't even give them an autograph.

It was then that I reduced down to black and white the particular understanding between the President and the general. I did so in the form of an amendment.

Mr. President, I ask unanimous consent to have my amendment No. 9 printed in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

At the end of article IV of the Treaty Concerning the Permanent Neutrality and Operation of the Panama Canal, add the following: "Panama and the United States assume the responsibility to assure that the Panama Canal will remain open and secure for ships of all nations. The United States and Panama shall, each in accordance with its respective constitutional processes, defend the Canal against any threat to the regime of neutrality and each shall have the right unilaterally or collectively to act against any aggression or threat directed against the Canal or against the peaceful transit of vessels through the Canal. This shall not be interpreted as a right of intervention in the internal affairs of Panama but as a right of the United States to take such action, military or otherwise, for the sole purpose of insuring that the Canal will remain open, secure and accessible. Such right shall never be exercised against or directed against the territorial integrity or political independence of Panama.".

At the end of article VI of the Treaty Concerning the Permanent Neutrality and Operation of the Panama Canal, add the following new section 2: "The vessels of war and auxiliary vessels of the United States and of Panama will be entitled to transit the Canal expeditiously. This is intended and it shall be so interpreted to assure the transit of such vessels through the Canal as quickly as possible without any impediment, with expedited treatment, and in case of need or emergency as determined by either party to go to the head of the line of vessels in order to transit the Canal rapidly.".

Add the following article VIII to the Treaty Concerning the Permanent Neutrality and Operation of the Panama Canal and renumber accordingly: "The rights and responsibilities under this neutrality treaty shall supersede any obligation or prohibition that the parties may have under the Rio Pact, the Hay-Pauncefote Treaty of 1901, the charter of the Organization of American States and the charter of the United Nation.".

Mr. HOLLINGS. That amendment was joined in over the fall period by the Senator from Minnesota (Mr. ANDERSON), the Senator from Arizona (Mr. GOLDWATER), the Senator from Missouri (Mr. EAGLETON), the Senator from Georgia (Mr. NUNN), and others. We submitted to the Foreign Relations Committee the need for this being understood without any confusion.

The Foreign Relations Committee, in its report, recommended that these amendments be adopted, in their 14-to-1 vote, and then explained in the Foreign Relations Committee report, on page 6, the statement of intent of these amendments, which now, in essence, is a statement of intent of the leadership amendments.

I ask unanimous consent to have printed in the RECORD page 6, page 7, and the top part of page 8, that section of the Panama Canal treaties report of the Committee on Foreign Relations to the U.S. Senate, dated February 3, 1978.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

STATEMENT OF INTENT

The Committee's intent in recommending the adoption of these two amendments to the Neutrality Treaty is that the Carter-Torrijos Joint Statements of October 14, 1977, be made an integral part of the treaty with the same force and effect as those treaty provisions submitted to the Senate initially for its advice and consent.

The Committee had originally voted to include the Joint Statement in a single amendment which would have added as a new article IX to the treaty. Upon being advised by the State Department—contrary to previous advice—that this placement could require a new Panamanian plebiscite, the Committee voted to reconsider the proposed article IX and voted instead to recommend the addition of that same material, in two parts, to articles IV and VI. This did not represent a "flip-flop"; in each instance the substantive wording was identical to that of the Joint Statement, and each provision—whether placed in one article or in two—would have had precisely the same legal effect, being equally binding internationally. The difference is purely one of cosmetics. If a negligible change in form, with no change whatsoever in substance, could obviate the need for a new plebiscite—an eventuality which could complicate vastly the ratification process—then the Committee concluded that it would happily oblige.

The meaning of these amendments, which together constitute the entire Joint Statement, is plain. The first amendment relates to the right of the United States to defend the Canal. (It creates no automatic obligation to do so. See p. 74 of this report.) It allows the United States to introduce its armed forces into Panama whenever and however the Canal is threatened. Whether such a threat exists is for the United States to determine on its own in accordance with its constitutional processes. What steps are necessary to defend the Canal is for the United States to determine on its own in accordance with its constitutional processes. When such steps shall be taken is for the United States to determine on its own in accordance with its constitutional processes. The United States has the right to act if it deems proper against any threat to the Canal, internal or external, domestic or foreign, military or non-military. Those rights enter into force on the effective date of the treaty. They do not terminate.

The above-described rights are not affected by the second paragraph of the amendment, which provides that the United States has no "right of intervention . . . in the internal affairs of Panama", and which prohibits the United States from acting "against the territorial integrity or political independence of Panama." The Committee notes, first, that these provisions prohibit the United States from doing nothing that it is not already prohibited from doing under the United Nations Charter, which proscribes "the threat or use of force against the territorial integrity or political independence of any state" (article 2(4)). The Committee never supposed that the United States, in entering into the Neutrality Treaty, intended to obtain powers that it had previously renounced. The Committee thus does not believe that the provision in question substantively alters existing United States commitments to Panama.

Second, the prohibitions set forth in the second paragraph do not derogate from the rights conferred in the first. The Joint Statement recognizes that the use of Panamanian territory might be required to defend the Canal. But that use would be for the sole purpose of defending the Canal—it would be purely incidental to the Canal's defense; it would be strictly a means to that end, rather than an end in itself; and it would not be carried out for the purpose of taking Panamanian territory. The concepts of the territorial integrity and political independence of Panama are, in short, an integral part of the treaty, so that action directed at preserving the regime of neutrality set forth in the treaty would never be directed against Panama's territorial integrity or political independence.

For these reasons, use of Panamanian territory to defend the Canal would clearly be permissible under the portion of the Joint Statement incorporated in Article IV. This is made clear in an opinion presented to the Committee by the Department of Justice (hearings, part 1, p. 332):

"A legitimate exercise of rights under the Neutrality Treaty by the United States would not, either in intent or in fact, be directed against the territorial integrity or political independence of Panama. No question of detaching territory from the sovereignty or jurisdiction of Panama would arise. Nor would the political independence of Panama be violated by measures calculated to uphold a commitment to the maintenance of the Canal's neutrality which Panama has freely assumed. A use of force in these circumstances would not be directed against the form or character or composition of the Government of Panama or any other aspect of its political independence; it would be solely directed and proportionately crafted to maintain the neutrality of the Canal."

Finally, even if a conflict were somehow to arise between the two paragraphs, because the United States has the right to act against "any . . . threat directed against the Canal", there is no question that the first would prevail. The rights conferred therein are stated in absolute terms and must therefore be construed as controlling.

The meaning of the recommended amendment to article VI is equally clear. This provision—extracted verbatim from the Joint Statement—confers upon United States warships and auxiliary vessels the right to go "to the head of the line" in an "emergency". What constitutes an emergency, and when one exists, is for the United States and the United States alone to determine. The provision could hardly be more explicit.

Like the recommended amendment to article IV, this amendment, if adopted by the Senate, will become an integral part of the treaty, of the same force and effect as all other provisions. The Committee is informed by the Department of State that the Government of the Republic of Panama has concluded that no new plebiscite will be required for the approval of the two amendments. Together, they comprise the verbatim text of the Joint Statement, which was read by General Torrijos to the people of Panama live on national television three days before the October 23 plebiscite. (See p. 478 of part 1 of the hearings for a list of Panamanian newspapers in which the Joint Statement appeared prior to the holding of the plebiscite.) It thus is clear that the Panamanian people were fully apprised of the Joint Statement prior to the plebiscite, and were accorded a full opportunity to consider its provisions before approving the treaties.

Mr. HOLLINGS. Mr. President, I think that statement of intent was what persuaded the Senator from South Carolina and other to join the Foreign Relations Committee and the leadership in the leadership amendments. So I did not

have any of the feel or understanding that the distinguished Senator from New York (Mr. MOYNIHAN) had about the DeConcini amendment.

I want to make clear my esteem for the Senator from New York. Incidentally, he was one of the first on board. I think in August he received, as we all did, a telegram from the President of the United States urging support for these treaties. If not the first, he was one of the first who wired back that he did support the treaties. His experience in the field of foreign affairs is unrivaled in this body. I know we all have enjoyed his eloquent statements with respect to raising our debate to a higher level, and explaining that the true test of greatness of the United States was not how we treated our strong and mighty adversaries or friends but how, in foreign policy, we treated the weaker of the parties involved. I have followed, with great admiration, Senator DANIEL MOYNIHAN in the statements he has made.

However, over the weekend, I say in the Washington Post of Sunday, April 16, a squib from the DeConcini remarks on the right to protect the canal, and a section from the remarks by Senator DANIEL MOYNIHAN in the Senate on April 13.

Senator MOYNIHAN begins by saying:

We cannot get anywhere by imposing symbolic subjection upon the Panamanians.

I want to try to explain the difference that the Senator from South Carolina has with the Senator from New York on this particular score. I quote from Senator MOYNIHAN:

I suggest that the world will think we have acted from fear. The world will see our effort to impose complex and meaningless and unnecessary conditions on our relations with Panama as the reverse of the Angola coin; because the Senate, when it faced the prospect that some serious opposition might be encountered, would have none of it. The Senate stood up and said one thing after another which at that time visibly was not so—that Angola was just having a tribal civil war. . . . That is what one distinguished Senator described the Soviet invasion of Angola as—a tribal civil war. Nobody in Central Africa thought it was a tribal civil war. They thought it was a Russian invasion. We would not help the people who would face it.

Then he said:

Having shown our fear there, are we not also expressing our fear here? Should we not say we are a confident and decent people?

Farther down, he said:

Why make Panama the object for expressions of fears which should be confronted on their own?

If there are people in this body—and I hope there are—who are fearful of the U.S. position in the world, fearful of the positions of the free nations in the world, concerned for freedom, let us confront that. Let us not sublimate it by imposing upon Panama—friendly, proven, trustworthy Panama—conditions which are inappropriate to a republic.

Let me indicate what I do agree with. I agree that the Panamanians are friendly, that they are proven, and that they are trustworthy. With respect to that, I agree with the Senator from New York. I think, in a way, some of the debate on the floor of the U.S. Senate has been demeaning to the people of Panama.

Yesterday, I was about to join the Senator from North Carolina in elaborating somewhat in the RECORD the historical record. The Senator from North Carolina brought it from 1856 to 1903. I wanted to show that it was we who were doing the reneging, not carying through from 1903 until 1977, when these treaties were submitted; that we had misgivings about the United States' record, not the record of the Panamanians. So I do consider them friendly, proven, trustworthy, and I hope they continue to be. These treaties will make the basis for mutual trust.

I return now to my historian friend, Senator MOYNIHAN. I was in the Senate at the time of the Angola debate. It was a tribal civil war in Angola. In fact, we had dealt with the People's Republic of China, and we had been in there for a year and a half, trying to help a side in the tribal civil war, but we were not winning. The question, after spending hundreds of millions of dollars, was whether we were bogging down into another Vietnam, whether or not we could back a side that could prevail.

But then the Senator goes on with a misstatement of history—because I was in the Senate at the time—by saying, "having shown our fear here."

Our fear is not of Panama. Our fear is not our greatness. Our fear, I believe, is the same as that of the Senator from Nevada (Mr. LAXALT), the Senator from North Carolina (Mr. HELMS), my colleague from South Carolina (Senator THURMOND), and others. It is a fear of the U.S. Congress.

Somebody should tell the Washington Post what is going on in this world. It is the U.S. Congress that the people are fearful of.

I happen to believe that under the present 1903 treaty, repudiated by two Republican Presidents and two Democratic Presidents, we had no chance to protect ourselves.

I favor the new treaties, and I favor the DeConcini amendment, because I have the same fear of this Congress, which the senior Senator from New York (Mr. JAVITS) a moment ago said would dream up some incident to abuse the DeConcini reservation or abuse Panama. I am fearful that there are those in Congress who would dream up some language that would say it was a domestic incident down there and we had no right.

I am realistic enough to know that no language is going to force us in and no language is going to force us out. We cannot jockey here for the exact wording each Senator would want. We all have to agree that no language will force us in or force us out. It depends on the measured judgment at the particular time—the intent, the steel, the determination, and the will of a national Congress.

The lack of confidence in the Presidency has been due to his vacillation, to the frequent change of signals. The lack of confidence in the U.S. Congress is because of its marching up and down the Hill: Do social security, now take it back; do the neutron bomb, take it back; do the B–1 bomber, take it back. People cannot get a focus on the people's representative body.

So, yes, they say now, on this important matter, let there be no understanding, let there be no shenanigans; let them not try to obscure an intransigence down there, such as a failure to operate with a strike, and call it a domestic thing, so that we do not intervene. We will never intervene. I do not worry about intervening down there. We have a tough time getting an honor guard to go to the Unknown Soldier's grave. We do not vote any money to go anywhere militarily. That is my misgiving; that is what I worry about.

But we do not want either an unfriendly government to change the signals or to use a sitdown strike, or something of that kind, to say that we do not have the right.

All Senator DECONCINI has been saying is let us be honest, clear, open, and aboveboard and state it like it is, and like our defense chiefs say they understand it, like the Commander-in-Chief, the President, says he understands it—and not how the Washington Post understands it in its editorial that same day, or how Senator MOYNIHAN understands it, because we are not worried about Panama. We do not say in the DeConcini amendment we are unfriendly to you, or you are not proven, or you are not trustworthy. We say we do not trust ourselves. That is what we are saying.

We would like to see a little bit more steel, more will, more determination and stability within this wishy-washy Congress—a Congress going off in all directions when it comes to our national defense.

I have supported the treaties from the very word "go." I would be glad to debate it. But I thought that the Washington Post and other media representatives running around loose wondering what kind of man is DECONCINI, and he is a freshman, and is he trying to get headlines, and all—I find that totally unjustified and unwarranted, and frankly on the verge of insulting. Somebody should stand up who understands the truth and understands this Congress and who has been here a little while and say, "Mr. Washington Post, and anybody else of a similar mind, we have no fear of Panama. We have no fear of our true greatness. But we are a little worried about the U.S. Congress."

Like Pogo, we have met the enemy and it is us.

And I think that is what DENNIS was trying to tell us all, and I think he told us just as clearly as anybody possibly could, and that does not detract in any way from anyone else.

I support Senator CHURCH and the particular language submitted, and I will be glad to debate it, but I wanted to make a true record.

It was Omar with his own shenanigans, it was Bethancourt, his chief negotiator, and all that other crowd that is listening on public radio who got us into this. We are not playing games. We respect the Republic of Panama as a nation. We respect the people of Panama as a people. But it was some of their own statements

that got us into this particular leadership amendment. The DeConcini amendment, and the clarifications thereof.

And I think in accepting that somewhere, sometime, they should read the record, read nothing less than the statement of intent, 14-to-1, by the Senate Foreign Relations Committee, and they will see what the Senator from South Carolina has in mind in supporting both this particular clarification and the DeConcini amendment.

I yield the floor.

The PRESIDING OFFICER. Who yields time?

The Senator from Idaho.

Mr. CHURCH. Mr. President, a few minutes ago when I returned to the Chamber I heard the distinguished Senator from Alabama quoting from the Rubaiyat. I heard him say:

The Moving Finger writes;
And having writ moves on;
Nor all your Piety nor Wit
Shall lure it back to cancel half a line
Nor all your tears wash out a Word of it.

He was telling us that we could not undo the DeConcini reservation since the Senate had already enacted it and attached to it the articles of ratification of the Neutrality Treaty.

With all respect to the Senator from Alabama, it makes no sense whatever to claim that the Senate cannot enact a reservation to this treaty, which would be controlling on both treaties. We do that all the time. Congress never can take an action on one day that cannot be undone the next.

But that is not the purpose of the leadership amendment. We have not introduced it today either to erase a word that has been writ or to shed any tears over those words.

For more than a week now the DeConcini reservation has been rolling around like a loose cannon on a heaving deck. Everybody has interpreted it in their own self-serving way. Some have even gone so far as to suggest that the DeConcini reservation repudiated our long-standing commitment to a policy of nonintervention in the internal affairs of other countries.

The DeConcini reservation did not do that. The sponsor of the reservation made it celar that was not his purpose. Yet the confusion that emerged was so serious it become necessary for us to clarify the purpose of that reservation as it was intended by its sponsor and by those of us who voted for it.

In other words, Mr. President, it became a matter of cardinal importance to get hold of that loose cannon and fasten it down in its intended place, which is what this leadership amendment is designed to do.

Let it be clear, both from the language of this leadership reservation and from the legislative record being made in this debate, that neither the United States of America nor the Senate has any desire whatever to set aside the policy of nonintervention which we have upheld for more than 40 years. Neither the United States nor this Senate has any intention of calling into question the pledge that Franklin Roosevelt made when he inaugurated a new era in the relations between this republic and our neighbors to the south which became known as the Good Neighbor Policy.

We pledged nonintervention in the internal affairs of any other country in the United Nations Charter, in the Rio Pact, and in the principal treaties involving the members of the Organization of American States.

And we stand by the policy of nonintervention in the internal affairs of any other country. That most certainly applies to the Republic of Panama.

Mr. President, the people of Panama have a reason to be sensitive about this matter. There was a time in the years before Franklin Roosevelt's Good Neighbor Policy when the United States rather habitually interfered in the internal affairs of small countries in the Caribbean and in Central America. Indeed, for many years we did so unilaterally under the sweeping provisions of the Platt amendment by which the United States asserted the authority to move its troops at its pleasure anywhere in Panama, in Central America and in the Caribbean whenever we chose, whenever a government displeased us.

That was the 20th Century version of the Brezhnev doctrine as it is applied today to Eastern Europe. To my knowledge, it is only the Soviet Union, alone among the countries of the world, which today claims the right to move its troops anywhere it pleases in Eastern Europe whenever a government there displeases the Politburo. We saw them do it in 1968 when the Soviet Army moved into Czechoslovakia because the internal actions of the Czechoslovakian Government were not approved in Moscow.

So, Mr. President, far from repudiating what has been the centerpiece of American policy towards Central and South America since the days of Franklin Roosevelt, we hereby reaffirm it, and we do so in words that make it unmistakably clear that the United States shall claim no right to intervene in the internal affairs of the Republic of Panama or to interfere with its political independence or sovereign integrity.

That is the purpose of this leadership amendment. I proudly support it, and I am confident that the great majority of Senators will proudly support it, because it will make clear to all the world that the United States wants no part of the Brezhnev doctrine; and that the United States shall not use its power, as the Soviet Union claims the right to use its power, to interfere in the internal affairs of our neighboring states. That is all there is to it.

Mr. SCHMITT. Mr. President, will the Senator yield?

Mr. CHURCH. That is why I am confident that this leadership amendment will be approved not only in the Senate but in Panama as well. It does, in fact, represent a dignified solution to a difficult problem that arose in the first place out of a misunderstanding we can now correct by supporting this amendment.

Mr. President, I yield the floor.

The PRESIDING OFFICER. Who yields time?

Mr. LAXALT. The Senator from Nevada yields time to the Senator from New Mexico for a question, as I understand it, 2 minutes.

The PRESIDING OFFICER. The Senator from New Mexico has 2 minutes.

Mr. SCHMITT. Mr. President, I generally admire and concur in the remarks of the distinguished leader of this treaty debate, the proponents of this treaty debate, here on the floor, Mr. CHURCH. I think he has stated the fundamental position of the United States very well.

My concern, however, is that, not being an international lawyer, but having only logic as a tool, I see an inconsistency in the reservation that has been presented to us by the leadership and, as I understand it, the distinguished Senator has already indicated that if a revolution in Panama threatened the canal we would have the right to intervene.

My first question is, Is that true?

My second question is, Is not a revolution the internal affair of Panama?

If I read the reservation that actions taken by the United States of America shall be only for the purpose of assuring that the canal shall remain open, neutral, secure, and accessible and shall not have as its purpose or be interpreted as a right of intervention in the internal affairs of the Republic of Panama, then I am afraid I do not understand the situation.

I am the last to advocate interference in the internal affairs of any country. But I think if we are going to put a reservation on the treaty we had better have it a consistent reservation. I would like very much to have Senator CHURCH respond and educate me, if he would.

Mr. CHURCH. Well, I respond to the Senator by saying he finds in the language of the leadership's proposal a problem that I do not see there.

It is conceivable, of course, that a revolution could occur. Normally that would not be our affair, and we claimed——

The PRESIDING OFFICER. The time of the Senator from New Mexico has expired.

Mr. LAXALT. I will yield 1 additional minute.

The PRESIDING OFFICER. The Senator may proceed.

Mr. CHURCH. We claim no right to interfere to put down a revolution or otherwise decide for the Panamanians what kind of government they should have. Our only claim runs to discharging our obligation under the treaty to keep the canal open, secure, accessible, and neutral.

If, under some circumstances, the Panamanian Government is no longer capable of doing that, as it has pledged itself to do, then the United States, as the other party to the treaty, reserves the right to do so. But the purpose would be limited to the canal itself and would not be directed toward determining for the Panamanians who shall govern them or what form of government they should adopt for themselves.

Mr. SCHMITT. Mr. President, I think the inconsistency is there whether the Senator sees it or not, and he is concerned about it. Of course, that was the basis for trying to encourage the Sen-

ate to look toward hemispheric management of the canal to remove just these kinds of inconsistencies.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. LAXALT. Mr. President, I yield at this time 5 minutes to the Senator from Alaska (Mr. STEVENS).

The PRESIDING OFFICER. The Senator from Alaska.

Mr. STEVENS. Mr. President, let me state at the outset again I am one who originally sought to find a way to make these treaties acceptable to the people of the United States through amendments, and I find it unfortunate that it is necessary to vote against the treaties because it is my conclusion that they are so ambiguous that they can only lead to a prolonged period of misunderstanding and disputes between the United States and Panama, and that this leadership amendment is one of those things that is going to cause the trouble.

We are again left in the position where we are leaving a legacy to future generations that can be solved only by force.

It seems to me that the very least the United States can do is to assure that the relationships it has with foreign countries through treaties are not subject to misinterpretation or, even worse than that, are not subject to one interpretation in the foreign country and another in our country.

Mr. President, the original DeConcini amendment, which I voted against because it was capable of being ignored that is the Panamanians are capable of ignoring it under their constitutional domestic law, at least stated that the United States independently had the right to take such steps under our own constitutional processes, including the use of military force, to reopen the canal or restore the operations of the canal.

As I said, our research showed that the Panamanians could ignore that. As a matter of fact, I think that is what General Torrijos has done by going to foreign nations with his letter. He has set the stage to ignore it.

The leadership amendment now attempts to amend the DeConcini amendment to the Resolution of Ratification on the treaty that does not become effective until the year 2000. At least that is this Senator's opinion, and I would like to propound a parliamentary inquiry to the Chair.

The PRESIDING OFFICER (Mr. FORD). The Senator will state it.

Mr. STEVENS. Is the neutrality treaty, or the Resolution of Advice and Consent thereto, before the Senate?

The PRESIDING OFFICER. The opinion of the Chair is that it is not.

Mr. STEVENS. I would make another parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. STEVENS. Is that Resolution of Ratification, the advice and consent resolution to the neutrality treaty, subject to amendment by an amendment at this time?

The PRESIDING OFFICER. In the opinion of the Chair it is not.

Mr. STEVENS. Then, Mr. President, I am constrained to make a point of order, and I do make a point of order, that this amendment is an amendment to the Resolution of Ratification to the Neutrality Treaty, which has already passed and is not before this body.

I make that point of order specifically on the ground that the DeConcini amendments specifically says that each nation, the United States and the Republic of Panama, shall have the right independently to take such steps as deemed necessary in accordance with its constitutional processes, and this amendment states specifically that it is an amendment to the provisions of this treaty and the Neutrality Treaty and the resolutions of advice and consent thereto, and it is intended to be at least a limitation on the action previously taken by the Senate in adopting the Resolution of Ratification to the Neutrality Treaty, as amended by the DeConcini amendment.

I make that point of order.

The PRESIDING OFFICER. A point of order is not in order until the proponent's time on the reservation has been used or yielded back.

Mr. STEVENS. I ask unanimous consent that it be in order now.

The PRESIDING OFFICER. Is there objection? Without objection it is so ordered.

The PRESIDING OFFICER. The Chair is prepared to rule.

As the Chair has stated, the Resolution of Ratification of the Neutrality Treaty is not before the Senate. The one on the Panama Canal Treaty is. Under the rules and the precedents of the Senate, the nature and scope of amendments or reservations are not defined and even though his reservation may incorporate the Resolution of Ratification of the Neutrality Treaty by reference, that is not proscribed by the rules.

Therefore, the Chair holds the point of order not well taken.

Mr. STEVENS. Mr. President, I can only say that, having confused the people of Panama before, the Chair has certainly confused them once again. At least he certainly has confused this Senator. I know there will be trouble when they try to translate this amendment to the Resolution of Ratification of the Panama Canal Treaty as it affects the Resolution of Ratification of the Neutrality Treaty into Spanish so that the Panamanians can understand it.

There is no question in my mind but that this is a precedent of the Senate that needs the total consent of a majority of the Senate to understand. I can only appeal the ruling of the Chair, and I do so.

I think it is incumbent upon the Senate to understand that it is setting a new precedent, that if you have two treaties and you have previously acted on one Resolution of Ratification and given advice and consent of the Senate, when the next one comes along all you have to do is hang an understanding as to the first treaty on it, and that is binding on us. Is that also binding on Panama?

The PRESIDING OFFICER. The Senator's 5 minutes have expired.

Mr. STEVENS. I appeal from the ruling of the Chair, and I ask for the yeas and nays.

The PRESIDING OFFICER. The Chair would like to state that the Chair's ruling was made as to form and not substance.

Mr. STEVENS. I beg the Chair's pardon; I specifically stated the conflict in substance between this amendment and the previous DeConcini amendment, and pointed out that it specifically amends the Neutrality Treaty. That is a point of order of substance, and not of form.

The PRESIDING OFFICER. The Chair was attempting to state that the Chair is not supposed to interpret possible effect but only to rule as to form.

The question is on the appeal from the ruling of the Chair.

Mr. ROBERT C. BYRD. Mr. President, I think that the Chair is preeminently correct in its ruling. I say so with all due respect—and when I say "due respect," I mean great respect—to the distinguished Senator from Alaska (Mr. STEVENS).

I move that the appeal be laid on the table, and I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion to lay on the table the appeal from the ruling of the Chair. The yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Arkansas (Mr. BUMPERS), and the Senator from South Dakota (Mr. MCGOVERN) are necessarily absent.

Mr. STEVENS. I announce that the Senator from Kansas (Mr. DOLE) is necessarily absent.

The result was announced—yeas 74, nays 22, as follows:

[Rollcall Vote No. 111 Ex.]

YEAS—74

NOT VOTING—4

| | | |
|---|---|---|
| Abourezk | Dole | McGovern |
| Bumpers | | |

So the motion to lay on the table was agreed to.

Mr. SARBANES. Mr. President, I move to reconsider the vote by which the motion was agreed to.

Mr. CHURCH. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. Who yields time?

Mr. CHURCH. Mr. President, I have spoken with the distinguished Senator from Nevada (Mr. LAXALT). It has been agreed between us that the time for the rollcall vote that has just been taken should be divided equally between both sides. I ask unanimous consent that that may be the case.

The PRESIDING OFFICER. Without objection, it is so ordered.

Who yields time?

Mr. GRIFFIN. Mr. President, on behalf of the Senator from Nevada, I yield to the Senator from Massachusetts 6 minutes.

The PRESIDING OFFICER. The Senator from Massachusetts is recognized for 6 minutes .

Mr. BROOKE. Mr. President, let me take just another tack from that that was taken by my distinguished colleague from Alaska. No one knows whether this treaty is going to be ratified, but in the event the treaty is ratified, I think we ought to be as clear as we can be without any ambiguity, if we can avoid it, as to just what is meant by the so-called DeConcini condition.

I think that it is well and proper that we seek to reassure the Panamanian people that no slight to their dignity has been intended during our debate. I personally hold a deep affection for the Panamanian people and understand and sympathize with their desire to obtain legitimate national aspirations. I believe the American people, armed with the facts, will support justified efforts to help the Panamanians achieve those aspirations.

I am troubled, nevertheless, by the intensity of the controversy that has arisen over the so-called "DeConcini condition." As a result of that controversy, on April 11 I wrote the President and asked the following question:

> Under the so-called DeConcini condition does the United States reserve to itself the option to take whatever actions are necessary, including the unilateral decision to use military force on the territory of Panama if necessary, to ensure that the Canal will be available for the passage of U.S. vessels, regardless of whether the threat to the Canal comes from any source external to Panama or from any internal source within Panama?

Last night I received a reply from the President that stated, and I quote, "The answer to that question is affirmative."

Therefore, regardless of what is contained in the language offered by the majority leader today, I believe it is clear that the United States retains the option to use military force on Panamanian territory, by unilateral decision if necessary, to keep the canal open even if the threat is from a source internal to Panama.

To be sure, this is a discrete right, to be exercised in a limited way and for a limited purpose. But it exists and there should be no equivocation about its meaning.

I do not and would not support an interpretation of the "condition" that claimed for the United States a wide-ranging right to intervene in the internal affairs of Panama. We do not intend in any way to challenge the political independence of Panama. We do not wish to control Panamanian affairs. Therefore, I believe the so-called leadership language may be a useful explanation. But I do not believe that it in any way limits our right to take whatever steps are necessary to maintain U.S. access to the canal in the face of a threat from whatever source. As the President also wrote in his letter:

> It is abundantly clear, therefore, that the United States can, under the Neutrality Treaty, take whatever actions are necessary to defend the Canal from any threat regardless of its source.

That is, so to speak, the bottom line.

I readily admit that the "condition" is a unique qualification. It has come about because of a very unique situation. It would be foolish to ignore that this is the case. The United States is being asked to give up title to property that it clearly owns, without recompense. It is being asked to forfeit unique "rights" it presently possesses under a binding international agreement. As I have said previously, I am not adverse to legitimate changes in our relationship to the canal and to Panama. They are needed, they are justified. I will vote for this treaty. But, to say this does not diminish the uniqueness of the situation and the likelihood, indeed perhaps the necessity, for unique initiatives such as the "DeConcini condition."

I personally want to assure our Panamanian friends who are listening to this debate that I, for one, deeply desire a continued close relationship between our two peoples.

I think others of my colleagues, perhaps all of my colleagues, want to do that.

I must admit to no particular regard for the present Government of Panama which follows practices that are inimical to the principles I believe should govern the relationship between a government and its constituents. But to say that I have a dislike for the Panamanian Government is in no way intended as an insult to the Panamanian people. That I would never do, for I deeply desire that the affinity of our two peoples for each other will continue and deepen as we seek acceptable solutions to difficult problems of concern to both countries.

I again want to make it clear that the "DeConcini condition" should be understood by the Panamanians as well as by us to mean that if there is a threat to the canal arising from within Panama, the United States will have the right to go in and keep that canal open. That is what we have said in this "condition." That is what the President says in even more forceful language in his letter, and I think this ought to be understood clearly by the Panamanians, or else we are going to have great difficulty down the road.

I ask unanimous consent, Mr. President, that both my letter addressed to the President, dated April 11, 1978, and the President's letter addressed to me, dated April 17, 1978, be printed in full in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

U.S. SENATE,
*Washington, D.C., April 11, 1978.*

President JIMMY CARTER,
*The White House,*
*Washington, D.C.*

DEAR MR. PRESIDENT: For the past several months, I have tried in my activities relating to the Panama Canal debate to reduce the level of ambiguity and potential for misunderstanding inherent in both of the treaties. While with my colleagues I feel comfortable in claiming a modest degree of success, the events of the past week indicate that the potential for tension and future debilitating rancor between Panama and the United States is high.

I am particularly disturbed over the controversy that has arisen regarding the so-called "DeConcini condition" attached to the resolution of ratification of the Neutrality Treaty. When the Senate acted upon this matter, I believe the prevalent assumption was that Panama had been informed of the substantive nature of the "condition" and had not indicated any deep reservations regarding it. That does not appear to be the case in light of the Panamanian communications to the Secretary-General of the United Nations and Heads of State of various countries.

Now, we are faced with the spectacle of various members of the Senate and the Administration trying to tell the Panamanians that the "DeConcini condition" does not reserve to the United States the option to act unilaterally with military force on Panamanian soil to keep the Canal operating in the face of an internal threat from Panama while at the same time trying to assure various Senators that that is its impact. I do not believe we can act responsibly on this matter and leave the door open to such ambiguity.

Therefore, I would deeply appreciate it if you would provide me with your thinking regarding the following question. Your answer could do much to clear the air on this matter and would indicate to both the Senate and Panama what interpretation the Administration will consider binding.

"Under the so-called DeConcini condition, does the United States reserve to itself the option to take whatever actions are necessary, including the unilateral decision to use military force on the territory of Panama if necessary, to ensure that the Canal will be available for the passage of U.S. vessels, regardless of whether the threat to the Canal comes from any source external to Panama or from any internal source within Panama?"

It would greatly assist me in my decision regarding the Panama Canal Treaty if I could receive an answer to this question before April 17th.

With warm personal regards, I am

Sincerely,

EDWARD W. BROOKE.

---

THE WHITE HOUSE,
*Washington, D.C., April 17, 1978.*

Hon. EDWARD W. BROOKE,
*U.S. Senate, Washington, D.C.*

SENATOR EDWARD BROOKE: I appreciate your thoughtful letter of April 11, raising the question whether the United States reserves to itself the option to take any necessary action to ensure that the Panama Canal will be available for the passage of U.S. vessels. The answer to that question is affirmative.

Article IV of the Panama Neutrality Treaty gives to each of the Parties ". . . the responsibility to assure that the Panama Canal will remain open and secure to ships of all nations" and provides that each Party ". . . shall have the right to act against any aggression or threat directed against the Canal or against the peaceful transit of vessels through the Canal." The first "Condition" included by the Senate in its Resolution of Ratification reaffirms this right of the Parties.

In his letter to me dated March 15, General Omar Torrijos noted that, to clear up any confusion in this regard, he and I had earlier prepared a Memorandum of Understanding "which clearly interpreted the unilateral capability of each one of our countries to protect the regime of neutrality against threats, attacks, or a closing of the Canal. . . ".

It is abundantly clear, therefore, that the United States can, under the Neutrality Treaty, take whatever actions are necessary to defend the Canal from any threat regardless of its source.

The correlative part of the Memorandum of Understanding, embodied in the leadership amendment to the Neutrality Treaty, makes it quite clear that action of this character must be confined to the stated objective alone, and that it will not be interpreted as a right of intervention in the internal affairs of Panama.

Thus, the provisions of the Neutrality Treaty are clearly consistent with our existing international obligations concerning non-intervention. We have no interest in or intention of intervening in the internal affairs of Panama. Our position in this regard should be clearly understood in both countries.

I am confident you will agree that the Panama Canal Treaties protect the interests of both parties and that they serve the highest national interests of the United States.

Sincerely,

JIMMY CARTER.

The PRESIDING OFFICER. Who yields time?

Mr. GRIFFIN. Mr. President, on behalf of the Senator from Nevada, I yield the remaining time on this side to the Senator from North Carolina. May I ask how much time that is?

The PRESIDING OFFICER. The Senator from Nevada has 3 minutes.

Mr. GRIFFIN. I yield to the Senator from North Carolina.

Mr. HELMS. Mr. President, I think it is essential to read into the RECORD a paragraph from the letter of the President of the United States to Senator BROOKE, to which the able Senator has added. I quote:

It is abundantly clear, therefore, that the United States can, under the Neutrality Treaty, take whatever actions are necessary to defend the canal from any threat, regardless of its source.

"Regardless of its sources." I submit, Mr. President, that the President of the United States has, in fact, with those words, introduced a new element into the debate by including the phrase "regardless of its source."

At least he is candid to that extent, but he is not quite so candid, I would say to the Senator from Massachusetts, when he says that such intervention will not be interpreted as intervention in the internal affairs of Panama.

Now, I anticipate that the Panamanians will interpret this differently. I pray, of course, that the objection to this flawed treaty will not result in violence in Panama. But this treaty is an engraved invitation to agitators. This Senate will make a grievous mistake if it does not send these treaties back for renegotiation.

Mr. President, here we are in the final day of debate on the Panama Canal treaties, and this reservation, submitted so late, in such a state of frenzy, and drafted in such secrecy, shows clearly that we are no nearer to a consensus on the meaning and importance of the treaties than when we started. It is still the generally accepted wisdom that the decisions of two or three Senators today, the last day, will decide the ultimate disposition of the matter.

Mr. President, why is it that the President of the United States, the entire foreign policy apparatus, the power structure of academics, businessmen, and bankers, and the most powerful voices of the media have been unable to convince the American people that these treaties are in the best interests of the United States? Why is it that in the last 2 weeks or 10 days that even the supposed beneficiary of these treaties, the Republic of Panama, has balked at accepting the work of the Senate?

The fact is, Mr. President, that these treaties are still under a cloud. They originated under a cloud, they were negotiated under a cloud, they have been debated under a cloud.

The result is that it will be virtually impossible for the United States and the Republic of Panama to work out a mutually acceptable and productive relationship, whether the treaties pass or whether the treaties fail. The threat of violence and disagreement was the ostensible reason for negotiating these treaties; yet the threat of violence and disagreement still hangs over the future, even if the treaties are ratified.

The Senator from North Carolina was one of the first Senators to visit Panama after the treaty drafts were announced. On August 19, when I arrived at the airport, the press asked why I had come. I said then, and I repeat it now, that my intention was nothing but that of good will toward the Panamanian people. I said that I stood ready, should the treaties fail, to work together to help the Panamanian people; that, indeed, opposition to the treaties was not to be interpreted as hostility toward the Panamanian people.

I repeat that today because I feel that these treaties are not in the best interests of the Panamanian people. If they fail today, there will be bitterness and disappointment, and it will be difficult to pick up the pieces. But if the treaties are ratified, it may well be the beginning of the disintegration of Panamanian freedom and independence.

For it has already been demonstrated that the treaties are fatally flawed. There is already bitter disagreement between Panama and the United States as to the meaning and interpretation of the most significant passages. Once the treaties go into effect, should they be ratified, the practical application of these terms and requirements will inevitably continue, destabilizing Panamanian economic and social structures. I have demonstrated on this floor that Panamanians will lose jobs, not gain them as a result of the treaty. And when this new unemployment is added to the present economic stagnation, the climate will be ripe for political agitation.

Why are these treaties under a cloud? Why are they fatally flawed? They are fatally flawed because there has never been a meeting of the minds on the fundamental problem, which is the transfer of sovereignty. Now I realize that the notion of sovereignty has been ridiculed on this floor from the beginning, as something of no importance. But if the treaties founder, they will do so because that issue was never resolved. Sovereignty was not the issue, we were told over and over again; yet it is the issue upon which, even if the treaties succeed, we will come to grief.

For sovereignty is the question of ultimate power. It answers the question: Who has the right to decide what actions may take place within a defined territory? As long as the United States is free to exercise all the rights of a sovereign within the territory of the Canal Zone, there was no doubt that we could do whatever was necessary to defend it. There was no question of intervention in the internal affairs of Panama. There was no question of violating the territorial integrity of Panama.

But the moment that the United States surrenders its sovereign rights, then every thing that we do, every action, is subject to the will of Panama. It is as simple as that. When Panama is sovereign, Panama decides.

At the root of the problem is a fundamental unresolved contradiction that our negotiators failed to solve. The treaties are an attempt to paper over that contradiction.

The ultimate issue in sovereignty, of course, is the right to use force. That is what sovereignty is all about. There may be disputes about actions of a lesser level, but in the end, they come down to the issue of who has the right to use force.

The treaties attempt to pretend that there will never be any division of opinion between the United States and Panama on how the ultimate right to use force will be exercised. But that is an absurd supposition It is an insult to the people of Panama. It assumes that they will be forever subservient to the desires of the United States.

That is why the people of Panama have been so disturbed over the past few

weeks. The United States has made it clear that, despite the pretence of handing back sovereignty, we intend to keep the ultimate right to use force, even against the Panamanian people if necessary. There can be no other interpretation.

The President of the United States has said in writing that we intend to use force against any threat to the canal. I repeat, against any threat to the canal. From the standpoint of the United States, I applaud his intention; but from the standpoint of the people of Panama, it can only mean that the President of the United States intends to use force against the people of Panama if the President decides that the people of Panama are the threat.

Let us not pretend that it does not mean that. It does mean that. The DeConcini reservation simply makes manifest what is implicit in the formula of the treaties. The DeConcini reservation brings out into the open what is merely implied. And the attempt of the leadership to hide the true meaning of the treaties does a disservice to the people of the United States and the people of Panama.

The Senator from North Carolina knows full well that some of his colleagues have adopted a cynical attitude. They have been saying to him privately that the problem is not in the concept of the treaties, but in stating it openly. In other words, they say that it is all right for the dictator of Panama and the President of the United States to have a private understanding that the United States has the right to exercise the ultimate sovereign power of force, but that it is wrong to state it in writing.

Indeed, when the Senator from North Carolina spoke to President Lakas of Panama, even President Lakas attempted to make the same proposal.

But the Senator from North Carolina rejects that concept as unworthy of two great nations, one large, and one small. It can only be described as deception. Furthermore, it is a violation of every international agreement that we have ever signed. Indeed, Panama is absolutely right in asserting that the DeConcini reservation is a violation of the U.N. Charter, the Rio Pact, and the OAS Charter. But if the DeConcini reservation is such a violation, so are the basic treaties if you make their implicit logic explicit.

Nor is the Senator from North Carolina raising this issue belatedly I raised it in the hearings of the Senate Armed Services Committee, and received replies from Admiral Holloway that made it crystal-clear that our military leaders had an imperfect understanding of our rights under international law. I am almost embarrassed to read his reply. He said:

> The relationship of the Canal to the national security of the United States is such that the independent introduction of military forces into the territory of Panama by the United States in response to a reasonably perceived threat to the neutrality of the Canal, likewise would constitute a reasonable exercise of the inherent right of individual self-defense by the United States and so would be permitted by the (UN) Charter.

Now I want to make it clear that I agree wholeheartedly with the sentiment that the canal is so important to the national security of the United States that defense of the canal is tantamount to the defense of the United States. But the point is that we are hamstrung in exercising such defense once sovereignty is turned over to Panama because of other agreements which take precedence over the Panama Treaty, namely, the UN Charter and the OAS Charter. I think that it was unwise to agree to the restrictions of the UN and OAS Charters; but we did agree. If we are going to keep our word, then Admiral Holloway's reply is sheer nonsense.

Nor did the Senator from North Carolina fail to attempt to highlight the fundamental contradiction in the treaties. On the very first day of debate, I introduced a substitute for the leadership amendment to the Neutrality Treaty, a substitute that would make explicit our right to intervene. When that substitute was debated, I pointed out that only by such explicit language, agreed to by Panama, could the right of intervention have the color of legality. In a lengthy colloquy with the distinguished Senator from Utah, Mr. HATCH, the whole issue of sovereignty, intervention, and their relationship with our international obligations was developed at length and in detail for the edification of the Senate.

The Senator from North Carolina proposed the retention of an enlarged Galeta Island base under the terms of the 1903 treaty; such a base would have preserved the sovereign jurisdiction of the United States, including the sovereign right to use force, without violating the internal affairs of Panama. But the Senate, in its apparent wisdom, also turned that down.

During the debate on the final passage of the Neutrality Treaty, the Senator from North Carolina warned that the leadership amendment failed to meet the problem posed by the transfer of the exercise of sovereignty back to Panama. I stated at that time:

> Once the transfer takes place, then the United States has no right to assert its interpretation of treaty rights over another sovereign state. The Senator from North Carolina pointed out that our obligations under the United Nations Charter, the Rio Treaty, and the OAS Charter precludes us from using force or the threat of force for any purpose except individual or collective self-defense. Since the Canal will no longer be defended as part of U.S. territory, it is manifestly absurd to hold that we could defend the canal as part of our own self-defense; we could only defend the canal as part of collective self-defense with the Republic of Panama.
>
> Once the canal falls under Panamanian sovereignty, then Panama is the sole judge of any treaty right or of any interpretation of the regime of neutrality. The Treaty proponents are in the position of claiming that the United States has the unilateral right to invade the territory of another nation in order to assert our own interpretation of a treaty right. . . .
>
> In any case, the introduction of U.S. troops into the territory of Panama, without Panama's permission, in order to assert our interpretation of the treaty would be a blatant violation of Panama's territorial integrity and Panama's political processes. Whatever political process Panama would use to come to her interpretation of the impact of the treaty on events or situations on her sovereign territory obviously would be violated.

Mr. President, the issue remains unresolved today. The President has written to the distinguished Senator from Massachusetts, and he attempts to assert both sides of the contradiction at the same time. He says, and I quote:

> It is abundantly clear, therefore, that the United States can, under the Neutrality Treaty, take whatever actions are necessary to defend the Canal from any threat regardless of its source.

That is what the President of the United States says: Any threat. Any threat. The President does not exclude threats which arise from the internal affairs of Panama. The President does not exclude threats which arise from within the integral territory of Panama. How can he exclude such threats? Is it not possible that such threats may be the most likely of all threats?

So the President is not excluding actions when the threat arises from Panama's internal affairs.

Nevertheless, the President has not abandoned the agreed-upon doubletalk. He says:

> The correlative part of the Memorandum of Understanding, embodied in the leadership amendment to the Neutrality Treaty, makes it quite clear that action of this character must be confined to the stated objective alone, and that it will not be interpreted as a right of intervention in the internal affairs of Panama.

What the President is saying is that any intervention in the internal affairs of Panama for the sake of defending the canal will not be interpreted as an intervention in the internal affairs of Panama.

Well, of course, the United States will not so interpret our intervention in the internal affairs of Panama; but can anyone have any doubt that Panama will interpret it as an intervention in the internal affairs of Panama?

The terms of the argument are contradictory. The President is trying to reconcile two opposites by declaring that they are not opposites. But the two propositions are mutually exclusive. And if the Senate of the United States attempts to assert both propositions at the same time, our whole relationship with Panama inevitably will come to grief.

It is far better to have the language explicit, rather than attempt to sort things out later when our only choice would be to use force against Panama. Our only choice would be the much discussed "gunboat diplomacy." Unless of course, we simply surrendered our rights and our best interests and withdrew.

Therefore, no one is doing a favor, either to the people of the United States or to the people of Panama by insisting that the right to intervene against "any threat regardless of source" does not include threats whose source is the internal affairs of Panama. Of course it includes threats from Panamanians. Of course it includes threats that arise from social conditions, including strikes, riots, and demonstrations. Of course it includes intervention against any decision

of the Government of Panama that threatens the operations of the canal. What else could it mean?

And if it does not mean these things, what good does it do to issue a declaration that intervention against any of these internal affairs will not be interpreted as intervention in internal affairs? I submit that the President of the United States has, in fact, introduced a new element into the debate by including the phrase "regardless of its source." At least he is candid to that extent; but he is not candid when he says that such intervention will not be interpreted as intervention in the internal affairs of Panama.

That phrase "any threat regardless of source" may well be sufficient reason for Panama to reject the treaty, in whole or in part, either now or in the future. There is no way in which any person who understands the English language can interpret that as a nonintervention pledge. Rather, it is the opposite; it is a pledge to the people of the United States that the United States will intervene in Panama.

So, Mr. President, I say again that if this Senate acts with wisdom, it will return these treaties to the negotiating table so that we can come up with a solution that will be acceptable to the Panamanians and acceptable to the American people, 72 percent of whom are in strong objection to these treaties.

The PRESIDING OFFICER (Mr. RIEGLE). Who yields time?

Mr. CHURCH addressed the Chair.

The PRESIDING OFFICER. The Senator from Idaho.

Mr. CHURCH. Mr. President, earlier in this debate I spoke to the leadership amendment and emphasized that its purpose was to underscore the fact that the United States remains firmly committed to a policy of nonintervention in the internal affairs of the other countries of this hemisphere.

I alluded to an earlier policy of the United States, often described as the gunboat diplomacy of the 1920's, and also to the mentality of the Platt amendment through which we sought to enforce our authority inside Panama whenever we chose to do so.

Mr. President, the Platt amendment was repealed by the Congress of the United States in 1934.

Ever since that time, consistent with the Good Neighbor Policy enunciated by Franklin Delano Roosevelt, the United States has firmly committed itself to respect the rights to self-determination of our neighboring countries.

But I did not mean to suggest in my earlier remarks that the United States alone practiced a policy of interventionism in the early years of this century.

I think that Ambassador Jorden, the U.S. Ambassador to Panama, put this whole matter in proper perspective when he testified before the Foreign Relations Committee. I think his testimony ought to read into the RECORD at this point. This is what Ambassador Jorden had to say on the sensitive question of interventionism, as it is seen by Latin Americans:

Now, intervention in Panama and in the minds of the Latin Americans has a very special meaning. When Latin Americans think about intervention they think of foreign troops coming in, killing their people, removing their government or replacing their government, taking over and running the show, and that is the context of intervention for the last 50 years in Latin America.

They remember the Spanish, they remember the French in Mexico, they remember Haiti and Nicaragua and all the rest of it. When they talk about intervention that hits a very sensitive nerve and it is bloody difficult for any Panamanian to say, "Yes; we have given the United States the right to intervene."

Now, when we are talking about intervention we are talking about a very different thing. We are talking about fulfilling a specific treaty obligation to protect the Panama Canal, not to destroy Panama or replace the government but to protect that canal. I think that most Latin Americans would not have any problem with that because the canal is important to them, to Peru and Ecuador and Nicaragua. All these countries that use the canal want to have it protected, want to have it open and safe, and would be quite happy if the United States did protect it.

Now, the Ambassador said everything that needs to be said on this score and, clearly, this is what the language of the leadership amendment accomplishes.

Mr. President, I reserve the remainder of my time.

Mr. GRAVEL. Will the Senator yield to me?

Mr. SARBANES. Mr. President, how much time is left to the managers of the bill?

The PRESIDING OFFICER. The Chair would advise that the managers of the bill have 7 minutes remaining.

Mr. SARBANES. We need to reserve about 5 minutes. I yield 2 minutes to the Senator from Alaska.

The PRESIDING OFFICER. The Senator from Alaska (Mr. GRAVEL) is recognized for 2 minutes.

Mr. GRAVEL. Mr. President, just briefly, when the heads of state came to Washington to witness the signing of the treaty by Jimmy Carter and Omar Torrijos, we Senators had a reception in the Russell Office Building, a luncheon, to receive these gentlemen.

I was fortunate enough to be seated at my table next to the President of the nation of Colombia, whose name is Lopez Michelsen.

I was struck by the intellect of this gentleman and felt very proud to be associated with him. I was impressed that South America would have this kind of a leader.

I had previously met Carlos Andres Perez of Venezuela, who I thought was similarly a great intellect and a great leader.

So I would like at this time to have printed in the RECORD a statement made by President Michelsen with respect to the issue of intervention at the recent dedication, in the last few days, in his country, and it deals with the subject most cogently.

I think it is something that should be part of this RECORD because of the fine statements already made by others.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

SPEECH BY PRESIDENT MICHELSEN

(Excerpts of speech delivered by the President of Colombia, Alfonso Lopez Michelsen, on Sunday, April 16, at a ceremony of the laying of the cornerstone for the museum Jose Eliecer Gaitan, named after the liberal leader assassinated in Bogota, Colombia, during the signing of the "Bogota Charter" also known as "The Charter of the Organization of American States," which spell out very clearly the principle of nonintervention.)

President Lopez Michelsen praised Gaitan's opposition to any type of intervention and the adoption by OAS of the "Charter of Bogotá", under which for the last three decades the right of non-intervention by a foreign power is guaranteed.

"Gaitán's struggle", he said, "was not against the United States, but against the type of imperialism, that we, as Latin American countries, have to stand united against."

"What a strange coincidence that precisely when we are commemorating the end to the unilateral intervention of the United States in our countries, an amendment of the U.S. Senate, in the treaties that set forth the autonomy and sovereignty of Panama, would want to protocolize again, after 30 years, the U.S. right to intervene in our territories."

He advised the foreign powers not to set foot on "the sacred soil of Latin America." (Quote: "That the foot of a foreign country never be set on the sacred soil of Latin America.")

"It can't be that today under the pretext of assuring transit through the Canal, or tomorrow under the pretext of fighting drug traffic, or the day after tomorrow in the name of man's right against one or other ideology, it is justified that a country, unilaterally, acquires the right of intervention."

Mr. GRAVEL. I ask unanimous consent to have printed in the RECORD a statement made by the Prime Minister of Great Britain, James Callaghan, as to the interest that his nation places with respect to Panama.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

STATEMENT BY BRITISH PRIME MINISTER JAMES CALLAGHAN

Britain has vital interests in the Panama Canal. Our ships are the second largest users. We have made an exhaustive study of the texts of the new treaties, which we unreservedly support as a permanent and stable solution to the future of the canal.

In our view, the treaties will insure the maintenance of the canal as a major international waterway, free and open to all nations.

Mr. GRAVEL. Mr. President, how much time do I have?

The PRESIDING OFFICER. Fifteen seconds.

Mr. GRAVEL. I do not think I can read what I have in 15 seconds so I will try to get another 15 seconds or a minute later on in the discussion.

I thank my colleagues.

The PRESIDING OFFICER. Who yields time?

Mr. MELCHER addressed the Chair.

The PRESIDING OFFICER. The Senator from Montana (Mr. MELCHER).

PANAMA'S SUCCESSFUL ECONOMY AND THE IMAGE OF THE UNITED STATES IN LATIN AMERICA

Mr. MELCHER. Mr. President, although I am one of the minority who opposed the Neutrality Treaty and who, therefore, opposes this treaty, I have asked for this time to summarize my concerns on economic matters of Pana-

ma operating the canal as contrasted with our image in Latin America.

Many supporters of the treaties expound that a strong and powerful United States can demonstrate its greatness by giving all of the canal facilities to Panama, and they espouse it as the proper act for us to salvage or enhance our prestige in Latin America. Accompanying that proposition is the administration admonition that there should be no strings attached, no amendments to the treaties other than those of Baker-Byrd, and no reservations of substance such as the DeConcini reservation. Can the assumption that this gift to Panama will enhance our image in Latin America bear analysis?

It is not my purpose to argue ownership, sovereignty or the propriety of the 1903 treaty. The facts concerning these three points are relevant, but they are not the central issue concerning the adoption of the treaties.

There are several points that I would stipulate to in the old or new treaties. Our original purchases of the land in the Canal Zone—both from the individual owners of parcels of land (about one-third of the total), and the balance from the Government of Panama—may have been at prices that were too cheap. I would have further stipulated that the annual return to Panama for the operation of the canal and the Canal Zone should be much higher and that the restricted use of the land within the Canal Zone has been unreasonable and harmful to Panama. These stipulations could and should have been remedied more than a generation ago. The treaties do correct those inequities in a strange mixture.

Gradually over the next several years we give up control of the land in the Canal Zone. Likewise, gradually over the next several years we give up control of the canal's operation but continue for 22 years to participate in the management. During this period of time—22 years—we provide funds for Panama to assure—I repeat—to assure—make certain—guarantee, if you will—that the canal's operation will be efficient and effective. So the economic and land injustices for Panama are corrected.

If there were no more to the treaties than that, or if the treaties provided some form of a beneficial partnership for Panama and the United States beyond 1999, I would not fault them—I would vote for them. But there is much more.

Under the treaties, after 1999 we cannot participate in the canal's operation. This apparently is the price we are to pay for Panama to accept the complete ownership of the canal's facilities, the railroad, the buildings, homes, land, and military facilities. In 1976 dollars the fair market value of all of this is $10 billion. We will further assist in military sales of $50 million; help in up to $200 million of Export-Import Bank credit; $75 million in housing guarantees; and participate in $20 million through the Overseas Private Investment Corporation. There will be $43 million cost to us for transfer of military, and $165 million spread over 20 years for early retirement of Canal Zone employees.

Will this generosity be an enhancement of our prestige in Latin America? To turn over the $10 billion in assets to provide the other monetary assistance, it is rationalized by the administration, will show how strong and fair a nation we are.

Actions of benevolence by the United States during the past two decades have not necessarily enhanced our world prestige, which has slipped during this era while we have been generous with foreign aid. It is an old axiom that one cannot buy friends, and our foreign aid efforts in Latin America have borne that out.

The per capita value of all that goes with the treaties is about $6,000 for every man, woman, and child in Panama. Naturally, the individual people will not see much of it, because the bulk is in assets connected with the canal's operation. They have benefited from that operation and will continue to do so. The per capita loss to each man, woman, and child in the United States of about $46 will not be felt directly, because the canal for us has been a principal asset only in the sense of facilitating world commerce—an indirect but important benefit and, therefore, if the canal continues to operate efficiently, the benefit continues, and no actual loss is felt by Americans.

For the Panamanian people to benefit in the long run from the canal depends on its continued successful operation in the future. It is at this point that I believe the treaties falter and demonstrate not U.S. strength, but clearly demonstrate weakness in our lack of practical planning and our willingness to subjugate ourselves to the clamor of the administration that beyond 22 years there should be no concern about the canal.

That argument—after 22 years everything will work out fine—is a very tempting lyric from a tune orchestrated by the entire administration. All of us in the Senate have extremely pressing problems for our individual States. Indeed, collectively Congress and the administration are well aware that our own domestic problems are so grave and urgent that we should not be spending great amounts of time on the Panama Canal Treaty debates while the U.S. economy stagnates, basic American industries founder, the dollar shrinks from inflation, and millions of Americans cannot find a job. So the temptation of the treaties is to say "yes" and get them behind us. But that, I believe, is the true weakness of the United States—the willingness of the executive branch—three Presidents—and their State Department to concede unreasonably, to believe that all will work out for the best in the treaties, and to assert that the cash and canal assets turned over to Panama will show us to be a truly strong nation.

Their faulty concession is that U.S. money backup and comanagement is essential for 22 years, but after 1999 neither will be required at all. We are dealing with a small country under a pretty tough dictator. Panama surely does not now have the economic base to operate the canal efficiently without our help.

It takes patience and persistence by us to work out long-range practical comanagement of the canal with Panama. Both sides of the negotiators—probably for political reasons—bargained and stalled for years and never reached a reasonable comanagement arrangement. The politics on the Panamanian side involved the symbolic removal of the United States from their country—get out, period. Getting rid of us has become the focal point for General Torrijos' national guard to gain a "liberation" image that helps their control over Panama. For the United States to abruptly abandon all interest or participation in the canal would be a startling event for individual Americans. Hence, the limbo period of 22 years of comanagement. It is a "Catch-22"—long enough so Americans are not to worry about what happens to the canal's operation after that, and short enough so the Panamanians can see complete control of the canal without a U.S. presence.

It has been argued by some on one side of the issue that there is a threat of Communist takeover by Cuba or Russia. It has been argued by some on the other side that failure to agree—here and now—to these treaties precipitates another "Vietnam" requiring 100,000 or 200,000 American troops guarding the canal. There is neither any sign of a Communist takeover nor a new "Vietnam." For Cuba, Russia or any aggressor to disrupt the canal's operation brings down the solid wrath of all the world's countries that use the canal. As for the "new Vietnam" argument, that assumes the Panamanians have given up on negotiating and have reversed their generally peaceful nature to become warriors without weapons to destroy that which provides their best economic base—the canal's operation itself.

Rather than view a form of comanagement of the canal as an infringement on the country of Panama, I view it in a business sense, as the sensible procedure to help Panama in a meaningful way. For the very same reasons that continued financial help for Panama is necessary for 22 years to operate and maintain the canal, we need some arrangements for the same joint responsibility after 1999.

Panama has attracted foreign capital through banking and insurance laws that are looser than most countries. They have attracted foreign capital for other reasons—principally because of their close ties to American business with the solid backing of the U.S. Government. Panama's share of U.S. investment in the Latin American Republics is 42 percent. That is the lion's share. Almost half of all business investment by U.S. interests in Latin America is in Panama. It amounts to $1.8 billion. That is, indeed, close business ties between Panama and the United States.

The Panamanians argue that with the treaties they will be on even more solid ground for continued opportunities to secure outside capital. However, it is important to note that Panama is overextended now, paying 28 percent of their annual revenue for interest due on their debts. They, in particular, need the financial gains the treaties guarantee

them to even hold their own shaky economy together.

If foreign investment at decent interest rates are to be available for Panama over a period of time, the complete absence of American participation in the canal's operation will be a disadvantage to Panama's credit. Efficient operation of the canal is the cornerstone of Panama's economy, and assured financial backup for effective maintenance and management is their best collateral to attract capital. That is the basis to attract long-term, long-line credit, which has been available to Panama partly—or, perhaps, largely—because of its close ties to the United States. With annual annuities and other funds backed by the U.S. Government for 22 years, Panama's credit for that period of time should be good. After 1999, without the financial backup from the United States and without our comanagement of the canal, the Panamanians are less likely to attract outside capital to expand their economy.

I believe world bankers, as a group, are more conservative and careful on investments than most of us, but I ask of you: Would any of you care to invest in long-term bonds for Panama to mature after 1999? In short, I believe that the business world outside of Panama and the business community within Panama rely on the backing of the United States both for credit and for a responsible government in Panama and, from that, a growing economy can possibly be nurtured.

The existing government under General Torrijos' national guard denies so much that is basic in a democracy that I believe their government will either be deposed or gradually reshaped. Torrijos has succeeded for 10 years, because of our solid backing. Substantial U.S. backing cannot continue if Torrijos and the national guard continue to deny democratic elections, an independent judiciary, and a government run by fairly elected officials rather than elections rigged by the national guard, and government officials subservient to the national guard.

The treaties do not affect that directly but, because they do not continue a form of active cooperation in the canal's operation after 1999, there is a likelihood that U.S. business investment will decrease then. Since the canal is the basic part of Panama's economy, any slippage in its efficient operation damages them first in lost revenue then, second, in credit rating. Inadequate funding works against the best interests of the canal's operation. We share that interest with the rest of the world who use the canal.

We have a special relationship with Panama, because of our development of the canal and our responsible operation of it. Although we have negotiated with Panama for a long period of time to reach the point where we now are, in my judgement the treaties do not produce a satisfactory long-term arrangement with and for Panama.

With more negotiation there is every reason to believe the treaties could become a firm and productive arrangement between Panama and ourselves. As they are, Panama receives a big gift but we, by the treaties terms, remove our backing and all responsibility after the year 1999. That gift and withdrawal is not necessarily a sign of strength. Rather, it would be a stronger United States that patiently but pointedly renegotiated arrangements with Panama to back up, assist and participate in the continued management of the canal's operation.

Negotiations to reach such a treaty would provide a sensible, sound leadership position helpful more to Panama than ourselves. That would provide an assurance of continued efficient operation of the canal, basic to Panama's economy, and an important advantage for world commerce, which is of great significance for all of Latin America—probably more beneficial to them collectively than to us.

But, then, that is the true sign of greatness and that is what is now lacking in the treaties.

Renegotiated treaties could retrieve it for us.

Mr. President, if I have any time remaining I reserve the remainder of it.

The PRESIDING OFFICER. The Senator is advised that he has 2 minutes remaining and it is so reserved.

Who yields time?

Several Senators addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Illinois seek recognition?

Mr. PERCY. Mr. President, will the Senator yield 1 minute?

Mr. SARBANES. Mr. President, what is the time situation?

The PRESIDING OFFICER. The Chair advises that the proponents of the amendment have 5 minutes remaining and the opponents have 1 minute remaining.

Mr. SARBANES. I yield 1 minute.

Mr. PERCY. Mr. President, I supported the DeConcini amendment.

The pending reservation before us now does not diminish the DeConcini amendment, or anything else in the treaty, as many Senators opposing the treaties have been arguing. In my judgment, it simply interprets what we mean in the treaties. It states that our purpose in taking any action will be to keep the canal open, not to intervene in the internal affairs of Panama.

This is a clarification, not a weakening of the treaties or the DeConcini amendment.

I am pleased to be a cosponsor of the reservation.

Mr. President, I indicated I would support the treaties only conditioned upon our accepting amendments that would make it possible for U.S. warships in perpetuity to go to the head of the line and that would make it possible to protect the neutrality of the canal from outside intervention at any time there was a threat to the canal. I think the leadership reservation improves the DeConcini amendment by clarifying that the objective and purpose of all of us, including Panama, is to keep the canal open. The United States stands ready to help and assist in that regard, whenever it is threatened, working in partnership with Panama.

Mr. DECONCINI. Mr. President, will the Senator yield?

Mr. SARBANES. Mr. President, I yield 1 minute to the Senator from Arizona.

Mr. DECONCINI. Mr. President, I support the leadership amendment.

I am rising to speak, Mr. President, on behalf of an amendment to the instrument of ratification which bears the name of the majority leader, the minority leader, a number of other distinguished Senators, and myself. This amendment is designed to clarify a few very simple concepts that apparently have been misunderstood by the Panamanians and some Members of this Chamber. The misunderstanding centers around what has become known as the DeConcini amendment to the Neutrality Treaty.

Let me begin by indicating that I have approached these treaties negatively from the outset. After my visit to Panama which included numerous discussions with Panamanian leaders, including General Torrijos himself, I came away with the very distinct impression that Americans and Panamanians had radically differing perceptions of these treaties and the rights they conferred on the United States and Panama. Since that time, I have stated publicly and privately that I would not support the treaties unless certain questions were satisfactorily answered. Of most concern to me was the Americans' right to keep the canal open after the year 2000 should it be closed for any reason.

I should add that I have never been an opponent of the idea of new treaties with Panama. I sincerely believe that our relationship with that nation needs to be redefined in order to reflect the changed values of the 1970's. In all too many ways, the present treaty arrangement reflects a bygone era.

However, I have also felt that any new treaties must protect the special and historic American interests in the canal.

Quite frankly, Mr. President, it was my intention to vote against these treaties, although I held out the option of voting "yea" if certain changes could be incorporated. It was not until it became apparent to the administration that my vote might be crucial that serious overtures were made to accommodate these concerns. After a period of serious negotiations with the administration in which the Senate leadership played a key role, agreement was reached on both the form my amendment would take—that is, as a condition to the instrument of ratification—and its content.

Although there have been conflicting reports on this point, it appears that the administration may have been unaware that the wording of the DeConcini amendment would cause profound consternation in Panama. At least, we can say for sure that on March 16, none of us in the Senate believed that it would cause much protest from the Panamanians. And the reason for this is quite simple. The DeConcini amendment asserted no right that had not already been asserted in the report of the Foreign Relations Committee. On page 6 of that report an unequivocal American right to use force to protect and defend the canal was clearly stated to be the intent of the

"leadership amendments." At one point, the report says:

The United States has the right to act as it deems proper against any threat to the Canal, internal or external, domestic or foreign, military or non-military. Those rights enter into force on the effective date of the treaty. They do not terminate.

In other words, Mr. President, the DeConcini amendment in no way sought to go beyond the rights already asserted by the Senate Foreign Relations Committee. My amendment was specifically addressed to the question of whether those rights were actually conferred by the language of the treaty itself and the subsequent leadership amendment. In my view—and in the view of a number of my Senate colleagues—the actual language was insufficient to sustain the rights asserted. Thus, we sought at the time to remedy the situation, not by creating any new rights, but by less ambiguously stating those rights we were told by the Foreign Relations Committee already existed.

The amendment we have before us now is an attempt to reassure the Panamanian people that the United States is not asserting, nor has it ever asserted, a right to intervene in the internal affairs of Panama. I would like to reiterate my words at the time the original amendment was introduced and passed:

I believe I speak for all Senators in stating that it is not our expectation that this change gives to the United States the right to interfere in the sovereign affairs of Panama. The United States will continue to respect the territorial integrity of that Nation. My amendment to the resolution of ratification is precautionary only; and it is based on the long history of American stewardship of the Canal. It recognizes the very special relationship that the Panama Canal has to American security. I certainly hope that if this right is attached to the treaty it will never need to be exercised. Yet, it is important that the American people know that should the need arise, the United States has sufficient legal sanction to act.

It is unfortunate that so many Panamanian people and their leaders have misconstrued the original DeConcini amendment. I believe that the misinterpretation may, in part, have been the result of considering the amendment in the context of a sometimes intemperate Senate debate on the canal treaties. In the heat of debate, we have occasionally used phrases or words that do not truly reflect the high regard we have for the Panamanian people and the respect that we have for every sovereign state. That, however, is the price we pay for openness and democracy. I sincerely believe, Mr. President, that not viewed in the context of this debate, the Panamanian people surely would not have reacted as they did to my amendment.

But that does not change the facts. This negative impression has been fostered by certain segments of both the American and Panamanian press. Thus, Mr. President, what we are doing today is asking the Senate to adopt an amendment to the resolution of ratification that was carefully worked out with all parties. Its purpose is to put to rest Panamanian fears that the United States is asserting in the DeConcini amendment a right to intervene in the internal affairs of the Republic of Panama. But—and this is equally as important—we are leaving intact the thrust and purpose of the DeConcini amendment which is to allow the United States to retain the right to keep the canal open.

I am satisfied, Mr. President, that the amendment we have before us today accurately reflects American policy. It restates our traditional view of nonintervention in the internal affairs of other nations, and it makes clear that in the exercise of our rights to keep the canal open we shall never have as our purpose the interference in the internal, sovereign affairs of the Republic of Panama. On the other hand, we also make it clear in the words of this amendment that the right to keep the canal open is unaffected. We are saying, simply, that in the exercise of that right we shall clearly have as our objective only the keeping open of the canal and not any other objective, such as interfering in Panama's internal politics.

Let me say, Mr. President, that the majority leader has shown great wisdom, restraint and patriotism in his handling of the delicate discussions that have led to this amendment. He has displayed an even-handedness toward each party and a respect for the interests of each party that sets him apart as a true leader. I believe this Nation owes him the deepest debt of gratitude.

I thank the Chair.

Mr. SARBANES. Mr. President, I simply wish to underscore, as we close out our time on the leadership amendment that these treaties represent an opportunity for the United States and for Panama and for the peoples of both countries to join together in a constructive and positive partnership. It offers the opportunity to assure that the canal will remain open, secure, accessible, and neutral. It will continue to serve as a great international waterway, at the same time that it gives assurances to the people of Panama that there will not be intervention in their internal affairs, that their sovereign integrity or their political independence will not be interfered with, that the very things which the able Senator from Idaho mentioned as being encompassed within the term "interventionism" in the thinking of Latin America will not take place.

Mr. President, much has been said over the course of this debate and as a consequence reactions have been prompted both here and in Panama. One would hope, as we come to the closing minutes, that should these treaties take effect, then both parties would seize the opportunity which is presented to develop a new relationship and to enhance the strength of both the United States and the Republic of Panama. These treaties are fair treaties. They are treaties designed to respond to the interest of both parties and to do so in such a way that fully recognizes and accords the respect that peoples are entitled to.

The leadership amendment, which is before us, is an important contribution to this objective just as the other amendments which have been made to the resolutions of ratification have been important contributions as the Senate has carried out its role of advising and consenting to these treaties.

The PRESIDING OFFICER. The time of the proponents has expired.

Mr. MELCHER. Mr. President, I have no further requests for time. I yield back the remainder of my time.

The PRESIDING OFFICER. The Senator from North Carolina has 1 minute remaining.

Mr. HELMS. Mr. President, I yield that 1 minute to the distinguished Senator from Alabama. I see him shaking his head. So in that case, I yield it back.

The PRESIDING OFFICER. All time has been yielded back.

AMENDMENT NO. 104

Under the previous order, the hour of 2:30 p.m. having arrived, the Senator from Alabama (Mr. ALLEN) is recognized to call up an amendment on which there shall be 30 minutes debate with vote thereon to follow the debate.

Mr. ALLEN. Mr. President, I ask that the amendment be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Alabama (Mr. ALLEN) for himself, Mr. THURMOND, and Mr. HELMS, proposes amendment numbered 104.

At the end of the amendment, add the following:

This reservation shall not be construed as limiting, detracting from, or diminishing the rights reserved to the United States in the DeConcini Reservation to the Neutrality Treaty to take action to keep the Canal open and operating.

The PRESIDING OFFICER. The Senator from Alabama.

Mr. ALLEN. Mr. President, I yield myself 10 minutes.

The PRESIDING OFFICER. The Senator from Alabama is recognized for 10 minutes.

Mr. ALLEN. Mr. President, the pending leadership amendment to which this amendment is offered is brought to us by the same people who brought the leadership amendment to the Neutrality Treaty, an amendment that was found to be so deficient and so full of holes, in the judgment of many here in the Senate, and it is brought to us by the same people who brought the DeConcini amendment.

I say that after the DeConcini amendment was offered, the leadership embraced the amendment, recommended it to the Senate, and it was approved by the President of the United States.

So a moment ago, when a point of order was raised that the leadership amendment was out of order, because it sought to amend the DeConcini amendment in the other treaty, I voted with the leadership in moving to table that appeal, because I do believe that the leadership can offer amendments and get anything added onto this treaty that they see fit, because they do have a majority who follow their recommendation with respect to approval or disapproval of amendments.

But that does not remove the fact that no matter what is placed in this treaty as an amendment or as a reservation, it cannot alter the terms of the DeConcini

amendment. That is there to stay. It is frozen into that treaty, because it has already been passed on by the Senate. The time for reconsidering the vote has expired.

It was an amendment that was recommended to the Senate by the leadership.

But I must say, Mr. President, that since the Panama Canal Treaty has been under consideration, the main thrust of the leadership has been to undercut or dilute the provisions and the meaning of the DeConcini amendment.

But, Mr. President, if the DeConcini amendment can withstand, as it apparently has, the provisions of the first two leadership amendments, and the present leadership amendment is on all fours with the first leadership amendment in the Neutrality Treaty, but if it can withstand the provisions of the leadership amendment to the Neutrality Treaty by the wording in the DeConcini reservation saying that "Notwithstanding the provisions of article V or any other provision of the treaty, if the canal is closed or its operations are interfered with, the United States can take whatever means, including military action, to keep the canal open," if the DeConcini amendment has survived the leadership amendment in the Neutrality Treaty, certainly it is going to survive the leadership amendment offered to a treaty that expires with the end of this century when the DeConcini amendment takes over. So no matter what the leadership adds to the Panama Canal Treaty, the DeConcini amendment will still be there, and you may rest assured that the United States is going to use the DeConcini amendment to assert any right it may need to assert in order to keep the canal open and to keep it in operation, notwithstanding the leadership amendment in the Neutrality Treaty and notwithstanding the present leadership amendment that is now pending.

So, Mr. President, there being so much doubt and so much ambivalence in the amendments that have been offered heretofore, since the leadership now is trying to dilute the DeConcini amendment, they had control over the DeConcini amendment, they accepted it, they assured the Senators that that is what they needed and what they wanted—never mind that it was to get sufficient votes to approve the treaty—but it, in effect, was also a leadership amendment, so, Mr. President, that being the leadership amendment also, and there being so much confusion caused by that amendment, can we now depend upon the second leadership amendment as a solution of the dilemma that we find ourselves in as a result of the action of the leadership?

Mr. President, I submit we need to clarify just what the leadership is driving at in this amendment. What do they say? The amendment was not made available to Senators, the rank and file Senators, I will say, until after 12 o'clock today, after the amendment was offered. What does it mean? It cannot interfere with the DeConcini amendment and, as I read it this morning, quoting from the Rubaiyat of Omar Khayyan—I guess, Mr. President, that is where the dictator got his first name from Omar Khayyan, Omar Torrijos—but I do not believe he would approve of this paragraph from the Rubaiyat, because it is very pertinent as to the standing of the DeConcini amendment. It stands there and it is going to stand there as a part of history.

Reading from the Rubaiyat:

The Moving Finger writes; and, having writ, moves on:

So we have moved on from the Neutrality Treaty—

Nor all your Piety nor Wit

I do not know whether they are talk-about the Senator from Idaho or the Senator from West Virginia or the Senator from Maryland when they speak "nor all your Piety nor Wit":

Shall lure it back to cancel half a Line.

So you can talk about diluting the DeConcini amendment all you want to, but the Rubaiyat is proof that that cannot be done:

Nor all your Tears wash out a Word of it.

So no matter what we do here on this treaty which expires with the year 2000 it is not going to affect the Neutrality Treaty and the DeConcini amendment which starts with the year 2000.

When the year 2000 comes this treaty and the leadership amendment are going to fall and we are going to take up with the Neutrality Treaty and the Deconcini amendment.

This amendment I have offered, along with the distinguished Senator from North Carolina (Mr. HELMS) and the distinguished Senator from South Carolina (Mr. THURMOND) would merely state—and I think it is necessary to help the leadership here to advise the Senate and advise the country of just what they mean by their amendment—this amendment we are offering will help them define what they mean by their amendmet. It does say:

This reservation—

That is, the leadership amendment—

shall not be construed as limiting, detracting from or diminishing the rights reserved to the United States in the DeConcini reservation to the Neutrality Treaty to take action to keep the canal open and operating.

That is what the reservation would be defined as if this amendment to the leadership reservation is agreed to.

Mr. President, I reserve the remainder of my time, and I now yield 5 minutes to the distinguished Senator from Kansas (Mr. DOLE).

The PRESIDING OFFICER. The Senator from Kansas (Mr. DOLE) is recognized for 5 minutes.

Mr. DOLE. Mr. President, I thank the distinguished Senator from Alabama.

Mr. President, I believe, having participated in some of the debate, and having offered amendments, some the Senator from Kansas thought were meritorious, and having had those amendments rejected, that in the years to come all of us will grow more aware of the importance of the treaty guarantees proposed by the distinguished junior Senator from Arizona (Mr. DECONCINI).

The so-called DeConcini reservation to the Neutrality Treaty, which has already been approved by the Senate, was the vital assurance of America's right to take independent action as it deemed necessary to insure that the Panama Canal shall always remain open for the transit by ships of all nations.

The DeConcini reservation to the second treaty, which was adopted last evening, will provide the very important guarantee that any decision our country makes with regard to the defense of the canal may not be vetoed by the Panamanians who sit on the Combined Military Board created by the treaty. This provision also preserves our right to act independently—not to intervene in Panama's internal affairs—that was never the intent—but to protect and defend the canal whenever its operations are threatened in any way.

Mr. President, I support the DeConcini reservation to the Panama Canal Treaty now under consideration, just as I supported the DeConcini reservation to the Neutrality Treaty last month. I believe that both of them are necessary preconditions to Senate ratification of the treaties even though they do not, in my opinion, make the treaties entirely acceptable.

The real significance of these assurances, however, is that they underscore the inherent weaknesses of both treaties as originally proposed by the administration. When the text of the two Panama Canal treaties was first released last September, the Senator from Kansas thought he recognized some very basic and some very fundamental weaknesses in the defense provisions of the negotiated accords.

There were conflicting interpretations of America's rights to protect and defend the Panama Canal, despite the fact that President Carter told us the provisions were "clearly understood" by the leaders of our two nations. These conflicting interpretations were not dreamed up by anyone on this floor. They were stated by witnesses before the committee. It was indicated that there was some difference of opinion by former Panamanian negotiators, and on the strength of that, the Senator from Kansas as well as others offered amendments as far back as last September. Our Nation's military leadership, which had endorsed the treaties, expressed their interpretation that "if neutrality is violated, then the United States has the responsibility to intervene in Panama and restore the neutrality regime of the canal." This was Adm. James Holloway's testimony before the Senate Armed Services Committee on January 24.

But Gen. Omar Torrijos continued to state his interpretation that "it is necessary for the United States to be committed so that when we ring the bell here, when we push the button, a bell rings over there, and the United States comes in defense of the Panama Canal." General Torrijos' interpretation obviously contradicted that of our own military leaders, who had been led to believe by our administration that our decision to defend the canal would be unilateral in nature.

At the outset, the Senator from Kansas

stated that the only way to resolve the ambiguity, and to resolve the concerns of the American people, would be to clarify the treaty language as forthrightly as possible.

DOLE AMENDMENTS

Last September 23, I introduced an amendment which I felt could help resolve the problem. My amendment No. 5 to the Neutrality Treaty was designed to specifically guarantee our authority to intervene militarily on behalf of the canal whenever we alone determined its neutrality to be threatened. At the time, the administration complained that my amendment was unnecessary. They suggested that the Senator from Kansas was trying to be an obstructionist.

But I might add that within 2 weeks, on October 14 of last year, the administration itself released a "joint statement of understanding" reached by President Carter and Gen. Omar Torrijos, thereby underscoring the fact that there was a difference in interpretation.

Even though the Senator from Kansas did not feel that the "Carter-Torrijos understanding" was a perfect answer to the problem, I took the administration at its word and proposed that the statement of understanding itself be incorporated as part of the treaty. I introduced treaty amendment No. 7 for that purpose. Again, the administration and other treaty proponents complained that the Senator from Kansas was trying to "kill" the treaties. They said it was unnecessary to put the statement of understanding directly into the treaty.

I do not believe that those Senators who supported the two DeConcini reservations will now consent to any dilution or diminishment of those guarantees. Yet, I share the concern already expressed by my colleagues from Nevada, Alabama, and Idaho, that the so-called leadership reservation does, in fact, limit the scope of the DeConcini reservation. If this were not so, there would be no purpose in offering it.

The leadership has told us time and time again how unnecessary it is to attach modifications to these treaties, because certain guarantees and limitations are "understood" by the leaders of the two countries. That was the reason originally set forth last fall, for opposing the defense amendments proposed by the Senator from Kansas. If the new leadership reservation in fact makes no change in the treaty, and simply reflects aspects already implicit in the articles, then perhaps the leadership reservation is unnecessary.

In any case, I support the Allen amendment of the second degree, to the leadership reservation, providing that it shall not limit, diminish, or detract from the rights of defense guaranteed by the DeConcini reservation, to keep the canal open and operating.

The American people and many of my colleagues disagreed with the leadership position. Momentum and support for the amendment was building, and in January of this year, the administration capitulated and agreed to give its blessing to an amendment of this type. The majority and minority leaders of the Senate agreed to introduce a new amendment to that effect, and it became known as the leadership amendment. It passed by an overwhelming majority vote, and made an important improvement in the treaty, but was not enough in itself to fully guarantee our basic defense rights.

And so, on January 19 and March 2 of this year, the Senator from Kansas introduced two additional amendments designed to protect our base rights in Panama during the future. The first of these proposed that the United States and Panama work together to find a mutually acceptable arrangement under which we might retain a military presence into the next century. If such an arrangement was not completed before December 31, 1999, we would retain the right to keep our present bases until a separate agreement was reached. The second amendment, which was similar in nature, would simply have added 10 words to the Neutrality Treaty, to hold open the possibility that Panama and the United States could agree at some point that a continued American military presence would be necessary.

The junior Senator from Arizona, Mr. DECONCINI, cosponsored both of these amendments. He, like many others in this body, shared a valid concern about our ability to protect the canal after the year 2000. Of these last two amendments offered by the Senator from Kansas, the first received 34 votes and the second, 37 votes. So the handwriting was on the wall at that point. More than one-third of the U.S. Senate—enough to deny ratification of the treaties—expressed strong support for efforts to strengthen the defense provisions in the neutrality treaty.

Therefore, it should have come as no surprise to anyone when the DeConcini reservation was adopted 1 week later, on March 16. Given the political situation, it was probably necessary for a so-called "swing Senator" to be the one to achieve victory with such a strengthening amendment, and I commend the junior Senator from Arizona for his ability to accomplish this. We know that the administration, and the pro-treaty leadership on the Senate floor, would have fought the same reservation if it had been offered by any except the "undecided Senators." The Senate leadership, along with the floor managers of this treaty, would have argued that the vital DeConcini reservation was "unnecessary" because U.S. defense rights were already "understood." They would have said it was "redundant" to spell out those rights because President Carter and General Torrijos already had implicit understandings along those lines.

Fortunately, those voices were silent during consideration of the DeConcini reservation to the first treaty, and apparently they will be willing to accept the DeConcini reservation to the second treaty, as well. This fortunate. These treaty modifications are necessary, and they will serve the best interests of our country for decades to come.

The PRESIDING OFFICER. The time of the Senator has expired. Who yields time?

Mr. CHURCH. Mr. President, I yield myself such time as I may need.

The PRESIDING OFFICER. The Senator is recognized.

Mr. CHURCH. Mr. President, the distinguished Senator from Alabama keeps quoting from the Rubaiyat. He has told us again that:

The Moving Finger writes; and, having writ,
Moves on: nor all your Piety nor Wit
Shall lure it back to cancel half a Line
Nor all your Tears wash out a Word of it.

Well, there are other passages from that same poet that seem to me to be applicable to this debate. For example:

Myself when young did eagerly frequent
Doctor and Saint, and heard great argument
About it and about: but evermore
Came out by the same door where in I went.

With them the seed of Wisdom did I sow,
And with mine own hand wrought to make it grow;
And this was all the Harvest that I reaped—
"I came like Water, and like Wind I go."

That, in a way, characterizes this argument. First, the Senator from Alabama takes the position that somehow we are seeking to dilute the DeConcini reservation. He is saying, "First of all, you cannot do it because that has been riveted into the resolution of ratification for the Neutrality Treaty."

Well, Mr. President, we are not attempting to erase, withdraw, or weaken the provisions of the DeConcini reservation. We are trying to make clear what its purpose is, as agreed upon by its sponsors and by those who voted for it.

So the Senator from Alabama is dead wrong when he says that we are here for the purpose of diluting the DeConcini reservation.

Then he goes on to say that in any case it cannot be done, whatever our intention may be, because the Neutrality Treaty starts at the end of the century when the Panama Canal Treaty expires.

Again I say the Senator from Alabama is dead wrong. The Neutrality Treaty and the Panama Canal Treaty start at the same time. Their provisions become binding at the same time, to wit, when the articles of ratification are exchanged by the two governments. That is the effective date when both treaties come into force. This leadership amendment addresses itself to all the provisions in both treaties and to all the provisions of the articles. So the argument has no merit, and the Senator is playing games.

I see three different Allen amendments. I do not know if the Senator intends to present all of them. The pending amendment, No. 104, reads:

This reservation shall not be construed as limiting, detracting from, or diminishing the rights reserved to the United States in the DeConcini Reservation to the Neutrality Treaty to take action to keep the Canal open and operating.

The next amendment, No. 105, reads:

This reservation, to the extent set forth herein, shall be construed as limiting, detracting from, and diminishing the rights reserved to the United States in the DeConcini reservation to the Neutrality Treaty to take action to keep the Canal open and operating.

And there is another, which reads:

This reservation shall be construed as limiting, detracting from, and diminishing the rights. . . .

And so on. As I said, the Senator is playing games. He wants to add something, anything, to the carefully crafted

language of the leadership reservation, when nothing should be added. The leadership reservation makes explicit exactly what the sponsor of the DeConcini reservation himself sought: Namely, that any action by the United States of America in the exercise of its right to assure that the Panama Canal shall remain open, neutral, secure, and accessible pursuant to the treaties and the articles of ratification thereto shall be only for the purpose of assuring that the canal shall remain open, neutral, secure, and accessible, and shall not have as its purpose intervention in the internal affairs of the Republic of Panama or interference in its political liberty or sovereign integrity.

It cannot be better stated. But the Senator from Alabama has done everything he can to defeat these treaties and he is not in a mood to acknowledge the clarity of this language. Rather, he is in a mood to confound and confuse the question by adding one amendment after another, inconsistent as they may be.

I hope the Senate will have none of that. I strongly urge the Senate to overwhelmingly defeat each of these amendments. They are mischievous. We should see them for what they are, and we should vote them down. I reserve the remainder of my time.

The PRESIDING OFFICER. The Senator from Alabama.

Mr. ALLEN. Every amendment the Senator from Idaho does not approve of is mischievous. This is not a mischievous amendment. I ask the question, is it fair for the leadership to obtain approval of the Neutrality Treaty by accepting the DeConcini amendment, making it their own, and thereby getting the first treaty approval and to now try to undercut the provisions of that reservation? It is not fair. It is not fair to those who cast their vote on the approval of the DeConcini amendment.

Now he says I am trying to undercut the DeConcini amendment. If that be true, why is he opposing my amendment which says that this reservation shall not limit or detract from or diminish the DeConcini amendment? It is patently incorrect on its face.

Mr. President, the distinguished Senator also said that the Neutrality Treaty starts at the very same time as the Panama Canal Treaty. He knows that the United States is in full charge of the defense up until the year 2000, and that the DeConcini amendment was aimed at article V of the treaty. I will read it. It has to do with the effective date of article V:

> After the termination of the Panama Canal Treaty, only the Republic of Panama shall operate the canal and maintain military forces.

So he knows. I do not know why he states the contrary is true. He knows that the DeConcini amendment goes into effect in the year 2000, even though the Neutrality Treaty does go into effect at the same time as the Panama Canal Treaty, if that is approved.

So the DeConcini amendment starts in the year 2000, and the distinguished author of that amendment stated that he—I know it did not become an amendment—intended to have a similar amendment to offer to the Panama Canal Treaty. I do not believe it has come in.

I thank the Chair.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. CHURCH. Mr. President, I yield myself such time as I may require.

In the first place, the DeConcini reservation is addressed not simply to article V but to any other provision of the treaty, and the reservation explicitly says this, on its face.

Now I read from article II, section 1 of the Panama Canal Treaty. It says:

> 1. This Treaty shall be subject to ratification in accordance with the constitutional procedures of the two Parties. The instruments of ratification of this Treaty shall be exchanged at Panama at the same time as the instruments of ratification of the Treaty Concerning the Permanent Neutrality and Operation of the Panama Canal, signed this date, are exchanged. This Treaty shall enter into force, simultaneously with the Treaty Concerning the Permanent Neutrality and Operation of the Panama Canal, six calendar months from the date of the exchange of the instruments of ratification.

Both treaties enter into force at the same time. That was written plainly into the language of the treaty. Why do we pretend otherwise? It is irrefutable. We do not have time to waste on arguments that are grounded in nothing but whimsy.

Mr. President, I am happy to yield to the distinguished Senator from New York.

Mr. JAVITS. I thank my colleague.

Mr. President, let us get to the substance of this amendment and the substance of what we are talking about. The substance is the internal affairs and the sovereignty of Panama. That is what this is all about. The original article V stated very clearly that both parties may do whatever they think they have to do to maintain the neutrality of the canal permanently.

That covered everything DECONCINI or anybody else could think of. Then along came the people of Panama and said, "What about using this as a reason for getting into Panamanian politics or invading our territory just because you always can contrive an instance? Somebody threw a rock at a ship."

General Torrijos and President Carter got together and they said, "We have no such design." They therefore said, "What we mean by protecting the neutrality is to take any action each of us thinks we ought to take independently of the other, including military action, in order to maintain the canal"—I would like to give the words because they are very clear—"open and secure."

Then along came DECONCINI and he said, "Regardless of any other consideration, whatever that may be, we have to keep this canal," said he, and I would like to use his words because they are also very important in considering this matter, "to reopen the canal or restore the operations, as the case may be, if the canal is closed or its operations are interfered with."

Still, everybody was saying the same thing. But DECONCINI did not say, just like article V did not say, without interfering in the internal affairs of Panama, including the invasion of its sovereignty or messing around with its politics.

So now we come along and we say that. That does not diminish anything DECONCINI did. It does not diminish anything article V did. It does not diminish anything the leadership did in the first treaty.

It simply makes clear what we mean. We mean that we are going to keep this canal open, secure, neutral, and free. But it does not mean, and that is all we are saying now, the negative, it does not mean that we are going to interfere with Panamanian politics or invade its sovereignty, or just invade its territory because we feel like it.

It seems to me, Mr. President, that when we put each of these things beside the other, it makes clear exactly what we intend, and we are saying what we intend, in the reservation.

Now we come to a matter of law. A reservation, which makes a particular meaning clear and is then accepted by the other side, is a free-standing contract, whether the proponent of this amendment is right or wrong as to the linkage, and I think the linkage is very clear. That its why we put these articles which relate to linkage, that is, article II and article VIII, into the record. They link both treaties. One does not take effect without the other, and it says so in the treaties themselves. Even under normal rules of relevance you can make an amendment to either treaty with that linkage.

Be that as it may, the point is this is a free-standing relationship between Panama and the United States which has nothing to do with DECONCINI, but which is defined further by this reservation to mean that we will not, whatever may be our other rights, either use those rights or any other fancied rights to interfere in the political affairs of Panama or to invade its sovereignty.

That does not exclude us from its territory or its troops, or anything else, to keep this canal open, secure, and neutral.

Mr. President, that, in my judgment, is the intention of both peoples, the people of Panama and the people of the United States, and it is properly expressed. It needs no further embellishment. It needs no further going up hill and down hill just for the sake of making a change. I hope very much, therefore, that the amendment will be rejected.

Mr. SARBANES. Mr. President, we are prepared to yield back the remainder of our time and move to table the amendment. Has all time expired?

The PRESIDING OFFICER. All time has expired on the proponents side and the motion to table is in order.

Mr. SARBANES. Mr. President, I move to table the amendment offered by the Senator from Alabama, and I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion to

table the amendment of the Senator from Alabama. The yeas and nays have been ordered and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK) and the Senator from Montana (Mr. MELCHER) are necessarily absent.

The result was announced—yeas 60, nays 38, as follows:

[Rollcall Vote No. 112 Ex.]

NOT VOTING—2

| | |
|---|---|
| Abourezk | Melcher |

So the motion to lay on the table the Allen amendment No. 104 was agreed to.

Mr. SARBANES. Mr. President, I move to reconsider the vote by which the motion to table was agreed to.

Mr. CHURCH. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER (Mr. LEAHY). Under the previous order, the Senator from Alabama (Mr. ALLEN) is recognized to call up his second amendment, on which there shall be 30 minutes of debate, with the vote thereon to follow the debate.

The Senator from Alabama (Mr. ALLEN).

AMENDMENT NO. 105

Mr. ALLEN. Mr. President, I call up amendment No. 105 and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Alabama (Mr. ALLEN), for himself, Mr. THURMOND, and Mr. HELMS, proposes an amendment numbered 105:

At the end of the amendment, add the following:

This reservation, to the extent set forth herein, shall be construed as limiting, detracting from, and diminishing the rights reserved to the United States in the DeConcini reservation to the Neutrality Treaty to take action to keep the Canal open and operating.

Mr. ALLEN. Mr. President, I yield 30 seconds to the distinguished Senator from Indiana (Mr. BAYH).

Mr. BAYH. I thank my colleague from Alabama.

Mr. President, I ask unanimous consent that a member of my staff, Chris Alridge, be granted privilege of the floor during the remainder of the debate and votes on this particular matter of the treaty.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from Alabama.

Mr. BAYH. I thank the Senator very much.

Mr. ALLEN. I am glad to accommodate the distinguished Senator.

Mr. President, I yield myself 9 minutes.

Mr. President, even though the distinguished managers of the treaties have stated that the leadership amendment now pending does not dilute the DeConcini amendment, which was added to the resolution of ratification to the Neutrality Treaty, yet they have seen fit to have the Senate table an amendment to their amendment which would merely have made that statement, that the purpose of the leadership amendment is not to limit or detract from or to diminish the rights reserved to the United States in the DeConcini reservation to the Neutrality Treaty to take action to keep the canal open and operating.

One wonders why they would object to this statement, which is something they have stated on the floor is not their intention. Yet, when we ask them to state that in the form of an amendment, they have the Senate table that amendment.

Mr. President, the DeConcini amendment was added to the Neutrality Treaty. Already there was a leadership amendment which had been agreed to and added to the Neutrality Treaty and it had substantially the very same provisions in the leadership amendment as are now contained in this leadership amendment to the Panama Canal Treaty—that is, that in intervening to protect the canal, we should not interfere with the internal affairs of Panama; that we should not interfere with their territorial sovereignty; that we should not interfere with their independence—the very same provisions that are contained in the present leadership amendment.

So the same provisions in the Neutrality Treaty did not limit the scope of the DeConcini amendment, because the DeConcini amendment said that notwithstanding the provisions of article V of the Neutrality Treaty, which says that starting with the year 2000 only Panama could have troops in Panama—notwithstanding that provision or any other provisions of the treaty, the United States could act unilaterally, even to the extent of using military action to keep the canal open and operating. That was despite the provisions of the leadership amendment actually inserted in the Neutrality Treaty.

So, Mr. President, if the DeConcini amendment could survive as an integral part of the treaty and as a provision that was offensive to the Panamanians, as being an affront to their dignity and their sovereignty, how could it be contended that it is not going to survive exactly as written in the Neutrality Treaty, despite a second leadership amendment to limit the meaning of the DeConcini amendment?

If the actual words in the Neutrality Treaty would not limit the DeConcini amendment, how are you going to limit the DeConcini amendment by a leadership reservation offered to the Panama Canal Treaty which expires at the end of this century, even though the DeConcini amendment would not become effective until the year 2000?

Mr. President, the leadership has seen fit to defeat an amendment to their amendment which would say that the leadership amendment does not diminish or decrease or detract from or limit the DeConcini amendment.

Just what does the leadership amendment mean? We would not be in this impasse today if we had had some clarity of expression in the treaty as shaped by the leadership, because they are responsible for the DeConcini amendment with its ambiguities. Yet, they come forward and say, "This is going to correct it. Maybe it will not dilute the DeConcini amendment, but it will be a concession to Panama and will save their face," and so forth. But I do not know that it is going to do that. Let us define what the leadership amendment does.

I have sought by amendment 104, which has just been tabled, to have the amendment say that it shall not be construed as limiting or detracting from or diminishing the rights reserved in the DeConcini amendment. If they think the opposite, if the leadership feels that it does diminish it, let us hear from them. They have had the original treaty approved. We all know—it is a matter of historic record—that they got it approved by agreeing to the DeConcini amendment, and it seems likely that that carried three Senators over to vote for the Neutrality Treaty. Now they are seeking to diminish and detract from and undercut the DeConcini amendment.

If that not be so, if it does not diminish it, they had the opportunity to say so in the other amendment, which they tabled even though they have been contending that it does not detract from the DeConcini amendment. Now let us see what their attitude is. In trying to probe for what this amendment means, let us try to find out now, before we agree to it, as was the case with the DeConcini amendment. We found out what it meant after it had been approved, and the leadership has been working ever since to change that meaning or to dilute that meaning on the floor of the Senate.

This amendment says:

This reservation—

That is, the leadership amendment—

to the extent set forth herein, shall be construed as limiting, detracting from, and diminishing the rights reserved to the United States in the DeConcini reservation to the

Neutrality Treaty to take action to keep the Canal open and operating.

So if they table the one saying it does not diminish, let us see what their attitude is going to be when this amendment says that it shall be construed as limiting or detracting from the DeConcini amendment.

Mr. President, I yield the remainder of my time to the distinguished Senator from Texas (Mr. TOWER).

Mr. TOWER. I thank the distinguished Senator from Alabama.

Mr. President, much of the debate in recent weeks has been speculation on our judgment by the court of world opinion, should the Senate reject the second treaty. Many in the media have editorialized that continued operational control of the canal would represent a throwback to the turn-of-the-century jingoism we have been accused of before. Our continued presence in the canal—regardless of the practical reasons why we should stay—would be judged as an example of a powerful nation out of touch with international realities, unable to shake its preoccupation with the colonialism of the past.

Relinquishing control, on the other hand, would underscore and enhance our status in the eyes of the world as a country setting an example for others to follow. If we buy this line of reasoning, then relinquishing control is a sign of strength, an example of our magnanimity in the conduct of foreign policy.

I say, "Baloney!" In fact, no informed or fairminded nation in the world could believe that the United States is bent on territorial and political aggrandizement in this world, when everything in our recent history has proved to the contrary.

As a matter of fact, in the face of countless examples of adventurism, aggression and threats to world peace on several fronts, we appear less committed to maintaining American strength and resolve—and yet more expectant that stability will be preserved if we simply demonstrate our good faith to the world. We have been asked to show foresight by overlooking international realities and by ignoring very serious flaws in the language of the proposed treaty.

I will not argue that the existing 1903 treaty cannot be improved upon or even replaced by a treaty more in keeping with American foreign policy goals for the remainder of this century and beyond. I do not believe, however, that the treaty before us today is the most prudent and responsible basis for the future of the Panama Canal and the future of United States-Panamanian relations.

Testimony before both the Foreign Relations Committee and the Armed Services Committee has demonstrated without question the critical importance of the Panama Canal to our national security. The notion that the canal is not a vital element of our economic and security structure has been repeatedly shown to be mythical.

The Senate has, in my view, paid little attention to the inherent and undeniable risks to which the canal will be exposed if the treaty before us is ratified and put into effect. Potential threats to the future security of the Panama Canal exist not only from sources external to Panama, but from the potential for political instability within Panama's own borders.

In addition to these security considerations, the proposed treaty would result in great cost to the American taxpayer and would bestow extremely generous payments to the Panamanian Government from canal tolls. The economic consequences of these provisions have not been taken into full account in my view during the course of the Senate's debate. Direct and indirect costs to the U.S. Treasury could well exceed $1 billion. The absolute minimum direct cost to the taxpayer will exceed $750 million. The necessary payments to Panama from canal revenues will require substantial toll increases, particularly as inflation raises the cost of operating and maintaining the canal. This in turn will have a detrimental effect on the economies of those ports handling ships which use the canal and specifically could cost thousands of jobs in the gulf coast ports.

I might note, Mr. President, that we have operated this canal for the benefit of all maritime nations and have done so evenhandedly.

In sum, the economic consequences of entering into the treaty now before the Senate will be decidedly adverse to the American taxpayer and the U.S. economy.

This reason alone is sufficient to warrant dramatic revision to the treaty provisions involving economic factors. Since the Senate has failed to accept modification to these terms, and as the provisions related to the canal's future security are clearly inadequate, I urge my colleagues to avoid a serious national mistake by voting to reject the treaty before the Senate today.

This reason alone is sufficient to warrant dramatic revision to the treaty provisions involving economic factors.

Since the Senate has failed to accept modification of these terms and as the provisions relating to the canal's future security are clearly inadequate, I hope my colleagues will avoid a serious national mistake, indeed an international mistake, by voting to reject the treaty before the Senate today.

I thank my colleague from Alabama.

The PRESIDING OFFICER. The Senator from Idaho (Mr. CHURCH).

Mr. CHURCH. Mr. President, I yield myself such time as I may require, and I shall be brief.

A few minutes ago the Senate tabled an amendment offered by the Senator from Alabama which said that the leadership reservation shall not be construed as limiting, detracting from, or diminishing rights reserved to the United States in the DeConcini reservation. Now the Senator from Alabama asks us to adopt just the opposite language, to wit, this reservation shall be construed as limiting, detracting from, and diminishing the rights reserved to the United States in the DeConcini reservation and he has still a third amendment which is in between.

Mr. President, I submit this is gamesmanship, and I concede, first off, that the Senator from Alabama has a great sense of humor. He also is capable of advancing the most intriguing kinds of arguments. For example, he has repeatedly said that the DeConcini reservation does not take effect until the end of the century. Then he has said if we amend the articles of advice and consent to the Panama Canal Treaty, which expires at the end of the century, how can we possibly reach the DeConcini reservation?

That is an intriguing argument. Its only weakness is that it has no relationship whatsoever to the provisions of the two treaties.

Article II of the Panama Canal Treaty and article VIII of the Neutrality Treaty provide that both treaties go into effect simultaneously, 6 months after the articles of ratification are exchanged by the two nations.

So, the argument advanced by the Senator from Alabama simply cannot be reconciled with clear provisions of these two treaties.

So I hope that nothing deflects us from our course. This is the 38th day of Senate debate on these two treaties. As I recall, the Senate debated only 11 days on the NATO alliance. We must not in this, the 38th day, permit ourselves to be distracted from our purpose.

The treaty we vote on today is right for the United States, right for the Republic of Panama, and right for the times in which we live. But it can never be made popular. This means that Senators are confronted with the hardest of choices: Either to vote for what is best for their country or for what is best for them in their own home States.

If as few as two Senators who voted for the first treaty cut and run on the second, ratification of this treaty will fail. But the issue, I assure you, Mr. President, will not die with the defeat of the treaty. Rather it will fester and grow more inflamed, making its ultimate resolution all the more painful.

Mr. CRANSTON Mr. President, will the Senator yield?

Mr. CHURCH. Yes. I am happy to yield.

The PRESIDING OFICER. The Senator from California (Mr. CRANSTON).

Mr. CRANSTON. Mr. President, a few minutes ago, the Senate tabled an amendment stating that the leadership amendment does not limit the DeConcini reservation. Now we are asked to vote on an amendment that it does limit the DeConcini reservation.

The fact is, of course, that the leadership amendment does neither. It simply makes clear that any action taken under the DeConcini reservation is not a departure from the principle of nonintervention.

Mr. President, the vote today is not on a "giveaway" of the Panama Canal or on the right to "intervene" in Panama. The vote today is an affirmation of the international public trust under which the United States built and oper-

ated the Panama Canal. The vote today is on a passing of that international publict trust to Panama where the canal is located.

The international public trust to which I refer is that spelled out in article I of the Treaty concerning the Permanent Neutrality and Operation of the Panama Canal:

> The Canal, as an international transit waterway, shall be permanently neutral in accordance with the regime established in this Treaty.

The United States has maintained the canal as a permanent neutral international transit waterway—"secure and and open to peaceful transit by the vessels of all nations on terms of entire equality." Panama, of course, assumes this exact obligation under article II of the Neutrality Treaty. The United States and Panama, jointly and individually, agree to maintain this "regime of neutrality" under article IV of the Neutrality Treaty.

By accepting this public trust, Panama does not relinquish its national sovereignty over the canal; indeed, Panama reaffirms it. By transferring the operation of the canal to Panama, the United States is not relieved of its obligation to maintain this "regime of neutrality"; indeed, the United States reaffirms it.

In recent days I have been distressed by the controversy that has arisen over certain reservations this Senate has attached to the Neutrality Treaty or this Panama Canal Treaty. Those reservations concern the obligation and right of the United States to maintain the "regime of neutrality" and to assure that the canal shall remain open, secure, and accessible. Those reservations are not a right of intervention in the internal affairs of Panama, they are not directed against the political independence or territorial integrity of Panama. And they are not in violation of any of the rights or obligations of the United States or Panama under the Charter of the Organization of the American States or the Charter of the United Nations. Indeed, these reservations merely spell out in detail and specifics the obligations and rights of the United States in maintaining the regime of neutrality.

May I say to our friends in Panama: If Panama performs that trust, as I have every confidence that Panama will, the United States need never take any act to maintain the regime of neutrality of the canal. And if for some unforeseen reason in the future, Panama should be unable to maintain the regime of neutrality, certainly both Panama and the United States—indeed the world—would expect the United States to act.

These treaties have a basic purpose even more important than establishing Panamanian sovereignty over the canal: the continuation of the canal as a permanently neutral international transit waterway. This is what the United States built and has given to the world. This is what Panama now acquires.

In ratifying these Panama Canal treaties, this Senate can reaffirm this international public trust. In agreeing to these treaties as ratified, Panama will affirm its national sovereignty over the canal and accept this international public trust. And the canal will remain secure and open to peaceful transit by the vessels of all nations on terms of entire equality.

Mr. SARBANES addressed the Chair.

The PRESIDING OFFICER. The Senator from Maryland (Mr. SARBANES).

Mr. SARBANES. Mr. President, I have listened to the distinguished Senator from Alabama as he argues first for one amendment and then for the other, two amendments diametrically opposite to one another. The one amendment says this reservation shall not be construed as limiting, detracting; the other amendment which he offers says this reservation shall be construed as limiting, detracting.

I am reminded, "Oh, what a tangled web we weave," by the skillful Senator from Alabama, and I must say I was given considerable pause when the amendments were first presented at the desk as to in what order they would be presented or brought up.

After all, one would then have to anticipate, I assume, that the arguments would have been completely reversed from the argument that was made, given the order that was followed, had we come with No. 105 ahead of No. 104, and we would have had to reverse all the arguments.

The Senator from Alabama would have been, I know, as he is in all of the arguments he makes, extremely skillful in doing that.

Mr. ALLEN. Mr. President, will the Senator yield inasmuch as I have no time?

Mr. SARBANES. I do yield.

Mr. ALLEN. I thank the Senator.

The Senator realizes, of course, had the first amendment, the amendment saying that the leadership amendment shall not be construed as limiting or detracting or diminishing the DeConcini amendment, if the leadership had accepted that amendment, as it stated on the floor was the intention of the leadership, then there would have been no amendment.

But inasmuch as the leadership had the Senate table the first amendment, then the Senator from Alabama, in an effort to find out what in the world the leadership did mean by the amendment, offered the second amendment to let the leadership pick and choose what it does mean by the amendment. That is the purpose of the inconsistent amendments. There would have been no second amendment offered had the first amendment been accepted.

Mr. SARBANES. It is very helpful for the Senator from Alabama to give us inconsistent, diametrically opposite, amendments in order to be of help to the leadership.

I think, in the course of this debate, both those who have offered various amendments which have been adopted and the leadership in offering the amendment that is now presented, have been very clear in terms of what they are trying to accomplish.

I know the Senator from Alabama would like to structure it in his own way and in his own manner, but I only have recourse again to the fact that the Senator from Alabama has been against a treaty with Panama ever since October of 1971. In the newsletter which he communicated to his constituents he has been opposed to a treaty; he has participated in cosponsoring a resolution that would have the United States maintain all sovereign rights, all jurisdiction in Panama; would make no concession—I think the only concession he is prepared to make is to pay a little more money.

I think it is clear to everyone that what is at stake with these treaties is not a little more money; what is at stake with these treaties is whether we are to develop a fair and equitable relationship between ourselves and the people of Panama, one that respects their dignity and independence just as we expect other nations to respect our dignity and independence.

The Senator has been extremely skillful in proposing amendments. He has been very good at moving in the stone walls on consideration of this treaty.

He keeps pushing the stone walls in closer and closer in order to leave less and less room within the walls on the basis of which the United States and Panama can reach an agreement. So the stonewalling which he has talked about so frequently is really something he has been extremely skillful at carrying forward here, and he keeps moving those walls in and narrowing down that space so there will not be a sufficient basis for an agreement.

I recall one debate in which one moment he was saying that these treaties were very unfair to the people of Panama and they should be angry about what was happening to the treaties. The next moment he turned to the Members of the Senate and said, "If the Panamanian people are going to be angry about what happens with these treaties then we ought to reject them."

So he creates his own closed circle just as these two amendments have created a closed circle. The way to dispose of the amendments, Mr. President, is to table both of them. We have tabled the previous one.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. SARBANES. I move, Mr. President, to table this amendment, the amendment pending, of the Senator from Alabama, and I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Maryland to lay on the table Mr. Allen's amendment No. 105.

The yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

The PRESIDING OFFICER (Mr. HART). The Senate will be in order. Senators will please take their seats. The rollcall will be suspended until the Senate is in order.

The clerk may proceed.

The call of the roll was resumed and concluded.

The result was announced—yeas 59, nays 41, as follows:

[Rollcall Vote No. 113 Ex.]

So the motion to lay on the table amendment No. 105 was agreed to.

Mr. CHURCH. Mr. President, I move to reconsider the vote by which the motion to lay on the table was agreed to.

Mr. SARBANES. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The hour of 4 p.m. having arrived, the Senate will now proceed to a vote on the leadership.

Mr. ALLEN. Mr. President, inasmuch as tabling seem to be in order, or seem to be the order of the day, and since the Senate is in the habit of voting to table, I move to table the leadership amendment and I ask for the yeas and nays.

Mr. ROBERT C. BYRD. Mr. President, let me say I did this last night so as to accommodate the distinguished Senator: In my original unanimous-consent request, I phrased it so that a tabling motion would not be in order to this amendment. But I felt in fairness to those like the Senator from Alabama who might move to table, I would give them the opportunity to do so, and I intend to vote no.

Mr. ALLEN. I thank the distinguished Senator for his debate.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. During this rollcall vote, the Senate will be in order. Senators should take their seats or retire to the cloakrooms to conduct conversations.

Mr. STONE. Mr. President, inasmuch as the Senate has completed one vote and is about to proceed to two other votes, I ask unanimous consent that this be a 10-minute rollcall vote.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. NUNN. Mr. President, I ask unanimous consent that John Roberts, of the Senate Armed Services Committee staff, be granted the privileges of the floor for the day.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BENTSEN. Mr. President, I ask unanimous consent that a member of my staff, Laura Katz, be granted the privileges of the floor during the debate and vote on the pending treaty.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MATHIAS. Mr. President, I ask unanimous consent that Margaret S. Nalle, of my staff, be granted the privileges of the floor for the remainder of the day.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. THURMOND. Mr. President, I ask unanimous consent that Mr. Edward Kenney, of the Senate Armed Services Committee, be granted the privileges of the floor for the remainder of the day.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senate will be in order.

Mr. STEVENS. Mr. President, I ask unanimous consent that Steven Perles, of my staff, be granted the privileges of the floor during the votes and consideration of the pending treaty.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PACKWOOD. Mr. President, I make the same request for Skip Priest, of my staff.

The PRESIDING OFFICER. Without objection, it is so ordered.

The question is on agreeing to the motion of the Senator from Alabama. The yeas and nays have been ordered, and the clerk will call the roll.

The second assistant legislative clerk called the roll.

The result was announced—yeas 21, nays 79, as follows:

[Rollcall Vote No. 114 Ex.]

So the motion to lay on the table UP amendment No. 36 was rejected.

Mr. CHURCH. Mr. President, I move to reconsider the vote by which the motion was rejected.

Mr. ANDERSON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENT NO. 37

Mr. CANNON. Mr. President, I have an unprinted amendment at the desk. I call it up and ask that it be stated.

The PRESIDING OFFICER. The clerk will state the amendment.

The legislative clerk read as follows:

The Senator from Nevada (Mr. CANNON) proposes unprinted amendment numbered 37.

Amending unprinted amendment No. 36 by striking the words "nor be interpreted as a right of".

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that Mr. CANNON have 2 minutes and Mr. CHURCH have 2 minutes.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. CANNON. Mr. President, this amendment would simply eliminate any possibility of confusion, either on the part of the Panamanians or on our own part, as to how it might be interpreted. I think the amendment without that provision is absolutely clear that if we take any action, it should be for the purpose stated in the DeConcini amendment, to keep the canal open.

Therefore, if we leave the language in relating to how it might be interpreted, we open it up to all kinds of differing interpretations.

I submit it is a good amendment.

The PRESIDING OFFICER. The Senator from Idaho.

Mr. CHURCH. Mr. President, I hope very much that the Senate will reject this amendment. This language that has been chosen by the leadership has been carefully crafted. Every possible consideration has been given to it.

The point I emphasize is this, we are not claiming the right of intervention in the internal affairs of Panama. Never have we claimed that. In fact, we are committed in the United Nations charter, in the Rio Treaty, and all the major treaties with the members of the Organization of American States, against intervention in the internal affairs of Panama or any other Latin country.

All we claim is the right to intervene for the purpose of keeping the canal open and neutral and accessible and secure.

The language could not be plainer as it now stands, and if we strike "nor be interpreted as a right of intervention in the affairs of the Republic of Panama" it could only be subject to the interpretation that we intend to set aside Ameri-

can policy since the time Franklin Delano Roosevelt first declared the good neighbor policy for this hemisphere.

I do hope the Senate will reject this amendment.

The PRESIDING OFFICER. All time has expired.

Mr. ALLEN. I ask for the yeas and nays, Mr. President.

The PRESIDING OFFICER. The yeas and nays are called for. Is there a sufficient second?

Mr. ROBERT C. BYRD. Is the Senator satisfied with a voice vote?

Mr. ALLEN. I ask for the yeas and nays.

Mr. ROBERT C. BYRD. Mr. President, the Senator from Nevada would be satisfied with a voice vote.

I merely want to point out we are impinging, as we did on the last vote on the tabling motion, upon the time of the Senators who yet have amendments to offer, and impinging on the time of the debate.

Mr. ALLEN. I ask for the yeas and nays. It is an important amendment and I think we should have a rollcall.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. ROBERT C. BYRD addressed the Chair.

The PRESIDING OFFICER. The Senator from West Virginia.

Mr. ROBERT C. BYRD. Mr. President, I move to lay on the table the amendment of the Senator from Alabama (Mr. ALLEN) and I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion to lay on the table the amendment of the Senator from Alabama (Mr. ALLEN). The yeas and nays have been ordered and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. HARRY F. BYRD, JR. Mr. President, may we have the well cleared?

The PRESIDING OFFICER. The clerk will suspend the rollcall until the Senate is in order. Will Senators take their seats? Will Senators clear the well?

The clerk will proceed.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Mississippi (Mr. EASTLAND) is necessarily absent.

The result was announced—yeas 58, nays 41, as follows:

[Rollcall Vote No. 115 Ex.]

YEAS—58

NOT VOTING—1

Eastland

So the motion to lay on the table UP amendment No. 37 was agreed to.

Mr. SARBANES. Mr. President, I move to reconsider the vote by which the motion to table was agreed to.

Mr. CHURCH. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The question recurs on the leadership amendment.

Mr. ALLEN. Mr. President, have the yeas and nays been ordered? If not, I ask for the yeas and nays.

The PRESIDING OFFICER. They have not been ordered.

Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

UP AMENDMENT NO. 36

The PRESIDING OFFICER. The question is on agreeing to amendment No. 36. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The second assistant legislative clerk called the roll.

The PRESIDING OFFICER. Will Senators take their seats? Will the Senate be in order?

The second assistant legislative clerk resumed the call of the roll.

The PRESIDING OFFICER. The Senate is not in order. The rollcall will be suspended until Senators have taken their seats.

The clerk will continue.

The second assistant legislative clerk resumed and concluded the call of the roll.

The result was announced—yeas 73, nays 27, as follows:

[Rollcall Vote No. 116 Ex.]

YEAS—73

So UP amendment No. 36 was agreed to.

Mr. SARBANES. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. CHURCH. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

AMENDMENT NO. 103

The PRESIDING OFFICER. Under the previous order, the Senator from Michigan is recognized to call up an amendment on which there will be 30 minutes debate.

The Senator from Michigan.

Mr. GRIFFIN. Mr. President, on behalf of myself and Mr. WALLOP I send an amendment to the desk and ask that it be stated.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

The Senator from Michigan (Mr. GRIFFIN) for himself and Mr. WALLOP proposes Amendment No. 103 to the Resolution of Ratification in the nature of a substitute:

*Resolved*, That the Senate return to the President of the United States the Panama Canal Treaty, together with the annex and Agreed Minute relating thereto, done at Washington on September 7, 1977 (Ex. N, Ninety-fifth Congress, first session), with the advice of the Senate that negotiations to develop a new treaty relationship with the Republic of Panama be resumed and continued until a treaty is agreed upon that better serves the interests of both nations.

Mr. GRIFFIN. Mr. President, this might be called the last-chance amendment. This is the last opportunity the Senate will have before a vote will be taken where the Senate, perhaps by only a one-vote margin, will take a very dangerous step.

Mr. President, I ask unanimous consent on behalf of the majority leader that the time for this amendment be limited to 20 minutes, 10 minutes to each side.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. GRIFFIN. This step will be a dangerous gamble for the United States and the security of the United States.

Mr. CURTIS. Mr. President, may we have order.

Mr. GRIFFIN. I wish I could characterize the exercise through which we have gone today as something other than a charade. Our action today would be ludicrous were it not so serious. Today we adopted a leadership amend-

ment to a treaty that expires in the year 2000, as a way of trying to modify the DeConcini reservation that was attached to another treaty. That other treaty is not now before the Senate, and it does not assume great importance until after the year 2000, when this treaty will have expired.

It is a charade, also, in that the substantial wording and effect of this leadership amendment was already in the leadership amendment attached to the other treaty.

The Senate is being asked this afternoon to paper over the serious and obvious differences that exist with vague and ambiguous language, which both sides will be able to interpret to serve their own interests.

But let us be clear about what we are doing. We are not solving or clarifying anything—we are burying our heads in the sand like a bunch of ostriches, hoping all the while that the almost inevitable confrontation for which we have set the stage will be delayed until after we have left the scene.

What was wrong with the DeConcini amendment was that it underscored the differences of interpretation concerning the Neutrality Treaty that have existed all along. Actually the DeConcini amendment was relatively mild. It provided that:

> If the canal is closed, or its operations are interfered with, the United States of America and the Republic of Panama shall independently have the right to take such steps as it deems necessary, in accordance with its constitutional precedents, including the use of military force in Panama, to reopen the canal or restore the operations of the canal, as the case may be.

That is milder language than the interpretation placed upon the Torrijos-Carter joint statement as put forth by the Committee on Foreign Relations in its own report, which said this:

> The meaning of these amendments, which together constitute the entire Joint Statement, is plain. The first amendment relates to the right of the United Sttaes to defend the Canal (*It creates no automatic obligation to do so. . . .*) It allows the United States to introduce its armed forces into Panama *whenever* and *however* the Canal is threatened. *Whether* such a threat exists is for the United States to determine on *its own* in accordance with its constitutional process. What steps are necessary to defend the Canal is for the United States to determine on its own in accordance with its constitutional processes. The United States has the right to act as it deems proper against *any* threat to the Canal, *internal* or external, *domestic* or foreign, military or non-military. Those rights enter into force on the effective date of the treaty. They do not terminate.
>
> The above-described rights are *not* affected by the second paragraph of the amendment, which provides that the United States has no "right of intervention . . . in the internal affairs of Panama", and which prohibits the United States from acting "against the territorial intergrity or political independence of Panama". (Emphasis supplied.)

But what the Panamanian reaction to the DeConcini reservation pointed up was that the Panamanians did not agree with our interpretation, and this was not the first signal we have had that the Panamanians do not agree with our interpretation concerning the U.S. rights to defend the canal.

We found out what their interpretation was on the eve of the plebiscite when General Torrijos, himself, told the Panamanians:

> . . . (I)f we are attacked by superior forces the United States is *obligated* to come to our defense.
>
> . . . (I)t is necessary for the United States to be committed so that *when we ring the bell* here, *when we push the button*, a bell rings over there, and the United States comes in defense of the Panama Canal. . . .
>
> I repeat, we *push the button*, the bell rings, and the United States is *obligated* to come to our defense. (Emphasis supplied)."

In the General's view, we do not have a unilateral right, but rather an obligation to respond, when they ask us.

There were many other interpretations put forth by Panamanian spokesman before that plebiscite interpreting the Neutrality Treaty as meaning that we could defend the canal in the event of a threat to the canal by "a foreign power," but never acknowledging that we could defend the canal against an internal Panamanian threat.

We proceed to a vote now, and the treaty may carry by one vote, perhaps, two. But what will happen if there is a labor strike after the year 2000, closing down the canal? What will happen if the Government of Panama then refuses to act? What will happen if an anti-American labor union refuses to operate the canal for the transit of U.S.-bound cargo and the Government of Panama refuses to act? Will that be an "internal affair?" I do not think that we have resolved that question. So I think that we are taking serious risks here.

I fervently hope and pray that if this treaty is ratified, the President will be proved right by history, and those who support him in the Senate will be proved right. My great fear is that they will be proved wrong.

The hope that we are going to guarantee peace and contentment in Panama by approving this treaty may be a vain hope, and if so what will we have accomplished? We will have terminated the 1903 treaty—because that will happen as soon as this treaty is ratified. We will have set in place the machinery to transfer the canal to the Panamanians. But will have really achieved the objectives that those who vote for this treaty desire?

I think this is a dangerous gamble. The right approach is to adopt this substitute, and to say to the President, "We do not want to reject the treaties outright, but we do not think these treaties serve the interests of the United States. We give the advice of the Senate that you send the negotiators back to the negotiating table, taking into account the debate of the Senate, and try to fashion more acceptable treaties."

Mr. President, I hope this substitute will be adopted. I yield to the distinguished Senator from New Mexico.

Mr. SCHMITT. I thank the Senator from Michigan for yielding.

Mr. President, most efforts to improve the treaties during Senate consideration have been resisted successfully. The questions which I and many of my colleagues and, I believe, the majority of the American people have about these treaties remain unanswered.

Mr. President, many of the amendments proposed to both this treaty and to the Neutrality Treaty received the support of 35 to 40 Senators. This could only mean that less than the two-thirds needed for ratification are fully satisfied with the treaties in their present form. Yet, if we ratify this treaty today, these unresolved problems will remain to plague our future.

I suspect and hope that the President of the United States is listening to the conclusion of this debate. I am now addressing my remarks to him.

A few weeks ago when Senator GRIFFIN offered this renegotiation amendment in the form of a substitute for the resolution of ratification it had become clear that the Neutrality Treaty would be ratified by one or two votes. Therefore, I can understand why there was insufficient support for this substitute.

Today, however, things have changed. No one is sure how the votes will fall between 6 and 6:15 this evening. That many in this hemisphere will lose is the only certain thing. Proponents and opponents are thus playing a form of senatorial Russian roulette.

This renegotiation substitute is our last opportunity to work together with Panama to create and ratify a new treaty in the best interests of the United States, Panama, and the Western Hemisphere.

It is clear to me that renegotiation has been in order ever since the President signed the treaties. During the week of March 13 I described the preferable conditions under which this renegotiation should occur: Namely, in consultation with all the major interested parties of the hemisphere. A proposal for such consultation goes to the heart of both the political and economic needs of our hemispheric friends.

I call on President Carter to ask his supporters on this treaty issue to back away from the brink. I call on the President to help the Senate lay the foundation for a brighter and more cooperative future for all the people of the hemisphere.

The PRESIDING OFFICER (Mr. SASSER). The 10 minutes of the Senator from Michigan have expired. The Senator from Idaho has 10 minutes.

Mr. SCHMITT. Mr. President, I ask unanimous consent that I be permitted to proceed for 1 more minute.

The PRESIDING OFFICER. Is there objection?

Mr. CHURCH. Mr. President, I have no objection as long as we retain our 10 minutes on this side, in fairness to my colleague from Maryland.

The PRESIDING OFFICER. Is there objection? Without objection, the Senator from New Mexico has 1 additional minute.

Mr. SCHMITT. The Griffin amendment, with a Presidential commitment to immediately begin new negotiations with the major user nations of the hemisphere, will give the Senate, Panama, the hemisphere and possibly the world

a new lease on their economic and political lives. It is the only way we can now defuse the time bomb these treaties have created. At the same time, we can take the most positive step ever taken toward a new hemispheric relationship; a relationship of hope and trust; a relationship for the future.

Mr. President, the Senator from Michigan has agreed to accept my amendment to his substitute for the Resolution of Ratification. I send the amendment to the desk. This amendment would require that other hemisphere nations be included in the new negotiations mandated by the distinguished Senator's substitute resolution.

Mr. GRIFFIN. Mr. President, is it in order that I accept this as a modification of my amendment?

The PRESIDING OFFICER. It would require unanimous consent.

Mr. GRIFFIN. I ask unanimous consent that my amendment be so modified.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

The modification (UP amendment No. 38) is as follows:

On page 7, after "Panama", insert, ", involving all the nations of North and South America who wish to participate,".

On line 9, after "nations", strike the period and add ", and all the nations of the Western Hemisphere."

The PRESIDING OFFICER. The Senator from Idaho (Mr. CHURCH) is recognized for 10 minutes.

Mr. CHURCH. Mr. President, after 14 years of negotiations between the United States and the Republic of Panama, directed by four different Presidents of this country, and after 38 days of debate on these treaties in the Senate of the United States, we are asked to approve a motion to return this treaty to the Committee on Foreign Relations and to the President of the United States, in order that it might go back again to the bargaining table.

If there is one thing clear, it is this: Should the Senate adopt the motion of the distinguished Senator from Michigan, these treaties will not go back to the negotiating table. We will go back, instead, to a condition of deadlock and defiance. It just is not any longer possible for one country to maintain a colony in another against the wishes of the inhabitants of that country.

We began negotiations back in 1964, when 24 people died in riots in Panama, because the overwhelming sentiment of the Panamanian people finally flared into open flames. Since that time we have undertaken to negotiate at arm's length a just set of treaties, a fair bargain fairly arrived at.

As each Senator prepares to cast his vote on the pending resolution, let him consider that the treaty before us is right for the United States, right for the Republic of Panama, and right for the times in which we live. And let him take into account what his final vote will mean.

A vote against this treaty represents a vain attempt to preserve the past.

It represents a futile effort to perpetuate an American colony in Panama against the wishes of the Panamanian people, in an age when colonies have disappeared elsewhere, gone with the empires of yesterday.

It represents an ill-destined desire to cling to American ownership and control of an aging canal, which, by the end of this century, will be able to accommodate less than one-tenth of the commercial tonnage then on the high seas.

It represents a sentimental journey back to the era of Teddy Roosevelt, the Big Stick, and the Great White Fleet, in a day when our modern aircraft carriers and nuclear submarines can no longer even use the present canal.

It represents a dangerous folly that will exacerbate an old Panamanian grievance stemming from the Treaty of 1903, in an age when such grievances can readily deteriorate into endless harassment and guerrilla war.

But a vote for the treaty looks forward to a new day.

It would restore to Panama jurisdiction over her own soil and thus lay the basis for a close and friendly cooperation between the United States and Panama in the years ahead.

It would give us the best guarantee available of dependable use of the canal from now until the end of the century, and beyond.

It would enhance the prospects for the construction of a sea-level canal to meet our naval and commercial needs of the 21st century.

It would protect our security interests by insuring that our right to go to the head of the line will be preserved in case of need, and by guaranteeing our right to defend the canal with military force if ever that should prove necessary.

It would create a sense of mutual respect and trust, nurtured from the knowledge that this is a just treaty, fair to both sides, which will make for better relations throughout the hemisphere and redound to our benefit everywhere in the world.

Yet the vote, Mr. President, will be a difficult one. Every Senator knows that ratification of these treaties will not be popular, given the deep division in public opinion. But the Senate was envisioned by our Founding Fathers as the legislative body where unpopular decisions might be made, when the long-term interests of the Nation demanded it.

Today I pray that the Senate will defeat this amendment, and then, by approving this treaty, will rise to its historic responsibility, as each Senator is called upon to put the country first—above personal and political considerations.

Mr. President, the moment of truth approaches. The outcome will either cast our future relations with Latin America and the developing world in a bright new light, or plunge it under a gathering shadow that could last for years to come.

I yield the remainder of my time to my good friend and able colleague, to whom I am so deeply indebted for the past 2 months of cooperation on this floor, the able Senator from Maryland.

The PRESIDING OFFICER. Senator SARBANES, of Maryland, is recognized.

Mr. SARBANES. Mr. President, 10 weeks ago tomorrow we began on the floor of the Senate the consideration of these treaties. The question which we are now about to answer is whether we have the maturity of judgment, the wisdom, the understanding, and the vision of ourselves as a people, and our role as a leader of the free world to seize the opportunity which is before us.

We are a powerful country, and we can use our power to protect our interests. But we should seek to use that power in accordance with a legal and a moral basis which makes its exercise justified. We should seek such a basis for the exercise of our power. These treaties give us that basis and thereby bring might and right into harmony.

These treaties are a positive opportunity for this country. They are not a retreat. They are not a flight from leadership. They are an assertion of what American leadership should be all about. They are a chance for America to move forward. They are an opportunity to bring forth the best, the very best, in the American people, to call upon the finest traditions for which this Nation stands and to do it in such a way that our defense interests, our economic interests, and our foreign policy interests are all served. More importantly, what we stand for as a people will be well served.

The treaties give us an opportunity to join with Panama in a cooperative relationship which will stand as an example to the entire world. An example of the proper and just relationship between a great power and a small nation, a relationship based on self-respect and dignity.

David McCullough, the author of that superb book, "The Path Between The Seas," said in his testimony before our committee:

The Panama Canal is expressive of one of the oldest, noblest desires in the human heart, to bridge the divide and to bring people closer together. These treaties are expressive of that same desire. They are a progressive step, an act of strength, and confidence, and of good will.

We ought not to lose today the opportunity which the treaties offer to the American people. I hope the Senate will advise and consent to this treaty.

The PRESIDING OFFICER. The time of the Senator has expired.

The question is on agreeing to the amendment of the Senator from Michigan.

Mr. SCHMITT. Mr. President, I ask for the yeas and nays.

Mr. CHURCH. Mr. President, I move to table the amendment. I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion to lay

on the table the amendment of the Senator from Michigan as modified. The yeas and nays have been ordered and the clerk will call the roll.

The assistant legislative clerk called the roll.

The result was announced—yeas 64, nays 36, as follows:

[Rollcall Vote No. 117 Ex.]

YEAS—64

So the motion to lay on the table amendment No. 103 (as modified) was agreed to.

Mr. CHURCH. Mr. President, I move to reconsider the vote by which the motion to table was agreed to.

Mr. SARBANES. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD addressed the Chair.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Senator from West Virginia.

Mr. ROBERT C. BYRD. Mr. President, I ask that the distinguished Senator from Nevada be recognized to call up an amendment at this time and that there be 1 minute to the side to be equally divided in accordance with the usual form on the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from Nevada (Mr. CANNON) is recognized.

UP AMENDMENT NO. 39

Mr. CANNON. Mr. President, I withdraw my unprinted reservation No. 35 and ask that a substitute reservation be stated, which the clerk has at the desk.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment will be stated.

The legislative clerk read as follows:

The Senator from Nevada (Mr. CANNON) for himself, Mr. BENTSEN and Mr. PAUL G. HATFIELD, proposes an unprinted amendment numbered 39:

Strike out the period at the end of the resolution of ratification and insert in lieu thereof the following: "subject to the following reservation:

"After the date of entry into force of the Treaty, the Panama Canal Commission shall, unless it is otherwise provided by legislation enacted by the Congress, be obligated to reimburse the Treasury of the United States of America, as nearly as possible, for the interest cost of the funds or other assets directly invested in the Commission by the Government of the United States of America and for the interest cost of the funds or other assets directly invested in the predecessor Panama Canal Company by the Government and not reimbursed before the date of entry into force of the Treaty. Such reimbursement of such interest costs shall be made at a rate determined by the Secretary of the Treasury of the United States of America and at annual intervals to the extent earned, and if not earned, shall be made from subsequent earnings. For purposes of this reservation, the phrase 'funds or other assets directly invested' shall have the same meaning as the phrase 'net direct investment' has under section 62 of title 2 of the Canal Zone Code."

Mr. ROBERT C. BYRD. Mr. President, I ask that there be 1 minute for Mr. CANNON and 1 minute for Mr. CHURCH.

Mr. LEAHY. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate is not in order. The Senate will be in order.

Mr. ROBERT C. BYRD. Mr. President, how about my request?

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. CANNON. Mr. President, I ask unanimous consent that Senator NUNN be added as a cosponsor of this amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CANNON. Mr. President, according to the Comptroller General, this amendment would save a loss to the Treasury over the next 22 years of approximately $505 million. It simply insures that no waiver of the interest payments from the Panama Canal Commission to the U.S. Government can be made unless it has the affirmative action of the Congress.

I think that is very important, that we have the opportunity to act on it if any waiver is to be made. Therefore, I believe it is a good amendment and I hope the leadership will accept it.

Mr. CHURCH. Mr. President, since the reservation offered by the distinguished Senator from Nevada provides that the final decision on the reimbursement of interest will be left to the Congress when it passes upon the enabling legislation to implement this treaty, we see no objection to the adoption of the reservation.

It is my understanding the sponsor desires a rollcall vote and we are happy to oblige in that regard.

Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to unprinted amendment No. 39 of the Senator from Nevada (Mr. CANNON). The yeas and nays have been ordered and the clerk will call the roll.

The legislative clerk called the roll.

The result was announced—yeas 90, nays 10, as follows:

[Rollcall Vote No. 118 Ex.]

YEAS—90

| | | |
|---|---|---|
| Allen | Hansen | Moynihan |
| Anderson | Haskell | Muskie |
| Baker | Hatch | Nelson |
| Bartlett | Hatfield, | Nunn |
| Bayh | Mark O. | Packwood |
| Bellmon | Hatfield, | Pearson |
| Bentsen | Paul G. | Pell |
| Biden | Hathaway | Percy |

NAYS—10

| | | |
|---|---|---|
| Abourezk | Gravel | Long |
| Clark | Griffin | Weicker |
| Culver | Hart | |
| Durkin | Kennedy | |

So Mr. CANNON's amendment (UP No. 39) was agreed to.

Mr. CHURCH. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. CANNON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, under the schedule that was outlined on yesterday there was to be 1 hour for general debate before the final vote on the resolution of ratification.

Every Senator who was known to have a reservation at that time was allotted some time in the schedule.

There have been at least two rollcall votes that were not anticipated yesterday, and they have eaten into the time.

I ask unanimous consent that the 1 hour for debate which had been originally scheduled be restored and that the vote occur at the expiration of that hour or upon the time being yielded back.

Mr. LONG. Mr. President, I object.

The PRESIDING OFFICER. Objection is heard.

Mr. ROBERT C. BYRD. Mr. President, I hope no objection will be heard. I hope the Senator will not object because there are Senators who have been promised time during the hour of debate.

Mr. LONG. I will be glad to give unanimous consent that all speeches made after the vote appear in the RECORD before the vote.

We did that on a tax bill some years ago. The public as a whole will not know,

except those in the Senate Chamber. But those who read about it in our history will think those stirring speeches changed the vote that made the outcome what it was. [Laughter.]

We have debated these treaties for almost 2 months now. Mr. President, it would be an insult to the intelligence of Senators to think anyone is going to change his mind at this late date.

We have people here who want to know the final vote count. Radios are tuned in all around the country. The galleries are packed. Everyone wants to know what will happen. Anyone who makes a speech now will be doing a very unpopular thing. [Laughter.]

I am not sure my vote will be popular, Mr. President, but I think my objection on this will be. [Laughter.] I must insist on my objection. But I am willing to give consent that anyone who wants to make a speech have it appear in the RECORD immediately following the vote, and the RECORD will show his speech is what determined the outcome.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the time the distinguished Senator from Louisiana has taken not be charged against the time for debate.

The PRESIDING OFFICER. Is there objection?

Without objection, it is so ordered.

Mr. McCLURE addressed the Chair.

Mr. ROBERT C. BYRD. Mr. President, I have listened——

Mr. McCLURE addressed the Chair.

Mr. ROBERT C. BYRD. Yes.

Mr. McCLURE. Mr. President, I was on my feet seeking recognition.

Mr. ROBERT C. BYRD. Mr. President, I yield to the Senator.

Mr. McCLURE. I thank the Senator.

Mr. President, it was stated by the majority leader, and I think in good faith, that all Members who had reservations that were known were allotted time. The junior Senator from Idaho had a reservation and it was not included on the list. There might have been time had we not run into three rollcall votes that were not anticipated, and I have made arrangements with the managers of the treaty that if as a matter of fact there is an extension of time for debate the junior Senator from Idaho will have at least time to explain what would have been offered had it been possible to offer it.

With that, Mr. President, I will not object to the request, but I thank the Senator for yielding to me at this time.

Mr. TOWER. Regular order.

Mr. BURDICK. Regular order.

The PRESIDING OFFICER. Regular order has been called for.

Mr. ROBERT C. BYRD addressed the Chair.

The PRESIDING OFFICER. The Senator from West Virginia is recognized.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there be one-half hour for general debate before the vote occurs.

Mr. SCOTT. Mr. President, I object.

The PRESIDING OFFICER. Objection is heard.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there be 10 minutes equally divided.

Mr. SCOTT. Mr. President, I object.

The PRESIDING OFFICER. Objection is heard.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senator from South Dakota (Mr. ABOUREZK) be allowed to speak for 5 minutes.

Mr. SCOTT. Mr. President, I object.

Mr. ROBERT C. BYRD. Mr. President, I hope the Senator will not object. There will come a time when the Senator will want 5 minutes, and the majority leader has never, never objected to any Senator on this floor having at least 5 minutes to speak.

Mr. SCOTT. Mr. President, if the distinguished majority leader——

Mr. ROBERT C. BYRD. I am giving up my time. I would like for the Senator from South Dakota to have 5 minutes and the Senator from Virginia may have 5 minutes under my request.

Mr. SCOTT. Mr. President, if the Senator will yield——

Mr. ROBERT C. BYRD. Yes.

Mr. SCOTT. Reserving my right to object, I have listened here the last few days to amendments being offered and accepted by the leadership, in my estimation, in an effort to placate some of the Senators and obtain some votes, and frankly it is disgusting to me, and I am going to continue to object to anything except the final vote on the treaty.

Mr. ROBERT C. BYRD. Very well, Mr. President.

I ask that the Senator from South Dakota be recognized for the remaining minutes before the vote.

The PRESIDING OFFICER. The Senator from South Dakota (Mr. ABOUREZK) is recognized for 1 minute.

Mr. ABOUREZK. Mr. President, I thank the Senator from West Virginia for yielding.

I only want to say that starting last week after the closed meetings of the so-called Senate-House conference committee on natural gas met at the White House in secret with the Secretary of Energy and with the President, at different times, I became determined after that, because of the fact that for the last 50 or so years oil policy in the Government has been made behind closed doors, that I would vote against this treaty on the Panama Canal.

Now, the treaty itself, while it may be important, I do not believe is as important as the issue of deregulation of natural gas and the economic impact that will have on the people of this country. I believe it is much more important.

I have had discussions with the White House for the past few days, and I have in those discussions learned from the White House that they intend to try to encourage an open democratic process in spite of the fact that they have committed what I would call great many transgressions in the past weeks on this natural gas issue, and I am convinced that although the treaty itself is only marginally better than the treaty that we are living under, in fact it does nothing but it legitimizes the imperialist aspect of the way that we are intervening in the affairs of Panama and other Third World countries, I might add, it is not the reality that is important here. It is the perception that the defeat or the passage of this treaty will have on the people of Panama and the people of the United States itself.

I asked for this time from the leader to announce that I intend to vote for the treaty for those reasons.

Mr. TOWER. Regular order.

Mr. ROBERT C. BYRD. Mr. President, regular order has been called for, but, Mr. President, I thank the Senator from South Dakota. I congratulate him on his courage, and I want the Senator from Virginia to know that I forgive him.

Mr. SCOTT. I appreciate the kindness of the distinguished majority leader.

Mr. TOWER. Regular order.

Mr. ROBERT C. BYRD. The Senator from Virginia may want 5 minutes sometime. I will try to help him get it.

Mr. GRAVEL. Mr. President, will the majority leader yield?

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that all Senators who had statements they were prepared to make orally be permitted to insert them in the RECORD, and that they appear as though made orally.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. HATCH. Mr. President, I believe it was Justice Oliver Wendell Holmes who once observed that close decisions make bad law. It is no less true that close votes make bad legislation and poor treaties.

The vote on this treaty will be very close. And why? Because there is no public support for it. The American people are against this treaty. There is no national consensus. Even the Congress may be opposed to this treaty, because the House of Representatives has been deliberately pushed aside and the Constitution ignored if not abused.

And because neither Congress nor the American people favor this treaty, the treaty—like the war in Vietnam—is doomed to failure, no matter how many votes the proponents receive today.

And why are the American people against this treaty? Because it has the stench of defeat, withdrawal, and weakness. Because it is poorly drafted, ambiguous, filled with translation difficulties, and does not protect American interest and rights. Because, Mr. President, it is even unconstitutional.

When another Edward Gibbon appears on the scene to chronicle the decline and fall of the United States, the Panama Canal Treaty, if it is approved will be remembered as one of the darkest days in the history of this country.

Should these treaties be ratified, our hemispheric problems are just beginning. Hostile forces will then begin winning. And America will be perceived as a receding power—unwilling to stand anymore, while its citizens weep, and watch the fall.

Mr. LAXALT. Mr. President, this is, indeed, a historic occasion. As Senators,

we will soon be called upon to decide a question that will go a long way toward determining the kind of people we are and the role we wish to play in the world. Many thoughtful presentations on both sides of the Canal Treaty question have been made during the past 2 months. But, I would like to take this opportunity at the close of a truly historic debate to speak to the significance of what we are about to do.

HISTORIC OCCASION

It is rare that this Senate comes to showdown votes on momentous questions with the outcome possibly hanging on a single vote. Any Senator thinking back historically, can easily think of votes such as that on the North Atlantic Treaty in 1949 which were important but not close. And, each of us has his own examples of cliffhangers of no particular moment. But, make no mistake about this one. Like the Versailles Treaty in 1919, the vote we are about to have on the Panama Canal Treaty is of immense import.

My good friend, the distinguished majority leader, in his customary learned fashion, spoke of Philippi and the Rubicon in underscoring the importance of the vote on the Neutrality Treaty. As usual, his allusions were right on point. The Rubicon sounded the death knell of the confusion and vacillation of the late Republic while Philippi set the stage for the emergence at Rome of the golden age of Augustus.

In my judgment, a negative vote on the pending resolution of ratification could signal a similarly hopeful turn in our foreign policy. From our weak and vacillating current position, where we seem unable to determine where we are or where we wish to go, we are now afforded an opportunity to move in the direction of a mature, strong and self-confident posture which our people so clearly deserve.

In his campaign, President Carter promised a government as good as the American people, but he has not yet delivered. Certainly, the Panama Canal Treaty fails to measure up. Our people know we cannot buy friends. Our people know that capitulation under threat of force simply merits graver threats. And, most importantly of all, our people know that in international affairs, while it is nice to be appreciated, it is even more important to be respected. And, this treaty in no way adds to the diminishing stock of respect in the world.

Mr. President, our people oppose this treaty. Although some effort was made in the debate on the Neutrality Treaty to argue that the American people had come around, that they had shifted from a position overwhelmingly in opposition to one slightly in favor, that effort was abandoned in the debate on the second treaty. This is because it has become clear that no such shift occurred. Indeed, if the American people have moved at all during the course of these debates, they have only grown more strongly opposed.

Perhaps, reply the proponents, but, echoing Burke, they argue that a Senator owes his constituents his judgment. They say a Senator is more than just a seismograph for registering the depth and intensity of his constituents' feelings. As far as it goes, this is certainly true. But, the mere fact of being opposite one's constituents on an important issue cannot so lightly be assumed tantamount to good judgment. Quite the contrary. For those of us with strong faith in the character and good sense of the American people, it is a most perilous position and one not to be assumed without the deepest reflection and the most serious conviction.

It is well for my colleagues to remember that the very same Edmund Burke, whose quote on the judgment of the representative outweighing that of his constituents was so bandied on the debate on the Neutrality Treaty, also said in a letter to the Bell-Club of Bristol on October 31, 1777:

> We members of the House of Commons are like other men who all want to be moved by praise or shame; by reward and punishment. We must be encouraged by our constituents and we must be kept in awe of them or we shall never do our duty as we ought.

JUDGMENT

Mr. President, those among my colleagues who genuinely feel that our canal in Panama is some kind of colonialist anomaly, who really believe that the Neutrality Treaty provides adequate safeguards for our vital defense interests, who honestly think that the economic provisions are fair and workable and who truthfully see our relations with Latin America being improved and strengthened by this pact; they should in good conscience vote "aye."

Needless to say, I do not believe any of these assertions. Our canal in Panama is a circumstance unique to world history. Dating virtually simultaneously from the birth of the Republic of Panama and conveying enormous benefits to the Panamanian people, it is in no sense a colonial possession. Unlike the Suez situation, where an ancient nation was dispossessed of its territory to create a canal, in Panama the canal and the neighboring nation came into being at the same time.

It is also difficult to see how anyone can feel comfortable with our defense rights as set out in the Neutrality Treaty for after the year 2000. Indeed, it is not even clear at this juncture whether we will have a Neutrality Treaty, because recent disturbances in Panama indicate that the Panamanian Government may ultimately have to reject it regardless of what it now says. Thus, far from being the finely honed diplomatic triumph pleasing to everyone, that was initially sold to us, it now appears as though that section of the Neutrality Treaty dealing with U.S. defense rights has succeeded in offending nearly everybody. Some Senators see it as insulting to Panama. Others see it as inadequately guaranteeing U.S. rights. And, almost no one is happy with it.

The economic provisions are no better. Despite the acceptance of certain reservations, the uneasy feeling among our people that we are literally paying the Panamanians to take a multibillion-dollar asset off our hands persists. I personally believe that certain reservations accepted by the Senate have gone some distance toward improving what once were totally unacceptable confusions and ambiguities. But, the fact remains that we are turning over our canal to Panama in a manner which will bring considerable profit to the present regime.

Proponents argue that our relations with Latin America will be enhanced immeasurably should the Panama Canal Treaty be agreed to. As a Latin myself, I doubt it. Even more so than most peoples, we Latins respect firmness and are suspicious of vacilliation and weakness. What is more, although Latin American leaders have to adhere publicly to a kind of antigringo solidarity on this issue, privately they have let it be known that they are concerned about an economic asset as valuable as the Panama Canal being left in the hands of the present Panamanian regime.

SIGNIFICANCE

At any rate, Mr. President, no one here should underestimate the significance of what we are about to do. However we vote, we can be certain that our constituents will remember. And, more importantly, we will all have our own consciences to contend with.

The press attention which the Canal Treaty issue has drawn, the groups mobilized both for and against, and the general intensity of feeling within the electorate virtually guarantee that this issue will be remembered for a good long time. Although the public is supposed to be fickle and short of memory, on this issue, none of us should count on it.

But, each of us, in the final analysis, must make up his own mind. The ultimate burden of decision rests with us, which is as it should be. Our Founding Fathers wisely afforded to the Senate the advise and consent function on treaties in order to ascertain after due deliberation and mature reflection whether treaties negotiated by the Executive are truly in the national interest.

All the debate will soon be over. The final amendment has been offered. Let us now proceed to deciding whether the Panama Canal Treaty measures up to this exacting standard.

Mr. CHILES. Mr. President, today I cast my vote for the ratification of the Panama Canal Treaty.

My decision in support of the Panama Canal Treaty and the Neutrality Treaty has not been an easy one for me. My decision was made only after careful examination of all the public and private information made available to me. I have been briefed by our defense and intelligence gathering agencies. I have closely followed the congressional hearings. I have listened to my constituents on visits to Florida and have examined my mail. I have listened to the arguments put forth by both proponents and opponents. Based upon all this information, I have to come down on the side of supporting the treaties with the amendments and reservations the Senate has adopted.

As I have examined the treaties over

the last several months, my major concern has been whether or not the provisions insured that the canal would remain open for our ships and those of all nations. The adoption of two major amendments to the Neutrality Treaty has insured that the United States has the right and the responsibility to defend the canal militarily against any aggression which might threaten the ability of our ships to transit the canal. The second amendment insures that our vessels will be able to transit the canal as quickly as possible, and in times of need or emergency, it would insure that our warships would go to the head of the line.

While these amendments assured our rights in a secure and a neutral canal after the year 2000, it was unclear to me and to many other Members of the Senate just what rights our country had should the canal be closed or its operations interrupted from internal causes. To make it ironclad that the United States has the unilateral right to reopen the canal in such cases, I joined with 74 other Senators in supporting the DeConcini reservation which spells out America's right to act independently to take the steps necessary to use military force to reopen the canal.

With the DeConcini reservation attached to the treaty, there's absolutely no question as to what action the United States can take to keep the canal open.

I am firmly convinced that ratification of the Panama Canal treaties with the amendments and reservations which have been adopted by the Senate are in our best national security interests. It will serve our best national security interests in terms of our overall relations with all of Latin America. It will remove an issue which has been a rallying point for the Communists, and will thus help to curb the possible growth of communism in Panama and Latin America.

As a U.S. Senator, I have been elected to represent the people of my State, and to do this properly I must to the best of my ability fully inform myself on all the aspects of these proposed treaties, listen to all the arguments for and against, weigh all consequences of accepting or rejecting the treaties and having done this, I must vote in the way my conscience dictates is best to protect the interests of the United States. I am doing this today by casting my vote in support of the treaties.

PANAMA CANAL TREATY: AN ANALYSIS

Mr. CLARK. Mr. President, one of the experiences that impressed me most during the prolonged hearings and debate over the Neutrality Treaty was the extent to which, as George Gallup wrote in an analysis:

> The more Americans know about the Panama Canal treaties, the more likely they are to favor Senate ratification . . .

This was parallel to my own experience, meetings and talking with people of my State. In many instances, persons would begin by being very much opposed to the treaties but, after a discussion of the pros and cons, would swing around and be much more friendly toward them.

This experience leads me to the conviction that there are still a lot of people in this country who have not yet read the treaty texts, who do not really know what they provide for, and who are in fact taking a position based on bits and pieces of information that they may pick up through the media. As a matter of fact, it occurred to me that even those with the patience to listen to this debate on the radio would not, from the broadcasts alone, have heard what is in these treaties. There is not even the formal reading of the articles—here on the floor we normally dispense with the reading after a few passages. Instead, they have heard debate on isolated items, often in the critical formulation of what is not in the treaties, and what may be added to them.

Mr. President, in my judgment, I think it is imperative that the American people become familiar with the substance of these treaties so that they may better judge what we are undertaking.

I am reminded of Woodrow Wilson's comment that the responsibility of the legislative branch to inform is as great as its responsibility to legislate.

For that reason I have undertaken a lengthy and detailed analysis of the Panama Canal Treaty. I want to spell out right here what is said in this treaty, what it means, why it is phrased in that fashion. I want to look right into the heart of this treaty to try to demonstrate, as I have learned myself, that there is an awful lot of painstaking negotiation embodied in this treaty, a lot of reflection on how best to establish a machinery for the gradual assumption of Panamanian control of the canal, while at the same time protecting the interests of this Nation, and of those American citizens now working in the canal.

Article I of the treaty is entitled "Abrogation of Prior Treaties and Establishment of a New Relationship." Upon entry into force of the new Panama Canal Treaty, the old Treaty of 1903 would be abrogated, as well as two subsequent revisions of that treaty, one in 1936 and 1955.

It would also abrogate a whole host of earlier treaties, conventions and exchanges of notes between the United States and Panama concerning the Panama Canal. This is a housecleaning provision; if you are going to have new treaties, the old ones have to be abrogated.

The second section describes the extensive rights the United States will enjoy during the period of this treaty, that is, for the rest of the century (until the year 2000):

> In accordance with the terms of this treaty and related agreements, the Republic of Panama, as territorial sovereign, grants to the United States of America . . . The rights necessary to regulate the transit of ships through the Panama Canal, and to manage, operate, maintain, improve, protect and defend the Canal.

Panama further guarantees to the United States "the peaceful use of land and water areas" necessary to carry that out.

Section 3 says:

> Panama shall participate increasingly in the management and protection and defense of the Canal . . .

Section 4 says simply that the United States and Panama—

> . . . shall cooperate to assure the uninterrupted and efficient operation of the Panama Canal.

To sum up this article, we agree to abrogate the existing treaties, but, in response, Panama guarantees us a broad range of rights necessary to continue operating the canal. These general principles are subject to clarifications and limitations elsewhere according to other terms of the treaty, but these are the broad principles on which this treaty is based, and on which it would be interpreted in an international court of law.

Article II is the "Ratification, entry into force, and termination" clause. This is the clause that provides that—

> This Treaty shall be subject to ratification in accordance with the constitutional procedures of the two Parties.

Without editorializing there, I would think it is fair to say that the treaty does not give the United States any authority to interpret the constitutional processes of Panama any more than it gives Panama authority to govern the constitutional processes of the United States; nor should it. These are domestic Panamanian issues.

Article II also links this treaty to the Neutrality Treaty the Senate already has voted to ratify, just as that treaty has a clause linking it to the Panama Canal Treaty. These two are linked so that one cannot come into force without the other. And rightly so, for the Panama Canal Treaty is designed to prepare Panama to assume control of the canal, under the arrangements in the Neutrality Treaty, after the year 2000; and the United States would not transfer operation to Panama absent the ongoing rights and guarantees provided to us by the Neutrality Treaty.

The article also provides that the treaties will enter into force 6 months after the formal ratification.

It also provides that this Treaty, the Panama Canal Treaty, terminates at noon on December 31, 1999, from that point on our relations will be governed by the Neutrality Treaty, which has no cutoff date.

Article III establishes the ground rules for "Canal Operation and Management."

In this article, Panama grants to the United States the rights to manage, operate, and maintain the Panama Canal in order to provide for the orderly transit of vessels through it. Among the specific rights are: First, to use the specific lands and waters necessary for this purpose; second, to make improvements and alterations; third, to establish the rules and regulations governing such matters as navigation; fourth, to establish, modify, collect, and retain tolls; fifth, to regulate relations with employees of the U.S. Government; and sixth, to issue and enforce regulations.

In short, the United States will retain full authority over all aspects of canal operation and management; helping the

setting of tolls and establishment of wages, vacations, et cetera, for our employees. All of these matters—and this is extremely important—will remain subject to the legislative jurisdiction of the U.S. Congress.

Moreover, the broad U.S. rights established here are reinforced in great detail in separate agreements and protocols which regulate details in much the same fashion as our status of forces agreement maintained with many countries throughout the world. These agreements provide extremely specific rights and protection for our agencies and employees, and this too is a very important point, our employees are not going to be worse off as a result of these treaties, their status will be different than it is now, but it will not be worse. Indeed, their situation will be better in many respects.

For example, an employee today who leaves the Canal Zone and goes into other parts of Panama has no specific protection under the existing treaties and agreements, under the new treaty they will have extensive protections wherever they may go throughout Panama, the status of force formula is a proven one, it has worked extremely well in protecting our employees—both civilian and military—in all sorts of environments in various countries throughout the world for 30 years, there is certainly no reason to believe that these modern and proven types of protections cannot work equally well in Panama.

An extremely important provision of section 3 is the provision for establishing a Panama Canal Commission to manage, operate, and maintain the canal.

I think it is vitally important that everyone concerned with this treaty recognize that the commission, which will run the canal, will be a U.S. Government agency, created by and subject to U.S. law.

Thus, it will be subject to the continued legislative jurisdiction of the U.S. Congress. Its Board of Directors will be composed of nine members, "five of whom shall be nationals of the United States of America, and four of whom shall be Panamanian nationals * * *." This is not for 6 months; this is not for 30 months. From the time this treaty enters into force to the time it expires at the end of the year 1999, the United States will run the Panama Canal Commission which runs the canal and will have a voting majority on its board.

Section 3 has a further provision for facilitating the transfer of control while at the same time providing for ultimate U.S. responsibility. It provides that the Administrator of the Canal, the individual who manages the canal under U.S. direction, will be American until 1990, with a Panamanian deputy, after that, the administrator will be Panamanian, but it will be a candidate of Panama's which is appointed by the United States. If we find him unacceptable, if we do not like him, we do not have to appoint him; Panama has to nominate a candidate acceptable to the United States, or he simply would not be named to the post. In fact, if the United States accepts a Panamanian nomination, and names the man as administrator, and then finds him unacceptable, the United States can remove him. Moreover, whatever the nationality of the administrator, or for that matter any other officer or employee of the commission, he will be a U.S. Government employee whose duties and authority will be defined by U.S. law, and his activities will be fully subject to the policy direction of the U.S. Government. This is not unusual. Our big multinational corporations operate throughout the world with local managers. Indeed, the U.S. Government employs foreign nationals both in the United States and in other countries where we have activities. They key to control is not the nationality of the employee, but who directs them. In this case it is clearly the United States which retains this control.

This section of the treaty also provides that the United States will reimburse Panama for a variety of public services in the canal operating area and in some housing areas. I understand that the United States will actually be saving about $8 million over the current costs of these services. This clearly would be to our advantage. Our agencies and employees deserve high quality public services.

The next section provides for the establishment of a Panama Canal Consultative Committee, composed of an equal number of high-level representatives of the United States and Panama, with the task of advising the United States and Panama on matters affecting the operation of the canal. I would certainly expect that this committee could evolve as a valued and useful advisory board. However, I wish to emphasize that its role is strictly advisory; decisions will be made by the United States and our agency, the Canal Commission.

Section 8 provides for growing participation of Panamanian nationals at high management levels, and throughout the administration. I find this perfectly justifiable, but must emphasize that again there are certain limitations and restrictions on this mandate, designed to protect current employees of the Canal Company, as spelled out in article X, which I will turn to later. The principle is stated, subject to reservations designed to assure proper operation of the canal and protection of its employees.

Finally, article III provides that when this treaty enters into force, the existing agencies—the Panama Canal Company, and the Canal Zone Government—shall cease to operate in Panama. As we have seen, the administrative and managerial functions performed by these agencies will be taken over by the Canal Commission. The municipal government function become the responsibility of the Panamanian Government.

Mr. President, I turn now to article IV, "Protection and Defense," which I consider one of the most vital provisions in this treaty. There are two specific points worth emphasizing:

First of all, the United States and Panama "commit themselves to protect and defend the Panama Canal. Each party shall act, in accordance with its constitutional processes, to meet the danger resulting from an armed attack or other actions which threaten the security of the Panama Canal or of ships transiting it."

Again, as in the Neutrality Treaty, both countries bind themselves to protect the canal, but each—and I repeat, each—acting alone, determines what actions it will undertake "to meet the danger resulting from an armed attack or other actions * * *"—let me repeat, "or other actions"—which threaten the canal. These "other actions" are wisely, in my judgment, left without further definition. It is the diplomatic way of doing things. Panama knows; the United States knows, that this means the same thing as article IV of the Neutrality Treaty, that is, that the United States can take action against any threat to the canal.

Second, article IV says the United States shall "have primary responsibility to protect and defend the canal." Again, primary responsibility for the protection of the canal. For this purpose the United States is assured the right to station troops, to train troops, and to move troops as necessary. The rights under this article are spelled out in considerable detail in an agreement in implementation of this article—a standard status of forces agreement such as we have with many nations—which contains provisions which our military leadership says flatly are quite sufficient to carry out our responsibility for defending the canal.

Finally, article IV provides for the establishment of a combined board of U.S. and Panamanian military officers, to work together—in the spirit of this treaty—in matters pertaining to the protection and use of the canal. This relates to the basic defense rights I just mentioned. Each party has the right to act independently if necessary, but both contemplate working together and cooperating to protect their common interest in the canal. The combined board will in no way affect the chain of command of the U.S. forces in Panama.

There is one other provision in this article IV of considerable significance: Section 5 provides:

> To the extent possible consistent with its primary responsibility for the protection and defense of the Panama Canal, the United States of America will endeavor to maintain its armed forces in the Republic of Panama in normal times at a level not in excess of that of the armed forces of the United States of America in the territory of the former Canal Zone immediately prior to the entry into force of this Treaty.

Let me emphasize these words, Mr. President, "to the extent possible * * *" the United States "will endeavor * * *" "in normal time * * *" to maintain force levels "* * * not in excess * * *" of those levels which exist when the Treaty goes into force. Absolutely right; absolutely correct. A good faith statement of policy that is perfectly consistent with the spirit of this treaty. Neither we nor the Panamanians want any more U.S. troops around than necessary to do the job. But in an emergency, where neces-

sary, the U.S. has the right to increase these levels.

Mr. President, article V contains the "Principle of Non-Intervention" in Panamanian politics which was criticized at various times during the hearings on the treaties. Let us look at just what it does. "Employees of the Panama Canal Commission, their dependents and designated contractors of the Panama Canal Commission, who are nationals of the United States of America, shall respect the laws of the Republic of Panama and shall abstain from any activity incompatible with the spirit of this treaty. Accordingly, they shall abstain from any political activity in the Republic of Panama as well as from any intervention in the internal affairs of the Republic of Panama."

I do not see what is so unusual about this restriction. It is not strange that Panama does not want these U.S. citizens, who are in Panama, because they work for the U.S. Canal Commission, to be fooling around in their domestic politics. Nor do our NATO allies, who have essentially the same restrictions on the activities of the large numbers of U.S. citizens in their countries, because of the alliance.

This language is no different than that in our status of forces agreements with many countries.

Lest there be any misunderstanding, this provision does not in any way restrict the activities of the U.S. nationals with respect to the American political scene, except, of course, that they will be, as they now are, U.S. Government employees, and subject to the same restrictions of the Hatch Act as any other U.S. employee.

Mr. President, article VI is brief, but of considerable importance in the discussion of particular concern to a broad segment of our population that is particularly alert to environmental issues. In brief, in this section the U.S. and Panama pledge themselves to give due regard to "protection and conservation of the environment" and agree to establish a joint commission to deal with these issues in the operation of this canal or any other which might be built. The two parties agree to submit to the Joint Environmental Commission an impact statement on any action they take which might have environmental ramifications.

Article VII dealing with "flags" is brief and to the point. The entire area will be under the flag of Panama which will always occupy the position of honor. The U.S. flag will fly along side the Panamanian flag at the headquarters of the Canal Commission. The U.S. flag will also fly on U.S. defense sites, and the U.S. flag can fly elsewhere if both parties agree. I think this is an entirely appropriate reflection of Panamanian sovereignty, and is consistent with normal, international practice.

Mr. President, article VIII on "Privileges and Immunities" is vital to the effective and independent operation of the Canal Commission. It states clearly that the installations owned or used by the agencies or instrumentalities of the United States of America operating in the Republic of Panama pursuant to this treaty and related agreements, "and their official archives and documents, shall be inviolable." This means that the Panama authorities cannot enter our facilities or inspect our records without our consent. Special arrangement will be made between Panama and the United States to handle criminal investigations at such locations.

Furthermore, although Panamanian law shall generally apply in these areas made available for use by the United States, the agencies and instrumentalities of the United States will be immune from the jurisdiction of Panama. And finally Panama has agreed to give the privileges and immunities accorded to diplomatic agents and their dependents under international law to the top 20 officials of the commission.

In short, throughout the period of this treaty, the Canal Commission's archives will be inviolable, the agencies of the U.S. government will be immune from jurisdiction of Panama, and 20 top officials and their families will enjoy diplomatic immunity. All this in addition to the very specific and extensive jurisdictional arrangements provided for all of our personnel under the implementing agreements which include specific procedural and due process guarantees for American employees of the Canal Commission, the military and their families. This in my judgment is a carefully drafted and thought out guarantee of our ability to run the canal without harassment by the Panamanians or anybody else.

Mr. President, sections 1–7, article IX, which deal with "Applicable Laws and Law Enforcement" are of vital interest to those American citizens who live and work in Panama or in what is now the zone.

Basically, the article provides for a transition period of 30 months during which private business or nonprofit activities established in the zone prior to March 7, 1977, may continue their operation on the same terms and conditions as now. They will be subject to Panamanian law generally, but have this 30-month period to bring their operation into full compliance with the laws of Panama. At that point, they become fully subject to Panamanian law, but, and I emphasize, "without discrimination." They will be treated as similar private enterprises in Panama. Panama further agrees to recognize private ownership of buildings in what is now the zone, though this does not apply to the real estate, since with one exception, private business and organizations in the zone do not own the land they occupy today.

Panama has agreed, however, that they can continue to rent the land at reasonable rates, and if Panama decides to sell the land, the present occupants will have the first option to purchase at a fair price. Nonprofit enterprises can buy the property on which they are located at nominal costs. If Panama should ever find it necessary to exercise eminent domain powers, the owners will be compensated at fair market value for their property.

Section 8 of article IX relates directly to the fear expressed earlier in this debate that Panama might, by administrative or legislative action, take steps which infringe on U.S. rights. Under this section, "The Republic of Panama shall not issue, adopt or enforce any law, decree, regulation, or international agreement or take any other action which purports to regulate or would otherwise interfere with the exercise on the part of the United States of America of any right under this treaty or related agreements." I think it is essential to quote this at length, because it certainly should assuage the fears of those who are anxious about Panama's intentions.

In section 10 of this article, the two parties commit themselves to take such steps as are required to guarantee the security of the Panama Canal Commission, its property, its employees and their dependents. In short, everyone working on the canal will be protected, and Panama agrees to pass any additional legislation that may be needed and to punish offenders. Finally, the two nations agree to negotiate a treaty providing that the nationals of either state, who are sentenced by the courts of the other state, and do not live there, may serve their sentence in their own country and agree to enter into a specific treaty on this subject along the lines of our recent treaty with Mexico. This should allay the concerns of those who fear that American citizens would have to spend time in Panamanian jails. Let me emphasize that this is a fillip, a gain for American citizens in general. Do not forget, though, that elsewhere it is provided that in the cases of crimes allegedly committed by U.S. citzens employed by the Canal Commission, Panama will as a matter of general policy waive jurisdiction to the United States.

Mr. President, article X is one of the longest and most detailed articles in the treaty, and well it might be for it deals with the terms and conditions for "Employment with the Panama Canal Commission."

Let me emphasize one point to begin with: Section 1 declares that—

> * * * the United States of America shall establish employment and labor regulations which shall contain terms, conditions and prerequisites for all categories of employees of the Panama Canal Commission.

Thus, the United States retains legislative jurisdiction on all employee matters. Let me very briefly enumerate the other key guidelines:

The regulations shall include a system of preference for hiring Panamanian applicants. This is as it should be. We want to employ more qualified Panamanians so that they are fully in a position to operate the canal by the year 2000. (Of course, 80 percent of the employees of the Panama Canal Company are already Panamanian.)

The terms and conditions to be established will be no less favorable to persons already employed than those currently in effect. In a word, no present employee of the Panama Canal Company will be disadvantaged in working for the Canal Commission.

Employment policy will "generally limit" the recruitment of personnel outside Panama to those with special skills not available there. This provision clearly enables the commission to hire outside Panama whenever persons with the requisite qualifications are not available inside that country.

The United States will establish training programs for Panamanians.

After 5 years the number of present U.S. employees who will still be there at that time must be lowered by 20 percent. Frankly, when allowing for attrition, I find this a perfectly acceptable figure. It does not constitute any sort of ceiling on the total number of U.S. employees we may have at any time during the life of the treaty.

The Coordinating Committee is assigned the function of serving as a liaison on job openings between the Panamanian Government and the United States.

The United States agrees to accept Panamanian professional licenses, but reserves the right to require additional professional skills. Like so many other provisions in this treaty, this provision recognizes the legitimate pride and status of the Panamanians, while at the same time reserving the right to establish whatever standards are necessary for running the canal.

This same balance holds for section 4, the provision for periodic rotation, at a maximum of every 5 years, of non-Panamanian employees hired after the entry into force of this treaty. Again, there is an exception made for administrative reasons in the cases of employees with special skills. And note, too, that it does not apply to persons currently employed by the Panama Canal Company.

So here we have another instance where the general principle of turnover is stated and reinforced, but where in practice the Canal Commission will have the authority to hire necessary individuals and keep them longer than 5 years if their skills are needed.

Regarding wage and fringe benefit policy, section 6 states flatly there "shall be no discrimination on the basis of nationality, sex or race." Interestingly, and consistent with the treaty's special concern for U.S. employees, the benefits now enjoyed, such as home leave, will not be considered as discrimination within the meaning of this paragraph. Again, this is a protection for the U.S. citizen now working on the canal.

Section 7 has received considerable attention already, and properly so, for it deals with the fate of those persons displaced from their employment, because of the terms of the treaty. As we know, Panama will assume certain functions now handled by the Canal Company or Zone Government, including municipal services such as police and certain aspects of fire protection.

Where this happens, the U.S. Government itself is committed to relocate these displaced persons "to the maximum extent feasible, in other appropriate jobs with the Government of the United States, in accordance with U.S. Civil Service regulations." Furthermore, Panama obligates itself wherever possible to retain non-Panamanian employees in activities transferred to Panama, and to maintain current pay rates and working conditions.

Article 9 contains a provision widely misrepresented in this country. Because it is so vital, I will quote it in its entirety:

(A) The right of employees to negotiate collective contracts with the Panama Canal Commission is recognized. Labor relations with employees of the Panama Canal Commission shall be conducted in accordance with forms of collective bargaining established by the United States of America after consultation with employee unions.

(B) Employee unions shall have the right to affiliate with international labor organizations.

Let there be no doubt about this point. Employees will continue to have the right to collective bargaining, and employee unions will be able to maintain affiliation with international labor organizations. The terms for collective bargaining will be worked out between the United States and the unions.

Section 10 outlines yet another consideration for current canal employees:

The United States of America will provide an appropriate early optional retirement program for all persons employed by the Panama Canal Company or Canal Zone Government immediately prior to the entry into force of this treaty.

The section goes on to note that due to special circumstances arising from this treaty the United States will make it easier for employees to retire under existing law, and seek legislation to provide more liberal entitlement to retirement annuities than is currently provided for by law if the employee himself decides he would prefer to go this route.

Again, this represents sincere effort to compensate those many dedicated U.S. citizens who have worked for the Canal Zone Company or the government. This program is expensive; its estimated cost (which ranges up to $150 million) is one of the major expenses incurred in the turnover. But it is just, and it is necessary. It is a benefit not to Panama, but to our own citizens.

Mr. President, article XI is so clearly a provisional arrangement, being the "Provisions for the Transition Period," that I will not go into a detailed section by section analysis. I would call attention only to the provision in section 1 that—

The authority granted in this Article to the United States of America for this transition period shall supplement, and is not intended to limit, the full application and effect of the rights and authority granted to the United States of America elsewhere in this treaty and in related agreements.

Now, Mr. President, we come to article XII, relating to "A sea level canal or a third lane of locks." Let me confess at the outset that I do not think any provision of the treaties has been more misunderstood and misrepresented than this article. Again, for the sake of accuracy, let me quote exactly what this article provides. After recognizing in section 1 the possible future importance of a sea level canal, and committing themselves to a joint feasibility study during the duration of this treaty, the two parties agree that if such a waterway is necessary, "They shall negotiate terms, agreeable to both parties, for its construction." As is obvious from the text, this is not a commitment necessarily to build a sea level canal; it is an agreement to negotiate the terms for such a canal if it is deemed desirable.

Then comes the much disputed passage:

2. The United States of America and the Republic of Panama agree on the following:

(A) No new interoceanic canal shall be constructed in the territory of the Republic of Panama during the duration of this treaty, except in accordance with the provisions of this treaty, or as the two parties may otherwise agree; and

(B) During the duration of this treaty, the United States of America shall not negotiate with third states for the right to construct an interoceanic canal on any other route in the Western Hemisphere, except as the two parties may otherwise agree.

Now, the fact is that this section is a straight trade off, The United States, and I emphasize that it was we who initiated this particular provision, knows full well that if and I say "If" because few persons I know believe the sea level canal will ever prove economically feasible—but "if" the canal is built, it would most certainly be constructed in Panama.

A U.S. commission spent 5 years and some $22 million before concluding in 1970 that of the 34 routes from Atlantic to Pacific, only eight were worth serious investigation, and of these the two best by a huge margin were in Panama. A Department of Transportation study in 1977 reconfirmed these findings. The route in Nicaragua is 140 miles long; through Colombia it is 100 miles long; the path through Panama is about 40 miles long. As I said, most experts I have talked with doubt that the sea level canal will be built anywhere. But if it is built, there is no option except Panama. Plowing through Nicaragua would cost four times more than through Panama. As a matter of fact, the judgment that Nicaragua was unfeasible was so persuasive that the Senate of the United States approved by 66 to 5 the abrogation of the Bryan-Chamorro Treaty which gave us that right. Many of the Senators now concerned with that right voted to renounce the Nicaragua rights 6 years ago.

The United States, aware of the significance of the Panama route, persuaded the Panamanians to pledge that if any canal is built in Panama, it must be by the agreement of the United States. Now, this is a significant restriction on Panama. It cannot build a canal in its own territory or let any other nation build a canal without our agreement. So, in agreeing to this provision, Panama wanted to quid pro quo. That was that the United States agree during the same period not to construct a canal elsewhere in Central America.

In my judgment this provision is highly favorable to the United States. As I said, I do not expect in any case that the sea-level canal will be built, and therefore do not find this "right" all that significant. But it is decidedly a point in our advantage. As a matter of fact, we have heard General Torrijos' com-

ment that he would be glad to dispense with this provision—cutting it would make him a national hero.

Let me add in concluding my remarks on article XII, that other sections of this article would permit the United States to build a third lane of locks to the existing canal, and would bind the United States not to use nuclear excavation techniques without the prior agreement of Panama.

Frankly, I think neither of these provisions is particularly important. Nobody speaks seriously of constructing a third lane of locks—but we would have the right to build them under this treaty. And in 1970 the Anderson Commission concluded that the use of nuclear explosives was not particularly feasible; nuclear excavation is contrary to U.S. worldwide policy; and we are prohibited from nuclear excavation by the Test Ban Treaty.

I come now to one of the most discussed articles of the treaty, article XIII, providing for "Property Transfer and Economic Participation by the Republic of Panama." This is the article which describes what we turn over to Panama on that last day of operation, and under what terms.

And, it is in this article where the payments to Panama by the Canal Commission are described.

First, section 1, providing for the turnover upon the termination of the treaty:

1. Upon termination of this treaty, the Republic of Panama shall assume total responsibility for the management, operation, and maintenance of the Panama Canal, which shall be turned over in operating condition and free of liens and debts, except as the two parties may otherwise agree.

I know that the issue of "free of liens and debts" has been widely discussed here during the debate on the Neutrality Treaty. Again, without attempting to argue the case here. I want to emphasize that the United States will have control over the Canal Commission throughout the duration of the treaty, and it is that U.S.-controlled Commission which will manage the canal in a fashion which will insure that the operation is free of liens and debts.

This provision means that we will not mortgage the canal or its equipment before we transfer it to Panama. It also means that if in 1995 we find it desirable to make large capital improvements in the canal, but do not want to pay the entire bill, Panama can agree to assume a pro rata share of the cost.

Upon entry into force of the treaty, the United States under section 2, "transfers to Panama all right, title, and interest the United States may have with respect to all real property, including nonremovable improvements" located in areas not reserved for U.S. use under the treaty, except for property made available for our use in these outlaying areas. Title to housing owned by the Panama Canal Company is transferred the day the treaty goes into effect, but the United States retains the use of such housing as is necessary.

I am told that the 1977 book value of Canal Company/Canal Zone Government property involved on this initial transfer, and those to be made over the life of the treaty, is roughly $96 million.

Upon termination of this treaty, Panama will assume total responsibility for the canal. All real property, nonremovable improvements and equipment related to the operation of the canal are transferred to Panama at that time.

The book value of the existing property to be transferred at the end, according to the State and Defense Departments, will be approximately $98 million. Panama will also receive all capital improvements made during the treaty's lifetime. With regard to military properties, facilities to be turned over at the start of the treaty have an acquisition cost of $27.5 million. During the treaty's life, additional property with an acquisition cost of $33.5 million will be turned over, and at the treaties and the remaining military facilities with an acquisition cost of $291.9 million will be transferred.

The payments to Panama during this period are supposed to be a "just and equitable return on the national resources which it has dedicated to" the Panama Canal. The payments, by the Canal Commission, from canal revenues, are:

(a) A share of tolls amounting to 30 cents per Panama Canal ton of shipping transiting the Canal;

(b) A fixed amount of $10 million per year; and

(c) An additional sum of up to $10 million per year if there is a surplus from operating revenues.

Why these particular figures? One Senator has an amendment which would cut the payments in half. Many critics describe this as "paying Panama to take the canal off our hands."

To set the record straight, Let us understand clearly that these will be payments from revenues. I grant that there are expenses involved from the U.S. Treasury, in the implementation of the new treaty, but the payments to Panama are not part of them.

To understand the significance of these figures, it is necessary to go back into the negotiating history of these treaties.

You will recall that initially Panama was asking for incredible sums—a billion dollars—as compensation for the presumed losses to Panama which resulted from the years in which the United States kept tolls at an artificially low level to accommodate the world's shippers, and consequently paid Panama a pittance for use of the canal territory.

The U.S negotiators went into these discussions with a basic position: Payments to Panama would have to be based on what the canal could earn, not on its theoretical value to the world's shippers, or some abstract value of Panama's contribution—through geography—to the world. Economic research indicated that the canal could absorb toll increases of up to perhaps 75 percent and still increase revenue. The United States took a very conservative position, opting instead for a projected toll increase of about 30 percent, on that basis, it was determined that a payment to Panama of roughly $50 million annually could be sustained. But rather than making this a flat across-the-board figure, this was divided into a payment (30 cents) based on traffic, a fixed $10 million, and a $10 million conditional payment if revenues are sufficient.

The point I want to make is simply that these are not arbitrary figures. They are a compromise between what Panama would like to receive, and the U.S. position that payments must be sustainable by canal revenues.

Mr. President, this brings me to the final article, No. XIV, which provides for the "Settlement of Disputes." I can dispense with this very briefly. In a word, Panama wanted provisions for compulsory arbitration of disputes. The United States felt it would do better without compulsory arbitration. The language in article XIV provides that where the parties are unable to resolve a particular matter, "* * * they may, in appropriate cases, agree to submit the matter to conciliation * * *." In short, there is no compulsory arbitration. That was what our negotiators were instructed to seek, and that is what they achieved. It was quite an achievement.

Mr. President, that concludes my section-by-section analysis of the treaty. I hope that by going through this in such detail I have made it clear why in my judgment this Panama Canal Treaty—as modified by the leadership amendment—represents a balanced and reasonable mechanism for transfer of the canal to Panamanian operation. It is highly protective of American interests during this period. Indeed, for all intents and purposes the United States runs the canal and has full responsibility for its defense through the end of this century. I would hope that the decision on this treaty takes this into full consideration, and that this treaty is seen as being in the best interests of both the United States and Panama. Taken together with the treaty on neutrality, it represents the most effective way, in my judgment, of guaranteeing what the United States wants in the future; that is, the open and free use of the canal by the navies and commercial fleets of all Nations.

### NONINTERVENTION AND THE PANAMA CANAL TREATIES

Mr. KENNEDY. Mr. President, we are considering today the last of the reservations and understandings to the resolution of ratification of the Panama Canal Treaty, before that treaty is hopefully adopted by the U.S. Senate.

The most important of these is clearly the amendment introduced today by the Senate leadership and floor managers of the treaties. The amendment provides that any action by the United States shall be only—I repeat only—to keep the Panama Canal "open, neutral, secure, and accessible." It provides that the United States will not—I emphasize will not—intervene in Panama's internal affairs or interfere with its "political independence or sovereign integrity."

I shall support this leadership amendment. It has equal application to both Panama Canal treaties, although it is adopted in the course of action on the

second treaty. This is a judgment confirmed in a memorandum of law prepared by the Department of State, which I ask unanimous consent to be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. KENNEDY. This provision is consistent, Mr. President, with the obligations on neutrality and nonintervention in the two Panama Canal treaties as amended. Our obligations are clearly defined in the Neutrality Treaty as follows:

Any United States action will be directed at ensuring that the canal remain open, secure and accessible, and it shall never be directed against the territorial integrity or political independence of Panama.

The United States has long been committed not to intervene in the internal affairs of any other state under the United Nations charter, which we have agreed prevails over all other international agreements. Article 2, section 4 of the charter provides that:

All members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any manner inconsistent with the purposes of the United Nations.

The United States has long been committed not to intervene in the internal affairs of any other State under the charter of the Organization of American States. Article 18 of the OAS charter provides that:

No state or group of states has the right to intervene, directly or indirectly, for any reason whatever, in the internal or external affairs of any other State. The foregoing principle prohibits not only armed force but also any other form of interference or attempted threat against the personality of the state or against its political, economic and cultural elements.

It is my hope that President Carter will also reaffirm these commitments when he moves to exchange the instruments of ratification with Panama. A protocol of exchange, covering both Panama Canal Treaties and signed by both parties, will be a particularly valuable instrument for the United States to state unequivocally its opposition to intervention in Panama's internal affairs.

So I believe that an adequate basis has been established for Panama and the United States to develop a new treaty relationship over the Panama Canal. This relationship must be based on partnership and mutual respect, above all respect for the sovereignty of Panama over its territory which has always included the canal.

This is a relationship of friends and allies, not of patron and client states. This is a relationship which will insure that the canal remains so open and so secure that there will never be a need for us to take military action in that part of the world.

With these understandings, I believe that we can turn from the difficulties and misunderstandings of the past to future friendship and cooperation with the people of Panama.

EXHIBIT 1

MEMORANDUM OF LAW

The question has been raised whether an interpretation of the Neutrality Treaty expressed in a reservation or understanding in the Senate's resolution of ratification of the Panama Canal Treaty would be legally binding on the parties with respect to the Neutrality Treaty.

We are not aware of any reason why such an interpretation, concurred in by Panama, would not be binding. The essential inquiry is whether there is a meeting of the minds. If both parties to a bilateral treaty agree in a separate instrument to an appropriate interpretation of that treaty, there is no legal reason why the separate instrument should not be fully effective in accordance with its terms.

In my opinion, such an interpretation of the Neutrality Treaty would be legally authoritative and binding on the parties.

HERBERT J. HANSELL,
*Legal Adviser.*

Mr. SPARKMAN. Mr. President, we are about to conclude debate on the most controversial treaty to come before the Senate since I have been a member of this body.

I hope that the Senate will give its advice and consent to this treaty as it did to the Neutrality Treaty and that, subsequently, Panama will accept the Senate's modifications. The adoption of the leadership amendment today should go far in reassuring the citizens of Panama that the United States has no intention of intervening in Panama's internal affairs.

The two treaties which the Senate has been considering for the last 2½ months are more significant than the words they contain. In our relations with the nations of Latin America, these treaties symbolize the end of an era of paternalism and the beginning of a new era of equality and partnership.

I commend the President for his courage in moving expeditiously to work out a genuine partnership relationship with Panama. The treaties are a fair and equitable bargain for both countries.

Many others deserve credit for bringing the Panama Canal issue to this moment of decision.

Without the active support of the majority and the minority leaders these treaties would not have had a chance for approval by the Senate. Throughout this long debate, both the majority and the minority leader have demonstrated the highest qualities of political leadership. After careful study of all the issues, they decided to support this unpopular cause, because they believed it was right, and then set out to convince their colleagues and the public of the wisdom of their decisions. Their work on the treaties has been in the highest tradition of great Senate leaders.

I wish to express my gratitude to Senators CHURCH and SARBANES who have carried the major burden here on the floor for the Foreign Relations Committee for the 38 days of this debate. Day in and day out, since February 8th, Senator CHURCH and Senator SARBANES have handled these treaties in a masterful manner. As my colleagues know, there is no political mileage in being a floor manager for such a controversial measure. I know that I speak for all members of the committee in expressing my thanks for their able and conscientious efforts.

Many members of the committee staff have assisted in the work on these treaties, under the guidance of Norvill Jones, the Chief of Staff. In view of the limited time, I will not name all of them. However, I do want to mention several whose efforts should not go without notice. Mike Glennon, the committee's legal counsel, has provided sound advice on many legal questions. Bob Barton, Ralph Nurnberger, Joel Johnson, and Bill Ashworth have also assisted on various matters. But, throughout, the primary staff burden has been on the shoulders of Bob Dockery and Ralph McMurphy. They have been on the Senate floor constantly during the debates, providing expert assistance and advice to the floor managers and other Senators. They are true Senate professional. Both the committee and the Senate are fortunate to have their services.

I also wish to thank all of the personnel of the executive branch who have worked so closely with members of the Senate and staff in providing assistance during the committee's and the Senate's consideration of the treaties.

Finally, I wish to pay tribute to National Public Radio for broadcasting the Senate debate on the treaties. These broadcasts have made a substantial contribution in educating the American public on the issues involved. I hope they will be a forerunner of other live broadcasts of Senate debates. I wish to pay tribute, especially to Linda Wertheimer and her associates for their competence and patience in interpreting for listeners the events taking place in the Chamber.

The Senate's work on these treaties has been in the finest tradition of the meaning attached by the authors of the Constitution to the advise and consent clause. In great detail the Senate has worked its will on these two treaties. For the first time in more than half a century it has amended a treaty. It has also given its advice to the President in the form of a number of other provisions included in the resolution of ratification. A byproduct is that the debate has pointed up the need for a fresh look at the Senate's rules governing the handling of treaties.

Mr. President, with the approval of this resolution the Senate will have done its work well. It will have demonstrated once more the constructive partnership role that the Senate can play in the making of foreign policy.

Mr. THURMOND. Mr. President, I rise this afternoon to warn the U.S. Senate one last time of the troubles ahead if this treaty is ratified today.

These troubles are sure to come. This is a bad treaty. It is poorly conceived to accomplish what it purports to accomplish. Its flaws are numerous and remain in place because the treaty supporters have allowed no substantive amendments during over 2 months of debate.

In my 24 years in the Senate I have never seen this body so totally reject the obvious wishes of the American people

on such an important matter. The Senate should listen to the people because the people are right in opposing these treaties.

PANAMA SOVEREIGN IN 1978

The Senate should also realize that the American people will soon learn, if they have not already, that Panama becomes sovereign in the Canal Zone 6 months after the exchange of the documents of ratification. This will occur in about November of this year, 1978, not the year 2000. At that time, in this very year, 1978, the Panama Canal and other lands in the zone become the property of Panama. In the year 2000 the United States merely passes operating control of the Panama Canal to the Panamanians.

Mr. President, why do the American people oppose this treaty despite Presidential TV appearances and unprecedented lobbying?

REASONS OPPOSED

They oppose it because:

First. It surrenders control of the canal to Panama.

Second. It violates the Constitution on transfer of property.

Third. It transfers a $9 billion asset without any payment to the United States.

Fourth. It could cost the United States up to $2.3 billion to transfer the canal to Panama.

Fifth. It denies the United States base rights from which to defend the canal and protect U.S. interests in the Caribbean.

Sixth. It weakens U.S. ability to be assured of the transfer of Navy ships from ocean to ocean in times of national emergencies.

Seventh. It fails to provide explicit rights for U.S. forces to enter Panama to defend the canal if closed or threatened.

Eighth. It does not assure priority of passage for U.S. ships in times of emergencies.

Ninth. It opens Panama and the canal to Communist subversion and control.

Tenth. It has vast economic disadvantages to U.S. exporters, shippers, ports and consumers.

Eleventh. It represents a retreat of American influence from the Caribbean area in which Communist forces are gaining yearly.

Twelfth. It makes uncertain the availability of a vital Pacific-Atlantic maritime link.

Thirteenth. It permits ships of a nation at war with the United States to use the canal to patrol waters in our hemisphere.

Fourteenth. It places a heavy burden on the American people through direct appropriations, loss of payments to the Treasury, and higher costs of goods by increased tolls.

Fifteenth. It fails to make clear what it purports to do and thereby will create trouble and even conflict between the United States and Panama.

Sixteenth. It is morally wrong because it places the United States in the position of making an important contract with a dictator whose power over his people and denial of their human rights will be strengthened by ratification of this treaty.

Mr. President, these are but a few of my concerns. Many more have been expressed by myself and other opponents during this lengthy debate. This treaty is the great giveaway of the century—a giveaway of U.S. property, prestige, economic strength and defense strength.

NO TRUST OF TORRIJOS

Mr. President, I do not trust the Panamanian dictator, General Omar Torrijos. He has strong Communist ties. His rule has brought huge debts on the Panamanian people. His rule has placed his people at the bottom of the list on human rights. I ask the Senate, why should we trust him with the operation and ownership of the Panama Canal, a vital international waterway?

Mr. President, the recent indecision and bargaining over the DeConcini amendment to the first treaty merely highlights the ambiguities, uncertainties and misunderstandings which riddle these treaties. The main purpose of the treaties, the advocates claim, was to develop a clear, concise and fair relationship with Panama. These treaties fail completely in this regard.

The Senate has not been allowed by the advocates of these treaties to improve them because of the very weakness of General Torrijos in his own country. The proponents have argued, in effect, it cannot be changed because General Torrijos is too weak to win approval in a new plebiscite. Practically every change, even the reservation attempting to change the reservation offered by Senator DeConcini has had to be cleared by General Torrijos. This is a mockery of the responsibility of the Senate.

I believe the people of Panama should have a new treaty, but one negotiated with a freely elected government truly representative of their concerns—not one designed to pay off the debts of a dictatorship.

CHANGES ATTEMPTED

Mr. President, during the course of this debate I have spoken at length on the defense, financial and economic consequences of these treaties. I have offered amendments, reservations and understandings in an attempt to shape these treaties in a way to better reflect the interests of the American people and the people of Panama.

For the most part, the treaties have not been improved except for the DeConcini reservation to the Neutrality Treaty. This reservation improved the U.S. situation, but now the treaty proponents have weakened it because General Torrijos finds it unacceptable.

Never have I seen a foreign figure hold such sway over the Senate. This will be a fateful day in U.S. history if the Senate pays more attention to the wishes of General Torrijos than to the wishes of the American people.

Again, I remind this body that if the Senate ratifies this treaty, later this year of 1978, probably sometime after the November election, Panama becomes sovereign in the zone. As territorial sovereign, Panama becomes owner of the canal. This happens in 1978, not the year 2000.

Mr. President, I urge my colleagues to search their minds and their hearts and place the interests of the people of America and the people of Panama first by sending this treaty back to the President for further negotiation.

INTERNATIONAL DEBT, THE BANKS, AND U.S. FOREIGN POLICY AS IT RELATES TO PANAMA

Mr. HELMS. Mr. President, in debating the proposed Panama Canal treaties, no attention whatever has been given to some of the as yet unexplained circumstances surrounding the intended giveaway of the Canal Zone and Panama Canal.

By that I mean the strong support—nationally orchestrated support, I might add—that has been given to the treaties by financial institutions and multinational corporations in the United States which have a direct stake in the economy of the Republic of Panama.

While the American taxpayers who over the years have underwritten the canal and its associated facilities, overwhelmingly oppose the treaties, the American banking and big business communities seem almost solidly for them.

The people want to know, why? U.S. Senators want to know, why?

The citizens of this country made the investment that built the canal, and its defenses, not the bankers and the giant corporations.

The interest-bearing balance on the net direct investment of the United States as of June 1976 was $319,005,661. The non-interest-bearing balance was an additional $18,051,630.

Mr. President, that totals $337,057,291—over one-third of a billion dollars.

In other words, the American people have over a third of a billion dollars still unrecovered in their Panama Canal investment.

The treaty proponents have demonstrated their intention to deprive the American people of the opportunity to recover that third of a billion. The toll rates will have to be greatly raised to meet the promised payments to Panama. But the administration and the Senate leadership fear correctly that the basis for such toll rates cannot also include provision for repayment of interest on the people's investment, or amortization of that investment over the 22-year life of the new treaty. That probably would drive the rates up to the point of diminishing returns and canal traffic would begin to go elsewhere.

Naturally, the interests of the American people must be put in second place. I and others have tried, all too unsuccessfully, to put those interests back into first place.

Mr. President, if the American people cannot get back their own hundreds of millions of dollars as yet unrecovered from their creation of the Panama Canal, why should they be forced to pay the Republic of Panama hundreds of millions more for taking over this tremendous national asset of the United States.

We would be already turning it over gratis—but we have not gotten our investment back out of the canal.

The national support for the treaties

by American based international banking groups and other multinational institutions includes support for the funding arrangements they contain. By those arrangements Panama benefits greatly. But the American taxpayers are equally—I should say, unequally—mistreated. Some have called the giveaway a "pay-away."

Mr. President, because of these circumstances, the American people look askance at the attitude of the international bankers and industrialists who have been promoting this giveaway.

Their own suspicions have been more than a little heightened by numerous articles which have appeared in the national and international press intimating or charging self-interest on the part of the giant banking institutions. These articles have presented a broad picture of the world's international banks being overextended in their loans to the world's underdeveloped nations. Those nations are going deeper and deeper in the red. They are becoming more and more unlikely to be able to repay those debts which grow larger, not smaller.

Mr. President, these articles have appeared in responsible publications, and they have helped to influence the thinking of our people and they have pinpointed questions for them that still remain unanswered.

An article in the London Daily Telegraph, March 3, 1977, stated flatly:

Apart from political considerations the Carter Administration is also believed to be under pressure from American banking interests to hand the canal over to Panama.

An article appeared in Inquiry for December 5, 1977, entitled:

The Treaty That Wall Street Wrote.

The author, Dr. Murray N. Rothbard, the distinguished economist and philosopher, wrote:

And so we should not be surprised to discover that U.S. government action in Panama today is for the purpose of subsidizing the Wall Street Bankers. . . . Commercial banks refuse to make public the details of specific loans, like those to Panama, and the Panamanian government is not exactly generous with such information, either. . . .

We might well ask, why did the New York banks pour all these loans into Torrijos' Panama? It seems clear that the money was a quid pro quo for Torrijos' decision—on the advice of leading New York banks—to reorganize Panama's banking laws in July 1970. This reorganization provided a favorable haven, free of taxes and onerous regulations, for foreign banks in Panama, much as Panama has long provided a flag of convenience for world shipping.

Dr. Rothbard then makes a statement and asks a question which go to the very heart of our debate on the new treaties, but which to date have not even been touched upon in the debate.

It was a deal that benefited the U.S. banks and the Torrijos regime, which could thereby expand its wealth as well as its political power in Panama. But now the U.S. taxpayer is being subtly asked to pick up the tab.

If a handful of large U.S. banks will be the major beneficiaries of the Panama Canal treaty, have they also had any role in lobbying for or negotiating the treaty itself?

Mr. President, this article raises the central, but yet unanswered question behind my remarks today.

The Honorable GENE SNYDER, U.S. Representative from Kentucky's Fourth District, last year put over 200 questions to the State Department and the Treasury Department on this matter of international banking interests relating to Panama.

Those questions were based on some 22 published articles, including Rothbard's, and also on some 7 additional news stories and memorandums from official sources. I have received from the Library of Congress additional material now known of or utilized by the Representative from Kentucky.

Congressman SNYDER's questions and the answers covering several hundred pages soon will be published in the House Panama Canal Subcommittee hearings, under the title, "Panama Canal Treaty Ramifications, Part 2, International Banking Interests Relating to Panama, and Other Treaty-Related Matters."

The hearings of the Panama Canal Subcommittee of the Merchant Marine and Fisheries Committee on November 30 and December 1, 1977, were devoted to the subject, "The economic and financial ramifications of the proposed Panama Canal Treaties."

Quite a few of Congressman SNYDER's questions were evasively answered in a most unsatisfactory manner.

We know, of course, of the banker/lawyer, Sol Linowitz, who played a major role in finalizing the treaty negotiations. We know, all too well, how the Carter administration appointed him as Ambassador for but a 6-month period, thereby avoiding the necessity of allowing the U.S. Senate to pursue the normal process of approving the appointment.

Dr. Rothbard closed his long article with the following words which might give pause to the majority in this body which is so set on disposing of the Panama Canal:

There are several ironies that emerge from a careful look at the Panama Canal treaty fight—especially the picture of this country's liberals and progressives battling to pour money into the coffers of a handful of Wall Street banks in the name of a treaty they mistakenly believe represents a withdrawal of U.S. power abroad. It doesn't, and those who automatically oppose anything the right wing favors, need to do some hard rethinking of their reflexive support for the new Panama Canal treaties.

Mr. President, another informative title appeared on an article by Ms. Cheryl Payer in Bankers Magazine, Spring 1977:

Will the Government Have To Bail Out the Banks?

That article opened with the following paragraph:

American banks with large loan exposures to third world countries are like the person astride the tiger: The dangers of continuing the ride are matched only by fears of what will happen if an attempt is made to dismount. Although most bankers would clearly prefer lending to better credit risks than the deficit-ridden less-developed nations, they are into a number of countries so deeply that a failure at this point to roll over previously extended loans could precipitate the crisis which everyone is trying to avoid. To extricate themselves from their dilemma, the banks are looking toward Washington.

Mr. President, Panama certainly is a deficit-ridden, less-developed nation. Does the Senate know how deeply U.S. banks are into Panama? I do not mean just what appears on the surface, and in statements for public consumption. I mean the real story behind the scenes.

The article in Bankers Magazine states further:

The bankers who are willing to admit that they are in deep trouble because of their Third World exposure are also nearly unanimous about the solution they expect. They propose that the governments of the creditor countries (primarily the U.S., of course) come to the aid of their Third World dependents and their own capitalists by increasing official aid programs, bilateral and multilateral, by massive amounts. The banks also hope that governments will bear the main burden of debt rescheduling as they did in the previous wave of Third World debt crises in the 1960s, when private debt was mainly in the form of supplier's credits. That is, they want the taxpayers of the creditor countries to pay the bad debts, with the money passing—in theory only—through the hands of the debtor governments on its way to repay bank loans. If this does not happen, they warn, we risk a 1930s style collapse of the banking system when the defaults become numerous.

Mr. President, that is not an article from some irresponsible far-out scandal-mongering publication. That is from Bankers Magazine. That periodical is for bankers, and talks to bankers about bankers and banking developments and problems.

Let us pay close heed to what is stated in this article.

I repeat:

They want the taxpayers of the creditor countries to pay the bad debts, with the money passing—in theory only—through the hands of the debtor governments on its way to repay bank loans.

Mr. President, Ms. Payer is telling us that the over-extended banks have used as their leverage on Washington to get taxpayer aid, a taxpayer bailout of their bad loans, the fear of another 1930's-style banking collapse.

SENATOR CHURCH REPORT: INTERNATIONAL DEBT, THE BANKS, AND U.S. FOREIGN POLICY

Official U.S. government sources have added depth to the picture presented in the articles in the press.

Not the least important of these sources is the Senate's own Committee on Foreign Relations.

The able advocate of the new treaties, the distinguished Senator from Idaho, Mr. CHURCH, as chairman of the Subcommittee on Foreign Economic Policy, has himself issued one of the most exhaustive documents dealing with this entire matter. The Senator from Idaho authored the introduction to a staff report dated last August and illuminatingly titled, "International Debt, the Banks, and U.S. Foreign Policy."

Mr. President, the Senator from North Carolina could very well entitle these remarks: "International Debt, the Banks,

and U.S. Foreign Policy as it Relates to Panama."

I shall quote extensively from the Church report of August 1977 in a few moments.

Mr. President, many of the articles I have mentioned have implied or charged that the international bankers want the treaties to bail out the Republic of Panama. The Torrijos regime owes a third of a billion dollars to American banks, another third of a billion to international banks abroad, and another three-quarters of a billion dollars to governments and quasi-official lending agencies such as the World Bank, International Monetary Fund, and the like.

Senator CHURCH in his introduction to that August 1977 staff report, wrote:

The Subcommittee on Foreign Economic Policy of the Committee on Foreign Relations has initiated an inquiry into the relationship between international indebtedness and the foreign policy interests of the United States.

Mr. President, just what is the role of our big banks in promoting these treaties at such an enormous detriment to this Nation's security and at such an enormous cost to our taxpayers?

That is what the citizens of this country want to know.

That is what many Senators in this Chamber want to know.

This particular Senator will present a number of facts today as background for this issue as yet totally unexplored by this body. And, Mr. President, I believe it is an issue that should be fully explored before the new treaties are approved.

Mr. President, I have heard more than one U.S. Senator state his own suspicion of the banking connection with the treaties, not only privately, but publicly.

Those of us who cannot fathom any legitimate reasons for disposing of the Canal Zone and the Panama Canal are asking, what is the quid pro quo?

The Senator from Idaho is familiar with bankers' doctrine of quid pro quo.

In his report on "International Debt, the Banks and U.S. Foreign Policy," there is specific mention of one such quid pro quo. The report discloses that Zaire leveraged the huge National City Bank in New York into an additional loan of some $250 million under the threat of otherwise never repaying earlier loans.

In the words of the Church report:

The Zaire Government is thus holding the money it owes the banks hostage for a $250 million ransom.

The report continues:

The Zaire case raises some interesting questions about just who has the greatest leverage at this stage of international debt buildup—the creditor banks or the debtor countries?

Mr. President, the Senator from Idaho deserves our compliments for having lifted a little bit the veil that covers the behind-the-scenes impact on government policy of powerful money interests and for focusing attention on the world banking situation exemplified by the Zaire case.

Can the distinguished Senator from Idaho adequately assure the Senate that the situation with Panama and the international banks to which that country is indebted to the tune of two-thirds of a billion dollars is not a parallel to the Zaire case?

The sentence following the one I just quoted from the Church report, addresses the problem still more fully with another question:

Was Citibank's willingness to undertake the task of raising another large loan for Zaire a prudent and sensible response to restore the creditworthiness of a borrower, or a desperate attempt to avoid as long as possible having to write off a substantial loss on an international loan, and perhaps thereby set a precedent for other debtor countries to follow suit?

Let me paraphrase that question.

Is the willingness of America's giant bankers to promote and support our giving away the Panama Canal enterprise a truly disinterested endeavor on behalf of the United States and a generous effort to aid a small Latin country—or is it a desperate attempt to forestall having to write off substantial losses on their international loans to Panama which is experimenting economic stagnation?

Mr. President, the American people want to know the answer to that question.

The Senator from North Carolina wants to know the answer.

Numerous Senators want to know the answer.

Mr. President, I now want to quote Senator CHURCH and his report at length to lend additional substance to the various articles I have mentioned in these remarks to raise this extremely important issue in the debate on the Panama Canal treaties. Here is our very own in-house source.

I repeat, the issue is simply presented in the very title of the Senator CHURCH—subcommittee document—"International Debt, the Banks, and U.S. Foreign Policy." This report alone provides a more than sufficient basis for any Senator to demand a full-scale Senate investigation into the matter of U.S. financial interests and the Panama Canal treaties.

In his introduction, the Senator from Idaho points out that there has been an economic revolution—not a gradual evolution—that in his words "has effected not only the United States but the whole international economic system."

That revolution has developed from the enormous hike in oil prices levied by the oil producing nations. The Senator writes:

In the first full year after the oil price increase, over $90 billion in oil payments was transferred to the 13 OPEC oil producing countries, from the rest of the world. As a consequence, the oil exporters had a current account surplus of over $65 billion, while the industrial countries had a collective deficit of $33 billion and the developing countries a deficit of $21 billion.

Official lending institutions such as the International Monetary Fund, which are the traditional source of balance of payments financing, have been able to meet only a fraction of the demand for international credit since 1973; it is the commercial banks which have filled the gap.

The distinguished Senator points out that the banks had found:

A vast new clientele made up of foreign central banks, state and municipal governments, public utilities, and other official entities.

"However," Senator CHURCH continues in his introduction to the report:

The commercial banks have become increasingly wary of extending their exposure to oil deficit borrowers. Consequently the U.S. Congress is being asked by the administration to appropriate additional funds for the IMF as well as other public lending institutions. Specifically, a proposed $10 billion facility, the so-called Witteveen facility is being negotiated for the provision of such additional resources. * * * However, the amount contemplated—approximately $10 billion—is nowhere near the magnitude necessary to cover the balance of payment deficits of the oil importing countries. Consequently, it is anticipated there will be future requests for additional congressional appropriations.

Mr. President, there you have part of the developing picture. More bad news for the hard-working taxpayers.

The American taxpayers are about to be hit up for a substantial chunk of this new $10 billion bank bailout fund. Their actual share, $1.72 billion, has already been approved by the House of Representatives. Not only that, they will be subjected to future appropriations. All this is to help bail out the banks. Note well, Senator CHURCH himself says this new IMF facility was proposed consequent to the problems of the banks.

Is that not what Senator CHURCH is telling us? He is telling us exactly what Cheryl Payer has told us in Bankers Magazine would happen. He forecasts continuing appropriations by which our citizens would continue to bail out the banks—by bailing out the countries deeply indebted to the banks. Is it any wonder many of us are worried that the Panama Canal giveaway is just another aspect of the overall bailout of the banks?

There it is: bail out the banks which have been underwriting the underdeveloped countries' oil consumption.

Would the OPEC countries be able to raise and hold up their oil prices if the IMF were not so ready to increase credit which validates the increase?

The law of supply and demand are such that when a producer finds no buyers at his prices, he is forced to lower those prices. Here we see the continued extension of credit which enables OPEC to continue their hold up. It is the taxpayer who pays.

Senator CHURCH gives these details in his very important report:

But what we have been dealing with since the oil price increase of 1973 are not temporary deficits but a structural defect in the world economy in which enormous financial surpluses are concentrated in the hands of a very few countries which cannot spend them for goods and services. They are thus deposited in the "strong" industrial countries. The "weak" oil deficit countries then borrow from the major financial institutions in the strong countries. And there is no end in sight to this cycle of a few permanent financial surplus oil producer countries and burgeoning international indebtedness by weaker oil importing countries.

Mr. President, I want to repeat the words of Senator CHURCH:

And there is no end in sight to this cycle of a few permanent financial surplus oil producer countries and burgeoning international indebtedness by weaker oil importing countries.

The distinguished Senator from Idaho is telling us that poor little nations like Panama have only greater indebtedness ahead, not less.

This, of course, Mr. President, means greater precariousness, not less, for the international banks which have overextended themselves in lending to such nations.

Now, I am not saying they are overextended, on my own authority. Senator CHURCH's fine report is one of my main sources for that statement.

The able Senator draws his introduction to the report to a close by expressing the purpose of his subcommittee and the report itself in these words—words by which, indeed, he throws down the gauntlet to the incumbent administration which, ironically, he so earnestly supports in the Panama Canal giveaway:

Nothing proposed by the present administration—or its predecessor—is likely to correct this underlying structural imbalance. That is the basic issue which confronts the Subcommittee, the Committee and the Congress as they consider, the various stopgap finger-in-the-dike measures proposed by both administrations. For that reason, the Subcommittee on Foreign Economics of the Committee on Foreign Relations has initiated an inquiry into the relationship between international indebtedness and the foreign policy interests of the United States.

As part of this inquiry, the Subcommittee is publishing this staff report which analyzes the major issues the Committee, the Congress and this country will confront in the years ahead.

We are confronting an issue right now—in this treaty debate—which I believe is heavily influenced by the international indebtedness that concerns our colleague from Idaho.

Mr. President, Senator CHURCH pinpoints a tremendously important issue. We here in the Senate should know much more about it as it relates to Panama. Before we agree to give that debt-ridden tiny country control over the Panama Canal we should unravel the mystery of the banking and other multinational self-interest in Panama. The canal holds very great importance for the United States in a world one-third of which is under the domination of an increasingly powerful Soviet Union. That nation's Cuban-based naval and air power is evident in the waters and skies of the Caribbean, the Gulf of Mexico, and the Atlantic Ocean.

Mr. President, Senator CHURCH has brought to our attention an extremely important matter which directly relates to the matter of the Panama Canal treaties.

His report does not address our Panama policy. Nevertheless it poses for us Senators these questions: What is the exact situation with regard to Panama's indebtedness to the banks? What is the influence of those banks under the pressure of that indebtedness—and the attractiveness of Panama as an offshore financial center and tax haven—on U.S. policy toward Panama?

Those are the questions we should address before we agree to turn our enormously important and valuable property over to Panama.

There may be no link behind banking interests and the treaties at all.

But bankers, like all of us, come under pressures from time to time. Senator CHURCH with no mention of Panama, tells of these pressures at great length in his report. How the banks have been and will continue to react to those pressures should be of very great importance to us Senators in this debate on the Panama Canal treaties.

Senator CHURCH bestowed his blessing on his subcommittee's staff report in these final words in his introduction:

The paper was prepared by Ms. Karin Lissakers, a professional staff member of the subcommittee. The paper presents in a lucid, thorough and thoughtprovoking manner the relevant facts and issues for public discussion. We are indebted to Ms. Lissakers for her outstanding work in researching and writing this paper.

Mr. President, we should take this time for the public discussion Senator CHURCH calls for.

This should be the precise time for a very public discussion, Mr. President, of the question I ask, based upon his report:

What is the situation regarding international debt, the banks, and U.S. foreign policy as it relates to Panama and the Panama Canal treaties?

According to the Church report, the world's international banks have become heavily overextended in making loans to oil importing developing nations. The bank's financial positions, the report indicates, are growing increasingly more precarious.

The report states:

Doubts are therefore raised about the ability of some countries to ever repay their foreign loans, or, in the long run, even to continue to meet interest payments on those loans.

The report asks, "whether this process of deficits, recycling, borrowing, and debt rescheduling can go on indefinitely," and makes this answer:

The viability of the whole international financial system is premised on the assumption that all the players stay in the game; that the banks continue lending, and the borrowers keep repaying the interest, so that although the principal may be refinanced or "rolled over" for individual borrowers, the money continues to circulate. The biggest threat to the system lies in the possibility that one of the passengers on the merry-go-round will decide to get off—that one of the large debtors finally decides to repudiate its debts, or one of the lenders says "no more" and calls in the chits. Other lenders then following in order to protect their interests and a domino effect sets in. As the crisis created by the collapse of Herstatt and Franklin National several years ago illustrates, even the disappearance of a relatively minor player can set the multinational banking system teetering.

Then the report issued by our colleague pointedly raises several questions. I believe that each of us should ask these questions in relation to the giveaway of the Panama Canal before finally determining how to vote on the treaty.

The question arises of how prudent the banks have been in their lending . . . Has the profitability of this activity blinded them to the underlying risks? Or has the banks willingness to lend to foreign countries for balance of payments purposes been premised on the unstated assumption that in the event of a real debt repayment crisis, the governments of the wealthy industrial countries will have to come to the rescue because they cannot afford to see either the debtor countries or their own large banking institutions go under?

Mr. President, we should be asking ourselves the question Congressman GENE SNYDER asked, "Is the Panama Canal vulnerable to international bankers?"

CHURCH REPORT FOCUSES ON BANKS "BEING BAILED OUT"

Mr. President, in these remarks the Senator from North Carolina has utilized the words, "bail-out," in connection with the international banks.

But this Senator is in distinguished company. The report approved and issued by our able colleague from Idaho, Senator CHURCH, uses the words, "bail-out."

It discusses an agreement made in July 1974 by the Board of Governors of the Bank for International Settlements at their meeting in Basle, Switzerland. It describes the BIS as the "central banker's central bank."

By the terms of that agreement, the Church report says:

Consortium banks which have multinational bank participation will be bailed out on a pro-rata basis by member parent banks, again backed by their own central banks.

Then the Church report makes an extremely important point.

It notes the obligations incumbent on these banks in making their international loans in return for this guarantee of a bail-out.

Unbelievably, Mr. President, there are no obligations required of the banks for this guarantee.

The report of the next chairman of the Senate Committee on Foreign Relations says this:

It is worth nothing that the central banks asked nothing from the private banks in return for their guarantee, at least officially. * * * Commercial banks can continue to compete on the euromarket at margins which do not insure profitability, to take on deposits and external credits without adequate capital reserves and to roll over hundred million dollar loans to underdeveloped countries who have little or no hope of ever being able to pay them back, without interference from any governmental authority. And if such practices lead to disaster the governments are pledged to come to the rescue.

Mr. President, the Church report says the United States, though not a member of the Bank for International Settlements, agreed to subscribe to the Basle accord at the annual IMF meeting in Washington in October 1974.

Therefore, the United States subscribes to the concept of governments guaranteeing a bail-out of the banks without imposing any reciprocal obligation on the banks to exercise prudent judgment in making their overseas loans.

Mr. President, by that agreement, our Government has signified that it will go

to the aid of the bankers who get in too deep regardless of whether their "practices lead to disaster."

The unprecedented drive of the administration to ram these treaties through the ratification process without amendment must be viewed against the background of this agreement.

Mr. President, these are only a few of the more significant points made by by the report of Senator CHURCH.

I regret that this report was not given full attention by the Senate early in its deliberations on the treaties.

Mr. President, here we are voting on treaties by which the Panama Canal will be torn from the American taxpayers, whose property it is, and we who shall cast our votes still have no clear idea as to what is really behind this absurd and suicidal policy.

What we do know, however, is that the banking community and the multinational business community seem to be almost solidly lined up behind the dispossession of the people of their tremendous asset in the Canal Zone.

The question we should ask, Mr. President, before voting to approve the treaties is quite simple and direct: What, is in it for the big bankers, and the big industrialists who have been pushing these treaties?

We know what is in the deal for the people, for the taxpayers.

The American people will be deprived after the year 2000—when babies born this year will have just reached maturity—of any control over a tremendously important national defense asset.

The American people will be deprived of a very important commercial asset.

The American people will be subjected, as consumers, to higher commodity prices because of higher canal toll rates because of treaty pledges to Panama.

The American people will be deprived of the opportunity of having their outstanding investment in the Canal of one-third of a billion dollars returned to them.

The American people will be subjected to future appropriations to make up for deficits in Panama Canal income because of financial payments to Panama far in excess of what canal traffic can bear.

That is what is in the deal for the American people.

But, Mr. President, what is in the Panama Canal giveaway deal for the international bankers and multinational corporations?

The facts are that Panama is a highly profitable offshore financial center. It is an unregulated banking center in which, from which, and through which the huge international banks can legitimately carry on activities which are not allowed in this country by U.S. law.

There, U.S. investors can legitimately avoid current U.S. tax liabilities—the real legitimate purpose of a tax haven.

There, unscrupulous individuals and corporations can evade U.S. taxes, and sequester their legally or illegally acquired funds in secret, numbered bank accounts.

Mr. President, an interesting overall view of tax havens is given in "Grundy's Tax Havens, A World Survey" (Matthew Bender & Co., New York, 1972). Editor Milton Grundy states in his preface:

> The general view which I have gathered is that the tax havens must cause some loss to the fiscal authorities throughout the world; but there must also be some truth in the proposition that a good deal of business is done via tax havens which, if the parties were contemplating a net-after-tax return, would not get done at all.

The Practicing Law Institute in New York City held a seminar on tax havens in January of 1973. The institute published a book entitled "Foreign Tax Haven," based on the edited transcript of that seminar. A Miami attorney, Marshall J. Langer, discussed Panama. Here are some excerpts from his remarks:

> It is important to highlight the fact that Panama has for many years been a successful major tax haven. Even though they have high tax rates for their domestic source income, they have made it clear over a period of time that there is no taxation of foreign source income, and that there is no taxation of dividends paid with respect to foreign source income. They have never taxed any such income nor is there any likelihood that they ever will.
>
> * * * * *
>
> They have a corporation law which is extremely liberal compared to that of many countries.
>
> One of the interesting factors about Panama . . . is the currency situation. There is no exchange control. The so-called Panamanian balboa does not really exist. The Panamanian balboa, when it comes to anything other than coins, is the U.S. dollar bill.
>
> * * * * *
>
> Panama has become an increasingly important international banking center. Literally millions and perhaps billions have been flowing through there.
>
> * * * * *
>
> Compared to some of the other tax havens, Panama has a huge number of companies. Two of the law firms represented at this seminar each serve as resident agent for more companies than all of the companies existing in the Cayman Islands. Each serves as resident agent for about 5,000 companies at a standard fee of $100 a year plus whatever else comes up. It's a good business. There are believed to be some 35,000 companies presently registered in Panama, significantly more than most of the places that we have discussed.
>
> Panama is not a party to any income tax treaty. There is no exchange of information between the Panamanian government and other government.
>
> * * * * *
>
> Panama is a less developed country for both U.S. income tax and U.S. Interest Equalization Tax purposes. It is a schedule A country for OFDI purposes. It is a major haven for U.S. ship owners. Literally hundreds of American owned ships are registered under the Panamanian flag.
>
> Captive insurance companies can also be established in Panama.

In Appendix O of the book we find the following remarks:

> In recent years Panama has adopted banking legislation patterned after Swiss law which permits numbered bank accounts and offers complete assurance of bank secrecy. If Panama has a problem it is probably due to the political unrest which has occurred there in recent years.

Mr. President, that last is of the utmost importance. The new treaties will, in the opinion of everyone I know, unquestionably assure the continuation in power of the Torrijos regime.

That, of course, would offer stability to the banking community, despite what it would do for, or I should say, do to, the Panamanian people.

Early in the seminar the book records we find the following statement by Lawrence A. Freeman, also from Miami:

> The element of stability is quite important. If someone is going to set up a company or a trust for a period of 10 or 15 years, or if a major company, such as American Express, is going to set up a holding company or a bank or a finance company to handle its operations in a number of countries, they want to know the company can safety remain in the particular jurisdiction for a long period of time. They are going to be uphappy if they have to move the bank or finance company or holding company two or three years hence. They are interested in the long-term picture from the standpoint both of political and economic stability.

Mr. President, from this we can see the natural, built-in self-interest concern on the part of the international bankers and multinational corporations that have established themselves in Panama, that political and economic stability in Panama be assured.

The dictatorial Torrijos grip on the country has, indeed, brought a measure of stability not previously known in Panama which had some 59 changes of Presidents in its first 70 years of existence.

However, we all know the enormous price exacted of his subjects for the stability Stalin brought to Soviet Russia, and that which Mao extracted for the stability he brought to China. Torrijos has been exacting more and more a price of similar nature.

It is only natural for the international capitalists to prefer the known to the unknown—the existing regime which, despite its unpleasant aspects, favors their operations, as opposed to an unknown successor regime whose policies, of course, cannot be predicted at all.

Economically, Panama today is going deeper into debt, with no promise for economic rejuvenation other than U.S. aid. That promise which falsely is held out as a cornucopia by Torrijos—acquisition of the canal and the zone—would prove to be unable to produce the prosperity he dangles before them.

On February 22, 1977, I introduced into the CONGRESSIONAL RECORD a memorandum sent by the American Embassy to the State Department dated October 26, 1976. It was in regard to the economic situation in Panama. A pertinent paragraph from that memorandum is the following:

> (B) Increased external financial flows per se, regardless of concessionality, permit Panama to defer grappling with the core problem of low productivity until a later date when the problem will probably have worsened, unless such financing bears specifically on some aspect of costs. Indeed, much of the capital inflow of the past three years has aggravated Panama's economic malaise by exacerbating its debt service burden without enhancing overall productivity. Moreover, total inflows greatly exceeded the current ac-

count deficit of Panama's balance of payments, resulting in large negative "errors and omissions" (around $100 million annually) most of which probably represented outflows of domestically-owned capital.

Mr. President, the continuing loans to Panama, according to the American Embassy in Panama, have only served to worsen the economic situation in that country.

What the Embassy did not point out, of course, is how much of those foreign funds that have poured into Panama have been siphoned off by the Torrijos regime.

Ironically, the banks not only have not helped the economic situation in Panama, but they have worsened their own financial positions by lending to that country which is increasingly unable to repay their loans.

The bankers and international capitalists have pushed the line openly and consistently to the American people that Panama needs the Canal Zone and the waterway's income to prop up its economy.

That much we know.

What we do not know is to what extent that propping up is necessary to their own continued operations in Panama.

Anyone with common sense knows that gaining control of the zone and canal will not help a country for long whose leadership has skimmed off the cream for its own bulging pockets.

That Torrijos is involved in many businesses was brought out in the secret session on drug trafficking in Panama. One of those businesses is that very drug traffic, as we all know, participated in by members of the Torrijos family itself.

Mr. President, the January 1974 issue of the quarterly publication of the American Bar Association's Section of International Law "The International Lawyer," carried an article entitled, "Panama and the Multinational Corporation: Tax Haven and Other Considerations." It was written by Robert Y. Stebbings, J.D., M.B.A

He sets forth the manifold legitimate features of the tax haven provided by Panama. Stebbings also reports on certain practices, however, engaged in by certain persons or companies that reflect on individuals and corporations legitimately utilizing Panama as a haven for avoiding current tax liability. He writes of the laundering of dinero negro, dirty money:

Prominent practitioners from two Latin American countries have privately expressed the view that the above tax-haven characteristics of Panama should hold little interest for a truly legitimate Latin American multinational committed to conforming to the legislation, tax and otherwise, of the jurisdictions in which it operates. They first point out that operating from Panama may create a bad image. Panama has been used by Latin Americans as a place to which, like Switzerland, money fleeing from tax or other national authorities may find its way, since there is no question of taxation upon entry or exit, and corporate and banking laws permit complete secrecy in all operations. The situation is reportedly such that certain of Panama's neighbors are wary in their approval of business dealings with the country. Mexico, for instance, will not allow royalty payments to a Panama-based company unless fully documented.

A Common procedure involves the flow to Panama of *dinero negro* which is then loaned to a real or dummy corporation in another country which can then relend the funds to the original party in the first country or elsewhere without arousing the suspicions that a loan made directly from Panama would create. The person or firm which makes this complete circle thus illegally sends money from his country to Pamana without paying taxes, earns tax-free interest on it while it is in a Panama bank and eventually may pay himself tax-free interest when he borrows it back from a dummy company in another country. (Actually there may be withholding on the interest payments.) Additionally, he may deduct his interest payments as business expenses in the country in which he is operating.

Freedom to conduct such illegal or questionable operations may be an important element in Panama's success as an international business and financial center. However, there may be other reasons for setting up headquarters in Panama: the country's tax policies permit a legitimate company's presence in the country for non-tax reasons while not penalizing it for its decision to be there.

* * * * *

Of fundamental importance is the fact that interest on the Panama bank accounts of foreigners is not subject to taxation by Panama. Equally, the interest income on bonds held by foreigners is not subject to Panama taxes which makes the country a feasible jursdiction for the establishment of so-called finance subsidiaries by means of which loan funds may be raised on international or regional capital markets.

This sort of operation (an international bond flotation) would not require the establishment in Panama of headquarters for a regional multinational, but merely the creation of such a finance subsidiary.

POTENTIAL RESOURCES LOCKED UP AND DISGRACEFULLY UNDEREXPLOITED BY CANAL ZONE AUTHORITIES

Mr. President, the next item I wish to call to the attention of the Senate deserves close attention, indeed. It just may give us some of the answers we all should be seeking.

The Banker for May 1973, published in London, had a revealing article called "Panama and the Canal," by a Robin Adams which reported on Panama's banking boom. However, more to our interest today, Adams made some prophetic observation of a pessimistic note:

Perhaps the most significant feature of the present structure of Panamanian banking is that, unlike some of the Caribbean islands, its progress is only partly of an offshore nature. There is a sharp imbalance between foreign and local assets and liabilities. At the present time, of the total assets of the banks, approximately two-thirds are Panamanian and approximately one-third are foreign. On the other hand, of the liabilities the proportions are reversed—one-third Panamanian and two-thirds foreign. Since by the end of 1972, assets and liabilities were well in excess of $1,000 millions, the result of this structure is that these international banking operations are financing the Panama economy to the tune of at least $300 millions, *an enormous sum in relation to the gross domestic product*, which in 1972 just passed $1,000 millions." [emphasis added]

*The rationale for this policy is not purely philanthropic.* The foreign banks are taking deposits from residents of Latin America and lending this money on in New York. In doing business in New York they have an edge over New York banks by the fact that they lend a significant proportion of their funds at higher interest rates on the local Panamanian market which subsidize their New York business. This has certainly sweetened profits, *but it depends of course on the continued availability of sound lending opportunities in Panama itself.* [Emphasis added]

Mr. President, Robin Adams went on back in 1973 to tell of funds being available for almost any profitable venture. Adams told of the "massive property boom with tower blocks of offices and flats going up all over Panama City." Adams asked then "whether an economy as small as that of Panama can continue to sustain a boom of current proportions."

Next Adams described the expansion of "secondary banking activities":

In this, the licensed banks lend to creditworthy business houses, who in turn lend on to less secure propositions, at higher interest rates, and they in turn lend on to yet more doubtful ventures, quite often the whole process only coming to rest with a large unsecured consumer loan to a middle to low income worker. With urban unemployment well over 10 percent, despite the growth of the past four years, this practice could be dangerous if there is any downturn in business conditions.

Mr. President, now in 1978 we all know there was a great downturn in Panama's economy. The housing boom burst and the economy today is stagnating.

What else did Robin Adams say in that 1973 article?

On the other hand, if the government is forced to curtail its development effort due to lack of funds, there could be a rather nasty recession with one or two expensive property losses, and bad debts. *This would undoubtedly be a setback to the banking industry.* [Emphasis added.]

But then, Mr. President, listen to this:

The main hope of avoiding such an eventuality is for Panama to get its hands on the potential resources that are now locked up and disgracefully underexploited by the Canal Zone authorities. Alternatively, the United States may choose to buy off Panamanian pressure with further generous aid. The future prosperity of the young, and extremely vigorous, international financial community in Panama City therefore depends like most other elements in the economy on the outcome of the struggle to regain the canal.

Mr. President, I do not know who Robin Adams is.

Of course, Adams in May 1973 knew nothing of the forthcoming Kissinger-Tack agreement of February 1974 by which the unauthorized agreement was made to give Panama the Canal Zone.

The Senate should be indebted to Robin Adams, however, for giving us a background that could very well help to assemble the missing pieces of the puzzle of intrique surrounding the canal giveaway so vehemently opposed by the vast majority of the American people.

Mr. President, let us dwell for a moment of two on the following words of Robin Adams which may, indeed, have great significance, realizing, of course, that they appeared in a highly respected banking journal in London, the Banker.

This (recession) would undoubtedly be a setback to the banking industry. The main hope of avoiding such an eventuality is for Panama to get its hands on the potential resources that are now locked up and disgracefully under-exploited by the Canal Zone authorities.

Now, Mr. President, either Robin Adams was totally ignorant of the laws of the United States under which the canal is operated at a nonprofit basis and the zone is maintained much as a military reservation to sustain the operations and defense of the canal, or did not care. In any event, the language used, "disgracefully under-exploited" has a very pointed meaning, coming as it does after the expression of a fear of "a setback for the banking industry."

Mr. President, could it be that the banking industry has had its eyes on the future exploitation of the Canal Zone?

Is the real reason for the inexplicable giveaway of our taxpayers' property in the Canal Zone the opportunities for profit that the big bankers see there?

I do not know the answer, Mr. President.

The American people do not know the answer.

One thing is for certain.

We Senators should know—and know for certain—before voting to approve this treaty.

EARLY STATE DEPARTMENT OPPOSITION TO TORRIJOS EVAPORATES

Mr. President, articles in the press told of strong opposition in the White House and State Department to the Torrijos regime for some time after he came to power. But later on, the policy was completely reversed, and the reason, some writers have claimed, was because of the bankers' growing interest in him.

I believe this is demonstrated sufficiently by the fact that, according to the New York Times of September 2, 1969, State Department officials said the United States cannot engage in long-term commitments on military and politically sensitive issues with the military type provisional government in power in Panama, despite pledges by Torrijos and the Junta that free elections would be held in 1970. Those officials said the United States is waiting to see if those promises would be honored.

Well, Mr. President, how well those promises by Torrijos have been honored is a matter of public record. To this day they remain promises. It is almost a full decade since the State Department had that position.

But the State Department not only did not wait for the pledges to be honored, it has almost succeeded in giving that very same regime everything they added in the Canal Zone.

What on earth changed them, Mr. President?

The Dictator Torrijos has not changed.

What did change U.S. foreign policy toward Panama, Mr. President?

Could it have been something the able Senator from Idaho has labeled "International Debt, the Banks, and U.S. Foreign Policy?"

Frankly, Mr. President, this Senator from North Carolina thinks Senator CHURCH may well have provided us with the answer to all the questions regarding the giveaway of the Panama Canal Zone and the Panama Canal.

Its title alone may give us all the answers we need.

Certainly the Senate should consider all the implications of Senator CHURCH's report as those implications apply to Panama before it votes for final approval of this treaty.

The subtitle of an article in Financial World for March 27, 1974, "Beware the 'Gnomes' of Panama", warned, "The new Switzerland, attracting banks and individuals alike, may not be nearly as safe."

Mr. President, pressures would certainly build upon the international bankers doing hundreds of millions of dollars worth of business by way of Panama if when they found Torrijos capable of restricting their operations. Making it less safe, that is!

What they might feel compelled to do to try to safeguard their positions in that obviously profitable offshore financial center is anyone's guess.

I do not know what individual bankers might do under such pressures.

There should be no doubt, however, about the capabilities of Omar Torrijos to put pressure on the bankers.

In this Senate chamber we have day after day witnessed the results of his pressure on the entire U.S. Government.

The administration would not allow a single amendment to pass, except its own meaningless ones, so as not to offend Torrijos and his corrupt regime.

Business week of October 3, 1977, carried an article entitled "Panama, High Economic Hopes if Ratification Comes."

That piece quotes Panama's Planning and Economic Policy Minister, Nicolas Ardito Barletta, as saying ratification of the treaties would open up what he called, "the biggest opportunity for growth and development in the history of Panama."

Business Week went on:

Adds a U.S. banker in Panama City: "But I know of several companies that may pack up and leave if the (U.S.) Senate vote against it."

The article pointed out the sluggishness of the Panamanian economy and quoted a local accountant as saying "Nobody has wanted to commit himself until the issue was resolved. Business Week wrote,

Doubts about the stability of the regime of General Omar Torrijos Herrera lie at the heart of that uncertainty.

Again, the magazine quoted a banker:

But if the treaty is not ratified, warns a U.S. banker in Panama, "This will not be a safe place to do business any more."

These statements go directly to the concern of bankers and industrialists for security in their operations.

They feel it important to maintain the status quo, and giving the canal to Torrijos certainly would assure the continuation of his regime.

There is another significant quote from the article:

Panama is counting on this improved financial situation to boost its international borrowing potential. Expanded lending means greater profit for the banks.

The Panama Star & Herald for December 5, 1977, carried a story datelined Mount Pleasant, Mich., which contained these highly pertinent remarks by Panama's Ambassador to the United Nations, Jorge Illueca, who spoke at Central Michigan University:

"The Government of General Omar Torrijos faces the danger of being overthrown if the U.S. Senate rejects the New Panama Canal Treaties", said the Panamanian Ambassador. The treaties are "an insurance policy for Torrijos' government."

Mr. President, it seems that ratification of the treaties fit into the category of an insurance policy for the big banking institutions as well.

Mr. President, another matter relating to international debt, the banks and U.S. foreign policy, has not been discussed in these debates.

That is the matter of the nonconfirmation by the Senate of the Ambassador who as conegotiator, drove the treaties through the final 6-month stage of negotiation, Mr. Sol Linowitz, of Marine Midland Bank.

The administration that now wants the Senate to rubberstamp the treaties, evidently was fearful of sending Mr. Linowitz before us to examine his credentials. Why?

Was the administration afraid the banking connections of the designee, as well as certain other connections, would mitigate against his appointment, and, perhaps, we would disapprove it?

It is a fact that Mr. Linowitz did not resign as a director of Marine Midland when he went on the treaty negotiating team.

He resigned only after a lawsuit based on his conflict of interest was instituted by our colleague, the Senator from Idaho, Mr. MCCLURE.

Mr. Linowitz's connection with a bank to which Panama owed at least $8 million, certainly would have been a highly controversial matter in his confirmation hearings.

Was the administration afraid that penetrating cross-examination of Mr. Linowitz might reveal reasons behind the Panama Canal giveaway that would make more sense than the reasons aired for public and congressional consumption?

On May 24, and October 21, 1977, the American Security Council's Radio Free Americas mentioned certain connections of Mr. Linowitz that would have merited close attention by the Senate in the Ambassador's confirmation process—had there been one.

Radio Free Americas named Linowitz as lawyer for Jose Gelbard, former Minister of Economic Affairs in Argentina under Peron, who was then living in the United States.

Gelbard has since died.

Gelbard fled Argentina because of judicial procedures by the post-Peron government against him, and the United States did not honor Argentina's demand for his extradition.

According to Radio Free Americas, Gelbard was a native of Lithuania where his close friend was Abraham Simcowicz, known as Fabio Grobar in Cuba where he has been Moscow's man since 1929.

Gelbard as Peron's economic minister signed a credit agreement with Fidel Castro's adviser, Grobar, by which Argentina extended Cuba up to $800 million to purchase Argentine agricultural and industrial goods, including Argentine-made General Motors cars whose delivery the United States had to authorize.

Radio Free Americas has informed me that Sol Linowitz got the special permit by which this was accomplished.

Since Cuba is in arrears on the payment of this sizable credit, the interest in the Argentine Government in Gelbard was readily apparent.

Linowitz was trying to get him U.S. citizenship when he died of a heart attack.

But what Radio Free Americas calls the "Argentine Watergate" also involves a key banking figure, David Graiver, who is supposed to have died in an airplane crash near Acapulco, Mexico in 1976.

Graiver had connections with the guerrillas of Argentina, the Montoneros, and it is alleged he secretly financed them.

Mr. President, in today's Washington Post, there is an article on the release of Argentine newspaper publisher, Jacobo Timmerman, by the Argentine Government. Of interest to us is that the article mentions David Graiver as owner of 51 percent of the stock in the paper Timmerman formerly published. The following paragraphs are taken from today's Post article:

> Most of the rest of La Opinion's stock—51 percent—was owned by David Graiver, whom Argentine authorities believe served secretly as investment banker for leftist groups that kidnapped wealthy executives for ransom before the military seized control of Argentina in March, 1976.
>
> It was Timmerman's association with Graiver—who was indicted last week in New York City for violating banking laws there—that was ostensibly the reason for the publisher's arrest.

Mr. President, David Graiver's bank in New York was the American Bank & Trust Co. When it failed in 1976, at least $18 million and perhaps as much as $40 million was missing, leading some to believe that David Graiver chose to vanish, and was not really dead.

Evidently New York authorities believe that in proceeding to indict him.

American Bank & Trust Co.'s failure was the fourth largest in U.S. history. The New York Times examined the bank and its failure on September 25, 1976 in an article entitled, "Financial Intrigue, Mystery Shroud American Bank and Trust Collapse."

The Graiver-Belbard-Grobar-Linowitz implications remain a mystery to the Senate.

Mr. President, I can but touch on these matters which many Americans feel should have been thoroughly investigated in Senate hearings on Sol Linowitz before he was permitted to undertake the treaty negotiations.

President Carter avoided such an examination, of course, by limiting the Linowitz appointment to 6 months.

I believe that was a direct slap at the Senate and its right to advise and consent on the appointment of ambassadors.

Mr. President, in his introduction to his report, "International Debt, the Banks and U.S. Foreign Policy," Senator CHURCH mentioned the proposed $10 billion Witteveen facility and the appropriations sought in the Congress for the American taxpayers' share of that amount.

I would like to call the attention of the Senate to an article in the Washington Star for February 12, 1978.

It was called "Bailing out Banks that Straitjacket the Third World," and was authored by Howard M. Wachtel and Michael Moffitt.

That article closed with this paragraph:

> In opposing the Witteveen Facility, the Wall Street Journal editorialized that "American taxpayers, in other words, will be asked to cough up a few billion for the IMF to loan to the poor countries so that they can pay off the banks . . . Imagine the flap if the problem were solved honestly and directly," they ask, by calling the Witteveen Facility "The Bankers Relief Act of 1977".

Mr. President, I wonder if, indeed, the Panama Canal giveaway treaties, might be one of the principal titles in the Bankers Relief Act?

Mr. President, a signing ceremony was reported in La Estrella De Panama for March 1 of this year, whereby a $36 million loan to a Panamanian company to build an oil terminal facility was finalized. On that occasion, a Chase Manhattan Bank official made a comment very pertinent to my remarks today.

Chase Manhattan put up $15 million of that loan, Panama's Government agency, COFINA, put up $1 million, and five other banks lent the remaining $20 million. The newspaper reported:

> In his address, the Director of the Chase Manhattan Bank, Lic. Luis H. Moreno, emphasized "the strength that the businessman derives from the backing of a Government which has a conscience with regard to the best use of its resources *and which also has a very strong support from the international banking world.*" (Emphasis mine)

I consider that to be a very significant statement. That statement expresses a truth which I believe every Senator would have to admit, bears directly upon the theme of my address to the Senate and the American people today.

Why should the international banking world give "very strong support" to the regime of Omar Torrijos—a regime whose unsavory links to the underworld is clear to anyone who refuses to deceive himself about the drug trafficking of members of the Torrijos family itself.

Why should American and other capitalists support so strongly a regime that works so closely with Fidel Castro—who like his masters in Moscow, is dedicated to the demise of capitalism?

Why, Mr. President, unless there is something in it for them?

Why else would our internationally oriented big businessmen give such strong support to a regime that has the complete support of the Communist Party of Panama?

Mr. President, before voting for the new treaty, every U.S. Senator should give extremely careful attention to an official statement issued recently by the Communists of Panama. The Communist Party of Panama, as we all know, is called the People's Party of Panama. On September 7, 1977, the very day of the signing of the new treaties by President Carter and Omar Torrijos, the Political Bureau of the People's Party of Panama issued an official document entitled, "Message of the People's Party of Panama in Connection with the Carter/Torrijos Treaty."

Mr. President, on March 6 I placed this entire message of the Panamanian Communist Party in the CONGRESSIONAL RECORD at page 5608. I want to bring the following words to the special attention of the U.S. Senate. I consider them to be of enormous significance:

> The People's Party urges strengthening the process of national liberation, improving the life of our people, consolidating the government headed by General Torrijos and deepening the anti-imperialist alliance.

There is more in the Communist Party's message that signifies its full support of Gen. Omar Torrijos. But what I have read is more than sufficient.

The Communists in every nation where they have not yet come to power, simply do not talk of consolidating the government. The Communists, by definition, are dedicated to the supplanting or overthrow of any government they themselves have not yet taken control of.

The Communists in any country in which they have not yet come to power speak of liberation from the control of the regime in power. Here we find the Communists of Panama speaking eloquently of "strengthening the process of national liberation" under the government headed by General Torrijos.

Where the Communists have not yet come to power in a nonsocialist country, they link the regime in power with capitalists everywhere under the synonym, imperialists.

Yet the Communists of Panama speak eloquently of "deepening the antiimperialist alliance" under the government headed by Torrijos.

Mr. President, in my opinion the sentence I have just read may well be the single most important sentence spoken on the floor of the Senate in this entire debate.

It signifies, explicitly, total support of the Torrijos regime by the Communists of Panama.

Implicitly, it signifies the Panamanian Communists either already control, or wield very great influence over, the Torrijos regime. In either case, the Senate has no business whatsoever turning the Panama Canal over to such a regime.

In my opinion, this body should vote 100 to 0 against the new treaties, if only because of this single sentence and its ominous significance to the security of the American people.

Mr. President, the treaty message of the Panamanian Communists states without equivocation:

> The People's Party urges . . . consolidating the government headed by General Torrijos.

Mr. President, passage of the treaties will most certainly consolidate the regime of General Torrijos. Freedom House has determined human rights and civil rights in Panama to be on a par with the Soviet Union and Communist Cuba. We will show no good will toward the people of Panama under Torrijos by approving the new treaties.

Mr. BAKER. Mr. President, in a short time the Senate will vote on the question of whether to consent to the ratification of the Panama Canal Treaty. I am in favor of ratification, and I will vote in support of ratification, and I doubt that there is anyone in this Chamber who does not know how he will vote when the bell rings at 6 o'clock. So I will not spend this time exhorting my colleagues to vote in support of ratification. Rather, as we are on the brink of an historic undertaking, I would like to confine my comments to certain personal observations.

First, whatever the outcome of the vote, I believe the Members of this body should be commended for their mature and reasoned deliberations on the issue of the Panama Canal traties and would like particularly to commend those on both sides of this issue who have participated day to day, who have argued forcefully and well on all aspects of the issues raised by these treaties and by doing so have elevated the stature of the U.S. Senate in the discharge of its constitutional obligations to advise and consent.

For my own part, I have attempted to insure that every Member of the minority, whether for or against the treaties, has had a full and fair opportunity to participate in the debate; to offer amendments and reservations; to bring to the debate perspectives of many diverse constituencies; and to have the benefit of every piece of available information that the administration could provide that might bear on the Senate's consideration of these treaties.

I would like to particularly acknowledge the role of the distinguished majority leader in this historic debate. Throughout our consideration of these treaties, his task has been a most difficult one and he has discharged his obligations fully, faithfully, and well. The majority leader has exhibited an exquisite sense of fairness to all and we have all benefited from his leadership. I thank him and commend him for his labors on behalf of this body and our country. This debate will stand as a tribute to his leadership.

Second, I believe that restraint, Mr. President, has been the hallmark of these debates. For this I am thankful. This has not been an easy or pleasant issue for many of us in the Senate, but for all of its contention, for all of the emotions that have marked this issue, the character of the debate has been exemplary in both form and substance. No one in this Chamber needs to apologize for the conduct of the Senate or any single Senator throughout the course of these extremely difficult and important deliberations.

Third, I would observe that the treaties issue is one upon which reasonable and well-motivated men might differ for good and sound reasons. There are so many aspects of these treaties that require a subjective judgment. Neither consent nor lack of consent to ratification affords any Senator a clear and unobstructed view of future developments. In a very real sense, all of us must speculate on which of the courses of action now before us offers the United States the best opportunity for constant and unimpeded use of the Panama Canal and the better merit from a national security standpoint. Those of us who support the treaties believe that ratification offers the better chance, the better odds, but we all must humbly realize, opponents and proponents alike, that no course of action guarantees the desired results.

If it were theoretically possible to foretell with certainty, to guarantee if you will, the course of future events, Mr. President, we might have the liberty of debating a perfect treaty. But this is an impossibility and I will be the first to acknowledge that these treaties are not perfect treaties. However, it has been said that "perfection is the enemy of the merely good." I believe, Mr. President, that these treaties are good. And, Mr. President, I believe these treaties are far better than attempting to maintain the status quo.

The treaties represent a pragmatic blending of the legitimate aspirations, emotions, and best interests of two proud and determined nations, and are in the best interest of the United States, particularly when balanced against available alternatives. I am prayerful that the Panamanians will see these treaties, as modified by the Senate, in their best interest as well—for I believe that it would be unfortunate, indeed, to squander this momentous opportunity after having come this far and it may be a long time before we reach this point again.

Fourth, I recognize that acceptance of these treaties will be the subject of much debate in Panama, as it has been in the United States. This is as it should be. In fact, the very nature of our own national debate on this issue says a great deal about the character of our country. It reflects our people's abiding will and determination to remain unchallengeably strong and willing to protect our national interest. The American people have signaled their contempt for decisions perceived as not reflecting that will and determination.

I believe these treaties are consistent with the aspirations of the American people. It is a measure of our strength, not weakness, that the United States can deal fairly, at arms length, and in the spirit of true partnership with a smaller, less powerful nation in a manner consistent with our own peace and security. This is a testimony to our strength and, I would suspect, a significant embarrassment to our foes.

Finally, and importantly, I would observe that while these treaties provide a viable framework for a constructive and cooperative future operation of the Panama Canal, they in no way diminish the pride that every American should feel in the achievement the Panama Canal represents. The Panama Canal, new treaty or not, stands today and for all time as an incredible physical accomplishment and a lasting monument to the thousands who have built, maintained, managed, and operated the canal for the benefit of mankind since the turn of the century. This American achievement will never be diminished in the eyes of the world.

Mr. President, I would like to read two quotes from David McCullough's "Path Between the Seas" which provide, I think, a fitting end to these remarks. The first is a paragraph that follows a description of the beginning of the difficulties that would arise between the United States and Panama over the years:

> To the average American at work on the canal, the aggrieved pride or "smoldering wrath" of the Panamanian was of only marginal concern. There would be time enough later to resolve such difficulties. For now the work was going too well, morale was too high, the end was much too plainly in view to think much about anything else.

The second, in the final section of the book, speaks for itself:

> The creation of a water passage across Panama was one of the supreme human achievements of all time, the culmination of a heroic dream of four hundred years and of more than twenty years of phenomenal effort and sacrifice. The fifty miles between the oceans were among the hardest ever won by human effort and ingenuity, and no statistics on tonnage or tolls can begin to convey the grandeur of what was accomplished. Primarily the Canal is an expression of that old and noble desire to bridge the divide, to bring people together. It is a work of civilization.

To my colleagues in the Senate, I will say that I believe that the time has come to resolve past difficulties, to bridge the divide between the United States and the Republic of Panama, and to further ennoble this great work of civilization.

Mr. MATHIAS. Mr. President, throughout this long debate on the Panama Canal treaties, two lines from Macbeth have haunted me:

> If it were done, when 'tis done, then 'twere well,
> It were done quickly.

Those lines have haunted me because no matter what the outcome here today we will not be done, when we are done.

The defect of our debate is that it has been almost entirely retrospective. We should have been considering the requirements of the merchant marine of the 21st century, but instead we have occupied ourselves rereading the fine print of the 1903 treaty, pouring over musty court decisions, and wallowing in the subjective reaction of the American and Panamanian people to one another.

In the 2½ months of our deliberations, we have been so preoccupied with the past, so mired in ancient history, that we have barely glanced at the future.

We should more profitably have been considering the requirements of merchant shipping in the years ahead. For, as marine commerce is developing, it is clear that 19th century engineering will not be adequate to the demands of 21st century shipping.

Obviously, we must either build a new canal, or rebuild the existing canal. We cannot simply stand pat, with or without new treaties.

And so, while the vote we take today may write "finis" to a chapter of our past, it will not carry us a single step into the future.

For that we must concentrate our thoughts and our creative energies on seeking the new solutions that the supertankers of our merchant fleet of the future will demand.

We are, however, left with the necessity of casting a vote on the restricted and foreshortened issue that is before us, and I shall address that question very briefly.

Today we vote on the Panama Canal Treaty which covers the period between now and the year 2000, when joint United States/Panamanian operation of the canal will cease. I intend to vote in favor of this treaty.

The Panama Canal today operates with the cooperation of the Government of Panama and the Panamanian people. Over 70 percent of the work force in the Canal Zone is Panamanian. In the future, the need for Panama's cooperation may well increase. For example, to widen the present canal or to build a sea-level canal within the Republic of Panama we would certainly require Panamanian cooperation. If the supertankers and the super carriers designed for the 21st century are to transit from ocean to ocean across the isthmus, then an alternative to the present canal will be necessary.

This sort of cooperation is needed at a time when the canal has become a nationalist issue among Panamanians. Americans, above all, should understand the aspirations of the Panamanian people. We cannot hope to have Panamanian cooperation in the future in the absence of a new relationship between Panama and the United States. Four successive U.S. Presidents have recognized this fact.

At the time of the vote on the Neutrality Treaty, I indicated that I had certain reservations about the Panama Canal Treaty. These have been dealt with through amendments or reservations to the treaty which I have supported. Yesterday, we decided that we would not be bound by article XII to build a sea-level canal only in Panama. We have also cleared up some of the financial ambiguities which were troubling me. For example, we clarified U.S. obligations regarding the $10 million surplus payments.

I have been very concerned about the possible negative effects on the Port of Baltimore resulting from higher canal tolls. I have examined this issue very carefully. I believe that the impact will not be serious. Ultimately, if these treaties lead to a continuation of uninterrupted traffic through the canal, we will all benefit.

The Senate has devoted a great deal of attention to the issue of the Panama Canal Treaties. It is an important one, but only one of many pressing concerns facing this country. I hope that we can now turn our attention to some of the other problems; many of which relate directly to our national security.

But, before we move on to the important work ahead, I would like to note that, although many deserve credit for the role they have taken in these deliberations, none has made a greater contribution to the orderly process of debate or to bringing that debate to a timely conclusion than has my distinguished Maryland colleague, Senator SARBANES.

Mr. McCLURE. Mr. President, the proposed Panama Canal treaties have been debated at great length and in great detail not only in the Senate Chamber, but in almost every forum in the country.

Public interest in these treaties is higher than for any issue to come before us in recent times.

I am sure that each Member of the Senate has received a great volume of mail on this subject. I certainly have, and as I read through my mail, I was struck by intelligent and thoughtful study so many people have made. Many of those who have written me have carefully analyzed the treaties and read everything they could obtain about Panama. Frequently, they have asked probing questions and brought to my attention crucial points about the treaty.

For the first time, the debates taking place in the Senate have been brought into people's living rooms through live radio coverage. Similarly, the letters to the editor section of Idaho newspapers reveals the careful attention given to the subject by large numbers of people. The level of public knowledge is extremely high. This presents us with a unique opportunity to bring all Americans directly into the decision-making process. The reservation I am proposing provides for a national referendum before the Panama Canal treaties can be ratified. A referendum on this issue is especially appropriate since the treaty transfers to a foreign government a valuable national asset which belongs not just to Government officials in Washington, but to every American. I think they should have a voice—direct voice—in deciding whether these treaties enhance or diminish America's just national interest.

In no way can this proposal be seen as an attempt to avoid the Senate's advise and consent responsibility. Far from being a devise by which the Senate can duck a hot issue, a national referendum will undoubtedly heighten public awareness of every action we have taken on these treaties.

Referenda are widely used at the State and local level. Recently, several Senators introduced a constitutional amendment which could establish the procedure for national referendum. The Panama Canal Treaty provides us with an excellent set of circumstances for our first referendum. It is an important issue, there is a high level of public interest, and most importantly, it is an issue which the people should have a direct role in deciding.

It is unfortunate that the people in a country noted for its repression of political discussion or dissent are permitted a vote, while in this country, the most free in the world, a vote of the people is denied.

It is, also, unfortunate that the time constraints caused by unforeseen rollcalls has made it impossible for me to offer my amendment. I ask that my proposed amendment be printed in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

Before the period at the end of the resolution of ratification, insert a comma and the following: "And subject to the reservation that before the date of exchange of the instruments of ratification of the Treaty, the Congress shall have adopted appropriate legislation to hold a national referendum on the question 'Shall the United States transfer the Canal Zone to the Republic of Panama?', and an affirmative vote shall have occurred in such a referendum."

Mr. HUDDLESTON. Mr. President, it should not be surprising that the question of ratification of the new Panama Canal treaties has generated considerable controversy among the American people. Nearly everything about this important waterway between the oceans has evoked controversy since its inception.

From the suggestions of a Spanish priest in a book published in 1552 through the seven expeditions authorized by President Ulysses S. Grant between 1870 and 1875, the ill-fated efforts of the French, which collapsed in 1888, and the remarkable triumph by the United States in 1914, about the only thing that was agreed upon by engineers, businessmen and political leaders of the times was that a passage from the Atlantic to the Pacific across the isthmus between North and South America would be useful and desirable.

The location, the type of canal, the method of construction, the cost and how to combat the illnesses peculiar to the tropical climate were subjects of bitter controversy right up to the final construction phase.

Of all the locations considered from Darien near the present border of Colombia to Nicaragua, Panama was seen as the least feasible through most of the early construction. Yet, mostly through the power of one man, Ferdinand de Lesseps, the hero of Suez, the route across Panama from Colon to Panama City was to be the chosen one.

The French venture in Panama was not just a failure, it was an unmitigated disaster. Thousands of investors lost their life savings. The country was rocked by scandalous revelations of misdeeds by many of the principals in the enterprise. Ferdinand de Lesseps, himself, the most celebrated Frenchman after his success with the Suez Canal; his son, Charles; and Gustave Eiffel, builder of the great tower in Paris that bears his name, were all convicted of bribery and fraud. Thousands of workers died from tropical diseases, mostly malaria and yellow fever.

The French effort was doomed from the beginning due to their underestimation of the magnitude of the task, underfinancing, tenacious belief that it must be a sea level canal and failure to come to grips with the health hazards.

One man emerged from the French debacle who was to play a significant and somewhat suspect role in decisions by the United States to take up where

the French left off in Panama. Philippe Bunau-Varilla worked tirelessly in this country on behalf of French interests and to salvage what he could of his own substantial investment in the French company. As Envoy Extraordinary and as minister plenipotentiary of the new State of Panama, he negotiated and signed the Panama Canal Treaty of 1903 on behalf of Panama. It is possible, too, that he was the master mind of the Panamanian revolt against Colombia that established its independence after Colombia had rejected the U.S. treaty.

Sentiment was strong in the U.S. Congress for the U.S. to undertake the construction of a canal between the seas after the French failure. But, the assumption was that the canal would be across Nicaragua. The chief proponent of the Nicaraguan route was Senator John Tyler Morgan of Alabama who believed such a route being closer to this country would favor shipping to and from our Gulf ports. But the shrewd and persistent lobbying efforts of Bunau-Varilla and a lawyer by the name of William Nelson Cromwell, who was employed by the French company, turned the matter around in favor of Panama, then still a part of Colombia.

The key factors in the lobbying success were the reduction in the asking price for the French holdings in Panama from the original $70 million to $40 million and the convincing of President Theodore Roosevelt that Panama offered the best chance to expedite the U.S. effort to construct a canal.

The treaty between the United States and Colombia, negotiated by Secretary of State John Hay and Dr. Tomas Herran, authorized the French company to sell its "rights, privileges, properties and concessions" to the United States, and Colombia granted the U.S. control of an area 6 miles wide from Colon to Panama City. Colombian sovereignty over the zone was specifically recognized, but the U.S. was permitted to establish its own courts of law within the zone and to enforce its own regulations concerning the canal, ports and the railroad. Police protection was to be supplied by Colombia with the United States empowered to help out if Colombia was unable to carry out this objective. The United States was to pay $10 million to Colombia in lump sum and an annual rent of $250,000. The franchise was for 100 years and was renewable at the option of the United States.

The Congress of Colombia rejected the Hay-Herran treaty to the consternation of President Roosevelt and in spite of thinly veiled threats from the Secretary of State and from the President himself.

The resourceful Bunau-Varilla and Cromwell moved quickly to encourage the revolt against Colombia, dealing with Dr. Manuel Amador and his associates and promising both money and military support from the United States. There was no official declaration of support from the U.S. Government, but, in fact, U.S. warships were sent to Panama ostensibly to protect the Panama railroad with orders to prohibit the landing of any troops "either government or insurgent." Thus, Colombia reluctantly accepted creation of Panama.

The United States quickly recognized the new country of Panama. Dr. Amador was named President and Envoy Extraordinary. Philippe Bunau-Varilla, the Frenchman, who had not been in Panama for 18 years, was designated as the sole negotiator for Panama on a canal treaty.

He moved swiftly and the terms of the document he devised with Secretary of State John Hay were far less favorable to Panama than the terms of the rejected treaty were to Colombia. The Canal Zone was to be 10 miles wider rather than 6; the United States was given control of sanitation, sewage, water supply and maintenance of public order in the terminal cities of Colon and Panama City.

More importantly, the United States was granted within the Canal Zone "all the rights, power and authority which the United States would possess if it were the sovereign of the territory—to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power or authority." And the rights were granted "in perpetuity" rather than for 100 years as the Colombian treaty.

Also, four small islands in the Bay of Panama were granted to the United States, and we had the right to expropriate any additional land or water areas "necessary and convenient" for the construction, operation, sanitation, or defense of the canal.

The compensation for Panama was the same as offered Colombia. Additionally, the United States guaranteed the independence of Panama.

During the final days of negotiations by Bunau-Varilla and Secretary Hay, Dr. Manuel Amador and a delegation from Panama were rushing to Washington expecting to review the treaty before it was finalized. They arrived about 2 hours late.

The Panamanians protested bitterly to Bunau-Varilla about the terms of the treaty and refused to assist in its ratification in Panama. But under the threat of withdrawal of U.S. protection of the new Republic, Panama formally approved the pact on December 2, 1903.

On February 23, 1904, the U.S. Senate ratified the Hay-Bunau-Varilla treaty by a vote of 66 to 14 after much acrimonious debate led by Senator John Tyler Morgan. But, one senator summed up the lack of significant opposition from the members by conceding that the treaty "comes to us more a liberal in its concessions than anybody in this Chamber ever dreamed of having * * * in fact, it sounds very much as if we wrote it ourselves."

Thus, the United States was launched upon the most stupendous public works project in history, and it was to succeed although the obstacles were gigantic and the price in lives and dollars was horrendous.

The project took 10 more years to complete, although it was opened ahead of schedule; cost 352 million—four times as much as Suez; exacted 5,609 more lives; and required the excavation of some 262 million cubic yards of rock, dirt and other material.

Since it opened in August 1914, it has seen steadily increasing use, with ships now transiting the canal at a rate of more than 1 per hour for every hour of every day of the year.

The question understandably then arises—why should we change a treaty which has been in force for 75 years, which specifies that it is to remain in force in perpetuity and which has apparently served United States and other interests well?

There are several answers.

One is that the 1903 treaty was born in controversy, and negotiated by a Frenchman, much to the displeasure of the Panamanians. While the United States did not precipitate all the events which led to the conclusion of the treaty and its somewhat pressured acceptance by Panama, it was a knowing bystander, ready and willing to benefit from transpiring developments. It acquired Canal Zone property and rights, but even according to President Roosevelt, Secretary of State Hay and the French Treaty negotiator, it did not acquire sovereignty.

Second, the accepted diplomacy of 1903—which undoubtedly made the United States moves of 1903 not uncommon or outside the then-existing norms of international life—is not the accepted diplomacy of 1978. Just as our individual daily lives are far different from those of our fathers and grandfathers in 1903, international relations, modified by communications, expanding technology and increasing interdependence—are also far different.

Third, might simply does not make right. I have no doubt that we could insist on the current treaty and use our military power to impose it, although the resources required would be great. But, the mere possession of strength and force does not inspire respect. The ability of a great nation to deal equitably and justly with smaller nations can do more to inspire respect than the unnecessary use of military force.

By far the most important answer is that there is an easier, more reliable, more assured way to protect U.S. interests in use, access and special privileges than under the present treaty. That way is to enter into a new arrangement with the country through whose land the canal runs and a partnership with the people of that country. That is what the two treaties seek to do.

Treaties are, by their nature, the product of negotiation and compromise. They represent efforts by two sides to come to terms which each can accept, even if they cannot wholeheartedly endorse.

The treaties before us represent 14 years of work by four administrations—two Republican and two Democratic ones. They embody principles which, if one will review Eisenhower statements, the Johnson-Robles guidelines which Eisenhower and Truman publicly endorsed, and the Kissinger-Tack agreement, are remarkably consistent.

They are treaties which the Senate

Select Committee on Intelligence, on which I serve, reviewed line by line to determine if there had been any blackmail or undue pressure during the negotiating process. Both members of the committee who support the treaties and members who oppose them agree there was none.

This does not mean that each and every provision is to our liking or even completely in our favor. But, it does suggest that it is the best arrangement we could now devise to protect both United States and Panamanian interests.

In the defense area, I believe United States interests are amply protected. Should there be a strategic threat, the canal would probably be vulnerable—regardless of what kind of treaty we had or if we had one at all. As Admiral Holloway noted in testimony before the Senate Foreign Relations Committee, "* * * in a strategic nuclear war, the importance of the canal in relative priority diminished to an inconsequential position."

On the conventional level or in connection with the possibility of sabotage, guerrilla warfare or terrorism, I think we have to look at the situation first in terms of the next 22 years during which the Panama Canal Treaty provisions will govern and then in terms of the period beyond the year 2000 when we will have only the Neutrality Treaty.

During the rest of this century, the United States will retain its existing military force in Panama—at whatever troop level we deem sufficient. In short, we are there. We are there in sufficient force to protect our interest and rights under the new treaties, and we have the right to be there.

But, what we envision during that time is not a confrontation with Panama but the development of a new partnership both in the defense and operation of the canal which would enable us to work jointly for the security and efficiency of the canal.

The defense situation after the year 2000 has been widely debated. The Carter-Torrijos communique, added as an amendment which made it an integral part of the treaty states precisely, "* * * *each* of the two countries shall, in accordance with their respective constitutional processes, defend the canal against *any* threat to the regime of neutrality and, consequently, shall have the right to act against any aggression or threat directed against the canal or against peaceful transit of vessels through the canal." (Emphasis added.)

In the Foreign Relations Committee report, our interpretation of this is set out in some detail as follows:

> . . . The first amendment relates to the right of the United States to defend the Canal. (It creates no automatic obligation to do so. See p. 74 of this report.) It allows the United States to introduce its armed forces into Panama whenever and however the Canal is threatened. Whether such a threat exists is for the United States to determine on its own in accordance with its constitutional processes. What steps are necessary to defend the Canal is for the United States to determine on its own in accordance with its constitutional processes. When such steps shall be taken is for the United States to determine on its own in accordance with its constitutional processes. The United States has the right to act if it deems proper against any threat to the Canal, internal or external, domestic or foreign, military or non-military. Those rights enter into force on the effective date of the treaty. They do not terminate.
>
> Second, the prohibitions set forth in the second paragraph do not derogate from the rights conferred in the first. The Joint Statement recognizes that the use of Panamanian territory might be required to defend the Canal. But that use would be for the sole purpose of defending the Canal—it would be purely incidental to the Canal's defense; it would be strictly a means to that end, rather than an end to itself; and it would not be carried out for the purpose of taking Panamanian territory. . .

And, finally, the understanding offered by Senator HAYAKAWA and adopted by the Senate on March 16 further explains the U.S. right to determine when it must act to defend the canal as a unilateral right.

Furthermore, after the year 2000, only Panama will have the right to maintain troops and military sites in Panama—a protection we do not have under the existing treaty. And U.S. vessels of war or auxiliary vessels clearly have a right to go to the head of the line, a privilege accorded only to the United States and Panama. These provisions should allay the fears of those who are concerned that foreign powers might establish military bases in Panama after U.S. forces are withdrawn.

Turning to the operation of the canal, the Panama Canal Commission, a U.S. Government agency, will have responsibility for managing the canal, setting tolls and enforcing rules of passage until the year 2000. After that time, the responsibility will shift to the Panamanians; but it will be to their advantage to keep tolls reasonable and operations efficient. Otherwise, users will look for alternative means of transporting goods which could reduce use and revenues.

At first glance, the revenues to be paid to Panama under the new treaty appear extreme. Assistance is to increase from some $2.3 million to as much as $50 to $60 million annually. Indeed, this portion of the treaties, in my judgment, is beneficial to Panama just as I believe the defense provisions are beneficial to us.

Several other factors should, however, be remembered. First, the payments are to come from canal revenues, not from the U.S. Treasury. Second, these payments, made from tolls, are not out of line with a number of agreements we have made with other countries under which we provide aid in exchange for base rights, such as we will have in Panama during the remainder of this century. Third, Panama will assume the costs of numerous services now paid for by the United States within the Canal Zone. These costs plus declining revenues in recent years resulted in operating losses of between $7 and $8 million.

Many persons are deeply concerned about the dictatorial aspects of the Panamanian Government, and I share those concerns. We cannot as a nation, however, impose governments of our preference upon other parts of the world. Dictators of both the left and the right rule in many areas. We do not like that; we do not approve of that. We can to some extent bring pressures to bear in order to try to influence developments in those nations. But, we work in this imperfect world with a number of leaders we would prefer not to because it is in our interest to do so. With the canal running through Panama, it is to our interest to try to work with the Government there with or without the new treaties.

"But General Torrijos is untrustworthy" some persons respond. Perhaps he is and perhaps he is not. But, if he is untrustworthy it would seem much more logical for him—or any other political leader—to abrogate a treaty such as the existing one which has so many provisions which irritate his people, than a treaty which resolves many of the conflicts, between his nation and ours, and, also provides Panama with many economic advantages.

Perhaps more to the point, however, is that the major changes under these treaties occur in the year 2000 and between the nations of Panama and the United States; they do not occur between Omar Torrijos and Jimmy Carter. The question, then, is what is best for the two nations, not for any two leaders or any individuals, at that time.

There are many other issues which have been raised in this debate, but it is not my intention to go into them further. As I have said, the treaties represent negotiation and compromise, and where that has occurred, I think the pros and cons of the final provisions have been more than adequately examined.

I would close with one final note. I have been dismayed at times by the harsh and bitter tones of this debate. Emotionalism, anger, rhetoric have been used on occasion to inflame rather than inform. I have also been disturbed by those who ascribe evil motives to those who disagree with them on this single issue—whether it be for or against the treaties.

We have many interests, many views in this Nation. Consensus building—which involves compromise and conciliation—is important to our system. We need only look to other countries to see the enormous potential for harm when consensus building breaks down and the dichotomies of the left and right become too great.

Reasonable men and women all along the political spectrum have taken differing positions on these treaties. I think we have to assume that each exercised his or her own judgment and respect that decision. If we stop to reflect for only a moment on our relations here in the Senate, we rapidly realize that our allies on agriculture might not, for example, be our allies on defense, or the coalition that works together on steel is not the one that operates on housing. We shift as interests shifts, issue to issue—and that is important.

Our Nation was built on some very basic precepts—freedom of each to pursue his own religion, freedom for each to choose his own political affiliation, freedom to assert ones own views.

We have and will disagree—that is part of the political system—but, in doing so we should remain ever alert to the

importance of how we disagree and how we reconcile our disagreements as we move from one issue to another.

Mr. President, there has been no issue before the Senate which I have studied more thoroughly or carefully. I have listened to all the arguments, explored every concern, every charge made. I have concluded that the treaty of 1903 is no longer workable and that the interest of the United States will be better served by ratification of the new treaties.

Mr. STEVENS. Mr. President, I stand before this body as one who has always maintained that the United States of America and the Republic of Panama must find a new relationship through which their respective interests in the Panama Canal can be accommodated. It is not without a sense of great frustration that I now vote.

Though I favor a new relationship with Panama, it is clear to me that the treaties presented to the Senate are so ambiguous and so subject to differing interpretations by Panama and the United States that we do both countries a great disservice by ratifying them. Mr. President, we are engaged in a debate in which neither side will win. Irrespective of whether the Panama Canal Treaties are ratified, in my opinion the people of the United States and the people of Panama will be the losers. When the negotiators of these treaties and the President signed these documents they committed the United States to a horrible legacy. We are all aware that if the Senate rejects this treaty that in the short run we will be faced with the prospect of violence in Panama. Mr. President, I maintain that if the Senate ratifies these treaties, we will be faced with the prospect of long-run violence in Panama. Violence which would stem from the misunderstandings that will grow out of these ambiguous documents.

Mr. President, I feel like a condemned man. Irrespective of how I vote, the outcome will be most distasteful.

I have on numerous occasions attempted to amend both the Neutrality Treaty and the Panama Canal Treaty in order to eliminate the ambiguities which could lead to confrontation. The proponents of the treaties have successfully thwarted all of our efforts to eliminate these ambiguities. I must cast my vote in opposition to the ratification of the Panama Canal Treaties.

Before yielding the floor, Mr. President, I would like to compliment the distinguished majority and minority leaders for the gentlemanly manner in which they have allowed this debate to take place. Throughout these difficult days, my good friends have gone to great lengths in order to assure that debate be carried out in a manner that was fair to all parties.

Mr. HASKELL. Mr. President, today marks the end of one of the most lengthy debates in the history of the U.S. Senate. Following the most extensive hearings on a treaty every held by the Foreign Relations Committee, we have been witness to 3 months of floor debate where each and every article and amendment has been thoroughly discussed.

Yet there remains a wide difference of opinion over what the Panama Canal treaties mean to America.

To opponents they represent the latest and most evident example of American capitulation to hostile forces.

To proponents the treaties embody the best impulses in the American tradition of dealing with friendly nations and offer the best opportunity to assure continued U.S. use and access to this vital waterway.

After the lengthy debate and despite volatile opposition, every major public opinion poll since last October has shown that the majority of the American people support the treaties if the U.S. right to defend the canal's neutrality is insured and American vessels are allowed priority passage in time of war.

I made my support of these treaties contingent upon acceptance of those vital amendments. They are essential to national security and have put to rest speculation that the United States would allow foreign intervention to close the canal.

Acceptance of the treaties is not a departure from the basic tenets of our foreign policy. It is simply a reaffirmation that our Nation can be a powerful force in the world without having to resort to arms to prove it.

If we are truly to be the beacon of democracy and a partner with the nations of Central and South America in keeping our hemisphere free, we must abandon notions of "gunboat diplomacy" and make our message to other nations a powerful one: The power of example.

Panamanian leftists and Communists, as well as other anti-American forces would probably like to see nothing better than our rejection of these treaties.

Their best hope for success is to keep alive the false issue of "Yankee Imperialism." A joint Panamanian-American agreement can scotch once and for all the outmoded accustations of American colonialism.

Our allies in the hemisphere are anxious that these treaties, representing U.S. commitment to cooperation with Latin America, will be ratified. Brazil, Venezuela, and other South American countries do not view the canal treaties as a sign of weakness.

Nor do our European allies view the treaties as an indication that the United States has weakened its support for NATO.

I continue to wonder at the extensive and ill-founded antagonism which has been directed at the Panamanian people. While no one in the Senate defends General Torrijos, the history of Panamanian-American relations does not invite the suspicions evident in much of the debate.

If the Panamanians are so hostile to us, why have they waited patiently through 14 years of negotiations?

If Panamanians are so bent on closing the canal why have not the 70 percent of the canal work force which is Panamanian walked off the job?

If Panama is so alined with Marxist countries, why does the government refuse to recognize the existence of the Soviet Union and Mainland China?

The only issue which divides us has been the disposition of the Panama Canal Zone. The two treaties provide a solution which is equitable to both nations and which protects America's strategic interests in the canal. The present Joint Chiefs of Staff, as well as many retired military leaders, agree that the treaties are in our best national interest.

But Panamanians have suffered many wounds to their national pride. Their sensitivity was recently demonstrated by their reaction to the DeConcini amendment. I, along with 74 other Senators, voted for that amendment because it appeared to provide further clarification involved in keeping the canal open in the future.

The interpretation of the DeConcini amendment adopted in Latin America led to widespread concern throughout that region.

When this became apparent, I expressed my conviction that it was incumbent on the Senate to dispel the fears of those countries. The Senate leadership and Senator DECONCINI have now cosponsored a resolution to clarify this point and allay those fears.

It seemed senseless to me to offend Panama and South America by wrongly implying that the U.S. Senate is reasserting a policy of intervention which was repudiated 45 years ago. At the turn of the century, the United States proclaimed the right to intervene throughout Latin America in cases of chronic wrongdoing or a general loosening of the ties of civilized society. We no longer believe that, and I am pleased that the Senate contends to reaffirm America's traditional commitment to the principle of nonintervention.

Finally, let me speak once again to the critics of the treaties. Rejecting the treaties is not going to remove Soviet and Cuban troops from Africa, it will not stop the development of Russian missiles and it will not slow the buildup of Warsaw Pact forces. Defeating the treaties, however, may gratify the Kremlin by indicating that America would rather alienate our long term allies rather than cooperate with them.

I am intensely aware of and concerned about our national security.

Keeping America strong has frequently required lengthy debates and difficult decisions. The ratification of the Panama Canal Treaties has provided an opportunity for a full discussion of the national security implications of devolving our interest in the Canal Zone.

Approving the treaties will retain American use and access to the canal and accomplish through diplomacy what we might not achieve through relying on military force.

Ratification of the Panama Canal treaties represents a wise, just and courageous decision by and for the United States.

### U.S. CATHOLIC CONFERENCE STATEMENT ON PANAMA CANAL TREATIES

Mr. KENNEDY. Mr. President, the General Secretary of the U.S. Catholic Conference, Bishop Thomas C. Kelly, made an important statement last week

in support of the Panama Canal treaties, which I commend and wish to bring to the attention of my Senate colleagues in connection with today's vote on the second treaty.

Bishop Kelly rightly pointed out that—

> The attachment of a reservation implying a U.S. right to intervention in the internal affairs of Panama has threatened and may indeed have eroded the respect for sovereignty, dignity, and social justice which the treaties are designed to foster.

These were the concerns which led me to oppose the original DeConcini reservation to the Panama Canal Neutrality Treaty, and to welcome the reiteration today of our country's commitment to nonintervention in the affairs of Panama.

Mr. President, I ask unanimous consent that the USCC statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON PANAMA CANAL TREATIES

Since 1975 the U.S. Catholic Conference has energetically supported efforts to negotiate new treaties which would return to Panama full and effective sovereignty over the whole of its national territory. Successful conclusion of such efforts can symbolize and initiate a new cooperative relationship between the United States and the nations of Latin America—a relationship characterized by full respect for the sovereignty of each nation, the dignity of its people, and the requirements of international social justice.

Viewing the agreements negotiated last September as a positive step toward this new relationship, USCC has supported the treaties signed by President Carter and General Torrijos. We welcomed the Senate's passage of the Neutrality Treaty last month. But the attachment of a reservation implying a U.S. right to intervene in the internal affairs of Panama has threatened and may indeed have eroded the respect for sovereignty, dignity, and social justice which the treaties are designed to foster.

Our concern is still greater in view of reports that attempts may be made to attach further reservations to the basic treaty, which will be voted on April 18. Such reservations could eviscerate the substance of the treaties and lead to a major setback in the hoped-for new relationship.

The U.S. Catholic Conference therefore urges the President and the Senate to resist firmly any measures which, either explicitly or implicitly, would restrict the legitimate sovereignty of the Republic of Panama. Moreover, in light of the present circumstances, USCC believes there is need for a statement of clarification by an appropriate party, indicating the intent of the reservation to the Neutrality Treaty and making clear that its scope does not exceed the principles contained in the original treaty. Finally, the Conference urges that the U.S. government explicitly reaffirm its intention to adhere fully in its relations with the Republic of Panama to the principles of nonintervention contained in the Charter of the Organization of American States.

It is USCC's hope at this stage of the ratification process that no effort will be spared to assure that the new treaties do signify and begin an era of justice and peace in the Western Hemisphere.

Mr. BIDEN. Mr. President, it was no secret to the last minute that I supported the Neutrality Treaty as modified by the Byrd-Baker leadership amendment.

Nor is it secret that I will support the Panama Canal Treaty to be voted today. I am announcing this because I would like to underscore the fact that the issue being debated in both treaties is the continued American use of the canal. It is not a vote in support of or against President Torrijos. I support both treaties because I feel that the continued American use of the canal for our strategic and economic purposes is our first priority. Whether President Torrijos stays in power until the 21st century is irrelevant to the merits of the treaties. I do not want to see the treaties rejected, emasculated, distorted, or diminished because I believe they enhance America's vital interests. Failure to ratify these treaties may indeed produce insurrection, terrorism, or even revolution in Panama. I have no fear that the United States could put down any violence that would occur. I do, however, question whether a usable canal would emerge from conflict within Panama. And a usable canal is our first priority.

If we have to send the marines down to Panama, I wonder how many Americans—who today have not given much thought to the treaties—will question the wisdom of the Senate for not having chosen—for not having voted—for not having supported a more effective means of defending the U.S. interest. The United States obtained the Canal Zone in a manner quite appropriate to the turn of the century. The decision to build a canal was made with extraordinary foresight. The technological achievement of the canal itself was a major American engineering breakthrough.

America was first—not last.

What worked for the U.S. interest in Panama in 1925 will not work in 1995 nor in 2025. When old ways do not work, it becomes a test of American superiority, American ingenuity, and American strength to find new ways. Today the only effective way to defend American interests in the canal is through a spirit of cooperation. A unilateral decision—even for the common good—is just not going to work. A joint decision—whose common good is preceived by both sides—is one that works.

The Panamanians today are a nation. They are one of the smallest and weakest nations of the world. What test of strength is it for the United States—the strongest country in the world—to use brute force against the weakest?

On the other hand, I ask: What genuine leadership is demonstrated when a country which has the means and the will to use military force instead chooses an ingenious and peaceful means for achieving the same objective. And that objective is clearly the continued use of the canal through this and the next century.

Mr. President, I support the two Panama Canal treaties because they are a product of American strength. And I believe they are the most "advanced weapon" we could choose to protect the short- and long-term interests of the American people.

Mr. DOLE. Mr. President, we have considered a number of proposed modifications to both the Neutrality Treaty and the basic Panama Canal treaty. Two amendments, and several reservations have been adopted: many more have been rejected at the behest of the Carter administration and the Senate leadership.

Now, as the final vote of ratification draws near, we must take a long, hard look at the final product. And we must ask ourselves, in all candor: "is this the best example of American negotiating skill on a bilateral treaty? Is this the best we can offer the American people?"

For myself, Mr. President, I find the answer to these questions to be a clear, unequivocal "no." The reasons should be plain enough to anyone who has studied the canal treaties in detail.

IMPRECISION

Perhaps the single most adverse feature of both treaties is their imprecise, vague, ambiguous, and confusing features. Nowhere has this weakness been more apparent than in those sections dealing with future American rights to protect and defend the canal. With the leadership amendments, and the DeConcini reservations, we have made some improvements, but not nearly enough.

There are still conflicting interpretations about what the defense provisions allow us to do, and what they commit us to do. The same holds true for certain economic and transition features, as well.

All things considered, both treaties have reflected clear examples of poor draftsmanship. In sum, they represent everything a good treaty should not be.

Even the phrasing is surprisingly offensive in its style and manner. As one of my colleagues has aptly noted, those treaties read like documents of surrender drafted by a victorious Panama for a vanquished enemy, the United States. We find phrases like, "The Republic of Panama grants to the United States * * *" and "The Republic of Panama permits the authorities of the United States of America to exercise jurisdiction * * *". From a stylistic standpoint alone, these treaties are little short of an insult to the Nation that gave birth to the Panama Canal, and helped Panama achieve its own independence from Colombia.

RECOMMITMENT OF TREATY

Mr. President, I support the motion by the Senator from Michigan, Mr. GRIFFIN, to recommit the Panama Canal Treaty to the President. Recommitment would simply represent the exercise of the Senate's coequal role in treaty-making powers granted by the United States Constitution.

The action simply involves a directive to the President, from the Senate, to resume negotiations with the Government of Panama until a treaty is agreed upon that better serves the interests of both our Nations. This would give both our Governments the opportunity to reflect upon the most troublesome aspects of this treaty, and to work out a new arrangement which clearly and unambiguously spells out the rights of both countries.

I have every confidence that, once ne-

gotiations resume, Panama will better understand our concerns, needs, and intentions, and that we will better understand hers. By clearing up uncertainties, and carefully defining commitments, both Nations will benefit.

The Senator from Kansas believes his colleague from Michigan has performed a service in proposing the recommitment of this treaty, and I extend my earnest support for its approval.

If, on final vote, the treaty is approved, the American people have lost. We have lost more than a great waterway—we have lost an effort to prove that American opinion still counts for something in the White House and in the U.S. Senate.

This latest in a series of foreign policy retreats by our Government shows that we just have not listened to the American people. Nor, I suspect, have we listened to our own best judgment. The proposed Panama Canal treaties are defective in many respects, as has been pointed out repeatedly on the Senate floor.

Yet, every effort that I and other Senators have made to improve the treaties has been beaten back by the pro-administration, pro-leadership contingent. I could not justify voting for treaties that so ignored the opinion and the interests of the American people, and I will cast my negative vote accordingly.

Mr. PAUL G. HATFIELD. Mr. President, I will support the final Panama Canal Treaty today, because agreement between our two nations is the best way of assuring the continued accessibility and operation of the waterway.

The United States never intended to establish a colony on the isthmus or to deny the sovereignty of the Panamanian nation. In 1904, President Theodore Roosevelt said,

> We have not the slightest intention of establishing an independent colony in the middle of the state of Panama, or exercising any greater governmental functions than are necessary to enable us conveniently and safely to construct, maintain and operate the canal under the rights given us by the treaty.

The original canal treaty may have been acceptable under the political conditions that prevailed in 1903. There has been recognition for many years of the need to negotiate a new treaty between the United States and Panama for the operation of the canal. Negotiations with Panama have been conducted under four Presidents—Johnson, Nixon, Ford, and Carter. The treaties are the logical culmination of the understanding between the United States and Panama for a new and mutually acceptable agreement for the future neutrality, accessibility, and defense of the canal.

The fundamental responsibility of the Senate during the consideration of the treaties was to protect the vital security interests of the United States by providing for the neutrality, accessibility, and defense of the canal. I believe these responsibilities are fulfilled by these treaties, with the changes adopted by the Senate.

My affirmative vote on the first treaty—the Neutrality Treaty—was absolutely contingent upon the reservation which I cosponsored to provide the United States with the right to act independently, including the use of military force, to assure the continued operation of the canal. Approval of this reservation strengthened the position of the United States and made it possible for me to support the treaty in the firm belief that this was the right decision.

The right of the United States to act independently is preserved in this second, or Panama Canal Treaty being acted upon today. We will be able to assure that the Panama Canal shall remain open, neutral, secure, and accessible, and I believe this is an essential prerequisite to the approval of this final treaty.

Among my most serious concerns about this treaty were its financial implications—its cost to taxpayers.

Accordingly, I have worked on, and supported, measures to tighten the treaty and reduce its cost. These revisions were necessary to assure that the taxpayers of the United States were not obligated to a long term contract to subsidize the operation of the canal, or the Panamanian Government. These reservations for the treaty provide:

That the United States is not obligated for the balance of annual contingency payments in the absence of surplus canal revenues;

That Canal Commission payments to Panama for public services will reflect actual costs as determined by an independent audit;

That authority of the United States to make decisions regarding expenses necessary for canal management, operation and maintenance not be restricted;

That the treaties do not obligate the United States to provide any form of foreign assistance to Panama;

That funds may not be drawn from the Treasury for payment to Panama without congressional authorization;

That the Panama Canal Commission will pay interest to the U.S. Treasury on the funds and assets invested in the canal.

These reservations establish realistic limitations on the cost of operating the canal during the 21-year interim period and provide the protection to American taxpayers that I believed was necessary.

I was also concerned about a provision of the treaty that restricted the United States from constructing another interoceanic canal in the Western Hemisphere. This restriction has been removed from the treaty and the option of building another canal is open to the United States.

I support these treaties with the belief that there is a need to establish a new relationship with Panama—a relationship that recognizes the sovereignty of that nation, but also protects our interests and assures continued use of the canal.

Last month I met with the Secretary of Defense and the Acting Chairman of the Joint Chiefs of Staff who assured me that in the professional military opinions of the Joint Chiefs of Staff, the treaties were in our best national interests.

These treaties, as presented to the Senate, were deficient in many respects. I joined with other Member to sponsor and support amendments to provide the right to defend the canal from any threat of aggression, to assure U.S. ships priority passage during time of emergencies, to make arrangements to station troops in Panama, and, in this treaty, to greatly reduce the cost to the American taxpayers. These and other amendments substantially strengthened the treaties, but they are still not perfect instruments. It would be impossible to negotiate a treaty that would completely satisfy each of the 100 Members of the Senate and every person in the United States and Panama.

In the final analysis, I am convinced that these treaties are the most acceptable method of assuring that the Panama Canal remains open, neutral, secure, and accessible.

Mr. ROBERT C. BYRD. Mr. President, 110 years ago, the U.S. Senate made one of the most significant decisions in its history. By a single vote, the Senate failed to find President Andrew Johnson guilty of the impeachment charges brought against him.

Six Senators voted contrary to the wishes of the controlling faction of their party, and to this day they are honored for their integrity in the face of certain political doom.

Senator Edmund G. Ross of Kansas, the last genuinely uncertain vote as the rollcall began, later confessed that, after Chief Justice Salmon P. Chase called for his decision:

> I almost literally looked down into my open grave, Friendships, positions, fortune—everything that makes life desirable to an ambitious man were about to be swept away by the breath of my mouth, perhaps forever.

And they were largely swept away. By that vote, Edmund Ross ended his own political career. But Edmund Ross of Kansas will live forever in the honored memory of the American people, because he voted for conscience and justice, rather than expediency or political self-preservation.

Contemporary popular opinion in 1868 did not rally to rescue those six Senators; on the contrary, it was enraged at their actions.

One of those Senators was Peter G. Van Winkle of my own State of West Virginia.

Van Winkle had been one of the prime movers in establishing West Virginia as a new State in 1863 and he was one of its leading citizens.

His reelection in the next campaign had been a foregone conclusion.

But when Peter Van Winkle failed to vote to find Andrew Johnson guilty. His political career was destroyed; he retired from public life under a torrent of abuse and vilification.

The West Virginia legislature officially rebuked him and condemned his vote.

A Wheeling newspaper wrote:

> It seems impossible a man with a sense of honor which we have attributed to him could have done what he has done.
>
> Mr. Van Winkle's responsibility in this matter is one we would not care to shoulder.
>
> His single vote decided. In the hands of Mr. Van Winkle's cinstituents (though he may not be aware of their existence) we leave him.

In the many decades since that momentous vote was taken, history has changed the popular judgment of men concerning the trial of Andrew Johnson.

It is not that Andrew Johnson has been determined to be without fault, or that Thaddeous Stevens and Ben Wade are now considered to be without virtue.

The victory in opinion belongs not to party or faction, but to wisdom, foresight, and vision.

Johnson's supporters were striving for reconciliation, compassion, unity, and compromise, in the face of vengence, retribution, and partisanship.

There is a profound poem by James Russell Lowell which states:

> Once to every man and nation
> Comes the moment to decide,
> In the strife of truth and falsehood
> For the good or evil side.

Mr. President, I believe that we are verging on one of those extraordinary moments in our own history.

For more than 200 years, we have been blessed with leaders who have authored chapters of history that speak well of our people. Today, we are challenged to write another.

Ours is a people of magnificent vision. We have seen the purple mountains on the horizon and looked beyond. We have gazed on the stars and then reached out to them. Our real monuments are not of marble and clay, but are of the substance of our ideals and the imagination of our ideas. Our people have not only dreamed our dreams, but with sweat, blood, fortitude, and courage, have translated those dreams into the deeds of freedom, and liberty, and justice.

There is, however, in these tumultuous days of world uncertainty, a sense of national despondency—a feeling that we are, in a manner, retreating on the battlefield of greatness and that we are being swept by an outgoing tide of events, from the principles of our historic shore. This, I believe, is the most basic concern of our people today regarding these treaties. It is a concern expressed by honorable men who oppose the treaties. They picture ratification as the gestating germ of weakness and decay.

With great respect, but in complete candor, this, I believe, is a blindman's theory, for its vision halts at the end of a cane. It is not worthy of our people's imagination.

A vote today to approve the treaty will not be a surrender to this pervasive malady which has haunted our national spirit since Vietnam. We would demonstrate strength, not weakness; confidence, not insecurity, by voting to approve the treaty.

We come now to the final moments. Through 38 days of debate, both sides have presented strong arguments. It has been an historic debate, and its impressions have been carried through the rippling waters of public opinion by the first audio broadcast from the U.S. Senate. In this country, as well as in Panama, this has been a compelling drama for many.

The world this afternoon hears the creak of a chair, the thump on a microphone, the shuffle of a piece of paper in this Chamber. Our voices and actions today echo through the streets of Panama City and other capitals of Central and South America.

Today we judge, and today we shall be judged. We have searched for truth. Both sides lay claim to the answer to the ultimate question: Are these treaties in our best national interests?

For my premise, I merely state this: The death of these treaties may leave an impression of strength, but it will be strength gilded with papier-mache. Their approval will mean strength fortified with vision and justice.

The architecture of my reasoning is simple: We are more than a hundred times this size of the Republic of Panama. We are unsurpassed in our military might.

Moreover, there is a tendency to overlook the fact that the United States will retain control of the canal for the next 22 years, plus the defense rights thereafter as provided in the neutrality treaty. Hence, these two treaties will fully protect U.S. interests for both the near and the distant future. And, we will have accomplished this without trampling on the rights of the Panamanians.

These treaties can be a benchmark of better relations with Central and South America, or their rejection can be the beachhead of confrontation. A prudent nation should choose the former. The unexplored frontiers of economic and political cooperation that will be opened to all of Latin America by the approval of these treaties are as wide as our own vision.

We have entered a new phase in the drama of world affairs. In the coming generations, the leadership of the West and the whole world will be shared with many of the developing nations. Brazil, Venezuela, Mexico, and Argentina, as well as other countries in this hemisphere, have enormous potential as future leaders in shaping world events. Do we dare betray a lack of sensitivity to the tide of history by failing to recognize the importance of these treaties in our future relations with these emerging giants? Do we want to deny to our friends and allies from the Rio Grande to Cape Horn the acknowledgment of their dignity and national pride?

We stand at a crossroads. There is a fundamental question that must be answered.

When the red sunset fades over this moment in time, will we have prevailed as a nation to understand others as our history shows we have so rightly insisted on being understood?

We must not be seen throughout the world confusing compassion with weakness, and greatness with dominance. We must be seen today as a nation as great as its principles and not be seen as a nation afraid of its principles.

To vote "no" on this treaty is to deny to others the freedom of destiny we have so often, so long, and so well cherished, fought, bled, and died for.

To vote "no" on this treaty is to slam the door on our already neglected relationships with our neighbors to the south.

To vote "no" on this treaty is to give a blank check to our world adversaries who would exploit a weakness that we had perceived as a strength.

The plain fact is this: By voting "yes" on this treaty, we are not gambling away our strength; we are making a sound investment in our future.

By voting "yes," we are not losing a canal; we are building trust and confidence within the Western Hemisphere.

By voting "yes," we are not retreating from greatness; we are sending a message to the world that genuine greatness and strength do not reside in force of arms and sheer might alone.

If American history were to run its course tomorrow, no man could diminish the glory and the record that we have established as a nation. But we have even greater roles to play in the world in coming generations. But those roles will not necessarily be played wearing the masks of yesterday. We can rise to unvisited pinnacles if we have the wisdom to vote today for conscience and justice in relation to Panama as did the Rosses and Van Winkles in relation to Andrew Johnson in 1868.

Mr. President, I compliment all Senators on the high caliber of this great debate. I express my great respect to those in the opposition for the strenuous battle they have fought.

Mr. President, I offer the highest compliments to Senators CHURCH and SARBANES who have so magnificantly managed the debate for the proponents of the treaties, and I offer my sincere thanks to all Senators who have supported the treaties and will vote "yes" on the final rollcall.

Finally, Mr. President, I offer my highest respect and gratitude and admiration to those courageous Senators who supported the treaties and who will soon stand for reelection. It has required genuine courage. What better words can be said of any man than these: He did his duty. These men have done their duty to their country. These men, as all Senators—regardless of the division of opinion among us—have done their duty.

Mr. President, I close with appropriate lines from James Russell Lowell's poem—"The Present Crisis":

> New occasions teach new duties; time makes ancient good uncouth;
> They must upward still, and onward, who would keep abreast of truth;
> Lo, before us gleam her camp-fires, we ourselves must pilgrims be,
> Launch our Mayflower, and steer boldly through the desperate winter sea,
> Nor attempt the future's portal with the past's blood-rusted key.

The VICE PRESIDENT. Under the previous order, the hour of 6 p.m. having arrived, the Senate will now proceed to vote, and the question is on agreeing to the resolution of ratification on Executive N. 95th Congress, 1st Session, Calendar No. 2, the Panama Canal treaty. The yeas and nays have not been ordered.

Mr. CHURCH. Mr. President, I ask for the yeas and nays.

The VICE PRESIDENT. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The VICE PRESIDENT. The clerk will call the roll.

The legislative clerk called the roll.

The yeas and nays resulted—yeas 68, nays 32, as follows:

[Rollcall Vote No. 119 Ex.]

The VICE PRESIDENT. Two-thirds of the Senators present and voting having voted in the affirmative, the resolution of ratification, as amended, is agreed to.

The resolution of ratification, as amended, as agreed to is as follows:

*Resolved (two-third of the Senators present concurring therein)*, That the Senate advise and consent to the ratification of the Panama Canal Treaty, together with the Annex and Agreed Minute relating thereto, done at Washington on September 7, 1977 (Executive N, Ninety-Fifth Congress, first session), subject to the following—

(a) RESERVATIONS:

(1) Pursuant to its adherence to the principle of nonintervention, any action taken by the United States of America in the exercise of its rights to assure that the Panama Canal shall remain open, neutral, secure, and accessible, pursuant to the provisions of this Treaty and the Neutrality Treaty and the resolutions of advice and consent thereto, shall be only for the purpose of assuring that the canal shall remain open, neutral, secure, and accessible, and shall not have as its purpose or be interpreted as a right of intervention in the internal affairs of the Republic of Panama or interference with its political independence or sovereign integrity.

(2) Notwithstanding any other provisions of this Treaty, no funds may be drawn from the United States Treasury for payments under Article XIII, paragraph 4, without statutory authorization.

(3) Any accumulated unpaid balance under paragraph 4(c) of Article XIII at the termination of the Treaty shall be payable only to the extent of any operating surplus in the last year of the Treaty's duration, and that nothing in that paragraph may be construed as obligating the United States of America to pay after the date of the termination of the Treaty any such unpaid balance which shall have accrued before such date.

(4) Exchange of the instruments of ratification shall not be effective earlier than March 31, 1979, and the treaties shall not enter into force prior to October 1, 1979, unless legislation necessary to implement the provisions of the Panama Canal Treaty shall have been enacted by the Congress of the United States of America before March 31, 1979.

(5) The instruments of ratification to be exchanged by the United States and the Republic of Panama shall each include provisions whereby each Party agrees to waive its rights and release the other Party from its obligations under paragraph 2 of Article XII.

(6) After the date of entry into force of the Treaty, the Panama Canal Commission shall, unless it is otherwise provided by legislation enacted by the Congress, be obligated to reimburse the Treasury of the United States of America, as nearly as possible, for the interest cost of the funds or other assets directly invested in the Commission by the Government of the United States of America and for the interest cost of the funds or other assets directly invested in the predecessor Panama Canal Company by the Government and not reimbursed before the date of entry into force of the Treaty. Such reimbursement of such interest costs shall be made at a rate determined by the Secretary of the Treasury of the United States of America and at annual intervals to the extent earned, and if not earned, shall be made from subsequent earnings. For purposes of this reservation, the phrase "funds or other assets directly invested" shall have the same meaning as the phrase "net direct investment" has under section 62 of title 2 of the Canal Zone Code.

(b) UNDERSTANDINGS:

(1) Nothing in paragraphs 3, 4, and 5 of Article IV may be construed to limit either the provisions of paragraph 1 of Article IV providing that each party shall act, in accordance with its constitutional processes, to meet danger threatening the security of the Panama Canal, or the provisions of paragraph 2 of Article IV providing that the United States of America shall have primary responsibility to protect and defend the Canal for the duration of this Treaty.

(2) Before the first date of the three-year period beginning on the date of entry into force of this Treaty and before each three-year period following thereafter, the two parties shall agree upon the specific levels and quality of services, as are referred to in Article III, paragraph 5 of the Treaty, to be provided during the following three-year period and, except for the first three-year period, on the reimbursement to be made for the costs of such services, such services to be limited to such as are essential to the effective functioning of such canal operating areas and such housing areas referred to in Article III, paragraph 5 of the Treaty. If payments made under Article III, paragraph 5 of the Treaty for the preceding three-year period, including the initial three-year period, exceed or are less than the actual costs to the Republic of Panama for supplying, during such period, the specific levels and quality of services agreed upon, then the Commission shall deduct from or add to the payment required to be made to the Republic of Panama for each of the following three years one-third of such excess or deficit, as the case may be. There shall be an independent and binding audit, conducted by an auditor mutually selected by both parties, of any costs of services disputed by the two parties pursuant to the reexamination of such costs provided for in this Understanding.

(3) Nothing in paragraph 4(c) of Article XIII shall be construed to limit the authority of the United States of America through the United States Government agency called the Panama Canal Commission to make such financial decisions and incur such expenses as are reasonable and necessary for the management, operation, and maintenance of the Panama Canal. In addition, toll rates established pursuant to paragraph 2 (d) of Article III need not be set at levels designed to produce revenues to cover the payment to Panama described in paragraph 4(c) of Article XIII.

(4) Any agreement concluded pursuant to article IX, paragraph 11 with respect to the transfer of prisoners shall be concluded in accordance with the constitutional processes of both parties.

(5) Nothing in the Treaty, in the Annex or Agreed Minute relating to the Treaty, or in any other agreement relating to the Treaty obligates the United States to provide any economic assistance, military grant assistance, security supporting assistance, foreign military sales credits, or international military education and training to the Republic of Panama.

(6) The President shall include all reservations and understandings incorporated by the Senate in this resolution of ratification in the instrument of ratification exchanged with the Government of the Republic of Panama.

Mr. CHURCH. Mr. President, I move to reconsider the vote by which the resolution of ratification was agreed to.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. CHURCH. Mr. President, I ask unanimous consent that the Secretary of the Senate be authorized to make technical and clerical corrections in the engrossment of the resolution of ratification.

The VICE PRESIDENT. Without objection, it is so ordered.

## ROUTINE MORNING BUSINESS

(Routine morning business and additional statements submitted are as follows:)

## MESSAGES FROM THE HOUSE

At 2:44 p.m., a message from the House of Representatives delivered by Mr. Hackney, one of its reading clerks, announced that the House has passed the following bills, in which it requests the concurrence of the Senate:

H.R. 3489. An act to amend section 216(b) of the Merchant Marine Act, 1936, to entitle the Delegates in Congress from the District of Columbia, Guam, and the Virgin Islands to make nominations for appointments to the Merchant Marine Academy, and for other purposes;

H.R. 6997. An act to authorize the Secretary of the Interior to convey all right, title, and interest of the United States in and to a tract of land located in the Fairbanks Recording District, State of Alaska, to the Fairbanks North Star Borough, and for other purposes;

H.R. 8397. An act to provide that a certain tract of land in Pinal County, Ariz., held in trust by the United States for the Papago Indian Tribe, be declared a part of the Papago Indian Reservation;

H.R. 10822. An act to improve the operations of the national sea grant program, to authorize appropriations to carry out such program for fiscal years 1979 and 1980, and for other purposes;

H.R. 10823. An act to amend the National Advisory Committee on Oceans and Atmosphere Act of 1977 to authorize appropriations to carry out the provisions of such act for fiscal year 1979, and for other purposes.

The message also announced that the House has passed the bill (S. 1633) to

provide for the extension of certain Federal benefits, services, and assistance to the Pascua Yaqui Indians of Arizona, and for other purposes, with an amendment, in which it requests the concurrence of the Senate.

## HOUSE BILLS REFERRED

The following bills were read twice by their titles and referred as indicated:

H.R. 3489. An act to amend section 216(b) of the Merchant Marine Act, 1936, to entitle the Delegates in Congress from the District of Columbia, Guam, and the Virgin Islands to make nominations for appointments to the Merchant Marine Academy, and for other purposes; to the Committee on Commerce, Science, and Transportation.

H.R. 6997. An act to authorize the Secretary of the Interior to convey all right, title, and interest of the United States in and to a tract of land located in the Fairbanks Recording District, State of Alaska, to the Fairbanks North Star Borough, and for other purposes; to the Committee on Energy and Natural Resources.

H.R. 8397. An act to provide that a certain tract of land in Pinal County, Arizona, held in trust by the United States for the Papago Indian Tribe, be declared a part of the Papago Indian Reservation; to the Select Committee on Indian Affairs.

H.R. 10823. An act to amend the National Advisory Committee on Oceans and Atmosphere Act of 1977 to authorize appropriations to carry out the provisions of such Act for fiscal year 1979; to the Committee on Commerce, Science, and Transportation.

## REFERRAL OF A BILL—S. 2900

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent, as in legislative session, that if and when S. 2900 is reported from the Committee on Environment and Public Works, it then be referred to the Committee on Commerce, Science, and Transportation for not to exceed 45 days.

The PRESIDING OFFICER. Without objection, it is so ordered.

## COMMUNICATIONS

The PRESIDING OFFICER laid before the Senate the following communications, together with accompanying reports, documents, and papers, which were referred as indicated:

EC–3362. A communication from the Assistant Secretary for Food and Consumer Services, Department of Agriculture, transmitting a draft of proposed legislation to amend, revise and consolidate the provisions of the child nutrition programs authorized by the National School Lunch Act, as amended, and the Child Nutrition Act of 1966, as amended, and for other purposes; to the Committee on Agriculture, Nutrition, and Forestry.

EC–3363. A communication from the Secretary of Agriculture, transmitting, pursuant to law, the global assessment report for fiscal year 1978; to the Committee on Agriculture, Nutrition, and Forestry.

EC–3364. A communication from the Secretary of Agriculture, reporting, pursuant to law, on the amounts, types, and uses of pesticides, unsupplement to the narrative discussion on herbicide and pesticides Section III, Item F of the FY 1977 report of the Forest Service previously transmitted to the Senate; to the Committee on Agriculture, Nutrition, and Forestry.

EC–3365. A communication from the Assistant Secretary of Defense, transmitting, pursuant to law, the first quarter year 1978 report of receipts and disbursements pertaining to the disposal of surplus military supplies, equipment, and material; and for expenses involving the production of lumber and timber products; to the Committee on Appropriations.

EC–3366. A communication from the Administrator, Rural Electrification Administration, Department of Agriculture, reporting, pursuant to law, approval of an REA insured loan in the amount of $11,200,000 to Southwest Louisiana Electric Membership Corporation, of Lafayette, Louisiana; to the Committee on Appropriations.

EC–3367. A communication from the Deputy Assistant Secretary of Defense (Installations and Housing), reporting, pursuant to law, a construction project to be undertaken by the Army National Guard; to the Committee on Armed Services.

EC–3368. A communication from the Principal Deptuy Assistant Secretary of Defense (Manpower, Reserve Affairs, and Logistics), reporting, pursuant to law, on the Reenlistment Bonus Test Program for the period 1 January through 31 January 1978; to the Committee on Armed Services.

EC–3369. A communication from the Deputy Assistant Secretary of Defense (Installations and Housing), reporting, pursuant to law, three construction projects to be undertaken by the Army National Guard; to the Committee on Armed Services.

EC–3370. A communication from the Assistant Secertary of Defense, transmitting, pursuant to law, contract award information amending data contained in the report covering the period March 15, 1978 to June 15, 1978; to the Committee on Armed Services.

EC–3371. A communication from the Acting Director, Defense Security Assistance Agency, reporting, pursuant to law, concerning the Department of the Navy's proposed Letter of Offer to Iran for Defense Articles estimated to cost in excess of $25 million; to the Committee on Armed Services.

EC–3372. A communication from the Assistant Secretary of the Army (Manpower and Reserve Affairs), transmitting a draft of proposed legislation to amend section 2107(a) of title 10, United States Code, to extend the age limitation on eligibility of students for the Reserve Officers' Training Corps financial assistance program to recognize active duty previously performed; to the Committee on Armed Services.

EC–3373. A communication from the Secretary of Housing and Urban Development, transmitting a draft of proposed legislation to encourage broader utilization of the condominium form of homeownership, to provide minimum national standards for disclosure and consumer protection for condominimum purchasers and owners and tenants in condominium conversions, to encourage States to establish similar standards, to correct abusive use of long-range leasing of recreation and other condominium-related facilities, and for other purposes; to the Committee on Banking, Housing, and Urban Affairs.

EC–3374. A communication from the Secretary of Transportation, transmitting, pursuant to law, the Eighth Annual Report of Operations under the Airport and Airway Development Act of 1970; to the Committee on Commerce, Science, and Transportation.

EC–3375. A communication from the Deputy Fiscal Assistant Secretary, Fiscal Service, Department of the Treasury, transmitting, pursuant to law, the seventh annual report on the financial condition and results of the operations of the Airport and Airway Trust Fund; to the Committee on Commerce, Science, and Transportataion.

EC–3376. A communication from the Administrator, Energy Information Administration, Department of Energy, transmitting, pursuant to law, a report on changes in the refiner distribution and market shares of the statutory categories of refined petroleum products; to the Committee on Energy and Natural Resources.

EC–3377. A communication from the Administrator, General Services Administration, transmitting, pursuant to law, a report of Building Project Survey for Boston, Massachusetts; to the Committee on Environment and Public Works.

EC–3378. A communication from the Deputy Fiscal Assistant Secretary, Fiscal Service, Department of the Treasury, transmitting, pursuant to law, the twenty-second annual report on the financial condition and results of the operations of the Highway Trust Fund; to the Committee on Environment and Public Works.

EC–3379. A communication from the Secretary of the Treasury, transmitting, pursuant to law, a report entitled "The Operation and Effect of the Domestic International Sales Corporation Legislation"; to the Committee on Finance.

EC–3380. A communication from the Acting General Counsel of the Treasury, reporting, pursuant to law, on actions under the Countervailing Duty Law (19 U.S.C. 1303) with respect to imports of non-rubber footwear from Uruguay; and relating to a preliminary and final determination relating to a formally initiated countervailing duty investigation under the provisions set forth in the Trade Act following the receipt of a petition from the International Leather Goods, Plastics and Novelty Workers' Union; to the Committee on Finance.

EC–3381. A communication from the General Counsel of the Treasury, reporting, pursuant to law, on actions under the Countervailing Duty Law (19 U.S.C. 1303) with respect to imports of leather handbags from Uruguay; and relating to a preliminary determination relating to a formally initiated countervailing duty investigation under the provisions set forth in the Trade Act following the receipt of a petition from the International Leather Goods, Plastics and Novelty Workers' Union; to the Committee on Finance.

EC–3382. A communication from the Assistant Legal Adviser for Treaty Affairs, Department of State, transmitting, pursuant to law, international agreements other than treaties entered into by the United States within sixty days after the execution thereof; to the Committee on Foreign Relations.

EC–3383. A communication from the Chairman, Development Coordination Committee, transmitting its annual report for 1977; to the Committee on Foreign Relations.

EC–3384. A communication from the Chairman, Development Coordination Committee, relating to revisions of its 1977 annual report; to the Committee on Foreign Relations.

EC–3385. A communication from the Chairman, Federal Maritime Commission, transmitting, pursuant to law, a report of its activities under the Government in the Sunshine Act during calendar year 1977; to the Committee on Governmental Affairs.

EC–3386. A communication from the Comptroller General of the United States, transmitting, pursuant to law, a report entitled "Landsat Policy Issues Still Unresolved," April 17, 1978; to the Committee on Governmental Affairs.

EC–3387. A communication from the Chairman, Council of the District of Columbia, transmitting, pursuant to law, an act adopted by the Council on March 7, 1978, which would amend the laws of the District of Columbia affecting children born out of wedlock in order to clarify that a child

born out of wedlock claiming to a deceased parents' estate simply needs to establish a parent/child relationship (Act 2-172); to the Committee on Governmental Affairs.

EC-3388. A communication from the Chairman, Council of the District of Columbia, transmitting, pursuant to law, an act adopted by the Council on March 7, 1978, which would endorse ratification of the Equal Rights Amendment (ERA) so that no person shall be denied equality of rights under the law on account of sex (Act 2-173); to the Committee on Governmental Affairs.

EC-3389. A communication from the Governor, Farm Credit Administration, reporting, pursuant to law, on its compliance with the Government in the Sunshine Act; to the Committee on Governmental Affairs.

EC-3390. A communication from the Secretary of Housing and Urban Development, transmitting, pursuant to law, a report of the Department's intention to establish a new system of personal records; to the Committee on Governmental Affairs.

EC-3391. A communication from the Director, Agency for Volunteer Service, ACTION, transmitting a supplementary proposal for legislation to amend the Domestic Volunteer Service Act of 1973; to the Committee on Human Resources.

EC-3392. A communication from the Secretary of Health, Education, and Welfare, transmitting a draft of proposed legislation to establish a program for developing networks of community-based services to prevent initial and repeat pregnancies among adolescents, to provide care to pregnant adolescents, and to help adolescents become productive independent contributors to family and community life; to the Committee on Human Resources.

EC-3393. A communication from the Executive Secretary to the Department of Health, Education, and Welfare, transmitting, pursuant to law, final regulation for Part 116b—State Operated Programs for Handicapped Children; to the Committee on Human Resources.

EC-3394. A communication from the Director, Water Resources Council, transmitting, pursuant to law, its annual report pursuant to the Freedom of Information Act for 1977; to the Committee on the Judiciary.

EC-3395. A communication from the Chairman, Marine Mammal Commission, transmitting, pursuant to law, its report concerning activities under the Freedom of Information Act for calendar year 1977; to the Committee on the Judiciary.

EC-3396. A communication from the General Counsel, Council on Wage and Price Stability, transmitting, pursuant to law, its report concerning activities under the Freedom of Information Act throughout 1977; to the Committee on the Judiciary.

EC-3397. A communication from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, orders in cases of aliens who have been found admissible to the United States under the Immigration and Nationality Act; to the Committee on the Judiciary.

EC-3398. A communication from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, reports covering the period March 16 through March 31, 1978, concerning visa petitions which the Service has approved according the beneficiaries of such petitions third- and sixth-preference classification under the Immigration and Nationality Act; to the Committee on the Judiciary.

## PETITIONS

The PRESIDING OFFICER laid before the Senate the following petitions, which were referred as indicated:

POM-592. A joint resolution adopted by the Legislature of the State of Connecticut; to the Committee on Foreign Relations:

"HOUSE JOINT RESOLUTION No. 34

"Whereas, there have been many contributions made by men and women of Irish ancestry to the State of Connecticut, to the building of our Nation, and to the Cause of Freedom everywhere since the earliest times; and

"Whereas, the fact that Ireland is artificially partitioned against the wishes of the overwhelming majority of the Irish people; and

"Whereas, the Irish people in the six-county area of Ireland known as 'Northern Ireland' are denied basic civil and human rights, and are unable to obtain either adequate protection or equal justice under law; and

"Whereas, the explosive situation in 'Northern Ireland' presents an imminent and realistic threat to the peace and is therefore the legitimate concern of all men; and

"Whereas, it is in the best interests of the United States that there be a just and equitable solution to this problem in order that peace, order, justice and well-being be restored to that part of the world; and

"Whereas, for humanitarian reasons, as well as out of respect for the principles of freedom, liberty, natural law, justice and history, we hereby take notice of the dangerous and deplorable state of affairs in Ireland.

"Now, therefore, be it resolved, that this assembly respectfully urges the Congress of the United States to manifest our country's traditional position as guardian of freedom and republican-democracy, the dignity of all mankind, freedom of conscience, and mankind's universal natural rights, by taking such affirmative action as will tend to persuade all concerned parties, and the world commonwealth of nations, to seek a speedy, just and equitable solution to the dangerous situation in the 'North' of Ireland, and to formally express the moral opinion that: 'The Irish people ought to be permitted to exercise the Right of National Self-Determination, thus returning the disputed six counties of Northeast Ireland to the Irish Republic, unless a clear majority of all the people of Ireland, in a free and open plebiscite, determine to the contrary.'

"Be it further resolved, that the clerks of the house and the senate cause copies of this resolution to be sent to the Honorable Jimmy Carter, President of the United States; to the President of the Senate of the United States; to the Speaker of the House of Representatives of the United States; and to each member of the Congress of the United States from the State of Connecticut."

---

POM-593. A resolution adopted by the Board of Trustees of Michigan State University, relating to the Equal Rights Amendment; to the Committee on the Judiciary.

POM-594. A joint resolution adopted by the Legislature of Micronesia; to the Committee on Environment and Public Works:

"SENATE JOINT RESOLUTION No. 7-56

"Whereas, our current Five Year Capital Improvement Program budget does not include money for construction and improvement of all major roads throughout the Trust Territory of the Pacific Islands; and

"Whereas, Guam, our neighbor, has been receiving financial assistance under United States Federal programs for construction and improvement of roads; and

"Whereas, the Trust Territory of the Pacific Islands has almost no financial capability to fund major road construction and improvement projects; and

"Whereas, construction and improvement of major roads in the Trust Territory of the Pacific Islands is a sound and lasting investment; and

"Whereas, such investment can have a significant impact on economic and social development in the Trust Territory of the Pacific Islands; and

"Whereas, mere maintenance of our dilapidated roads should prove to be more expensive, unproductive, and wasteful in the long run, now, therefore,

"Be it resolved by the Senate of the Seventh Congress of Micronesia, Second Regular Session, 1978, the House of Representatives concurring, that the Congress and the President of the United States are hereby requested to amend the appropriate United States laws so as to make the Trust Territory of the Pacific Islands eligible for federal financial assistance for major road construction and improvement; and

"Be it further resolved that certified copies of this Senate Joint Resolution be transmitted to the Congress and the President of the United States, the Secretary of the Deparment of the Interior, the Director of the Office of Territorial Affairs and the High Commissioner of the Trust Territory of the Pacific Islands."

## PETITIONS PRESENTED

Mr. PELL presented the following petitions, which were referred as indicated:

POM-595. A resolution adopted by the Legislature of the State of Rhode Island; to the Committee on Environment and Public Works:

"RESOLUTION

"Whereas, Under 23 U.S.C. 103(e)(2) five hundred additional miles were approved by the Congress under the so-called Howard-Cramer Amendment, allocating mileage to certain states under certain conditions; and

"Whereas, The Federal Highway Administration has allocated, under this Howard-Cramer provision, 27.40 miles to Rhode Island, 7.0 miles to California, 7.73 miles to Connecticut, 43.80 miles to Florida, 47.80 miles to Georgia, 145.90 miles to Louisiana, 44.50 miles to Maryland, 20.25 miles to Massachusetts, 27.30 miles to New Jersey, and 64.90 miles to New York, thereby making a total of 436.58 miles of the five hundred allocation; and

"Whereas, The federal interstate funds that have been made available to Howard-Cramer mileage states cited are fixed by the cost on the date of withdrawal of an interstate segment, and are not increased by the federal government to compensate for the effects of inflation nor construction cost differences experienced as a result of transfer from one project to another; and

"Whereas, As a result of said fixed costs on date of withdrawal, some Howard-Cramer mileage transfer projects in these states are funded at fifty percent or less on this portion of the interstate system; now, therefore be it

"Resolved, That the senate of the state of Rhode Island and Providence Plantations hereby memorializes the congress of the United States to enact legislation, at the earliest possible date, to apply the federal share funding provisions of Title 23 of the United States code to fund at ninety percent all of the interstate mileage designated by the Federal Highway Administration as Howard-Cramer under the provisions of 23 U.S.C. 103(e)(2); and be it further

"Resolved, That the secretary of state be and he hereby is authorized and directed to transmit a duly certified copy of this resolution to each member of the Rhode Island delegation in the congress of the United States."

POM-596. A resolution adopted by the Legislature of the State of Rhode Island; to the Committee on Foreign Relations:

"RESOLUTION

"Whereas, The Republic of China and its people have constituted one of the most trusted friends and allies of the Government and people of the United States since the Republic of China was founded in 1912; and

"Whereas, The existence and continued freedom and prosperity of the free Republic of China are rights to which the independent and brave people of that republic are entitled; and

"Whereas, The Republic of China stands as a substantial factor in the free world's constant effort to maintain world peace through moral suasion and appropriate readiness; now, therefore, be it

"Resolved, That the Senate of the State of Rhode Island and Providence Plantations hereby commends the United States Government for maintaining its continuous and historic policy of support for the freedom and security of the Republic of China and its courageous, industrious people; and be it further

"Resolved, That the Senate of the State of Rhode Island and Providence Plantations conveys to President Jimmy Carter and the Congress of the United States the commendation of Rhode Island to our national government for the support accorded the Republic of China; and be it further

"Resolved, That the secretary of state be and he is hereby respectfully requested to transmit duly certified copies of this resolution to the members of Congress from Rhode Island."

---

POM-597. A resolution adopted by the Legislature of the State of Rhode Island; to the Committee on the Judiciary:

"RESOLUTION

"Whereas, The identity in name and nature, the roots in home and family, and the important contributions of grandparents should be recognized in this country as part of a very vital role in the shaping of close-knit family units; now, therefore, be it

"Resolved, That the members of the congress of the United States be and they hereby are respectfully requested to designate as an annual observance the first Sunday after Labor Day as National Grandparents' Day; and be it further

"Resolved, That the Secretary of State be and he hereby is authorized and directed to transmit duly certified copies of this resolution to the Rhode Island delegation in Congress."

---

## REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. CANNON, from the Committee on Commerce, Science, and Transportation, with an amendment and an amendment to the title:

H.R. 6669. An act to establish a national climate program, and for other purposes (Rept. No. 95-740).

---

## EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. CANNON, from the Committee on Commerce, Science, and Transportation:

Leslie Lazar Kanuk, of New Jersey, to be a Federal Maritime Commissioner.

(The above nomination from the Committee on Commerce, Science, and Transportation was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

---

## INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. LUGAR (for himself, Mr. BROOKE, Mr. GRIFFIN, Mr. HEINZ, and Mr. GARN):

S. 2931. A bill to increase the authorization for the urban homesteading program under section 810 of the Housing and Community Development Act of 1974, to improve coordination between the urban homesteading program and the rehabilitation loan program, and for other purposes; to the Committee on Banking, Housing, and Urban Affairs.

By Mr. LAXALT:

S. 2932. A bill to amend Title XVIII of the Social Security Act to permit the recognition and use of relative value studies; to the Committee on Finance.

S. 2933. A bill to amend the Sherman Act to provide for the publication and use of relative value studies; to the Committee on the Judiciary.

By Mr. CANNON (for himself, Mr. MAGNUSON, and Mr. PEARSON) (by request):

S. 2934. A bill to amend the Fishery Conservation and Management Act of 1976 to include the Northern Mariana Islands; to the Committee on Commerce, Science, and Transportation.

By Mr. HATHAWAY:

S. 2935. A bill to amend the Older Americans Act of 1965 to provide for new or improved programs to assist older persons residing in rural areas, and for other purposes; to the Committee on Human Resources.

S. 2936. A bill to amend the Internal Revenue Code of 1954 to provide certain corporate income tax reductions and to increase the amount of the surtax exemption; to the Committee on Finance.

By Mr. BAYH (for himself, Mr. DECONCINI, Mr. KENNEDY, Mr. ABOUREZK, Mr. PAUL G. HATFIELD, and Mr. MATHIAS):

S. 2937. A bill to amend the Speedy Trial Act of 1974 to provide further authorization for appropriations for pretrial services agencies; to the Committee on the Judiciary.

---

## STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. LUGAR (for himself, Mr. BROOKE, Mr. GRIFFIN, Mr. HEINZ, and Mr. GARN):

S. 2931. A bill to increase the authorization for the urban homesteading program under section 810 of the Housing and Community Development Act of 1974, to improve coordination between the urban homesteading program and the rehabilitation loan program, and for other purposes; to the Committee on Banking, Housing, and Urban Affairs.

(The remarks of Mr. LUGAR when he introduced the bill appear elsewhere in today's proceedings.)

By Mr. LAXALT:

S. 2932. A bill to amend title XVIII of the Social Security Act to permit the recognition and use of relative value studies; to the Committee on Finance.

S. 2933. A bill to amend the Sherman Act to provide for the publication and use of relative value studies; to the Committee on the Judiciary.

USE OF VALUE STUDIES

● Mr. LAXALT. Mr. President, I am today introducing a set of bills which, by separate approaches, would specifically sanction the development and use of so-called relative value studies. I am doing so in my capacity as a member of the Health Subcommittee of Senate Finance and the Antitrust and Monopoly Subcommittee of Senate Judiciary—the two panels to which the measures will be referred.

The first proposal would amend the Social Security Act to permit relative value studies published by medical organizations to be recognized for purposes of medicare reimbursement. The second would provide a more general authorization for the use of such listings by clarifying that they are not the type of activity contemplated for prohibition under the Sherman Act.

As Senators familiar with health care reimbursement mechanisms are aware, the whole objective of the RVS is to identify the relationship that one procedure has to another in terms of difficulty and requirements of time and professional expertise. They have been utilized for a number of years within all areas of the medical community as an effective means of moderating costs by militating against unusual disparities in charges made by providers. They do this by offering a meaningful measurement of skill and a common terminology upon which medical services to patients can be evaluated.

The application of RVS's by peer review organizations has been demonstrated quite convincingly, I believe, to allow more accurate assessments of utilization and costs. Moreover, physicians using the RVS have been able to appropriately weigh their own services in relation to general guidelines—and carriers have found that they improve their projection of cost estimates for proposed benefits.

The development of relative value studies was undertaken by practicing physicians in California more than two decades ago. Following publication of their findings from lengthy analysis of statistics and records, many medical organizations, other physicians, insurance companies and government agencies saw the usefulness and practicality of such a concept and began increasingly to establish and implement their own RVS's for claims processing purposes.

In recent years, however, a legal shadow has been cast over the publication and voluntary use of RVS's by physicians and medical associations. That is, the Justice Department and particularly the Federal Trade Commission have taken it upon themselves to attack such studies as anticompetitive and in violation of antitrust laws. This is in spite of the fact that an HEW-funded study released just last month concluded from data involving my own State of Nevada

and 23 others that RVS use does not demonstrate any pattern of price-fixing.

In any event, given the FTC direction, it seems to me extremely ironic that insurance companies and Government agencies would continue to use relative value studies in their own determinations of payment levels while those most instrumental in their initial development, that is, the physicians, are suddenly being coerced into withdrawing from the practice. Nevertheless, that is what is happening, and apparently only congressional action such as I am proposing can inject any element of fairness and reason into the anti-RVS "crusade."

I want to stress the point, Mr. President, that the FTC has vowed to wipe out voluntary RVS's within the medical profession and is succeeding in doing so not because of merit or legal persuasion, but because of their disproportionate ability to win by attrition. It does not take much insight into the unbridled powers of our regulatory agencies to know that consent decrees can eventually be elicited from most anyone because, right or wrong, groups must capitulate and sign simply because they do not have the means to withstand the overwhelming resources of the Federal Government.

I think it is important to note that my distinguished colleague and chairman of our Finance Health Subcommittee, Senator TALMADGE, has also recognized that the case against the RVS is without total justification and has himself included in S. 1470—the Medicare-Medicaid Administrative and Reimbursement Reform Act—language that would permit their legitimate use. However, in an understandable effort to at least partially accommodate the FTC and avoid an all-out confrontation, his provision has been so tightly drawn as to, I believe, fall somewhat short of the desired goal of reasonable, uniformly-available guidelines.

For one thing, the existing proposal would ultimately place the establishment of an RVS completely in the hands of the HEW Secretary. Further, it would not sufficiently take into account the prior efforts and input of the medical profession in this area over the past 20 years. Obviously, we need to balance out these two concerns if we are to reach a mutually acceptable solution.

While it is my hope that the alternatives I am presenting today can contribute to the discussion and perhaps improve upon the measures already under consideration, I applaud Senator TALMADGE's leadership and foresight in identifying the question as not whether we should have RVS's, but, rather, whether they are valid. I certainly agree that by clearing the air and assuring the reinstitution of properly constructed relative value studies, we can further encourage the good faith self-restraint which we would all welcome from the health delivery system.

Mr. President, I ask unanimous consent that both these bills be printed in the RECORD.

There being no objection, the bills were ordered to be printed in the RECORD, as follows:

S. 2932

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

SECTION 1. Title XVIII of the Social Security Act is amended by inserting at the end thereof the following new section:

"SEC. 1881. (a) Notwithstanding any other provision of law, the Secretary may, for the purpose of determining reasonable charges for physicians' services under this title, recognize and use relative value studies developed by national or state private nonprofit medical organizations.

"(b) The development or publication of any relative value study for purposes of this section by any national or state private nonprofit medical organizations, or their agents, shall not be deemed a violation of any Federal law.

"(c) The use of any relative value study by any individual, corporation, partnership or other entity on a voluntary, individual basis shall not be deemed a violation of any Federal law."

(d) This amendment shall take effect upon the date of its enactment.

S. 2933

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

SECTION 1. Section 1 of the Sherman Act, 26 Stat. 209, 15 U.S.C. 1, is amended by:

(1) deleting the period at the end of the second sentence;

(2) by inserting at the end of the second sentence the following:

": *Provided,* That no provision of Federal law shall render illegal (whether performed individually or collectively) (1) the transmission, collection, compilation, analysis or evaluation of statistics, records, documents or other data, for the purpose of determining and developing a coded listing of physicians' services with unit values that indicate the relativity among such services of (a) median charge (b) time spent per patient and/or (c) degrees of professional skill involved (hereinafter known as a 'relative value study'); or (2) the development, dissemination or publication of such relative value studies, by any private, non-profit national, state or local medical association, medical specialty society, or other medical organizations, or by any agent thereof: *Provided further,* That the use of such relative value studies by any person, corporation, partnership or other entity as a criterion to aid in the determination of usual, customary or reasonable charges for professional health care services shall not be deemed a violation of any Federal law."

SEC. 2. This amendment shall take effect upon the date of enactment.●

By Mr. CANNON (for himself, Mr. MAGNUSON, and Mr. PEARSON) (by request):

S. 2934. A bill to amend the Fishery Conservation and Management Act of 1976 to include the Northern Mariana Islands; to the Committee on Commerce, Science, and Transportation.

● Mr. CANNON. Mr. President, I introduce today, at the request of the Department of Commerce, and on behalf of myself and my colleagues, Mr. MAGNUSON and Mr. PEARSON, a bill to amend the Fishery Conservation and Management Act of 1976 to include the Northern Mariana Islands.

I ask unanimous consent that the bill and the letter of transmittal be printed in the RECORD.

There being no objection, the bill and the letter were ordered to be printed in the RECORD, as follows:

S. 2934

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Fishery Conservation and Management Act of 1976 (16 U.S.C. 1801–1882) is amended as follows:

(1) In the definition of the term "State" in subsection 3(21) (16 U.S.C. 1802), insert the words "the Northern Mariana Islands," immediately after the word "Guam,".

(2) In the description of the Western Pacific Council in paragraph 302(a)(8) (16 U.S.C. 1852), delete the word "and" before the word "Guam" and insert after the word "Guam" the words ", and the Northern Mariana Islands". Also in the same paragraph delete the number "11" before the words "voting members" and insert in lieu thereof the number "13"; delete the number "7" before the words "appointed by the Secretary" and insert in lieu thereof the number "8".

THE SECRETARY OF COMMERCE
*Washington, D.C., April 13, 1978.*

Hon. WALTER F. MONDALE,
*President of the Senate,*
*Washington, D.C.*

DEAR MR. PRESIDENT: Enclosed are six copies of a draft bill "To amend the Fishery Conservation and Management Act of 1976 to include the Nothern Mariana Islands," together with a statement of purpose and need in support thereof.

The Department has determined that this proposed legislation does not constitute a major proposal requiring preparation of an Economic Impact Statement under Executive Orders 11821 and 11949, and OMB Circular A–107.

We have been advised by the Office of Management and Budget that there would be no objection from the standpoint of the Administration's program to the submission of this legislation to the Congress.

Sincerely,

JUANITA M. KREPS.

Enclosures.

STATEMENT OF PURPOSE AND NEED

Amend the Fishery Conservation and Management Act of 1976 to include the Northern Mariana Islands.

Public Law 94–241 (90 Stat. 263) approved the Convenant to Establish a Commonwealth of the Northern Mariana Islands in Political Union with the United States of America. The Constitution of the Northern Marianas will go ino effect on January 9, 1978, the first step toward commonwealth status.

Such action has the effect of establishing a Fishery Conservation Zone off the Northern Marianas but does not have the effect of including the Northern Marianas within the jurisdiction of any Fishery Management Council. Therefore, it is necessary to make appropriate amendments to the Fishery Conservation and Management Act of 1976 (FCMA) (16 U.S.C. 1801–1882).

Accordingly, this legislation amends the FCMA to include the Northern Marianas (1) in the definition of the term "State" and (2) within the jurisdiction of the Western Pacific Fishery Management Council. In addition, this legislation alters both the total number of members of the Western Pacific Coucil and the number of members appointed by the Secretary to make the size and composition of this Council consistent with other Councils composed of four States.●

By Mr. HATHAWAY:

S. 2935. A bill to amend the Older Americans Act of 1965 to provide for new

or improved programs to assist older persons residing in rural areas, and for other purposes; to the Committee on Human Resources.

RURAL ELDERS ASSISTANCE ACT OF 1978

● Mr. HATHAWAY. Mr. President, today it is my great pleasure to introduce the Rural Elders Assistance Act of 1978. This bill will amend the Older Americans Act of 1965 to focus greater attention on the special needs of persons residing in rural areas.

That greater attention must be focused on the rural elderly cannot be denied. Four out of every 10 older persons reside in nonmetropolitan areas. Yet our current programs in effect fail to accommodate the needs of this significant segment of the population.

Older persons living in rural areas are more likely to live in poverty than their urban counterparts, to have substandard housing, poor health, and limited mobility. Lack of transportation often prevents these individuals from getting from their homes to health facilities, senior centers, meal sites, and even potential places of employment.

The Rural Elders Assistance Act attempts to correct the existing deficiencies. This bill would bring health, nutrition, social and economic programs and services to rural Americans by providing for improved outreach activities and transportation systems. For example, it requires area agencies on aging to provide information and referral sources for rural areas as well as metropolitan areas, and enables area agencies to use mobile units to conduct this activity.

Mobile units are also authorized for multipurpose senior centers. The use of such units should result in increased availability and accessibility to the services and programs offered by centers. This provision should be of particular benefit to individuals in isolated areas or small communities which have no stationary multipurpose senior center.

Under present law, grants are authorized to assist in meeting the costs of acquiring, altering, or renovating existing facilities. However, assistance is not available for construction of new facilities. This provision has worked to the detriment of many small towns which lack facilities suitable for conversion. Consequently, I am proposing to amend the law to allow for construction of centers where there are no existing facilities appropriate for acquisition, alteration, or renovation.

The Rural Elders Assistance Act also authorizes model projects which meet the special needs of rural elders, including outreach and public information programs, special transportation and escort services, health screening and outpatient services, and homemaker and home health services.

In addition, it provides for model programs to coordinate all existing programs for which elders may be eligible, and specifically authorizes regionalized approaches and the establishment of a system with a central location for information, needs assessment, program eligibility determination, and referral to appropriate services. Such a mechanism would simplify the process of securing information and assistance by providing older persons with one focal point for help for all types of programs. To insure that this concept of a central location meets the needs of the rural elderly, the legislation specifically provides that the mechanism may be a mobile unit.

Further, projects to develop models for independent living to assist older persons to remain within their communities and out of institutions are authorized. It is anticipated that such projects will explore the mix of shelter and supportive services appropriate for a given elderly population.

Other provisions amend the nutrition program to expand the home-delivered meals effort to include more individuals who cannot reach a congregate meal site, and authorize a study of the special circumstances and needs of older persons residing in rural areas.

Finally, the bill I am introducing today revises the senior community service employment program so that more individuals will be able to participate. To accomplish this goal, the bill bars discrimination against individuals who do not own a car or other form of private transportation. Second, it amends the definition of "eligible individuals" by increasing the amount of income which an individual may receive and still qualify for the program. Under current regulations, the program has been limited to individuals who meet the poverty guidelines of the Office of Management and Budget. This has been found to be too restrictive, as noted in a newspaper article "Guidelines Hamper Jobs-for-Elderly Effort" which appeared in the Bangor Daily News on December 21, 1977. Mr. President, I ask unanimous consent that this article be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GUIDELINES HAMPER JOBS-FOR-ELDERLY EFFORT

(By Nancy Remsen)

Most people agree that it would be nice to offer older persons the chance to work and earn some extra money.

And many older people are interested in finding some part-time employment.

But a federal program which aims to match willing persons over age 55 with part-time jobs in social service agencies has run into some difficulty because of the low-income requirement and the necessity of owning a car for many of the jobs available.

The state Office of CETA Planning and Coordination recently received a $170,000 federal grant to be used in hiring 50 older persons in programs throughout the state.

Frederick C. Lawler, director of the program called the Senior Community Service Employment Program, said there is much enthusiasm concerning the program, but the agencies that are hiring the older workers are finding they must turn away some willing applicants because their income is too high.

And the University of Maine Cooperative Extension Program, which has been involved in the same federal program for seven years also has found it isn't easy to find single persons with incomes less than $3,000 or persons with another family member with incomes below $4,080 who have cars so that they can be outreach workers or nutrition aides.

Ellis Waller of the Cooperative Extension Service, said older persons are reluctant to admit they are poor though they want to work to earn extra money.

Maine received $608,500 for 168 slots for elderly workers for the Cooperative Extension Service to dole out.

A program recently set up by the Roman Catholic diocese's Human Relations Services, Inc. to help elderly persons cope with winter is one of the major recipients of slots in the senior community service employment programs of both the Extension Service and the State CETA office.

Damian Gagnon, who is coordinating the field work of the diocesan program, said he has just started advertising for what he calls energy aides or people who will visit homes of elderly persons and provide them with warm clothing or help them make their home warmer this winter. He has 25 slots that will be paid with funds from the Cooperative Extension program and 13 from the state CETA office.

"I'll be surprised if we can fill a dozen of the positions," he said. "We need people with a car. They have to be able to get around. But to meet those guidelines and have a car is almost impossible.

The Eastern Task Force on Aging has recently been given eight slots for handymen by the state CETA office, but Irving Hunter of that agency said, "Things are stymied."

The agency saw a great need, based on calls, letters and word from outreach workers, to offer some minor maintenance assistance to older persons and hoped to hire older persons to do the work, two in each of the four counties in which the task force operates, Hunter said.

But as with other of the jobs developed for this employment program, a car is necessary to do the job, Hunter said.

"I was so enthusiastic about this program because of the need," he said. Now, he said, he is "bitterly disappointed and frustrated" because the agency hasn't been able to find eligible older persons.

"But we're going to keep at it," he said.

Keeping at it seems to be the answer, because the Mid-Coast Human Relations Council had 18 slots to fill and has found older persons for everyone, according to Joe Jaret.

"We have aggressively sought people," he said. The agency wrote letters to town managers, ran public service announcements on the radio and advertised in newspapers, he said.

Jaret said his agency wasn't flooded with applicants, "but we had a pretty fair response."

Mr. HATHAWAY. In addition to remedying the transportation problem, the bill I am proposing would allow individuals earning an income of up to 125 percent of the poverty guidelines to participate in the program.

Mr. President, I am introducing the Rural Elders Assistance Act in response to the concerns articulated by elders in the field. These concerns are valid, and it is with pleasure that I offer this bill.

There are other related issues of concern to me, and I intend to address these concerns when the Committee on Human Resources considers reauthorization of the Older Americans Act of 1965. In particular, I plan to offer an amendment to address the need for long term community-based care. In addition, I intend to put forth a provision to make the nursing home ombudsman program per-

manent instead of maintaining it as a model project as in existing law. Further, I would hope to expand this program to extend assistance to older Americans who do not reside in nursing homes.

Mr. President, the value of the ombudsman program should not be underestimated. In the State of Maine, for example, the Maine Committee on Aging has been able to develop a statewide program to investigate nursing home residents' complaints and to work with communities, the state legislature, and appropriate agencies to develop substantive nursing home reform. Last year, with a grant of only $18,000, the committee investigated approximately 300 complaints on behalf of residents, proposed several pieces of legislation which were enacted, and worked with the State Department of Human Resources in amending departmental rules and regulations governing nursing homes. In order to insure continuation of this important effort, an amendment to the Older Americans Act is warranted. It will be my pleasure to offer such a provision before the Human Resources Committee.

Mr. President, I would like to make one final point. I have chosen to use the term "Elders" in the title of the bill, because that is the term which our elders prefer. This preference is explained in an article entitled "Year-Old Panthers Hit Stride," which appeared on March 25, 1978, in the Portland Evening Press. I ask unanimous consent that excerpts from that article be printed in the RECORD at this point.

There being no obection, the excerpts were ordered to be printed in the RECORD, as follows:

YEAR-OLD PANTHERS HIT STRIDE

(By Donna Halvorsen)

Elba Chibucos went downstairs at the Ambassador Apartments where she lives and asked the desk clerk to "come up and see our panther."

"A live panther?" the clerk wanted to know.

But the panther was only a cake cut in the shape of a panther and decorated with gray frosting.

Later Thursday Mrs. Chibucos, 74, would carry it to Salvation Army headquarters on Cumberland Avenue and a small group of people would sing, "Happy birthday to us, happy birthday dear Panthers, happy birthday to us."

The little noontime party was in celebration of the first birthday of Portland's Gray Panthers, one of hundreds of similarly-named groups across the country.

As with any new movement, a new look at themselves has prompted the elderly to question the way others have traditionally looked at—and labeled—them.

The little noontime party was in celebration of the first birthday of Portland's Gray Panthers, one of hundreds of similarly-named groups across the country.

As with any new movement, a new look at themselves has prompted the elderly to question the way others have traditionally looked at—and labeled—them.

So senior citizens, says Margaret McConvey, has become elders.

"Why senior citizens? Why not just citizens?" she asked. "Why older Americans? Why not just Americans?

"Elders is what we accept because we consider ourselves the elders of the tribe, the tribe meaning the human race, the human family," said the former Chicagoan, who gave her age as "67 backwards."

Mr. HATHAWAY. I note with pleasure that Portland's Gray Panthers are celebrating their first birthday. I would like to take this opportunity to wish them a very happy birthday and commend them for their accomplishments to date.

Mr. President, I ask unanimous consent that the text of the Rural Elders Assistance Act of 1978 be printed in the RECORD at this point.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2935

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That this Act may be cited as the "Rural Elders Assistance Act of 1978".

SEC. 2. (a) Sec. 304(c)(3) is amended by (1) by inserting "including those residing in isolated or sparsely populated rural communities" after "plan"; (2) by inserting "including a mobile unit" after "location"; and (3) by inserting "and comprehensive" after "current".

(b) Section 505(a)(7) is amended by inserting "including those residing in isolated or sparsely populated rural communities" after "State".

SEC. 3. Sec. 308(a) is amended by adding at the end thereof the following new paragraphs:

"(8) meet the special needs of older persons in rural areas, including outreach and public information programs, medical, social and economic needs assessment, determination of program eligibility, and referral to appropriate services, special transportation and escort services, health screening and outpatient services, homemaker and home health services, nutritional services, reading and letter writing services, and other services designed to assist such individuals in utilizing fully the programs which are available;

"(9) develop models for independent living for older persons to assist such persons to remain within their communities and out of institutions. Projects under this paragraph may explore what specific services and facilities or mixture of services and facilities, including, but not limited to shelter, nutrition, homemaker and home health services, are appropriate for a community's older persons; and

"(10) coordinate all existing facilities, programs, services for which older persons are eligible, including those available to the general population, to ensure the accessibility and availability of comprehensive services, to minimize fragmentation of services and avoid duplication of effort, and to maximize the ease with which services and program benefits are obtained. Projects under this paragraph may include, but are not limited to, regionalized approaches to service delivery and the establishment of linkages among existing health, social, economic, nutritional, educational, transportation, and other services with a central location, which may be a mobile unit, for information, needs assessment, program eligibility determination, and referral to appropriate services."

SEC. 4. Sec. 411 is amended by redesignating subsections (4) through (6) as sections (5) through (7) and inserting after subsection (3) the following new subsection:

"(4) studying the special circumstances and needs of older persons residing in rural communities, and developing or demonstrating new approaches to meet these needs."

SEC. 5. (a) Sec. 501(a) is amended by inserting "(1)" after "cost of"; and by inserting "and (2) where no existing facilities are suitable for acquisition, alteration or renovation, the cost of constructing new facilities."

(b) SEC. 501(c) is amended by inserting ", including a mobile unit" after "facility."

SEC. 6. (a) Sec. 705(a)(4) is amended by inserting "rural," after "Indian,".

(b) SEC. 706(a)(3) is amended by inserting "or to whom such site is not otherwise accessible" before the semicolon at the end thereof.

SEC. 7. (a) Sec. 902 (b)(1)(H) is amended by inserting "outreach activities and" after "including".

(b) SEC. 902(b)(1)(I) is amended by inserting "transportation and" after "including".

(c) SEC. 902(b)(1)(L) is amended by inserting ", and will provide assurance that lack of privately owned transportation will not exclude eligible individuals from employment in any project funded under this title" before the semicolon at the end thereof.

(d) SEC. 907(2) is amended by striking "a low income" and substituting in lieu thereof "an income not exceeding 125 percent of the poverty criteria established by the Office of Management and Budget.".

---

By Mr. HATHAWAY:

S. 2936. A bill to amend the Internal Revenue Code of 1954 to provide certain corporate income tax reductions and to increase the amount of the surtax exemption; to the Committee on Finance.

CORPORATE TAX REDUCTION ACT OF 1978

● Mr. HATHAWAY. Mr. President, today I am pleased to introduce the Corporate Tax Reduction Act of 1978.

This bill is the result of Small Business hearings which I chaired in Portland, Maine, on February 10, 1978. These field hearings were arranged to receive testimony on the administration's small business tax proposals and alternative proposals. I received very valuable and helpful testimony from several important groups including the Smaller Business Association of New England (SBANE), the Connecticut Small Business Federation and the Smaller Business Service Bureau.

These groups presented evidence that the President's proposed corporate tax package was more beneficial to larger companies than small business.

The Select Committee on Small Business has also prepared an extensive analysis of the 1978 Tax Proposals Relating to Small Business. A portion of that report on corporate tax rates is as follows:

Corporations are taxed on their net income after deducting salary compensation for officers, wages for employees, interest and other expenses. It should be noted that dividends are paid out of after-tax income, and are taxed as income to the individual recipients on the form 1040, giving rise to complaints against "double taxation" of dividend income. The relevant financial information for the company is entered on a form 1120.

In 1938, a distinction was made between the first $25,000 of taxable income, which incurred a lower tax, and income above that level which was subject to a higher rate.

In 1950, the structure was changed to

the present "normal tax" (payable by all companies with taxable income), and a "surtax" on earnings more than $25,000 * * *

In 1964, the rates at which the normal and surtaxes was levied were reversed; but $25,000 in taxable income was maintained as the dividing line. In other words, the "normal tax" rate was changed from 26 to 22 percent and the "surtax" rate changed from 22 to 26 percent. Corporations earning more than $25,000 continued to be subject to a 48-percent statutory rate, while those with earnings of less than $25,000 experienced a tax reduction of 4 percentage points. However, the structure remained the same.

The table recapitulating the history of corporate rate structures follows:

TABLE 46.—CORPORATION INCOME TAX RATES, 1909–62

| Calendar year | Reduced rates on small corporations | General rate (percent) |
|---|---|---|
| 1909–13 | $5,000 exemption | 1 |
| 1913–15 | None after Mar. 1, 1913 | 1 |
| 1916 | | 2 |
| 1917 | | 6 |
| 1918 | $2,000 exemption | 12 |
| 1919–21 | do | 10 |
| 1922–24 | do | 12½ |
| 1925 | do | 13 |
| 1926–27 | do | 13½ |
| 1928 | $3,000 exemption | 12 |
| 1929 | do | 11 |
| 1930–31 | do | 12 |
| 1932–35 | None | 13¾ |
| 1936–37 | Graduated normal tax ranging from— | |
| | First $2,000 | 8 |
| | Over $40,000 | 15 |
| | Graduated surtax on undistributed profits ranging from | 7–27 |
| 1938–39 | First $25,000 | 12½–16 |
| | Over $25,000 | [1] 19 |
| 1940 | First $25,000 | 14.85–18.7 |
| | $25,000 to $31,964.30 | 38.3 |
| 1940 | $31,964.30 to $38,565.89 | 36.9 |
| | Over $38,565.89 | 24 |
| 1941 | First $25,000 | 21–25 |
| | $25,000 to $38,461.54 | 44 |
| | Over $38,461.54 | 31 |
| 1942–45 | First $25,000 | 25–29 |
| | $25,000 to $50,000 | 53 |
| | Over $50,000 | 40 |
| 1946–49 | First $25,000 | 21–25 |
| | $25,000 to $50,000 | 53 |
| | Over $50,000 | 38 |
| 1950 | Normal tax 23 / Surtax (over $25,000 surtax exemption) 19 | 42 |
| 1951 | Normal tax 28½ / Surtax (over $25,000 surtax exemption) 22 | 50¼ |
| 1952–60 | Normal tax 30 / Surtax (over $25,000 surtax exemption) 22 | 52 |
| 1961 [2] | Normal tax 27.48 / Surtax (over $25,000 surtax exemption) 22 | 49.48 |
| 1962 [2] | Normal tax 25 / Surtax (over $25,000 surtax exemption) 22 | 47 |

[1] Less adjustments: 14.025 percent of dividends received and 2½ percent of dividends paid.
[2] Provides reduction in rates effective July 1, 1961, to 25 percent first $25,000 and 47 percent over $25,000. Rates computed to show effect of prorating income earned before and after July 1.

Source: The Federal Tax System: Facts and Problems, 1961. Materials assembled by the Committee Staff for the Joint Economic Committee, Congress of the United States, Washington, D.C.

If the dividing line between smaller and larger companies established in 1938 were adjusted for inflation, it would have risen as follows:

*Inflation 1938–77: and indicated adjustment to dividing line between small and large business*

| Years | Increase in GNP deflator (percent) | Indicated division between small and large companies |
|---|---|---|
| 1938–75 | 347.8 | $111,950 |
| 1975–77 | 11.1 | 124,376 |

The Tax Reduction Act of 1975 made the first major changes in the structure of the corporate tax in 25 years. In addition to reducing the tax rates on corporate earnings from 0 to $25,000 from 22 to 20 percent (equivalent to a 9 percent rate reduction) and the tax rate on earnings between $25,000 and $50,000 from 48 to 22 percent (a 40-percent rate reduction), it reintroduced three steps in the rate framework such as had been in effect from 1940 to 1950. The 1975 structure, and consequent tax savings under that act, are illustrated below:

MAXIMUM TAX SAVINGS FROM THE SMALL BUSINESS PROVISIONS OF THE TAX REDUCTION ACT OF 1975

| | 1975 tax | Reduction in rates (percent) | 1977 tax | Dollar reduction | Percentage reduction |
|---|---|---|---|---|---|
| Before tax earnings: | | | | | |
| 0 to $25,000 | $5,500 | 22–20 | $5,000 | $500 | 9 |
| $25,000 to $50,000 | 12,000 | 48–22 | 5,500 | 6,500 | 40 |
| Total reduction at $50,000 | 17,500 | 48 | 10,500 | 7,000 | 60 |
| Over $50,000 | | 0 | | [1] | [1] |

[1] There were, however, no rate reductions at that time for the brackets above $50,000. Such companies would experience tax savings because of the rate reductions on taxable income below $50,000. The percentage benefit would fall proportionally with increased taxable income over $50,000.

An economic impact study of a proposed tax change in which the corporate tax rate would be 20 percent on the first $50,000 of income, 22 percent on income over $50,000 and a surtax of 26 percent on net income over $150,000. The initial Treasury revenue impact is estimated at $2.0 billion.

I ask that this study be included at the conclusion of my remarks.

In analyzing the data from this model, and discussions with members of the small business community, I am introducing a bill which will set the corporate rate at 20 percent on the first $150,000 of income and 48 percent thereafter. It is estimated that the revenue impact of this change will be $2.5 to $3.0 billion.

I believe this is a needed change in the corporate tax structure to assist small businesses. I hope that we can move this legislation as a part of the tax cut/tax reform package which the Senate Finance Committee will be considering this summer.

In order that my colleagues may be better informed on this bill, I ask unanimous consent that the study and the text of the bill be printed in the RECORD.

There being no objection, the bill and study were ordered to be printed in the RECORD, as follows:

S. 2936

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That this Act may be cited as the "Corporate Tax Reduction Act of 1978".

SEC. 2. (a) Subsection (b) of section 11 of the Internal Revenue Code of 1954 (relating to normal tax on corporations) is amended to read as follows:

"(b) NORMAL TAX.—The normal tax for a taxable year is equal to—

"(1) 20 percent of so much of the taxable income as does not exceed $150,000.".

(b) Subsection (d) of section 11 of such Code (relating to surtax exemption) is amended by striking out all that precedes "except that" and inserting in lieu thereof the following:

"(d) SURTAX EXEMPTION.—For purposes of this subtitle, the surtax exemption for any taxable year is $150,000;".

(c)(1) Paragraph (7) of section 12 of such Code (relating to cross references relating to tax on corporations) is amended by striking out "$50,000" and inserting in lieu thereof "$150,000".

(2) Subsection (f) of section 21 of such Code (relating to effect of changes in rates during a taxable year) is amended to read as follows:

"(f) CHANGE IN SURTAX EXEMPTION.—In applying subsection (a) to a taxable year of a taxpayer which is not a calendar year, the change made by section 2 of the Corporate Tax Reduction Act of 1977 in the surtax exemption shall be treated as a change in a rate of tax.".

(3) Paragraph (1) of section 821(a) of such Code (relating to tax on mutual insurance companies to which part II applies) is amended to read as follows:

"(1) NORMAL TAX.—A normal tax for a taxable year equal to—

"(A) 20 percent of so much of the mutual insurance company taxable income as does not exceed $150,000,
or 44 percent of the amount by which such taxable income exceeds $6,000, whichever is lesser; plus".

(4) Subparagraph (A) of section 821(c)(1) of such Code (relating to alternative tax for certain small companies) is amended to read as follows:

"(A) NORMAL TAX.—A normal tax for a taxable year equal to—

"(i) 20 percent of so much of the taxable investment income as does not exceed $150,000,
or 44 percent of the amount by which such taxable income exceeds $3,000, whichever is lesser; plus".

SEC. 3. The amendments made by this Act

shall apply to taxable years ending after December 31, 1977.

---

ECONOMIC IMPACT STUDY OF PROPOSED TAX CHANGE (H.R. 10382)

INTRODUCTION

For comparative purposes, we used two different methods in analyzing the economic impact of H.R. 10382. These were: (1) A static economic ratio analysis. (2) A dynamic econometric model. They both indicated that H.R. 10382 will have an expansionary effect on the economy.

*The economic ratio analysis*

The objectives of this analysis were (a) to determine the industries and the size of the companies that would experience the most rapid expansion, and (b) to estimate the cost of the tax change in terms of federal tax revenues.

We based our analysis on all U.S. companies that declared a positive net income in 1973–74. This information was available in the 1977 Almanac of Business and Industrial Financial Ratios, which is a summary of IRS data.

The main assumption behind the ratio analysis is that on the average, the financial structure (i.e. debt to equity ratio) of all companies will remain unchanged after H.R. 10382 is effective. Thus, the tax savings means that firms will undergo an expansion in assets and scale.

H.R. 10382 will provide tax savings for all companies with net taxable income over $25,000. This means increased working capital and higher retained earnings. The change in retained earnings increases debt capacity. We assumed that all companies were able to increase their long term debt by an amount equal to the tax savings. This leverage further enhances their working capital position. Using the ratio of sales to working capital, we estimated the increase in total revenues for all profitable companies in 6 major industries and for the total U.S. By applying the ratio of employment to sales, we then calculated the number of new jobs that H.R. 10382 would provide.

As the static analysis uses aggregated data, the average company with total assets under $1 million shows net income below $25,000. As such, the average corporation in this group will not save from this legislation. Although in this group companies which perform above the average will benefit from the bill, the available statistics do not allow us to break this out accurately. Manufacturing as a group is an exception, for the average company with total assets of $0.5 to $1 million declared over $25,000 in net income, and 16,000 new jobs will be created in this sector.

A total of 207,000 new jobs will be generated in the aggregate scale expansion brought about by the bill. 60 percent of this new employment will occur in companies with between $1 and $5 million in total assets and average yearly sales of $5 million. 15 percent of the jobs will be in firms with $5 to $10 million in total assets and average sales of $11 million. 12 percent of the jobs will be in firms with total assets of $10 to $25 million and average sales of $16 million.

Manufacturing and wholesale trade will experience the largest expansion. They will absorb 31 percent and 34 percent of the new jobs.

The gross, total tax reduction is $2.1 billion in the initial period. With a Keynesian approach based on a marginal propensity to consume of .90, the feedback of personal income taxes is $1.9 billion (assuming an average personal income tax rate of 10 percent). Adding the reduction in unemployment benefits of at least $.4 billion to the $1.9 billion, there should be a slight gain in federal tax revenues due to economic expansion after a short time lag.

*The dynamic econometric model*

The objectives of this analysis were to (a) determine the net effect of H.R. 10382 on federal tax revenues, and (b) to estimate the increases in employment, GNP, capital outlays, productivity and consumption.

The model was provided by Dr. Norman B. Ture, who prepared a similar analysis of the Roth bill (H.R. 8333). It is neoclassical in nature. Since the Roth simulation, two inputs have been changed. The inflation is now 6 percent as opposed to 5 percent, and a more conservative utilization equation is used.

The results indicate an employment increase of 80,000 per year growing slightly to 100,000 over the next 9 years. (See Exhibit II.) Annual GNP will grow by some $10 to $19 billion over the same period because of H.R. 10382. The bill can therefore be thought of as a slight, expansionary stimulus to a small sector of the economy. The annual increase in capital outlays will be some $6–8 billion in each of the next 9 years. This leads to productivity improvements and increased capacity to pay wages. A rise in annual consumption of $3–4 billion can also be expected over the next 9 years due to H.R. 10382.

The Ture model shows that H.R. 10382 will have no impact on federal tax revenues in the first 3 years. A slight net tax inflow will take place from 1982 to 1987. The net revenue gain per new job is $12,500 in 1982 and $20,000 in 1987.

CONCLUSION

Both analyses indicate that the net federal tax gain or loss is negligible, and that additional jobs will be created due to H.R. 10382. Since the main impact will be on small to medium sized companies, the jobs will be geographically distributed in smaller communities as well as in the larger urban areas. The internal financing that H.R. 10382 provides is valuable to these smaller corporations because they are virtually blocked out from the public markets at present. Any discrepancies in the results between our 2 methods of analysis must be attributed to differing methodologies and assumptions as well as to other imperfections. We have also checked the results expected from the Chase Econometrics model, and were assured that the employment expansion aspects were comparable. But solely because of the way the Chase and Warton models input tax reductions (i.e. as losses in federal revenue) they would not show the positive feedback of personal income tax increases. For planning purposes, it is also especially important that the business community perceives H.R. 10382 to be permanent, or capital sources will not provide the leverage the models assume.

EXHIBIT 1

| | Present tax under current laws | Tax under proposed Heckler bill | Savings |

EXHIBIT XI—ASSUMPTIONS AND SOURCES USED IN THE ECONOMIC RATIO ANALYSES

The financial data are from the period 1973–1974.

Sales figures are adjusted to 1977 levels using the wholesale price index which shows a 21.9 percent increase from 1974 to May 1977.

The employment to sales ratio is calculated by dividing the total employment in wholesale and retail trade and manufacturing by the total sales in the same three industries. The ratio is also adjusted for inflation and is .0000054.

The average personal income tax rate is calculated by dividing the Federal budget receipts—Individual income taxes by Total compensation of employees, and is 15 percent. This rate is conservative since inflation may have pushed more persons into the higher tax brackets since 1974.

The percentage of unemployed receiving unemployment benefits is calculated by dividing the total number of unemployed individuals by the average number of persons receiving unemployment benefits, and is 45 percent.

The average weekly unemployment benefit payment was $64 in 1974, and this number is converted to a yearly basis and adjusted for inflation. The figure used was $4056 for 1977.

The average yearly salary was $10890 in 1975. Adjusted for inflation, this figure was $12153 in 1977.

The marginal propensity to consume was calculated by dividing the personal consumption expenditures by total disposable personal income. This method assumes that the average and the marginal propensities are the same. The MPC used was .90.

The model assumes that the tax reduction is financed by borrowing or increased money supply.

The model assumes that companies are able to borrow long term an amount equal to their annual tax savings resulting from the implementation of the Heckler bill.

The model assumes that the long term borrowings do not restrict other sectors in the economy from expanding.

Data are retrieved from the 1975 Economic Report Of The President and the Statistical Abstract of the US, 1977 edition and the Almanac of Business and Industrial Financial Ratios, 1977 edition.●

---

By Mr. BAYH (for himself, Mr. DECONCINI, Mr. KENNEDY, Mr. ABOUREZK, Mr. PAUL G. HATFIELD, and Mr. MATHIAS):

S. 2937. A bill to amend the Speedy Trial Act of 1974 to provide further authorization for appropriations for pretrial services agencies; to the Committee on the Judiciary.

PRETRIAL SERVICES AGENCIES

● Mr. BAYH. Mr. President, today along with Senators DECONCINI, KENNEDY, ABOUREZK, PAUL HATFIELD, and MATHIAS, I am pleased to introduce a bill to amend the Speedy Trial Act of 1974, Public Law 93–619, to provide continued, short-term authorization for appropriations for pretrial services agencies.

Title II of the Speedy Trial Act of 1974 authorized the Director of the Administrative Office of the U.S. Courts to establish, on a 4-year demonstration basis, 10 pretrial services agencies in representative judicial districts. These districts, central California, northern Georgia, northern Illinois, Maryland, eastern Michigan, western Missouri, eastern New York, southern New York, eastern Pennsylvania, and northern Texas were selected in accordance with the criteria set forth in the statute.

The second title of the Speedy Trial Act is designed to improve the efficiency and deterrent of the criminal justice system. More specifically it is designed to reduce the likelihood that defendants released prior to trial will commit a subsequent crime before trial commences. When Congress passed the Speedy Trial Act it was of the view that more careful selection of pretrial release options for defendants and closer supervision of released defendants would reduce pretrial crime. Congress further attempted to alleviate the fugitive problem by providing 10 Federal districts on a demonstration basis with sufficient resources to both conduct bail interviews and supervise conditions of release. This approach was applauded by nearly everyone who testified or commented on it during hearings held by the Senate Constitutional Rights Subcommittee prior to enactment of the Speedy Trial Act.

Pretrial services agencies perform two basic functions: First, the compilation and verification of background information on persons charged with the violation of Federal criminal law for the use of the district judge or a U.S. magistrate in setting bail and, second, the supervision of persons released from pretrial custody including the provision of counseling and other pretrial services. The stated objectives of the act are to reduce pretrial detention and pretrial recidivism.

The funds provided by the Congress in the amount of $10 million for the operation of pretrial services agencies were made available in fiscal year 1975 to remain available until expended. The legislative history of the act indicated that as much as $1 million each year could be spent for the operation of each of the 10 pretrial services agencies and that Congress intended to monitor the operation of these agencies to determine whether additional authorizations for appropriations would be required. Through careful management the initial appropriation of $10 million will provide for the operation of the program through December of 1978. However, the final report of the Administrative Office of the U.S. Courts on the operation of the pretrial services agencies and recommendations concerning the future of the program is not due until September 1979. Sufficient funding is needed to insure the continuation of this program until the Congress has had ample time to consider the final report and determine the future of the program.

The 10 pretrial services agencies have been in operation for 27 months. In fulfilment of their responsibilities these agencies have interviewed more than 20,000 accused persons and provided information to judicial officers to assist them in their release decisions, have supervised more than 11,000 persons released to their supervision, and have provided services to persons released pretrial including counseling and assistance in securing employment, medical, legal, or social services. In certain situations specialized agencies, such as drug treatment programs, provided the necessary pretrial services.

The Speedy Trial Act requires extensive data collection designed to satisfy the requirements for annual reports and a final, comprehensive report concerning the administration and operation of the pretrial services agencies by the director of the Administrative Office of the U.S. Courts, including the views and recommendations of the administrative office at the end of the 4-year demonstration program. Preliminary results of the administrative office noted that over 12,000 of the 20,000 persons interviewed

have reached final disposition and the data from these cases is now available for analysis.

It is projected that more than 30,000 Federal offenders will have gone through the pretrial services program by the conclusion of the demonstration phase of the program in September 1979. It is anticipated that this data will provide, along with other information, a substantial basis for the evaluation of the program and its impact on the criminal justice system.

Mr. President, if the Congress is to benefit from the mandates of Title II of the Speedy Trial Act of 1974, which established these 10 pretrial services agencies, it is then imperative that we provide the necessary resources to carry out the directives of the 93d Congress. The legislative history of the act indicated that Congress intended to monitor the operations of the pretrial services agencies concerning the future of the programs and its possible expansion to other district courts.

Congressman RODINO has introduced H.R. 10934, a similar amendment to the Speedy Trial Act for the continued authorization of appropriations for pretrial services agencies. This legislation is presently pending before Congressman CONYERS House Subcommittee on Crime. I look forward to working with my House colleagues in order to process this legislation as expeditiously as possible so that the pretrial services agencies can continue their work in an atmosphere of confidence—confidence that the Congress is interested and willing to support the continuation of the demonstration pretrial services agencies.

Mr. President, I call on my colleagues to support this legislation until Congress has had ample time to consider the final report of the pretrial services agencies and determine the future of the program. I ask unanimous consent that the text of the bill be printed in the RECORD at this point.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2937

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That section 203 of the Speedy Trial Act of 1974 is amended by striking out the period at the end thereof and inserting in lieu thereof the following: "; and for the fiscal year ending September 30, 1979, to remain available until expended, the sum of $5,000,000.".●

## ADDITIONAL COSPONSORS

S. 3

At the request of Mr. KENNEDY, the Senator from Minnesota (Mrs. HUMPHREY) was added as a cosponsor of S. 3, the Health Security Act.

S. 419

At the request of Mr. HASKELL, the Senator from Oklahoma (Mr. BELLMON) was added as a cosponsor of S. 419, the Federal Oil Shale Commercialization Test Act.

S. 1780

At the request of Mr. DOMENICI, the Senator from Illinois (Mr. PERCY), and the Senator from Montana (Mr. MELCHER) were added as cosponsors of S. 1780, the elementary and secondary education optional consolidation and reorganization bill.

S. 1820

At the request of Mr. HELMS, his name was removed as a cosponsor of S. 1820, a bill to authorize the Secretary of the Interior to assist the States to establish programs for the maintenance of natural diversity, and for other purposes.

S. 2602

At the request of Mr. EAGLETON, the Senator from New Mexico (Mr. SCHMITT) was added as a cosponsor of S. 2602, a bill to prohibit the concurrent exercise of functions, powers, and duties which are exercise by an officer appointed by the President by and with the advice and consent of the Senate by an officer who has not received such advice and consent.

S. 2645

At the request of Mr. WILLIAMS, the Senator from Minnesota (Mr. ANDERSON) was added as a cosponsor of S. 2645, a bill to establish an Art Bank.

S. 2744

At the request of Mr. SCHWEIKER, the Senator from Colorado (Mr. HART) was added as a cosponsor of S. 2744, the Rural Health Services Act of 1978.

S. 2780

At the request of Mr. HATHAWAY, the Senator from West Virginia (Mr. RANDOLPH) was added as a cosponsor of S. 2780, a bill to amend the Public Health Service Act to provide for grants and contracts for projects to provide health and dental care to medically underserved rural populations, and for other purposes.

S. 2804

At the request of Mr. DOMENICI, the Senator from New Mexico (Mr. SCHMITT) was added as a cosponsor of S. 2804, a bill to expand the licensing and related regulatory authority of the Nuclear Regulatory Commission for certain specified activities, and for other purposes.

S. 2807

At the request of Mr. DOMENICI, the the Senator from Illinois (Mr. PERCY) and the Senator from Montana (Mr. MELCHER) were added as cosponsors of S. 2807, the Bilingual Education Act Amendments of 1978.

S. 2862

At the request of Mr. HASKELL, the Senator from Kentucky (Mr. HUDDLESTON) was added as a cosponsor of S. 2862, the Regulatory Control Act.

S. 2843

At the request of Mr. HELMS, the Senator from Idaho (Mr. MCCLURE) was added as a cosponsor of S. 2843, a bill to provide for the issuance of gold medallions, and for other purposes.

S. 2850

At the request of Mr. EAGLETON, the Senator from West Virginia (Mr. RANDOLPH) was added as a cosponsor of S. 2850, a bill to amend the Older Americans Act to provide for improved programs for the elderly, and for other purposes.

S. 2895

At the request of Mr. BENTSEN, the Senator from Montana (Mr. PAUL G. HATFIELD), the Senator from Minnesota (Mr. ANDERSON), the Senator from Idaho (Mr. CHURCH), the Senator from Nevada (Mr. LAXALT), the Senator from Oklahoma (Mr. BARTLETT), the Senator from North Dakota (Mr. YOUNG), the Senator from Hawaii (Mr. MATSUNAGA), the Senator from Kentucky (Mr. FORD), and the Senator from Idaho (Mr. MCCLURE) were added as cosponsors of S. 2895, a bill to amend the Meat Import Act of 1964.

S. 2912

At the request of Mr. CLARK, the Senators from Nebraska (Mr. CURTIS and Mr. ZORINSKY) and the Senator from Minnesota (Mrs. HUMPHREY) were added as cosponsors of S. 2912, a bill to strengthen the economy of the United States through improved loan rates and target prices for producers of wheat, feed grains, and upland cotton.

S. 2920

At the request of Mr. THURMOND, he was added as a cosponsor of S. 2920, a bill to amend the Trade Act of 1974.

SENATE JOINT RESOLUTION 29

At the request of Mr. BURDICK, the Senator from Texas (Mr. TOWER) was added as a cosponsor of Senate Joint Resolution 29, to authorize the President to annually proclaim National Family Week in that week in November which includes Thanksgiving Day.

SENATE CONCURRENT RESOLUTION 73

At the request of Mr. DOLE, the Senator from South Carolina (Mr. THURMOND), the Senator from Kentucky (Mr. HUDDLESTON), and the Senator from New Mexico (Mr. SCHMITT) were added as cosponsors of Senate Concurrent Resolution 73, regarding the imposition of import fees on crude oil.

AMENDMENT NO. 1716

At the request of Mr. CRANSTON, the Senator from Colorado (Mr. HASKELL) was added as a cosponsor of Amendment No. 1716 intended to be proposed to S. 2570, a bill to amend the Comprehensive Employment and Training Act of 1973 to provide employment and training services, to extend the authorizations, and for other purposes.

## SENATE RESOLUTION 434—SUBMISSION OF A RESOLUTION AUTHORIZING PRINTING

Mr. CHURCH (for himself and Mr. DOMENICI) submitted the following resolution, which was referred to the Committee on Rules and Administration:

S. RES. 434

*Resolved,* That there be printed for the use of the Special Committee on Aging thirteen hundred additional copies of part one

of its report to the Senate entitled "Developments in Aging: 1977."

## AMENDMENTS SUBMITTED FOR PRINTING

### AIR TRANSPORTATION REGULATORY REFORM ACT OF 1978—S. 2493

AMENDMENT NO. 1788

(Ordered to be printed and to lie on the table.)

Mr. MELCHER (for himself and Mr. McGOVERN) submitted an amendment intended to be proposed by them, jointly, to the bill (S. 2493) to amend the Federal Aviation Act of 1958, as amended, to encourage, develop, and attain an air transportation system which relies on competitive market forces to determine the quality, variety, and price of air services, and for other purposes.

AMENDMENT NO. 1789

(Ordered to be printed and to lie on the table.)

Mr. McGOVERN submitted an amendment intended to be proposed by him to the bill (S. 2493), supra.

● Mr. McGOVERN. Mr. President, I submit this amendment to S. 2493, the Air Transportation Regulatory Reform Act, in the nature of a substitute to my amendment No. 1781, an amendment concerning the automatic market entry section of this legislation. Mr. President, I ask unanimous consent that this substitute amendment to S. 2493 be printed in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

AMENDMENT No. 1789

On page 18, beginning on line 21, strike everything through line 20 on page 21, and insert in lieu thereof the following:

"(2) During each of the calendar years 1979, 1981 and 1983, each air carrier or person specified in paragraph (1) may select one segment, not to exceed 3,000 statute miles in length, over which it shall be authorized by the Board to provide scheduled nonstop air transportation of persons, property, and mail; *Provided however*, that the Board shall not grant such authority to any carrier or person which has received new route authority in excess of 1,000 cumulative statute miles under subsections (a)(1) or (i) of this section during the 12-month period immediately preceding the date for filing selections under this subsection. No segment may be selected (A) if the average load factor, during the six-month period prior to such selection, in service provided to such segment by any air carrier was less than fifty-five per centum; or (B) which has been designated by another air carrier under paragraph (3) as being closed for that year to automatic entry under this subsection. Initial selections shall be filed with the Board on the first business day of July in each year for which automatic entry is authorized. Final selections shall be certified as selected by the Board by September 1, of the year in which the selection was filed, unless the Board finds that the air carrier or person making the selection is not fit, willing, and able to provide the air transportation selected, and to conform to the provisions of this Act and the rules, regulations, and requirements of the Board made or issued under this Act. Based on such certification, that air carrier or person shall be authorized to engage, for the next 20 months, in scheduled nonstop air transportation of persons, property, and mail over the segment selected.

"(3) Each air carrier specified in paragraph (1) may, for each year in which automatic entry is authorized, designate a number of segments between which it provides regularly scheduled nonstop air transportation, which shall not be open to automatic entry under this subsection as follows:

"(A) For the year 1979, two such segments.

"(B) For the year 1981, two such segments.

"(C) For the year 1983, one such segment may be designated under this paragraph. Designations for each year shall be filed with the Board on the first business day of January of the year for which the designations are made."

CONFORMING AMENDMENTS

1. On page 17, line 18, strike out the words "each year".

2. On page 21, line 21, renumber paragraph "(5)" to "(3)", and renumber all succeeding paragraphs accordingly.

3. On page 21, line 22, after the word "year" add the following, "for which automatic entry is authorized,".

4. On page 22, line 14, strike out the words "either of" and the number "2".

5. On page 22, line 15, strike out the word "calendar", change "years" to "year", and after the word "year" insert the following, "for which automatic entry was authorized,".

6. On page 23, line 25, after the word "segments" insert a comma and the words "if any,".

7. On page 24, line 7, after the word "segments" insert a comma and the words "if any".

8. On page 24, lines 12 and 13, change "1983" to "1984".

9. On page 24, line 17, change the number "4" to "5".

10. On page 24, line 20, change "(9)" to "(7)".

11. On page 27, line 11, add the following new paragraph: "(11) The automatic entry program established by this subsection shall terminate on June 30, 1985."

### NAVIGATION DEVELOPMENT ACT—H.R. 8309

AMENDMENTS NOS. 1790 AND 1791

(Ordered to be printed and to lie on the table.)

Mr. MARK O. HATFIELD submitted two amendments intended to be proposed by him to the bill (H.R. 8309) authorizing certain public works on rivers for navigation, and for other purposes.

AMENDMENT NO. 1792

(Ordered to be printed and to lie on the table.)

Mr. DOMENICI submitted an amendment intended to be proposed by him to the bill (H.R. 8309), supra.

LOS ESTEROS LAKE

● Mr. MARK O. HATFIELD. Mr. President, I am introducing today an amendment that I plan to offer to H.R. 8309. This amendment seeks to assure that artifacts from archeological sites dating to 3000 B.C. will be preserved before Los Esteros Lake in New Mexico is filled by floodwaters.

During the past 6 years, the National Park Service, Southern Methodist University, and the Center for Anthropological Studies in Albuquerque have carefully studied and cataloged the reservoir area. They have identified 60 sites eligible to be listed in the National Register. These range from 5,000-year-old campsites, where Indian families left grinding and scraping stones, more recent Indian sites with pottery and other artifacts, and the dwellings of European settlers and ranchers beginning in the 18th century.

The rescue and cataloging of these artifacts may provide important information in our study of the history of the Southwest.

To date the Corps of Engineers has obligated $261,000 to make these evaluations, and to begin to recover some of the artifacts. That sum, which is 1 percent of the cost of the Los Esteros project, is the limit permitted under Public Law 93-291.

My amendment authorizes an additional $200,000 to complete this important archeological work. The figure, I might add, is based on field investigations, and a plan developed by the Historic Preservation Office of New Mexico, the Advisory Council on Historic Preservation, and the Corps' District Engineer in Albuquerque.

Mr. President, this is a sound and reasonable amendment. But we must act quickly. By this fall, the elevation of the dam will reach a level where a severe storm could flood sites not yet excavated and for which no money is presently available. I hope it will prove acceptable to the Senate.

I ask unanimous consent that the amendment be printed at this point in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

AMENDMENT No. 1792

On page 17, after, line 5, insert the following and number accordingly:

"SEC. —. The project of Los Esteros Lake, Pecos River, New Mexico, authorized by Sec. 203 of the Flood Control Act of 1954 (68 Stat. 1260), is hereby modified to authorize the expenditure of not to exceed $200,000 for the recovery of cultural resource data, in addition to any amounts authorized for this purpose pursuant to the Reservoir Salvage Act of 1960, as amended (88 Stat. 174)."●

### NATIONAL PARK SYSTEM—S. 2876

AMENDMENT NO. 1793

(Ordered to be printed and referred to the Committee on Energy and Natural Resources.)

Mr. CRANSTON submitted an amendment intended to be proposed by him to the bill (S. 2876) to provide for increases in appropriations ceilings for development ceilings, land acquisition for boundary changes in certain units of the National Park System, and for other purposes.

### FULL EMPLOYMENT AND BALANCED GROWTH ACT—S. 50

AMENDMENT NO. 1794

(Ordered to be printed and referred to the Committee on Banking, Housing,

and Urban Affairs and the Committee on Human Resources, jointly.)

Mr. PROXMIRE submitted an amendment intended to be proposed by him to Amendment No. 1703 intended to be proposed to S. 50, the Full Employment and Balanced Growth Act.

Mr. PROXMIRE. Mr. President, today I am submitting an amendment to the Full Employment and Balanced Growth Act—S. 50—that makes it clear that the Congress believes it is desirable, necessary, and feasible to achieve full employment and price stability together.

The major focus of S. 50 is on employment and the policies to achieve full employment. The bill has interim numerical goals of reducing unemployment among Americans aged 20 and over in the civilian labor force to not more than 3 percent, and to reduce unemployment among the entire civilian labor force aged 16 and over to not more than 4 percent by the end of the fifth year after enactment—which means in all probability 1983 full employment must be sustainable once it is achieved. Therefore, the creation of jobs must be done in an economy with an expanding level of production, increasing productivity, and a stable and much lower level of inflation than we have experienced recently.

Most economists now believe that unemployment and inflation can and should be dealt with together rather than separately. Indeed, the notion of a strict "Phillips curve" tradeoff has been rejected. We can and we must choose policies directed at both reasonable full employment and reasonable price stability. If no strict trade-off exists, neither goal would jeopardize the other.

Mr. President, my amendment to S. 50 establishes as an interim goal, to go along with the interim goals for unemployment, the reduction of the rate of inflation to 3 percent or less. As with the other interim goals this goal is set for the fifth year after enactment of S. 50. This appears to me to be a desirable and an attainable goal for inflation 5 years from now.

Some of my colleagues will argue that a 3 percent inflation goal is too high. I agree that 3 percent inflation is too high, but I do not think we would have a reasonable chance of doing much better than that within 5 years. If goals are to be workable they must have a chance of being achieved. If we can do better than 3 percent I will be the first to applaud the policies set by the Congress. This amendment certainly does not prevent us from doing better than the established numerical goals.

Other of my colleagues will no doubt argue that 3 percent inflation is unattainable within 5 years. They may, in fact, say that we cannot get the inflation rate that low ever again. I reject that. It is very easy to close our eyes to inflation. It is too easy for the Congress to pass legislation and to create new programs that are inflationary. But it is very difficult for the Congress to reduce expenditures for programs once they have been approved.

It must be fully understood that inflation cannot be curbed without the appropriate policies. The Full Employment and Balanced Growth Act could exacerbate inflation if it is passed without an explicit inflation target that the Congress must take cognizance of when it decides on appropriate economic policies. Ways must be found to stop the boom-bust cycle, and that is a fundamental reason why the inflation goal is needed. We must admit that to a large extent our inflation has its roots in excessive Government spending and large and growing Federal deficits.

The discipline imposed by targets has worked quite well for many private corporations. If that discipline is to work in Government the economic goals must be there for the Congress and the administration to see. The Federal Government must face up to its obligations, and goals can be helpful if they are prudently and objectively selected.

The supporters of the Full Employment and Balanced Growth Act claim that the establishment of an inflation goal to go along with the unemployment goals will reduce the Government's commitment to achieve full employment. Mr. President, this need not be the case. My amendment makes it clear that in establishing an interim inflation goal the Congress reaffirms its desire to achieve full employment by explicitly stating that, "Policies to achieve the inflation goal shall be designed so as not to impede the achievement of the unemployment goals."

Some may also argue that our current inflation was caused by events entirely outside the Government's control, by the OPEC oil price increases, and from adverse weather conditions, and that such events could happen again which would make the inflation goal unachievable. We cannot plan for exogenous shocks; that is a fact. But it is also true that the inflationary effects of the shocks that took place several years ago have largely worked their ways through the economy, except for the residual inflationary spiral that was left behind. The inflationary spiral has created an "underlying" inflation rate of 6 to 7 percent. As long as prices chase wages and wages chase prices, we are bound to have inflation. We must recognize that as long as every interest group attempts to catchup what has been previously lost, progress will be very difficult to make. That is another reason why the inflation goal is needed along with the unemployment goals—to alert everyone to the fact that inflation must be reduced along with unemployment, and that it will take a concerted effort by everyone to do that.

Mr. President, we must recognize that in the past tight monetary policy by the Federal Reserve has been the main continuously used policy tool aimed at reducing inflation. However, along with periodic tight money has come slow growth and loss of jobs, because monetary policy is a very blunt weapon to use against inflation. There is little that monetary policy can do to stop an inflationary spiral except to stop the economy. I do not want to see that happen, and I trust that the Congress and the members of the Federal Reserve Board do not want it either. By establishing and working toward a specific goal of reducing inflation, the Congress will be working with the Federal Reserve, not against it, and hopefully this will lessen the need for the Federal Reserve to lean with all its power and might against the inflationary winds. Hopefully monetary policy can take an easier stance so that investment and capital formation can be encouraged, rather than discouraged, which will lead to more jobs, higher productivity, and in the end less inflation.

Recently, the new Chairman of the Federal Reserve Board, G. William Miller, indicated in testimony before the House Banking Committee his support for an explicit numerical inflation goal. Mr. Miller's exchange with Congressman AuCoin went as follows:

Mr. MILLER. I would prefer, Mr. Congressman, to see a more explicit reference to the inflation aspect in the Humphrey-Hawkins bill. If you recall, the prior legislation that still is very important is the Employment Act of 1946. In that Act, we established a national policy of full employment without a specific level being cited, but full employment left to circumstances as they developed.

But that also, often forgotten (Act), has language that explicitly provides that full employment will be achieved by creating conditions for investment and growth in the private sector of the economy and with price stability. I think those principles ought to be reaffirmed, and if we are going to be specific in numbers for employment, I think it would be well to look at some explicit view of what inflationary forces mean.

Mr. AuCOIN. So to that extent you see a defect in the Humphrey-Hawkins legislation progressing through the Congress?

Mr. Miller. I see a preference in terms of the process under which Humphrey-Hawkins would operate. I see that it could work without a specific number on inflation. I would prefer to have it.

Finally, Mr. President, the establishment of an explicit numerical inflation goal is consistent with the anti-inflation program announced last week by President Carter. By recognizing the need to approach the goals of full employment and lower inflation together in the Full Employment and Balanced Growth Act, the Congress will be expressing it support for the approach to inflation taken by the President—by clearly recognizing the problems and causes of inflation and the need for voluntary efforts to reduce the inflationary spiral.

Mr. President, I ask unanimous consent that the text of my amendment be printed in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

AMENDMENT No. 1794

On page 10 insert after line 14 a new subsection (5) as follows:

"(5) for all of the purposes of the Full Employment and Balanced Growth Act of 1978, the phrases "rate of inflation" and "reasonable price stability" shall refer to the

rate of change or level of the consumer price index as set forth by the Bureau of Labor Statistics, U.S. Department of Labor.".

On page 11, line 16, after the words "per centum", insert the following:

"and to reduce the rate of inflation to 3 per centum or less".

On page 11, line 23, after ".", insert the following:

"Upon achievement of the 3 per centum inflation goal, each succeeding Economic Report shall have the goal of further reducing the rate of inflation toward zero. Policies to achieve the inflation goal shall be designed so as not to impede the achievement of the unemployment goals."

## NOTICES OF HEARINGS

COMMITTEE ON GOVERNMENTAL AFFAIRS

● Mr. RIBICOFF. Mr. President, the Committee on Governmental Affairs will continue hearings on the Civil Service Reform Act of 1978, S. 2640, on Wednesday, April 19, and Thursday, April 20. The hearings each day will be held in room 3302 of the Dirksen Senate Office Building. On Wednesday, April 19, the hearing will begin at 10:15 a.m. On Thursday, April 20, the hearing will begin at 9:45 a.m. The following is the list of witnesses from whom the committee will hear on these 2 days:

April 19, 1978:

Mr. William A. Hammill, International Personnel Management Association;

Panel: National Association of Supervisors—Mr. Rod Murray, National President; Mr. Bun B. Bray, Jr., Executive Director; and Mr. James L. Hatcher, Assistant Executive Director.

April 20, 1978:

Senator Patrick Leahy;

Florence Isbell, American Civil Liberties Union;

Panel: Ernest Fitzgerald, Robert Sullivan and Anthony Morris.●

SUBCOMMITTEE ON IMPROVEMENTS IN JUDICIAL MACHINERY

● Mr. DECONCINI. Mr. President, I wish to announce that open public hearings will be held by the Subcommittee on Improvements in Judicial Machinery of the Committee on the Judiciary on S. 2094, S. 2389, and H.R. 9622, bills affecting the jurisdiction of the Federal courts in diversity of citizenship cases and the amount in controversy requirement in Federal question cases.

The hearings will be held on April 25, 1978, in room 5110, Dirksen Senate Office Building, commencing at 9 a.m.

Those who wish to testify or submit a statement for inclusion in the record should communicate as soon as possible with the Subcommittee on Improvements in Judicial Machinery, 6306 Dirksen Senate Office Building, Telephone (202) 224–3618, Washington, D.C.●

## ADDITIONAL STATEMENTS

### THE NEUTRON BOMB AND WORLD OPINION

● Mr. MATHIAS. Mr. President, it often is said that the passage of time is a great remedy, that time cures all things, and surely this is true. But, sometimes the passage of time obscures facts, and our perception of facts, in a way which dulls our ability to make judgments about critical issues affecting our world.

For example, in World War II and the years that immediately followed, there was a very active knowledge about the effects of an atomic bomb. We all carried in our mind's eye the mushroom cloud scenes of Nagasaki and Hiroshima, each devastated by an atomic bomb. The world was well aware of what was meant when we talked about the use of atomic and nuclear weapons.

Time has to some extent healed the scars that were created by these dreadful scenes, and people today are not as actively interested in the question of nuclear weapons as they were, or as they ought to be. And this is regrettable, because the kind of devastation which can be wrought by nuclear weapons is truly awesome, and it ought to be constantly kept in mind by the statesmen of the world, as well as by the people who send the statesmen out to work to prevent a nuclear holocaust.

It is with this perspective that we should approach the question of production and deployment of the neutron bomb. This bomb is a nuclear device in which the heat effect and the blast effect is reduced, but the radiation effect—the third element of nuclear bombs—is very strong and very highly active. That's why scientists call it the ER, or enhanced radiation bomb.

So, a neutron bomb does not destroy vast amounts of property, but does effect the health and life of human beings within its burst area.

I have reservations about the neutron bomb, as I think most people do. I don't know of anyone who can be enthusiastic about the existence or the use of the neutron bomb. But, I think the manner in which the President has expressed his reservation, the indecisive way he approached the determination whether or not to deploy the bomb, has had an unfortunate side effect that might in nuclear terms be called fallout.

The President's indecisiveness has helped focus world attention on a weapon that we in the United States do not have in production, that we do not have ready for deployment. The world has been listening to our internal debate while the Soviet Union has been getting ready to deploy a tactical nuclear missile, the SS–20, without the hindrance of public criticism, without the burden of global disapproval.

We ought to give the Russians equal time in the public criticism which surrounds the weapons issue. We shoud have seen a little more public attention being paid to what the Soviets are doing to threaten the European balance, and less to what the effect of our deployment might be several years from now. After all, the neutron bomb is a specific response to the thousands of tanks the Russians have fielded and which have barely been mentioned by anyone.

For us to give up the neutron option completely can only be viewed as a sign of weakness and indecisiveness when we do not make a demand for an equal forbearance on the part of the Soviet Union. Because the neutron bomb is a tactical and not a strategic weapon, it is not subject to the SALT negotiating process.

I hope that the Secretary of State will be asking the Soviets hard questions about their willingness to rein in their European buildup. Restraint on our development of the neutron bomb should come in the context of reciprocal Soviet restraint.●

### U.S. POSTAL SERVICE

● Mr. FORD. Mr. President, I submit for the RECORD an editorial which was broadcast on radio station WOMI–WBKR, the Owensboro Broadcasting Co., Owensboro, Ky., on April 12, 1978.

The text of the editorial follows:

EDITORIAL

We saw the other day where an electronics firm won the contract to supply the U.S. Postal Service with a number of gadgets that are supposed to sort letters, excuse the expression, post-haste. We suppose they are very efficient devices, and quite costly. To make them practical from a cost standpoint the postal service has to have a lot of letters available for them to sort. We understand that to accomplish the chore of assembling a sufficient quantity of mail needing sorting, the postal big-wigs have ordered that letters be trucked from little and large postoffices to a really large one where the machines will be located. There they will be sorted and then trucked back to the starting point for distribution to letter carriers, and then to patrons. The net result will be to make local mail take longer than mail from distant points to get delivered. This fact is underscored by the restrictions placed on the newly created express mail, and the limited areas where it is available.

We hear by the grapevine that Owensboro is one of the large cities whose letters will be trucked to a larger city for sorting and return. The larger city is Evansville.

We fail to understand how the new system will be as efficient time-wise as present methods, unless it might be to speed the handling of bulk mailings like church news letters just through sorting them with the regular staff.

We predict that in order to take advantage of speeded-up letter sorting, we will have to pay in slowed down total delivery time, and a smaller clerk force in the postoffices of the nation.●

### SENATOR WEICKER SPEAKS ON LAW AND ORDER

● Mr. HEINZ. Mr. President, last Saturday evening the distinguished Senator from Connecticut (Mr. WEICKER) delivered a thoughtful and courageous address at the annual dinner of the Amen Corner in Pittsburgh.

Senator WEICKER's topic was law and order but his remarks went beyond what we normally think of when that term is used. Instead of discussing crimes such as theft, murder, or robbery, the Senator from Connecticut spoke movingly

about fundamental destructions of justice by government and elected officials, by labor and business leaders, and by "average" middle Americans—the very groups one does not think of when crime is the subject of discussion. Prominent among the Senator's subjects were the FBI break-ins and the Korean bribery scandal, the latter of particular interest to Senator WEICKER because of his recent service on the Senate Ethics Committee.

Mr. President, this is a thoughtful speech which reflects a great deal of knowledge and interest on the Senator's part. It is a courageous speech because it meets head on issues many of us might wish to push into the background. I commend Mr. WEICKER's remarks to my colleagues and ask that they be printed in the RECORD.

The remarks follow:

AN ADDRESS BY SENATOR LOWELL WEICKER

I would like to spend my time with you this evening discussing law and order. I am aware that in a technical sense this is not your life's work—but in the sense of your American citizenship it is part of your life.

This is not going to be a discussion of cliches of the type that define law and order in terms of capital punishment, plea bargaining, social injustice or federal funding for law enforcement.

Rather, I am asking that we examine to what extent each of us intends to obey the law and to commit to seeing that the law is enforced. For those of you who are "all the way" on both counts a cheer and sincere congratulations.

Unfortunately, the record of respect and support for a government of laws in this nation is of such a declining nature as to paint a different picture—a picture that is out of focus, off base and for the birds.

Even now I'm sure there are those listening to this speech who are mentally nodding in agreement as they envisage the destruction of justice as some young city black holding a knife to an old lady's throat (she of course is white) or some Hispanic raping a young teenager (she of course is a middle-American).

But surprise! This evening when I talk about the destruction of justice I'm going to talk about us. By us I mean Senators, Presidents (of countries and corporations), judges, secretaries of State, labor leaders, doctors, lawyers, businessmen, small business owners, well-to-do-America, middle America, law enforcement officials, salesmen, housewives, the educated, the religious, whites—in other words, everybody except those who we traditionally conjure up in our minds' eye as having committed a crime.

And I'm going to do this because though I deplore the taking of even one life in a dark and lonely alley somewhere, I despair even more when a nation loses its life in broad daylight in full view.

You ask what's this business of America losing its life. It's the business of moving from a government of laws to becoming a government of men. It's the business of people deciding which laws they're going to enforce and which laws they are going to obey. It's the business of deeming oneself as sufficient to substitute for the constitutional process.

True, the recent pronouncements of the Attorney General relative to alleged violations of law by members of the FBI is what fired up this speech but that travesty is only the latest in an unbroken march toward selective law breaking and selective enforcement that is the scandal of our generation. And this scandal is in addition to, not part of Watergate.

Let me start with the FBI scenario because in one way or another I've been intimately involved with this Agency and its personnel for quite some time now.

A year ago, both during Appropriations hearings and in private, I reiterated my views to the new Attorney General Bell that allegations of wrongdoing against members of the FBI should travel the full course of justice. At that time the case of Agent John Kearney was the focal point of legal and public interest. I also made it clear that the investigative trail should be followed no matter how high it led. Little did I surmise that allegations of illegal activities would travel from a Kearney who I did not know to L. Patrick Gray who I did know, liked and who had already suffered greatly from past misfortunes.

So naturally the question was asked by many as to what I thought of my original admonition to Griffin Bell, my original criticism of the rhetoric of the founders of the Kearney defense fund now that it was a friend who was involved.

Well, the admonition and criticism stick and, moreover, I disagree with substitution of administrative action for Constitutional Justice when it comes to Messrs. Kearney, LaPrade and such other agents who may have engaged in acts deserving of the full scrutiny and verdict of the legal process.

The fact these gentlemen are members of the Federal Bureau of Investigation should guarantee the best of their behavior not the worst. Moreover, the "following orders" excuse was rejected and the rejection made international law by your country at Nuremberg. The "we were after terrorists" justification has some difficulties in the definition because of an official Washington, FBI included, that only a few years back equated enemies with valid dissent. For example, U.S. military intelligence in West Germany was breaking and entering the abodes of American citizens which citizens were supporters of Senator George McGovern. These people were hardly terrorists or enemies.

No, I don't believe in Hoover justice, Mitchell justice or Bell justice. I do believe in the American system of justice and its capacity, unsurpassed in human history, to determine innocence and guilt.

Yes, some of Mr. Kearney's fundraisers, to the contrary notwithstanding, you can have effective law enforcement which is Constitutional. The inefficiencies of law enforcement which frustrate many of us from time to time exist primarily because two hundred years ago you—you as an individual, you as a human being, were deemed to be more important than the conveniences of society. Justice Black phrased it elegantly:

"Certainly, why shouldn't they? What were they written for? Why did they write the Bill of Rights? They practically all relate to the way cases shall be tried. And practically all of them make it more difficult to convict people of crime. What about guaranteeing a man a right to a lawyer? Of course, that makes it more difficult to convict him. What about saying he shall not be compelled to be a witness against himself? That makes it more difficult to convict him. What about the 'no search, unreasonable search or seizure shall be made?' That makes it more difficult. . . . Why did they want a jury? They wanted it so they wouldn't be subjected to one judge who might hang them or convict them for a political crime, or something of that kind. And so they had juries. And they said the same thing about an indictment. That's what they put it in for. They were, every one, intended to make it more difficult, before the doors of a prison closed on a man because of his trial."

Lastly as to this aspect of the law and order picture. From time to time, expressions of concern have issued forth as to lowered morale in the FBI should justice take its full course. I can appreciate that problem but, Ladies, and Gentlemen, I suggest the more crtitical problem confronting this nation is the rapidly deteriorating belief among all elements of our society in the equality of American justice. It's gotten to the point where we've gone from a presumption of innocence and an acceptance of the best in each other to the suspicion that everybody and every institution is ripping us off. Events such as I'm talking about do nothing to dispel that cynicism. Getting such negativism set straight had better be number one on the national spiritual agenda even ahead of soothing some hurt feelings in the FBI.

Now to turn to the law and order contribution or lack thereof by the political side of government.

As most of you know, both the Senate and House Ethics Committees have been investigating allegations of South Korean influence peddling among members of Congress. Until recently, I have been a part of that effort.

What Tongsun Park and his government did provokes, I'm sure, anger among the people of this country. Or, at least, I hope it does. But understand that what was done was taught South Korea by representatives of this country.

Remember several years ago when revelations of CIA money being used to influence the Italian elections were made known? How many of you dismissed that incident with a "well that's in Italy, not here." Now you know it was also here. And it was here because we were willing to accept a double standard specifically—keep the bribery abroad and it's okay. So our CIA taught the KCIA that principle and we are now reaping the rewards of lessons well taught and well learned. My question to each of us "at what point in time in our national morality did the correctness of bribe depend on whether it was a domestic or an international act?" I ask that question not only of government but of American business.

Back to the Park investigation. I felt from the cutset that the testimony and cooperation of Tongsun Park and his government would be of dubious value. That in the interest of a complete investigation it would be necessary to find other sources of information. I found those potential sources. Not among Washington lobbyists, not among embassy personnel, not by traveling to Seoul. But in the memoranda of my own government. Here it is everyone raising a hue and cry over Park and the Koreans and wonder of wonders the written record makes it clear that thanks to information supplied by various U.S. intelligence agencies, the FBI, the Justice Department, the State Department, the National Security Council, Director Hoover, Dr. Kissinger, Mr. Mitchell were all sent the information in 1971 that has this country in an uproar in 1978.

By what application of the law was the law sat on in 1971? Was it because Senators and Congressmen were involved? Was it for reasons of friendship or politics? Was it for future potential use?

For sure we know it wasn't for reasons of reinforcing the concept of "equal justice under law."

And so another example is set at the top which encourages everyone to write their own rule book. This violence doesn't manifest itself in rivers of blood or broken bodies but in a legacy that the old U.S. of A isn't going to be quite as good a place for our children as the one we inherited. A little more anarchy, a little less Constitutional democracy.

It was Lord Moulton that said, "The measure of a civilization is the degree of its obedience to the unenforceable."

Hell, we don't even make it to the ABC's and 1 plus 1 of our laws.

Business does its payoff thing overseas and explains it away as local custom.

Unions openly flout the Taft Hartley law and government tolerates the law breaking to the point where the courts throw government out of court.

Bert Lance philosophizes his problems away with the point that he has made money on what he is suspected of doing and consequently that vindicates him—all this while he peddles his White House connections in the Mid East.

Are we really waiting for the uneducated, the ill fed, the homeless, the poor, the despondent, the weak to set the law and order example in our country?

If so, this might be the occasion for only the second time in our young history to play "The world turned upside down."

Or is each one of us by personal example going to reestablish the United States as a government of laws? For awhile that will probably be a lonely business. However, it will do the job for law and order with the only cost being a measure of your love for all that is our nation.●

## REPRESSION OF HELSINKI WATCHERS IN U.S.S.R. CONTINUES

● Mr. PELL. Mr President, systematic repression of the Helsinki watchers in the U.S.S.R. continues unabated. Last Thursday, according to press reports from Moscow, Pyotr Vins, one of the newest members of the Ukrainian Helsinki Watch Group, was sentenced in Kiev to 1 year in labor camp on the charge of "parasitism," an accusation commonly leveled against human rights activists who lost their jobs and were unable to find work because of their activism. Vins joins his colleagues in the Ukrainian Public Group To Promote Observance of the Helsinki Accords as the latest victim of official reprisal: Of the 14 members of the group, 5 (Mykola Rudenko, Olsksiy Tykhy, Mykola Matusevych, Myroslav Marynovych, and now Pyotr Vins) have been tried and sentenced, 1 (Levko Lukyanenko) is awaiting trial, and 1 (Pyotr Grigorenko) has been permanently exiled from his country.

Pyotr Vins, the son of the imprisoned Baptist Pastor Georgi Vins, was in the process of applying to emigrate to Canada to join relatives there when he was arrested in mid-February. Although only 23 years old, young Vins had already paid a stiff price for his activities: he was denied the opportunity of a higher education and was twice detained for 15-day periods in December 1977. Now, Soviet authorities have extracted toll—a year in labor camp. I join my colleagues in the Congress in saluting this courageous young man. I hope my colleagues will join me in urging the immediate release of Pyotr Vins and the other imprisoned Helsinki watchers in the U.S.S.R.●

## OKLAHOMA PSRO PROJECT—OURS

● Mr. BARTLETT. Mr. President, approximately 2 years ago the Department of Health, Education, and Welfare published regulations requiring peer review of all admissions under medicare and medicaid programs. These regulations are commonly called the PSRO program.

The impact of these regulations on a predominately rural State is extremely significant, and in response to these regulations, the hospitals and physicians in Oklahoma submitted an application to the Department of Health, Education, and Welfare for the purpose of developing a workable program of admissions review that could handle both rural and urban hospitals.

Basically, the project was to determine whether or not it is possible to use a retrospective statistical audit of hospital performance to determine whether or not its internal utilization review is working properly.

The project was called the Oklahoma Utilization Review System (OURS), and it has now completed its first 12 months of operation. The Oklahoma Foundation for Peer Review, which operates the OURS project, has submitted their findings to the Secretary of Health, Education, and Welfare, and provided me with a brief history and statement on the current status of this operation.

The project has been cited as an example of innovation from the private sector, and I believe that the initial results prove that progress can be made toward stabilizing the Federal cost of health care.

Mr. President, I ask that a copy of the brief history and explanation of the OURS project be printed in the RECORD.

The material follows:

OKLAHOMA UTILIZATION REVIEW SYSTEM

BRIEF HISTORY AND EXPLANATAON

When Medicare and Medicaid became law in the mid-1960's, there was a provision in the original Act designed to be a "cost control" mechanism. The law provided that before a hospital could receive reimbursement through either program it was necessary for the institution to have a "utilization review plan" in effect.

The purpose of such a plan was to assure that whenever a Medicare or Medicaid patient entered a hospital they (a) needed a hospital level of services, (b) were rendered services that were medically necessary for the diagnosis given, and (c) did not remain in the hospital longer than was medically necessary.

The phrase "utilization review" referred to the fact that such a plan was designed to review the utilization of hospital bed space and ancillary services.

As the cost of the two federally funded programs began to increase from year to year, Congress began to search for a long term cost containment approach. At the same time HEW began to look for short term mechanisms that might control costs.

On November 29, 1974, HEW issued new Utilization Review Regulations, tightening up the regulations that had been issued when Medicare and Medicaid became law. Shortly after the new regulations were issued a Task Force was established in the state of Oklahoma to assist hospitals to comply with the new regulations. The Task Force consisted of representatives from the Oklahoma State Medical Association, Oklahoma Osteopathic Association, Oklahoma Hospital Association, the Hospital Licensing Section of Oklahoma State Health Department, and representatives from the Medicare and Medicaid agencies.

The Task Force quickly realized that the new U.R. Regulations tightened up the requirements to a point where they could actually endanger the financial existence of nearly 50 small hospitals in Oklahoma. The primary trouble was with the number of physicians required for a hospital to have a "utilization review plan" that met federal requirements. A plan was devised that would establish a statewide network of small utilization review committees . . . committees made up of physicians who would be willing to assist hospitals that did not have enough professional staff members to meet the U.R. Requirements on their own. However, federal regulations apparently did not provide for such hospital cooperation. In addition, in order to carry out such a plan it would be necessary to have a small amount of funding . . . funding for travel, rental of meeting space, telephone expense, etc.

In May of 1975 a delegation of Oklahoma physicians traveled to Washington and presented the idea of a statewide network of utilization review committees to some high-level HEW officials. The meeting with the officials was setup through cooperation of the Oklahoma Congressional Delegation and was held in Senator Henry Bellmon's office.

The idea of a statewide network of utilization review committees was met with some enthusiasm by HEW officials. The officials told the Oklahoma Delegation to prepare a formal plan and budget for submission to HEW. They offered to send the necessary experts to Oklahoma to help in the drafting of a formal grant request.

Over the next 18 months the Task Force worked with HEW experts to devise a formal plan. During that period of time, however, the plan grew from a simple statewide network of utilization review committees into a system that would assist every hospital in the state and would assure a uniform enforcement of utilization review requirements in all hospitals.

During the developmental period the utilization review plan gained a name . . . the Oklahoma Utilization Review System, and became known by the acronym "OURS". The plan is quite simple, a computer screening system has been developed to evaluate every hospital in Oklahoma on the basis of such things as average length of stay, use of ancillary services, charges per day, pre-operative length of stay, and the number of Medicare or Medicaid denials or partial denials. All of the information necessary to make the various evaluations comes from the Medicare and Medicaid claim forms filed by the hospital.

All of a given hospital's Medicare and Medicaid claims over a period of time are combined by a computer process to generate a series of statistics on the hospital. This results in a computer printout indicating the hospital's performance as compared to standards established by Oklahoma physicians. This computer printout is called the "report card".

The state is divided into six balanced regions with a Regional Review Team in charge of each. The regions are balanced by number of hospitals, number of physicians, and a number of possible beneficiaries. Each Review Team consist of nine physicians . . . an appropriate ratio of Medical Doctors to Doctors of Osteopathy in the region. The func-

tion of the Team is to examine each hospital's computer printout and then subjectively evaluate that hospital to eliminate or screen out individual deviations brought about by unique hospital circumstances. (As an example, a hospital with a large burn center might have an unusually long average length of stay. It's brought about by the fact that most burn victims are extremely long term hospital cases.)

The OURS plan is a double screening program . . . a statistical computerized screening that is followed up by a subjective human evaluation.

After the Regional Review Team evaluates the hospital's statistics, it is placed in a "review category" or "review status". Depending on the status, the Regional Review Team may make recommendations to help individual hospitals improve future performance. Using a "reward" approach, as a hospital's performance improves the required paperwork and formal review necessary is lessened.

The OURS plan was formally adopted in late 1975 by the Oklahoma Osteopathic Association, Oklahoma State Medical Association, Oklahoma Hospital Association, and the Oklahoma Foundation for Peer Review governing bodies. At that time it was forwarded to HEW with a request for full funding.

After a prolonged series of false starts, the project was finally approved and fully funded in late 1976 to begin operation for 12 months beginning on February 1, 1977. Total budget for the 12 month demonstration project was $198,000.

The OURS plan completed its 12 months of operation on January 30, 1978. The first 12 months of operation have now been analyzed and the following data made available.

The reference in the following tables to "baseline data period", refers to the period July 1–December 30, 1976. This was the last six calendar months before the operation of the OURS plan began.

OKLAHOMA UTILIZATION REVIEW SYSTEM, POTENTIAL HOSPITAL UTILIZERS

| Beneficiaries | Number possible | Data source |
|---|---|---|
| July to December 1976 —Baseline data period: | | |
| Title XVIII, pt-A (medicare). | 320, 218 | SSA, Baltimore monthly average from actual count. |
| Title XIX (medicaid). | 163, 155 | DISRS, monthly average from actual count. |
| SSA disabled | 34, 417 | SSA, Baltimore. |
| Renal disease | 563 | DHEW, Dallas Office, number as of Dec. 31, 1976. |
| Total | 528, 353 | |
| February 1977 to January 1978—12-mo operations: | | |
| Title XVIII, pt. A (medicare). | 351, 503 | SSA, Baltimore, estimate based on projected growth from 1976 data. |
| Title XIX (medicaid). | 154, 433 | DISRS, monthly average from actual count. |
| SSA disabled | 40, 422 | SSA, Baltimore estimate based on projected growth. |
| Renal disease | 591 | DHEW, Dallas Office, estimate based on 1976 data plus growth. |
| Total | 546, 949 | |

OURS, UTILIZATION COMPARISONS—BASELINE PERIOD TO 12-MO OPERATIONS

| | Baseline | Operational | Variance (percent) |
|---|---|---|---|
| Possible beneficiaries | $528, 353 | $546, 949 | Up 3.5. |
| Claims filed (title XVIII, XIX, SSA disabled and renal disease). | [1] 179, 470 | 174, 201 | Down 2.9. |
| Hospital days utilized | [1] 1, 558, 428 | 1, 564, 858 | Up 0.4. |
| Total charges submitted | [1] 193, 143, 202 | 228, 869, 625 | Up 19.02. |
| Claims per thousand possible beneficiaries. | [2] 339. 9 | 319 | Down 6.15 or 20.9 per thousand. |
| Days per thousand possible beneficiaries. | [2] 2, 951. 5 | 2, 866 | Down 2.9 or 85.5 per thousand. |
| Number of claims totally denied | [3] 2, 260 | 1, 497 | Down 33.8. |
| Percent of claims totally denied | 1. 25 | 0. 86 | Down 0.31. |
| Number of claims partially denied | [3] 508 | 195 | Down 61.6. |
| Average length of stay (days) | 8. 68 | 8. 98 | Up 0. 3. |
| Average pre-operative length of stay (days) | 3. 17 | 3. 03 | Down 0. 14. |

[1] Some baseline data have been projected for full 12 mo for comparison purposes. This was accomplished by doubling the actual data collected during the last 6 calendar months of 1976. Historically any skewing effect should favor the baseline period.

[2] Baseline data projected to full 12 mo for comparison.

[3] Denials for entire calendar year 1976 (Blue Cross/medicare).

GAMES WITH FIGURES (DAYS)

Multiply days decrease per 1,000 (85.5) by number of possible benefit utilizers (547 M) and by average charge per day ($146)—Equals—savings by non-utilization, $6,828,-201.

GAMES WITH FIGURES (CLAIMS)

Multiply claims decrease per 1,000 (20.9) by number of possible benefit utilizers (547 M) and by average charge per claim ($1,-321)—Equals—savings by non-utilization, $15,102,068.●

## FOREIGN MEAT IMPORTS

● Mr. MELCHER. Mr. President, the chairman of the Federal Reserve Board and the Director of the Council of Wage and Price Stability have both publicly suggested that we open up foreign meat imports to hold down beef prices, although beef prices in March were still below their level 4 years ago.

The cattle industry has just gone through the wringer. They have now finally liquidated herds to a point where supplies balance demand at a price level which will pay their costs of production, but they are still down economically—they have not recovered their very substantial losses of the last 3 or 4 years and they have not caught up on those notes at the bank which were to raise money enough to pay the losses of the last 4 years.

Trying to roll back meat prices at this time like sinking the liferaft that cattlemen have clung to to avoid drowning. Industrial profits have been improving. Workers have been getting their cost-of-living wage increases. No segment of our economy has suffered more than agriculture, especially our grain and livestock producers. The cattlemen are only beginning to see some solid ground ahead and it is premature to even think about rolling prices back on them.

The National Cattlemen's Association has recently printed in their Better Beef Business bulletin an excellent and objective analysis, in readable question-and-answer form, of the beef price situation

I ask to have it printed in the RECORD and I commend the analysis to all of my colleagues for study, and also especially to those in downtown agencies—including the White House and Federal Reserve System—who are inclined to start kicking before they know what they are doing.

The material follows:

WHAT'S BEHIND THE HIGHER BEEF PRICES?

Q. Why are beef prices going up?

A. The answer is simple—the law of supply and demand. Beef supplies are now decreasing from the record high levels of 1976 and 1977. Per capita supplies in the second quarter of 1978 will be about 7 percent less than a year earlier. Meanwhile, personal incomes as well as population have continued to increase, and total demand for meat has grown.

Q. What about other meats?

A. That's one reason why beef prices have been increasing. Pork production is not increasing, as previously forecast. As a result, per capita supplies of red meat in the coming months will be smaller than expected.

Q. But hasn't the beef price increase recently been exceptionally sharp?

A. Yes, it has. That's one thing that can happen in a commodity business. You sometimes get rather rapid price changes. One thing to remember is that prices often go down as rapidly as they go up. For example, the average price of Choice beef dropped from $1.49 to $1.35 per pound between January and March in 1976, while it went up this year from $1.48 in January to $1.58 in March. One reason for the recent increase was adverse weather and little or no weight gain on cattle—delaying the time when they go to market.

Q. It seems to me that retail beef prices are a lot higher now than ever before.

A. It probably seems that way because they were quite low for most of the past four years. Beef prices may go higher later, but the March retail average of $1.58 was still below the record high of $1.61 per pound in mid-1975.

Just look at the average February cattle and retail beef prices over the past several years (table 1). The average price of Choice beef was $1.50 in February, 1974. It dropped to only $1.29 in February, 1975. The February average did not get back up to the 1974 level until this year—when the average was $1.53.

The price of Choice steers at Omaha back in February, 1974, was $46.38 per hundredweight. Four years later, in February, 1978, the average, at $45.44, still was less. Not until March did the average go higher.

TABLE 1.—AVERAGE FEBRUARY PRICES OF BEEF AND FED CATTLE, 1973–78

| | February— | | |
|---|---|---|---|
| | NCA 5-cut average (pound) | USDA choice beef (pound) | Choice steers, Omaha (hundredweight) |
| 1973 | | $1.30 | $43.54 |
| 1974 | $1.63 | 1.50 | 46.38 |
| 1975 | 1.29 | 1.29 | 34.74 |
| 1976 | 1.38 | 1.43 | 38.80 |
| 1977 | 1.40 | 1.35 | 37.98 |
| 1978 | 1.59 | 1.53 | 45.44 |
| March 1978 [1] | 1.63 | 1.58 | 49.50 |

[1] Partially estimated.

Source: USDA.

Q. Okay, I can see that beef prices go down as well as up, but I come back to my basic question. Aren't beef prices getting higher compared with other things?

A. No, they still have gone up less in recent years than most things we buy. For example, the average price of beef in March, 1978, was only 16 percent higher than the average for 1973—the last year when most cattlemen made a profit during most of the year. The over-all Consumer Price Index, on the other hand, increased 41 percent in the same period, and 1978 average disposable income per person is expected to be 54 percent higher than in 1973 (table 2).

Q. It still seems that there are more "ups" than "downs" in beef prices.

A. Over the longer term, that generally is true. That's because beef prices, like everything else, are affected by inflation. The farm value in a dollar's worth of beef generally is about 60 percent; the other 40 percent goes for processing, transportation and merchandising. For the most part, it's the farmer's share of each beef dollar that fluctuates. The annual average farm-to-retail price spread, on the other hand, generally keeps going up, right along with inflation.

For example, the average price of Choice steers in Omaha in March this year was only 11 percent higher than the average for 1973. However, the farm-to-retail beef price spread went from an average of 42 cents per pound in 1973 to an estimated 63 cents in March—an increase of 50 percent (table 2).

TABLE 2.—CATTLE AND BEEF PRICES AND COMPARISIONS

| Year | Choice steers Omaha [1] (hundredweight) | Retail prices choice beef [1] (pound) | Farm-to-retail beef price spread [2] (c/lv.) | Index of prices paid by farmers for production items [3] (1967 equals 100) | Consumer Price Index all items [4] (1967 equals 100) | Average per person disposable income (per year) |
|---|---|---|---|---|---|---|
| 1973 | $44.54 | $1.36 | $41.9 | 146 | 133 | $4,286 |
| 1974 | 41.89 | 1.39 | 53.0 | 166 | 148 | 4,638 |
| 1975 | 44.61 | 1.46 | 54.4 | 182 | 161 | 5,061 |
| 1976 | 39.11 | 1.39 | 64.4 | 198 | 171 | 5,511 |
| 1977 | 40.38 | 1.38 | 60.8 | 208 | 182 | 6,035 |
| 1978 [5] | 49.50 | 1.58 | 63.0 | 217 | 187 | 6,580 |
| Percent change, 1973–78 | +11 | +16 | +50 | +49 | +41 | +54 |

[1] Annual averages, except March 1978.
[2] 1st quarter averages, except estimated for March 1978.
[3] Annual averags except 1st quarter, 1978.
[4] Annual averages, except January 1978.
[5] Partially estimated.

Q. Why did this margin go up so much? Does it mean the "middleman" is getting a lot more?

A. It really depends on how you define "middleman." What goes into the "middleman's" margin is primarily a lot of costs. Actually, there's nothing mysterious about the rising price spreads. All you have to do is look at the Consumer Price Index and the figures on personal income, and you have your answer. The problem is inflation.

About half of the cost of getting food from farm to market is labor costs. As wages increase—and assuming no improvement in output per man-hour—labor costs, and price spreads, keep going up. Also, there have been sharp increases in costs of energy, packaging, equipment, etc. Profits of packers and retailers together don't account for 2 cents out of each food dollar. Not earnings as a percent of total sales are about 1 percent in the packing industry and less than 1 percent in food retailing.

Q. Why are beef supplies decreasing now? Have producers been holding back cattle in an effort to get higher prices?

A. No, they haven't been. Actually, cattlemen can't afford to feed cattle very much past the time they are ready for market. Costs get too high. The main reason for the beef supply decrease now is that cattle production runs in cycles, just like other commodity businesses. But in the cattle business the cycles are longer. A cycle runs 10 to 12 years from one low point in cattle numbers to the next. (See the accompanying chart.)

During one part of the cycle, cattle numbers and the basic cow herd are increased as hundreds of thousands of individual farmers and ranchers react to favorable prices by expanding their herds or getting into the cattle business. (See table 3.) Eventually, cattle numbers become too large. There is more beef than consumers can or will buy at a profit to cattlemen. This is the situation cattlemen have faced during most of the past few years.

The financial losses which resulted from the large supplies brought on the "liquidation" phase of the cycle—when many cattlemen were forced, or elected, to get out of the cattle business or cut back on their operations. Exceptionally rapid cost increases and drought in some regions accentuated the recent liquidation.

This liquidation of breeding stock temporarily compounds the beef over-supply and cattle low-price problems. Then, after cattle numbers are reduced and per capita beef supplies decline, prices begin to rise again. That's what's happening now. The industry is now emerging from the liquidation phase of the latest cattle cycle—a four-year period when most cattlemen lost money most of the time.

TABLE 3.—NUMBER OF CATTLE AND CALVES ON FARMS AND RANCHES, JAN. 1, 1978, WITH COMPARISONS

[In thousands of heads]

| Year | All cattle and calves | Percent change from previous year | All cows | Percent change from previous year |
|---|---|---|---|---|
| 1968 | 109,152 | 0 | 47,710 | 0 |
| 1969 | 109,885 | +1 | 48,085 | +1 |
| 1970 | 112,303 | +2 | 48,982 | +2 |
| 1971 | 114,578 | +2 | 29,786 | +2 |
| 1972 | 117,862 | +3 | 50,585 | +2 |
| 1973 | 121,534 | +3 | 52,541 | +4 |
| 1974 | 127,670 | +5 | 54,293 | +3 |
| 1975 | 131,826 | +3 | 56,682 | +4 |
| 1976 | 127,980 | −3 | 54,974 | −3 |
| 1977 | 122,810 | −4 | 52,424 | −5 |
| 1978 | 116,265 | −5 | 49,677 | −5 |

Source: USDA.

Q. Why does the cycle last so long?

A. Because the cattle industry is, in effect, controlled by the biology of the cow. From the time a producer decides to increase the size of his basic cow herd, it often takes four years before the extra beef resulting from that decision reaches the super market.

Suppose a producer decides a female calf born today will be added to his basic cow herd. It takes 16 to 24 months before that heifer calf can grow up, mature and be bred. It takes another nine months of gestation before a calf is born. Then it's generally at least 18 more months before that calf is grown and finished for market.

Q. Will beef prices just keep going up for the next few years?

A. Not necessarily. The longer term trend may be upward until herds are rebuilt enough, but there also will be shorter term "downs" as well as "ups" as a result of fluctuations in meat supplies.

Actually, cattle prices have to increase further before the total industry can be profitable again. As shown in table 2, prices paid by farmers for production items have gone up 49 percent since 1973, while cattle prices were up only 11 percent as of March. While other things were going up in price during the past few years, cattle prices were going down or not increasing.

Q. Just how much are beef supplies decreasing now?

A. It looks as though production in 1978 will be at least 6 percent less than in 1977, and 9 percent less than in 1976. Per capita beef supplies on a carcass weight basis are likely to drop to 118 lbs. in 1978, compared with 126 lbs. last year (table 4). Eventually, per capita supplies may drop back to around 110 lbs. again.

Q. It seems hamburger prices have been going up faster than other cuts of beef. Why?

A. Much of the ground beef comes from older cows being culled from herds and from non-fed steers and heifers. As shown in table 4, production of beef from cows and non-fed steers and heifers increased substantially during the liquidation phase of the cycle. This production helped meet the growing demand for ground beef from the fast food industry. As a result of the large hamburger supplies, prices were very low for an extended period. Now, with liquidation winding down, there is less cow beef. However, more of each fed beef carcass is now going into hamburger. Prices may be higher for a while, but supplies should be ample.

TABLE 4—COMMERCIAL CATTLE SLAUGHTER, SLAUGHTER MIX AND BEEF PRODUCTION, 1971-78

[In thousands of head]

| | Commercial slaughter | | | | | | | Per capita consumption[1] | |
|---|---|---|---|---|---|---|---|---|---|
| | Fed | Non-fed | Cows | Bulls | Total | Per-cent nonfed | Beef product (million pounds) | Beef (pounds) | Red meat (pounds) |
| 1971 | 26,060 | 2,517 | 6,375 | 633 | 35,585 | 27 | 21,697 | 113.0 | 197.8 |
| 1972 | 27,670 | 1,472 | 5,992 | 645 | 25,779 | 23 | 22,218 | 116.1 | 192.9 |
| 1973 | 25,890 | 873 | 6,248 | 676 | 33,687 | 23 | 21,088 | 109.6 | 178.0 |
| 1974 | 23,880 | 4,598 | 7,514 | 820 | 36,812 | 35 | 22,844 | 116.8 | 190.5 |
| 1975 | 21,200 | 7,057 | 11,557 | 1,097 | 40,911 | 48 | 23,673 | 120.1 | 182.4 |
| 1976 | 25,085 | 5,948 | 10,617 | 997 | 42,644 | 41 | 25,662 | 129.2 | 194.7 |
| 1977 | 25,892 | 5,145 | 9,865 | 907 | 41,851 | 38 | 24,984 | 125.7 | 193.2 |
| 1978[2] | 27,000 | 2,650 | 8,450 | 750 | 38,850 | 31 | 23,400 | 118.0 | 187.0 |

[1] Carcass weight basis.

Q. Can't government control supplies and prices in order to even out the peaks and valleys of the cattle cycle?

A. It's been tried. It simply doesn't work. Government interference now would cause greater losses for producers. This would force further reductions in beef production, and eventually still higher prices. Consider the effects of the 1973 beef boycott and government price freeze. Most consumer advocates concluded that the boycott and freeze were counter-productive. Partly as a result of the 1973 disruption of the market, supplies of fed beef in mid-1975 were sharply reduced, and retail prices temporarily reached record highs.

Most cattlemen believe in the free market system, and they think that this system—without government controls and subsidies from taxpayers—is in the best long term interest of the public as well as cattlemen.

Unfortunately for cattlemen, the best cure for low prices is low prices. Why? Because low prices bring needed supply adjustments. Similarly, the best cure for high prices is high prices—because higher prices eventually bring supply increases, which then moderate prices to consumers. Cattlemen don't like big supply and price fluctuations either, but they think the alternative—costly government red tape and controls—is worse.

Q. Cattlemen say they should be left alone now that beef prices are rising. But weren't they previously crying for guaranteed prices and government help to bail them out?

A. No, they were not. And that's a tribute to cattlemen, considering their huge financial losses. Sure, many complained. They were caught between escalating costs and declining prices. Most of them lost money most of the time for the last four years. But they didn't ask for government subsidies or controls. If they didn't get out of the cattle business, they tightened their belts, borrowed more money, and looked forward to the time when their returns hopefully would improve again.

Now they need an opportunity to recover their losses, repay their debts and earn a profit on their investments. They expect government to stay out of their business now, just as government stayed out when they were suffering big losses. It would be unfair for government to change the rules of the game now and try to artificially increase meat supplies or impose price restrictions.●

## MRS. MARY TUCKER

● Mr. HELMS. Mr. President, it is not surprising that many Senators and dozens of Senate staff members have expressed to me their deep personal sadness that death has claimed a lovely associate of mine, Mrs. Mary Tucker.

Mary died unexpectedly this past Saturday evening at her home. She had not been well for the past 2 weeks, but none of us was prepared for the shocking news that she is gone.

Mr. President, when I was elected to the Senate in November 1972, Mrs. Tucker was one of the first staff members whom I selected as an associate. I remember my delight when I learned that she would be available, because she knew "The Hill," and she was popular and respected by the thousands of people with whom she had dealt while serving on the staffs of a number of Senators, the most recent being the distinguished Senator from Maine (Mrs. Smith).

So Mary "hit the ground running" when she became my associate. She was instrumental, and so immensely helpful, in helping me set up my office. She understood the importance of case work, and she was always genuinely sympathetic with any citizen who had a problem.

I could not begin to count the times that citizens of my State have told me about how "Miss Mary," as she came to be known, had gone out of her way—far, far beyond the call of duty—to be helpful.

That was the way Mary Tucker operated, Mr. President. She loved people, and they certainly loved her. And that is why there has been such sadness this week, as the news of Mary's death became known.

All of us who worked with her are diminished by her death. I shall miss her, both as an associate and as a friend. Mrs. Helms and I, and all of the members of our staff, extend our deepest sympathy to Mr. Tucker and their children.●

## MISS LAURA CARLSON WINS ESSAY CONTEST

● Mr. PELL. Mr. President, each year the Warwick (Rhode Island) Emblem Club No. 416 holds an essay contest for Warwick secondary school students as part of its Americanism program. This year, the winner of the contest was a seventh grade student from Winman Junior High School, Miss Laura Carlson. Miss Carlson was awarded a U.S. Savings Bond for her winning essay, entitled "What The American Flag Means To Me."

I would like to commend Miss Carlson for her winning essay, and would like to share it with my colleagues in the Senate.

Mr. President, I ask that the text of the essay be printed in the RECORD.

The essay follows:

WHAT THE AMERICAN FLAG MEANS TO ME

The American flag to me is a symbol of what our forefathers fought for. When I was little I always thought that the stripes on our flag were a ladder that all Americans should try to climb to reach the stars. The stars represented America's goals and highest ambitions and encouraged Americans to strive and do their best to reach them.

I still believe this and hope our flag will inspire Americans to do their utmost to improve our country, provide liberty and justice for all, and to lead America to those stars.

Although the American flag stands for what we have accomplished it also stands for great things to come. Americans should look back on the past with pride, but also look to the future, its horizons bright with hope and promise.●

## FEDERAL REGULATIONS AND SMALL BUSINESS

● Mr. DOMENICI. Mr. President, last month John Williams of the Small Business Legislative Council testified on the impact Federal regulations have on the small businessmen of America.

His statement contains vivid examples of the trials and tribulations encountered by small business owners when dealing with the Federal Government.

I submit for the RECORD the following statement.

The statement follows:

STATEMENT OF THE SMALL BUSINESS LEGISLATIVE COUNCIL BEFORE THE SUBCOMMITTEE ON IMPROVEMENTS IN JUDICIAL MACHINERY OF THE SENATE JUDICIARY COMMITTEE HOLDING HEARINGS ON S. 2354, THE EQUAL ACCESS TO THE COURTS ACT, MARCH 13, 1978

Mr. Chairman and Members of the Subcommittee: My name is John Williams. I am Government Affairs Director for the National Tool, Die and Precision Machining Association. I am appearing today on behalf of the Small Business Legislative Council (SBLC), an organization of national trade and professional associations whose members are predominantly smaller businesses. An affiliate of the National Small Business Association (NSB), the SBLC acts as a unifying voice for over 2 million small business firms, commenting on issues or areas in which our member associations are in substantial agreement. Thirty-five national associations currently support the Small Business Legislative Council position that—

"Legislative initiatives to award attorney's fees to individuals and small business owners who prevail against the government are a positive first step toward restraining the somewhat arbitrary nature of the federal agencies in applying excessive regulation. The small business owner rarely can afford the costs and ramifications of a long and drawn out court fight and appellate procedure, especially if that battle is against the power of the Federal Government. The Small Business Legislative Council supports the purposes of S. 2354 to both help individuals and small business, and to stem the flow of excessive regulation."

The importance of the small business community to the national economy is well-known and widely-documented. It accounts for 97% of the total number of U.S. enterprises, 59% of all private employment, 48% of the total business output, 43% of the total GNP, and is responsible for over one-half of all inventions and product innovations. We therefore whole-heartedly commend Senators Domenici and Nelson, and the Members and staff of the Subcommittee on Improvements in Judicial Machinery for their efforts in bringing this important concept to greater public attention.

Legislative proposals for providing attorneys' fees to small business owners and individual citizens who win against the government represent truly long-overdue initiatives. They can be viewed as perhaps the most valuable first step toward restraining the arbitrary nature of those federal regulatory agencies that file judicial complaints against small agencies that file judicial complaints against small businesses and individuals simply because they realize that a small business owner rarely can afford the ramifications of a legal fight.

Mr. Chairman, it is certainly not news to the citizens of this country that the Federal Government has proliferated its reach into many areas by promulgating rules and regulations at an alarming rate over the last several years. We do not deny the need for statutory protection of the health, safety and general well-being of all Americans. Indeed, government guidelines in many product and service areas have proved to be desirable. However, the small businesses and individual proprietors in this country can unequivocally voice their vehement opposition to excessive regulations that, in essence, provide the ammunition for the guns of government agencies that frequently make a target of small business.

There is no question that, in many cases, the regulatory agencies have sought rulings against small firms that just do not have adequate resources to fight back. This process not only establishes precedents for rulings against larger enterprises, but, as has been suggested, builds the "batting averages" of the agencies to justify not only their very existence but larger appropriations from Congress as well.

On several occasions more candid employees of regulatory agencies have publicly stated their agency's intent to single out or prosecute small companies rather than take on the giant firms that have large legal staffs and that could adequately defend themselves against prosecution by the government. When a House Small Business Subcommittee held hearings in 1976 on Antitrust and the Robinson-Patman Act, Dr. F. M. Scherer, former Director of the Bureau of Economics of the FTC, said:

"I had not fully realized until I came to Washington how unfairly the burden of federal regulation and antitrust enforcement falls upon small business as compared to large companies. The corporate giants can and do maintain stables of highly-skilled attorneys to advise them how to stay clear of the law and defend themselves if they nevertheless run afoul. Small firms are less able to afford such counsel, and the law firms they retain typically lack the specialized knowledge needed to cope with a body of statutory, case and regulatory law as complex as Robinson-Patman. As a result, they are more likely to get into trouble and to settle by consent if a complaint is brought. . . . I had also understood little about the value system of government antitrust attorneys. What I learned since joining the Commission staff is that many attorneys measure their own success in terms of the number of complaints brought and settlements won. In the absence of broader policy guidance, therefore, the typical attorney shies away from a complex, long, uncertain legal contest with well-represented giant corporations and tries to build up a portfolio emphasizing small, easy-to-win cases. The net result of these broad propensities is that it is the little guys, not the giants that dominate our manufacturing and trade industries, who typically get sued."

Dr. Scherer's statement points directly to our concern with the "equal access to the courts" concept being addressed here today. Small manufacturers and distributors are not a General Motors or IBM with corporate legal teams and the financial resources to back those legal disputes that can tie up the courts for years. Suppose a regulatory agency unjustly imposes a moderate fine of $500 or $1,000 upon a small business owner. In most cases, that person is more likely to reason that he or she does not have the money or the time to contest the penalty in court against the power of the United States Government. In situations such as these, the business person accedes to the fine—and loses. He loses because he has acceded to the penalty, and he loses because he did not challenge it.

A decision by an official of a regulatory agency, right or wrong, has caused more than just a handful of companies to become bankrupt or go out of business. Moreover, even if the regulatory agency ruling has been proved wrong, a bankrupt company cannot afford the costs of suing the government or righting the case through the appellate procedures. The government has many lawyers who can make a career of one case. An already-exhausted business has no alternative but to throw in the towel and quit.

The case of a Wisconsin toy manufacturer is a case in point. In 1972, the FDA cited a certain toy, manufactured by Marlin Toy Products, Inc., as unsafe. The company conducted a general product recall at a cost of $95,000 and corrected the alleged defect. In the next year, the newly formed Consumer Product Safety Commission published a "banned-products" list which included, by mistake, the modified Marlin product. The list, distributed nationwide to thousands of toy shops, caused virtually all of Marlin's regular customers to cancel their orders. The result was a $1.2 million loss to Marlin, which had to lay off all but 10 of its 85 workers.

If a regulatory agency orders a product recall, unbelievably complex problems arise for a small business. The manufacturer must not only locate each product he has distributed, but he must buy back the item as well. This is obviously no small task, considering the fact that his products may be located in a wholesaler's warehouse or on a retailer's shelves anywhere in the country. In most cases, it is a problem involving the recall of products that may have been in the distribution channels for years. There are few small firms that have the capital to recall all their products and remain in business.

Witness, if you will, the case of the 108-year old New Jersey soup maker (Bon Vivant) who declared bankruptcy shortly after the Food and Drug Administration caused a nationwide recall of every unused item he had ever sold, despite the fact that only one product line was suspect. That action involved the recall of 90 product lines totaling 1.5 million cans! Many believe that the company was unnecessarily harassed by the government simply because it lacked the adequate financial resources for effective legal defense. A supermarket executive commented that "if (the company) had been one of the major canneries, the FDA would never have ordered a total recall of every can of every product line. They are not about to put one of the big boys out of business."

A similar incident involving Campbell Soup Co. shortly thereafter confirmed that executive's suspicions. In that instance, Campbell Soup Co. recalled 230,000 cans of contaminated chicken vegetable soup. Officials of the FDA and the Department of Agriculture confirmed the fact that Campbell's, fearing "unfavorable publicity," had been quietly recalling the soups for several weeks before the company notified Federal officials that it has discovered the presence of botulin in some of the soups. Yet, in this case, the punitive action taken by those Federal agencies responsible amounted to nothing more than a "slap on the wrist." In fact a USDA official in Kansas City commented that "there (would) be no action by this office other than monitoring (the recall of the soups)."

A chronology of the Bon Vivant Soup case, entitled "Seven Days in July," is attached at the end of this statement. (Attachment B) It represents a vivid illustration of the need for providing at least some recompense to those harassed by regulatory overkill. Mr. Andrew Paretti, former owner and President of Bon Vivant, even now concedes that if legislation such as that proposed by Senators Domenici and Nelson had been on the books in 1971, Bon Vivant would still be in business today. The Bon Vivant case, from start to finish, took over three years to be adjudicated; no small business could bear the costs involved and still survive.

Since the National Small Business Association first announced the introduction of S. 2354 in its January-February, 1978 "Voice of Small Business", it has received numerous letters from small businesses documenting their particular experiences with various government agencies. One company's experience with the Nuclear Regulatory Commission (NRC), for example, resulted in suspension of the firm's operating license for a period of three weeks. To this small company, the total loss of income during the period of license suspension, along with the continuation of payroll and other fixed costs, placed an enormous financial burden upon its owners. The dispute with the NRC now centers, among other things, around the legality of the license suspension, and recovery of $43,000 in losses incurred by the company during the three-week shut down. The president of this company has written:

"During the various meetings and deliberations with the NRC, we have not availed ourselves of outside counsel due to the further financial burden that it would have brought on. We therefore feel that the Equal Access to the Courts Act (S. 2354), introduced by Senators Domenici and Nelson . . . is highly desirable since it would give the small business some hope of recovering legal costs and allow the business to make judgements with regard to fighting the government on a decision based on legal merit rather than as an expedient business decision."

Still another company writes that a decision by the local National Labor Relations Board could have serious implications for company personnel management. The president, vowing that he will "fight it to the bitter end", says:

"Knowing that we could be reimbursed for our legal costs would certainly enable us to face this problem squarely rather than throw in the towel because we can't afford to fight the government bureaucracy."

These represent but a few of the experiences that have come to the attention of the Small Business Legislative Council. Cases like these point up the fact that, once created, a regulatory agency's foothold is often strengthened through the capitulation of small businesses and individuals who are unable to withstand the regulatory pressure, or to fight their cases in court.

In our view, providing attorney's fees for those who win against the government may begin to redress not only the imbalance that currently exists between the regulated and the regulators, but may also begin to stem the growth of the entrenched and, in many cases, ineffective bureaucracies that have indeed become a major cause of public disaffection with the Federal government.

President Carter himself has addressed this very problem in response to a small business community inquiry. President Carter said:

"Because of their lack of ability and resources to defend themselves, small businesses are the favorite targets for the 82 regulatory agencies in Washington, which last year put out some 45,000 pages of regulations. This underscored the burden forced on small businesses by Washington, and makes it more difficult for the small business man and woman to compete with big business, which can afford the best in full time CPAs, attorneys and lobbyists. . . . I pledge to allow the small business man and woman to get back to running their businesses by completely reforming our Federal regulatory agencies, their reporting requirements, and tax laws, to get the government off his back."

In closing, Mr. Chairman, we emphasize that the SLBC firmly believes that the proliferation of agency rules and regulations within the last 15 years has resulted in what is basically an administrative and bureaucratic denial of justice to those individuals and small businesses that are unable to bear the financial burden of defending themselves in a court of law against the power of the Federal government. Our judicial system, based on equal justice under law, must be open to every citizen of this country, not just to those able to afford the burgeoning costs of legal defense. On that basis we firmly support the principle behind the Legal Services Corporation, created by Congress to ensure equal justice for all. But we also urge careful consideration of expanding the "equal access to the courts" concept as a viable means to suppress the regulatory overkill that is threatening, on an ever-increasing basis, the very survival of the small business community. Frustration with government intervention and regulation is becoming increasingly widespread—especially for those forced to bear the burden of the cost of compliance with those regulations, and then are unjustly accused of failure to comply. We re-affirm our enthusiastic support for S. 2354, the Equal Access to the Courts Act, and thank you Mr. Chairman, and the Members of this distinguished subcommittee for the opportunity to present our views to you today.●

## TAX RETURN AND FINANCIAL STATEMENT OF FLOYD K. HASKELL

● Mr. HASKELL. Mr. President, in accordance with my usual practice, I attach hereto and request that they be printed in the RECORD my Federal income tax return for the calendar year 1977 and a statement of net worth as of March 13, 1978.

The material follows:

FINANCIAL STATEMENT OF FLOYD K. HASKELL

(Net worth as of March 13, 1978)

Provide a complete, current financial net worth statement which itemizes in detail all assets (including bank accounts, real estate, securities, trusts, investments, and other financial holdings) all liabilities (including debts, mortgages, loans, and other financial obligations) of yourself, your spouse, and other immediate members of your household. Where values are other than current market value state the basis. In the case of real estate, mineral leases and similar interests specify nature and location.

ASSETS

Cash on hand and in banks, $3,927.57.

U.S. Government securities—add schedule [1], $38,940.00.

Listed securities—add schedule [2], $17,562.50.

Unlisted securities—add schedule [3], $45,094.64.

Real estate owned—add schedule [4], $255,900.00.

Real estate mortgages receivable [5], $13,812.68.

Autos and other personal property, $10,000.00.

Cash value—life insurance, $15,350.30.

Other assets—itemize:

Civil Service Retirement Account, $19,152.29.

Remainder Interest in Trust [6], $42,978.84.

Limited Partnership Interests [7], $13,200.00.

Miscellaneous [8], $1,000.00.

Total assets, $476,918.82.

LIABILITIES

Notes payable to banks—secured, none.

Notes payable to banks—unsecured, none.

Notes payable to relatives, none.

Notes payable to others, none.

Accounts and bills due, none.

Unpaid income tax, none.

Other upaid tax and interest, none.

Real estate mortgages payable—add schedule, none.

Chattel mortgages and other liens payable, none.

Other debts—itemize:

Loan on VA Insurance $5,000.00.

Total liabilities, $5,000.00.

CONTINGENT LIABILITIES

As endorser, comaker or guarantor, none.

On leases or contracts, none.

Legal Claims, none.

Provision for Federal Income Tax, none.

Other special debt, none.

[1] U.S. Bonds due 8/15/84 and 25 Treasury Notes due 11/15/81 at market value.

[2] 1,000 shares Continental Materials and 1,750 shares Terra Chemicals at market value.

[3] 56 shares Sheridan Savings and Loan at book value; 15 El Paso County, Colorado, Bonds; 10 Bent County, Colorado, Bonds; 20 HFA Bonds.

[4] 319.88 Acres unimproved real estate in Boulder County, Colorado, at appraised value December 31, 1973.

[5] Secured by First Deed of Trust; appraised value November 1975; face value $21,504.68.

[6] Remainder interest in trust established for mother:

*Trust assets*

[7] At investment cost. Partnerships own miscellaneous nonproductive mining interests in Arizona and Montana. One property may be of value. The General Partner has informed the Limited Partners that a discovery has been made and sufficient mineralization exists to pay the retained royalty. The corporations owning the operating interests in the property apparently disagree, since no announcement to shareholders of any discovery, as required by SEC rules, has been made.

[8] Valuation arbitrary. Undivided interest in federal oil and gas leases—income 1974 (-0-), 1975 ($438.00), 1976 ($438.67), and 1977 ($470.01).

GENERAL INFORMATION

Are any assets pledged? (Add schedule), no.

Are you defendant in any suits or legal actions? no.

Have you ever taken bankruptcy? no.

U.S. INDIVIDUAL INCOME TAX RETURN, 1977

Floyd K. Haskell, 170 Garfield St., Denver, Colorado 80206.

Your [redacted] xxx-xx-xxxx .

Occupation: U.S. Senator.

Presidential Election Campaign Fund: Do you want $1 to go to this fund? Yes.

Filing Status: Single.

Exemptions: Yourself.

Income:

8. Wages, salaries, tips, and other employee compensation: $55,350.

9. Interest income. (If over $400, attach Schedule B.) $4,455.

10a. Dividends (If over $400, attach Schedule B) $1,682. 10b less exclusion $100. Balance $1,582.

14. Capital gain or (loss) (attach Schedule D), $9,407.

18. Pensions, annuities, rent, royalties, partnerships, estates or trusts, etc. (attach Schedule E), $517.

21. Total income. Add lines 8, 9, and 10c through 20, $71,311.

Adjustments to Income:

23. Employee business expenses (attach Form 2106), $5,041.

28. Total adjustments. Add lines 22 through 27, $5,041.

29. Subtract line 28 from line 21, $66,270.

31. Adjusted gross income. Subtract line 30 from line 29. Enter here and or line 32. If you want IRS to figure your tax for you, See page 4 of the Instructions, $66,270.

Tax Computation:

32. Amount from line 31, $66,270.

33. If you itemize deductions, enter excess itemized deductions from Schedule A, line 41. If you do NOT itemize deductions, enter zero, $7,616.

34. Tax Table Income. Subtract line 33 from line 32, $58,654.

35. Tax. Check if from Schedule TC, $22,492.

37. Total. Add lines 35 and 36, $22,492.

Credits:

41. Investment credit (attach Form 3468), $270.

46. Total credits. Add lines 38 through 45, $270.

47. Balance. Subtract line 46 from line 37 and enter difference (but not less than zero), $22,222.

Other Taxes:

54. Total tax. Add lines 47 through 53, $22,222.

Payments:

55. Total Federal income tax withheld (attach Forms W-2, W-2G, and W-2P to front), $18,349.

56. 1977 estimated tax payments (include amount allowed as credit from 1976 return), $1,960.

Payments:

62. Total. Add lines 55 through 61a, $20,309.

Refund or Due:

66. If line 54 is larger than line 62, enter Balance Due. Attach check or money order for full amount payable to "Internal Revenue Service." Write social security number on check or money order, $1,913.

SCHEDULES A AND B—ITEMIZED DEDUCTIONS AND INTEREST AND DIVIDEND INCOME

Floyd K. Haskell: Your social security number, [redacted].

*Schedule A itemized deductions*

Medical and Dental Expenses (not compensated by insurance or otherwise) (see page 14 of Instructions.)

1. One half (but not more than $150) of insurance premiums for medical care. (Be sure to include in line 10 below), $150.

4. Subtract line 3 from line 2. Enter difference (if less than zero, enter zero), 0.

5. Enter balance of insurance premiums for medical care not entered on line 1, $410.

6. Enter other medical and dental expenses: (a) Doctors, dentists, nurses, etc., $915.

Insurance reimbursement, $50.

7. Total (add lines 4 through 6c), $1,275.

8. Enter 3% of line 31, Form 1040, $1,988.

9. Subtract line 8 from line 7 (if less than zero, enter zero), 0.

10. Total (add lines 1 and 9). Enter here and on line 33, $150.

Taxes (See page 14 of Instructions.)

11. State and local income, $2,020.

12. Real estate, $119.

13. State and local gasoline (see gas tax tables), $31.

14. General sales (see sales tax tables), $468.

15. Personal property, $127.

Sales tax—auto, $539.

17. Total (add lines 11 through 16). Enter here and on line 34, $3,304.

Contributions (See page 16 of Instructions for examples.)

21 (a) Cash contributions for which you have receipts, cancelled checks or other written evidence, $853.

24. Total contributions (add lines 21a through 23). Enter here an on line 36, $853.

Casualty or Theft Loss(es) (See page 16 of Instructions.)

Miscellaneous Deductions (See page 16 of Instructions.)

Tax preparation fees, $350.

Form 2106 attached, $5,159.

32. Total (add lines 30 and 31). Enter here and on line 38, $5,509.

Summary of Itemized Deductions (See page 17 of Instructions.)

33. Total medical and dental—line 10, $150.

34. Total taxes—line 17, $3,304.

36. Total contributions—line 24, $853.

38. Total miscellaneous—line 32, $5,509.

39. Total deductions (add lines 33 through 38), $9,816.

40. If you checked Form 1040, box, $2,200.

41. Excess itemized deductions (subtract line 40 from line 39). Enter here and on Form 1040, line 33. (If line 40 is more than line 39 see "Who MUST Itemize Deductions" on page 11 of the Instructions.), $7,616.

*Schedule B—Interest and dividend income*

Floyd K. Haskell: Your social security number, [redacted].

Part I—Interest Income:

Interest on U.S. obligations, $3,661.

Mountain Valley Associates, note, $779.

New England Mutual Life Ins., $15.

2. Total interest income. Enter here and on Form 1040, line 9, $4,455.

Part II—Dividend Income:

Hazen Research, Inc., $178.

Sheridan Savings & Loan Assn., $34.

Terra Chemicals, $1,400.

Union Carbide, $70.

4. Total of line 3, $1,682.

8. Dividends before exclusion (subtract line 7 from line 4). Enter here and on Form 1040, line 10a, $1,682.

CAPITAL GAINS AND LOSSES

Part II—Long-term Capital Gains and Losses—Assets Held More Than 9 Months:

Mountain Valley Assoc. note—installment sale, $77; $2,573.

3558 Sh Hazen Research, $11,569; $5,577; $23,127; $6,885, $16,242.

11. Net gain or (loss), combine lines 6 through 10, $18,815.

13. Net long-term gain or (loss), combine lines 11 and 12, $18,815.

Part III—Summary of Parts I and II (If You Have Capital Loss Carryovers From Years Beginning Before 1970, Do Not Complete This Part. See Form 4798 Instead.)

14. Combine lines 5 and 13, and enter the net gain or (loss) here, $18,815.

15. If line 14 shows a gain—(a) Enter 50% of line 13 or 50% of line 14, whichever is smaller (see Part IV for computation of alternative tax). Enter zero if there is a loss or no entry on line 13, $9,408.

(b) Subtract line 15a from line 14. Enter here and on Form 1040, line 14, $9,407.

Part IV—Computation of Alternative Tax (See Instruction S to See if the Alternative Tax Will Benefit You):

17. Enter amount from Schedule TC (Form 1040), Part I, line 3, $57,904.

18. Enter amount from line 15a (or Form 4798, Part I, line 8(a)), $9,408.

19. Subtract line 18 from line 17 (if line 18 exceeds line 17, do not complete the rest of this part. The Alternative Tax will not benefit you), $48,496.

24. Subtract line 23 from line 22, 0.

25. Tax on amount on line 19 (use Tax Rate Schedule in instructions), $17,968.

26. Enter 50% of line 18 but not more than $12,500 ($6,250 if married filing separately), $4,704.

27. Alternative Tax—add lines 24, 25, and 26. If smaller than the tax figured on the amount on Schedule TC (Form 1040), Part I, line 3, enter this alternative tax on Schedule TC (Form 1040), Part I, line 4. Also check the Schedule D box on Schedule TC (Form 1040), Part I, line 4, $22,672.

SUPPLEMENTAL INCOME SCHEDULE

Part II—Rent and Royalty Income. If you need more space, use Form 4831. Have you claimed expenses connected with your vacation home rented to others? No.

See statement 3: (b) Total amount of rents, $965 and (d) Depreciation (explain below) or depletion (attach computation), $212.

6. Totals, (b) Total amount of rents, $965 and (d) Depreciation (explain below) or depletion (attach computation), $212.

7. Net income or (loss) from rents and royalties (column (b) plus column (c) less columns (d) and (e)), $753.

10. Total rent and royalty income (add lines 7, 8, and 9), $753.

Part III—Income or Losses from Partnerships, Estates or Trusts, Small Business Corporations.

See statement 2, P—(e) Income or (loss), —$236.

11. Totals, (e) Income or (loss), —$236.

12. Income or (loss). Total of column (e) less total of column (f), —$236.

13. TOTAL (add lines 5, 10, and 12). Enter here and on Form 1040, line 18, $517.

COMPUTATION OF SOCIAL SECURITY SELF-EMPLOYMENT TAX

Part II—Computation of Net Earnings from NONFARM Self-Employment: Regular method:

5. Net profit or (loss) from: (b) Partnerships, joint ventures, etc. (other than farming), $217.

6. Total (add lines 5a through e), $217.

8. Adjusted net earnings or (loss) from nonfarm self-employment (line 6, as adjusted by line 7), —$217.

Nonfarm optional method: 9(a) Maximum amount reportable, under both optional methods combined (farm and nonfarm), $1,600.

Part III—Computation of Social Security Self-Employment Tax:

12(b). From nonfarm (from line 8, or line 11 if you elect to use the Nonfarm Optional Method), —$217.

13. Total net earnings or (loss) from self-employment reported on line 12. (If line 13 is less than $400, you are not subject to self-employment tax. Do not fill in rest of schedule), —$217.

14. The largest amount of combined wages and self-employment earnings subject to social security or railroad retirement taxes for 1977 is, $16,500.

TAX COMPUTATION SCHEDULE

Part I—Tax Computation for Taxpayers Who Cannot Use the Tax Tables:

1. Enter your Tax Table Income from Form 1040, line 34, $58,654.

2. Multiply $750 by the total number of exemptions claimed on Form 1040, line 7, $750.

3. Taxable Income. Subtract line 2 from line 1; $57,904.

4. Income Tax. Check if from Tax Rate Schedule X, $22,672.

General Tax Credit:

5. Enter $35 multiplied by the total number of exemptions claimed on Form 1040, line 7, $35.

6. Enter amount from line 3, above, $57,904.

7. Enter, $2,200 if you are single (or an unmarried head of household), $2,200.

8. Subtract line 7 from line 6, $55,704.

9. Enter 2 percent of line 8 (but do not enter more than $180), $180.

10. General tax credit. Enter the larger of line 5 or line 9, $180.

11. Tax. Subtract line 10 from line 4. Enter the difference (but not less than zero) here and on Form 1040, line 35, $22,492.

EMPLOYEE BUSINESS EXPENSES

Part I.—Employee Business Expenses Deductible in Computing Adjusted Gross Income on Form 1040, Line 31:

4. Other (specify) (Include expenses not listed on line 1 through 3 to extent of reimbursement) See statement 4, $29,432.

5. Total of lines 1 through 4, $29,432.

6. Less: Employer's payments for above expenses (other than amounts included on Form W–2), $24,391.

7. Excess expenses (line 5 less line 6). Enter here and include on Form 1040, line 23, $5,041.

Part II.—Employee Business Expenses which are Deductible if You Itemize Deductions on Schedule A (Form 1040):

1. Business expenses other than those included above (specify) See statement 5, $5,024; see statement 6, $135, $5,159.

COMPUTATION OF INVESTMENT CREDIT

Used property (See instructions for dollar limitation, (h) Life years, 7 or more; Cost or basis (See instruction G), $2,700; Applicable percentage 100; Qualified investment (Column 2 x column 3), $2,700.

2. Qualified investment—add lines 1(a) thru (h), $2,700.

3. 10% of line 2, $270.

7. Tentative investment credit—Add lines 3 through 6, $270.

*Limitation*

8. (a) Individuals—Enter amount from line 37, page 2, Form 1040, $22,492.

11. Line 8 less line 10, $22,492.

12. (a) Enter amount on line 11 or $25,000, whichever is lesser. (Married persons filing separately, controlled corporate groups, estates, and trusts, see instruction for line 12.), $22,492.

13. Total—Add lines 12 (a) and (b), $22,492.

14. Investment credit—Amount from line 7 or line 13, whichever is lesser. Enter here and on line 41, Form 1040; line 10(b), Schedule J, page 3, Form 1120; or the appropriate line on other returns, $270.

STATEMENT 1—WAGES, SALARIES, TIPS, ET CETERIA

Employers name and address, income tax withheld, wages, salaries, tips, et ceteria, and FICA:

U.S. Senate, Washington, D.C., $18,349 and $55,350.

Total tax withheld, wages, and FICA, $18,349**, $55,350**, and 0**.

STATEMENT 2—INCOME FROM PARTNERSHIPS

Name and address of partnership: (H) High Hopes, Ltd., 84–6114818.

Income: Other partnership income, —$19.

Name and address of partnership: (H) Canus, Ltd., 84–0583390.

Income: Self-employment income, —$217.

Recap of partnership income—

Total partnership income subject to SE tax, —$217*.

Total other partnership income, —$19*.

Total partnership income to schedule E, —$236**.

STATEMENT 3—INCOME FROM RENTS AND ROYALTIES

Property description: Oil and gas lease—Colorado.

Income: Gross rents, $965.

Total income, $965.*

Expenses: Depletion, $212.

Total deductible expenses, $212.*

Net income, $753.**

STATEMENT 4—OTHER EMPLOYEE BUSINESS EXPENSES DEDUCTIBLE FROM ADJUSTED GROSS INCOME—FORM 2106

Other expenses:

Washington, D.C. living expenses per Public Law 471, 82nd Congress, $3,000.

Fares, meals, lodging and other travel expenses, $10,609.

Other reimbursed expenses, $15,823.

Total other business expenses, $29,432.**

STATEMENT 5—EMPLOYEE ITEMIZED BUSINESS EXPENSES

Itemized miscellaneous deductions:

Constituent communication, $927.

Dues and entertainment, $2,323.

Miscellaneous, $1,774.

Total employee business expense, $5,024.**

STATEMENT 6—EMPLOYEE DEPRECIATION EXPENSE

Depreciation:

Description: Chinese table and screen; date acquired, 1977; cost or other basis, $2,700; current depreciation, $135.

Totals: cost or other basis, $2,700**; current depreciation, $135.**●

## A DEPARTMENT OF EDUCATION?

● Mr. SCHMITT. Mr. President, this morning the Washington Post carried an editorial entitled: "A Department of Education?" While I have not yet fully weighed the difficulties against the merits of creating a cabinet level department to deal with education in this Nation, I have considered the arguments both for and against this proposal. As the editorial points out, there are many valid points in favor of separating education from the other functions of the Department of Health, Education, and Welfare (HEW) and the other departments which administer specific programs.

At the same time, Mr. President, I have become increasingly concerned with the future of education in this Nation. Our Republic will stand or fall on the quality of our education of future citizens. Again, as the editorial points out, we have continually spent more money and have been faced with greater problems over the years. Obviously, money is not the ultimate answer. We must do more than just treat the symptoms of our social problems. We must find solutions.

The Federal Government, through HEW, has continually become more and more involved in decisionmaking which should, more properly, be left to parents working with teachers and State and local officials. Rather than aiding and advising on local education, the Federal Government has imposed program guidelines which often are inappropriate, unnecessary, or too costly. There is a strong possibility that a separate Department of Education may not only continue these policies but increase the inefficiency of State educational systems.

I strongly support greatly improved elementary and secondary education and believe that the Federal Government can aid State and local education officials. However, most of the decisions on what to teach and how to teach it must be made on the local level where the parents and teachers better understand the local problems.

An official in Washington cannot possibly understand the problems which exist in Santa Fe and New York City. The situations are so very different. If the past is any indication, most Federal programs lack the necessary flexibility so that local officials can tailor them to meet the needs of their community. Instead, an unneeded bureaucracy is created around an unneeded program at ever-increasing cost and inefficiency.

Another area of concern, and a very serious concern, is the diminution of the role of parents in the education of their children. In my discussions with parents throughout the State of New Mexico, I have been impressed with the alarm parents have shown in their feeling of helplessness in having an input into the education of their children. This authority is not being usurped by local or State officials. It is being usurped by officials here in Washington who leave no options to local officials and teachers.

Mr. President, I think the editorial in The Washington Post deserves serious consideration. Many of the concerns and points raised in the editorial are similar to my own.

When the proposal for a separate Department of Education is brought before the Senate, we all shall be looking for guarantees that this new department will be more efficient and effective than the present arrangement and not just another bureaucracy. More importantly, we must be looking for guarantees that this department will not attempt to further usurp the role and authority of parents and local education officials. The Federal Government must aid local officials with research, advice, and, if necessary, finances and not impose their will on educators, parents, and officials.

Mr. President, it is not a bureaucracy and money that will guarantee quality and equal opportunity in our educational system. Rather, it will take dedication to quality and equal opportunity by relying on the judgment of those closest to the problem, the parents and the teachers.

The editorial follows:

A DEPARTMENT OF EDUCATION?

It did not come as an earth-shaking surprise that President Carter last Friday asked Congress to create a department of education. The creation of such a department, separate from HEW, was an explicit Carter campaign pledge. And there is an enormous reservoir of sentiment favoring the move in the Senate: Sen. Abraham Ribicoff, the Connecticut Democrat who is himself a former HEW secretary and who currently presides over the Senate Governmental Affairs Committee, had 52 co-sponsors on a bill proposing a new education department the last time we looked. So we are well aware that we are swimming upstream with our own perception of the plan: We think it is a bad idea.

Our opinion has nothing to do with the personal, political and bureaucratic tugging and hauling that seems to be going on among Secretary Joseph Califano and a variety of others over territorial imperatives and turf. And we do reconize the validity of some of the assertions that are being made in support of a new department, although we don't think those assertions, true or not, necessarily lead in logic to the need for creating a separate department of education. Yes, it is a fact that since HEW was established around a quarter of a century ago, the total education budget has zoomed into the stratosphere, from a few hundred million dollars to more than 10 billion. And, yes, it is true that the American education system is full of flaws and that some of them seem to be getting worse, not better. And it is the case that HEW itself is ungainly in size and shape and that the Office of Education has a kind of institutional thyroid deficiency and that there is a great deal of cross-purposes, self-canceling activity between all the various agencies and subagencies of government that have a hand in education.

But to acknowledge all that is not automatically to make the case for creating a new department. The collection of various bureaucracies and instrumentalities into one seemingly logical place is a fairly common element of governmental-reform schemes—that has had at best mixed results. The bureaucratic bits and pieces that became HUD, for example, hardly underwent a galvanic revitalization by virtue of sharing a roof and a set of executive managers. And to look at either the Labor Department, say, or the Commerce Department is to know that gathering units of government around a single large, controlling subject hardly guarantees their energy or efficiency.

We don't cite the Labor and Commerce departments casually: To the extent that they are basically one-constituency organizations of government, they provide another cautionary note. One of the principal risks of creating a separate education department is that it will become a creature of its clientele. That clientele would not necessarily be the schoolchildren and their parents affected by the federal government's education programs. Much more probably it would be the National Education Association, the organization of teachers and school administrators who already exert a great deal of in-

fluence on education policy in Washington. In a way, this would be giving them their own department.

Let's go back for a moment to the argument about the zooming-into-the-stratosphere budget. After all, the same argument could be made about the various armed services that were gathered into the Defense Department. Do they now deserve to be separated out into independent entities answerable only to the president and not to the secretary of defense? The comparison isn't wholly apt, but it isn't wholly frivolous, either, because it is precisely this fitting in of education with the other, related health and welfare programs that makes sense of having education in and under the HEW organization. The more they can be made to function in some degree of harmony with each other, the better.

So we don't see the self-evident wisdom of the proposal on substantive grounds, and we note that strictly in terms of let's-put-it-all-in-one-place efficiency, the president's proposed consolidation of federal education programs into one department leaves out—surely, as reported, because of contrary lobbying pressures—veterans education and job and manpower training programs, which together add up to an enormous amount of what the government spends on education now. Pressure groups organized around a particular interest saw to that. Does Mr. Carter really want to organize another such group, in government, under the heading of the Department of Education?●

## TRIBUTE TO SENATOR SPARKMAN

● Mr. CHURCH. Mr. President, on Friday, April 14, Senator JOHN SPARKMAN was honored by his constituents at a dinner in Birmingham, Ala. The praise that was heaped on the chairman of the Foreign Relations Committee on that occasion was well deserved, and I would like to share with my colleagues the account of the affair taken from the Birmingham News. I submit the article for the RECORD.

The article follows:

PRAISE HEAPED ON RETIRING SEN. SPARKMAN

(By Al Fox)

They came from across Alabama and from the nation's capital to salute the man known across the nation as "Mr. Housing" who is retiring from Congress after 42 years.

The honoree was U.S. Sen. John Sparkman who has spent more than half his life in service to the people of Alabama, first as a U.S. representative for 10 years and for the past 32 years as a member of the U.S. Senate.

Sparkman is retiring at the end of this year, and it was with tears in his eyes and a choke in his voice that he told more than 1,000 supporters at the Birmingham-Jefferson Civic Center Friday night that "I hope to see all of you in the future. We are coming home."

The senior senator from Alabama said that he reached the decision to retire "with a little regret," and he was a "little sad" when he told his wife, Ivo, that he was leaving active politics.

"But she only said we're free to do what we want," he said. "Thanks to all of you from me and my family."

The two men who have served in the U.S. Senate were among the many speakers who took part in the "Salute to John Sparkman," one of the most festive occasions ever staged by the State Democratic Executive Committee.

Former U.S. Sen. Lister Hill of Montgomery who served in the Senate for 22 years with Sparkman before he retired in 1969, said that he had been alloted "only two minutes," to talk of "the achievements of John Sparkman," and then said that "to tell all of the things of greatness that he achieved, we would be here for two nights."

"We worked closely together when we were in the Senate, and before that in the U.S. House, and I know of his ability, courage and dedication to the people, not only of Alabama but of the nation," Hill said.

U.S. Sen. James B. Allen of Gadsden, who succeeded Hill and who becomes the states' senior senator upon Sparkman's retirement, said that "while we do not always agree, we have never had a cross word."

Allen said that "there is a scent of history in the air tonight. Not in the next 100 years will we pay tribute to a man of such service to his people. He has never lost the sense of humility."

Quoting Kipling, Allen said that "he has walked with kings and has not lost the common touch."

It was U.S. Rep. Bill Nichols of Sylacauga, who told the most heart-warming story of the night when he displayed a time-worn telegram that his parents had received from Sparkman 33 years ago when Nichols, then a young Army lieutenant who had lost a leg during the fighting in Germany in World War II, was confined to an Army hospital in England.

Sparkman visited the hospital in England as a member of the Foreign Relations Committee of the U.S. House and met Nichols. He then telegramed the parents of Nichols and advised them that he had made arrangements to have the young lieutenant returned to the U.S.

Sparkman was presented with a key to the city by Mayor David Vann, who said he "cut my political eye teeth campaigning for you," and he presented Mrs. Sparkman with a minature key in the form of a pin.

Other members of Congress who spoke were U.S. Reps. Tom Bevill of Jasper, Walter Flowers of Tuscaloosa and Ronnie Flippo of Florence. Flippo, the youngest member of the Alabama delegation, said "I'm his congressman and I hope I can do the same that he did."

Former U.S. Rep. Bob Jones of Scottsboro, who succeeded Sparkman in the House and served for 30 years before retiring, also was there.

Sparkman served for many years as chairman of the Senate Banking, Housing and Urban Development Committee and as Chairman of the Small Business Committee, where he earned the title of "Mr. Housing" and the friend of the small businessman.

Making short talks in tribute to Sparkman included Vondal Gravlee of the National Association of Homebuilders of Birmingham; Arthur Tonsmeire of Mobile, representing the savings and loan associations; John T. Nixon, representing the mortgage bankers' association; Mrs. Mary George Waite of Centre, representing the Alabama Bankers Association; Arthur Shores of Birmingham, representing the Alabama Bar Association; Dr. Joseph Volker, chancellor of the University of Alabama System, representing health and education, and Barney Weeks of Birmingham, president of the Alabama Labor Council, representing organized labor.

Maynard Layman of Decatur, assistant to the publisher of the Decatur Daily, was chairman for the "salute" with Mrs. Charlotte Dominick of Birmingham as co-chairman.

George Lewis Bailes, Jr., of Birmingham, chairman of the SDEC, introduced a film depicting the public service of Sparkman, including his campaign in 1952 when he was the Democratic nominee for vice president, which will be presented to the University Alabama School of Law for its library.●

## JIM CALLOWAY

● Mr. CHILES. Mr. President, I would like to join my colleagues who have commented on the retirement of Jim Calloway, the chief counsel and staff director of the Senate Committee on Appropriations.

When the late Senator John McClellan become chairman of the Senate Committee on Appropriations, he brought Jim Calloway with him to the committee from the then Government Operations Committee, where Jim was serving ably as chief counsel and staff director. Jim served his chairman and the Appropriations Committee members for over 5 years in this important role.

When I first came to the Senate in 1971, I was appointed to the then Government Operations Committee. Within a few hours, Jim Calloway was in my office making himself available to me and my staff for council and advice.

When the late Senator McClellan became chairman of the Appropriations Committee I was fortunate to be assigned to that committee, and continue to work with Jim in his role of chief counsel and staff director.

During the last 8 years I have had the opportunity to work with Jim and watch his performance. I can say that I have not seen a more skillful or professional approach to Senate business by a key committee staff member than provided by Jim Calloway. As his chairman, Jim was always fair in his approach to his many responsibilities. Many members of the Senate can attest to his sound advice and knowledgeable council on a wide range of matters.

I want to wish Jim Calloway success in whatever future endeavors he might undertake.●

## EXCESSIVE FEDERAL REGULATION

● Mr. BENTSEN. Mr. President, last week the Subcommittee on Economic Growth and Stabilization which I chair heard some testimony which should alarm every thinking American.

According to a pathbreaking study on regulatory costs undertaken by the Center for the Study of American Business and presented last week to our subcommittee, Federal regulations alone—excluding State and local regulations—cost consumers and business over $100 billion annually.

Mr. Raymond Haysbert, president of Parks Sausage, made a particularly effective presentation of the unique regulatory burden facing small businesses. Mr. Haysbert testified, for example, that it cost his firm an incredible $96,000 to comply with legal regulations in order to raise just $400,000 in new equity capital.

His contract trucking firm must account to the ICC for its time every 15 minutes, and is actually prohibited from

leaving the New Jersey Turnpike when traveling between New York and Baltimore on business.

Mr. Haysbert's problems are symptomatic of the most serious aspect of Government regulation: Small, independent business people in America can hardly keep track of the agencies empowered to issue regulations, much less what is in the regulations themselves.

As the National Federation of Independent Business noted last fall, the average small entrepreneur works 58 hours a week and has a little time to leaf through the 70,000 pages of the Federal Register published annually to keep abreast of new and changing regulations.

It is no wonder that some find themselves charged with regulatory violations. Their natural environment—the free market system—is being constantly constricted by the barbed wire of Federal interference and regulation. They are stalked by bureaucratic bounty hunters out for their hides.

Our subcommittee heard testimony which revealed that as many as 400,000 firms are fined each year for violating Federal rules and regulations too complex or technical for them to understand.

Most of these fines are for minor infractions. In fact, over 80 percent were fined for less than $2,500. This strongly suggests that most of these violations are due in part or entirely to confusion or ignorance of Federal regulations, and not to premediated, willful intent to break laws. Some premeditated violations do occur, however, simply because small business cannot afford the cost of complying with nitpicking Federal paperwork requirements. In one case, a firm chose to pay a $500 fine in order to avoid paying $750 to an attorney or accountant to complete some complicated Federal form.

This testimony is the first real indication that Federal regulations are simply asking too much of small business men and women. Not only are Federal regulations complicated, they are contradictory, requiring firms to violate one regulation in order to comply with another.

Let us not forget one thing. For 200 years the key to our success as a nation has been freedom. Not just the traditional freedoms of worship and expression, but the freedom to succeed. The small businessman, the person with an idea—the risk-taker—has always been the motor force behind our economic development.

When excessive Federal redtape strangles the initiative of individual risk-takers it naturally stifles the development of new products. In fiscal 1975, EPA issued 2,800 new product registrations under the Federal Insecticide, Fungicide and Rodenticide Act. But in 1977, only 103 were issued. New product applications last year were only one-third of the number of applications made in 1975. Most significantly, in 1977 new product registrations were only 1 out of 17 applied for as opposed to 1 out of 3 in 1975.

What this means is that Federal redtape is destroying the major competitive advantage of American business in world markets—the capacity to develop new products which meet the needs of the world's population and improve the quality of life everywhere they are introduced.

Most small businessmen and most Americans support the efforts of their Government to clean up our air, to keep our water pure, and to improve the quality of life for all citizens. I support these goals. I have fought for them.

So, the rising tide of citizen indignation is not directed at the legitimate efforts of Government to clean up our environment and to improve worker health and safety. Rather, it is correctly directed at unwarranted, confusing, unreasonable regulations which strangle individual freedom and individual initiative.

The hearings which our subcommittee held last week did not yield an easy, simple remedy to the problem of excessive Federal regulation. That was to be expected because there is no easy answer to the problem. But redtape is a man-made phenomenon. Therefore, it can be controlled if only the men and women who make the laws and the men and women who execute them are dedicated to making Government rational, efficient, and effective. Mr. President, I intend to work unceasingly as one Member of Congress, toward those goals.

The confidence of the American people in Government is at a dangerously low ebb, partly because the American people are fed up with Government's tendency to continuously expand and intrude. Mr. President, if we in the Congress can turn this process around we will go along way toward restoring the people's faith in their Government. That is how important this issue is and that is why I intend to search for specific legislative remedies to the problem. I hope many of my colleagues will join me in that effort.●

## GI BILL ADMINISTRATIVE PROVISIONS UPHELD

● Mr. CRANSTON. Mr. President, on March 20, 1978, the U.S. Supreme Court, on appeal from the U.S. District Court for the District of South Dakota, handed down a decision reversing the judgment of the lower court in the case of Max Cleland, Administrator of the Veterans Administration, et al. against National College of Business. At issue was the question whether the due process clause of the fifth amendment prohibits Congress from restricting the educational courses for which veterans' benefits are available under the GI bill without including identical course limitations in other Federal educational assistance programs. The Supreme Court sustained the provisions in question and ruled in favor of the VA.

The specific case involved the Veterans' Administration's implementation of the so-called 85–15 requirement and the 2-year rule, which are described in the decision.

Mr. President, so that Members may have an opportunity to review this Supreme Court decision in detail, the decision follows:

MAX CLELAND, ADMINISTRATOR OF THE VETERANS ADMINISTRATION, ET AL. v. NATIONAL COLLEGE OF BUSINESS

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF SOUTH DAKOTA

[No. 77–716. Decided March 20, 1978]

PER CURIAM.

The question presented is whether the Due Process Clause of the Fifth Amendment prohibits Congress from restricting the educational courses for which veterans' benefits are available under the GI Bill [1] without including identical course limitations in other federal educational assistance programs.

A veteran seeking educational assistance benefits must file an application with the Administrator of the Veterans Administration. Before approving the application, the Administrator must determine whether the veteran's proposed educational program satisfies various requirements, including the so-called 85–15 requirement and the two-year rule.

The 85–15 requirement requires the Administrator to disapprove an application if the veteran enrolls in a course in which more than 85 percent of the students "are having all or part of their tuition, fees, or other charges paid to or for them by the educational institution, by the Veterans Administration . . . and/or by grants from any Federal agency." [2] The Administrator, however, may waive the requirement if he determines that it would be in the interest of both the veteran and the Federal Government.

The two-year rule requires the Administrator to disapprove the enrollment of an eligible veteran in a course that has been offered by a covered educational institution for less than two years. The rule applies to courses offered at branches and extensions of proprietary educational institutions located beyond the normal commuting distance of the institution.[3]

Appellee National College of Business is a proprietary educational institution which has extension programs in several States. Most of its courses have a veteran enrollment of 85 percent or more. Appellee is therefore affected by both the 85–15 requirement and the two-year rule.

Appellee brought this action in the

[1] The various provisions dealing with veterans' benefits are contained in Title 38 of the United States Code. 38 U.S.C. § 1651 *et seq.* relate specifically to the veterans' educational assistance program. While the term GI Bill is often used to describe veterans' benefits legislation generally, for purposes of this opinion it refers to legislation dealing specifically with veterans' educational assistance benefits.

[2] 38 U. S. C. § 1673(d), as amended by § 205 of Pub. L. 94–502. While this appeal was pending, the 85–15 requirement was amended in several respects. Sec. § 305(a) of the GI Bill Improvement Act of 1977, Pub. L. 95–202. However, the amendments have not made the requirement inapplicable to appellee's students.

[3] Sec. 38 U. S. C. § 1789, as amended by § 509 of Pub. L. 502, 90 Stat. 24051. The rule was recently amended by § 305(a) of the GI Bill Improvement Act of 1977, Pub. L. 95–202. The amendment authorizes the Administrator to waive the two-year rule if he determines that it would be in the interest of the veteran and the Federal Government. The Administrator, however, does not suggest that the rule will be waived with respect to appellee's students.

United States District Court for the District of South Dakota, challenging the constitutionality of the restrictions.[4] Appellee contended that the restrictions arbitrarily denied otherwise eligible veterans of educational benefits and denied veterans equal protection because they were not made applicable to persons whose educations were being subsidized under other federal educational assistance programs.[5] The District Court held the 85–15 requirement and the two-year rule unconstitutional and permanently enjoined their enforcement. We reverse.[6]

I

The course restrictions challenged by appellee evolved in response to problems experienced in the administration of earlier versions of the veterans' eduactional assistance program. When extension of the World War II GI Bill to veterans of the Korean War was under consideration by Congress in 1952, the House Select Committee to investigate Educational Training and Loan Guarantee Programs under the GI Bill studied the problems that had arisen under the earlier program. The Committee's work led to passage of the first version of the 85–15 requirement, which applied only to nonaccredited courses not leading to a college degree that were offered by proprietary institutions. Pub. L. 82–550, 66 Stat. 667.

"Congress was concerned about schools which developed courses specifically designed for those veterans with available Federal moneys to purchase such courses . . . . The ready availability of these funds obviously served as a strong incentive to some schools to enroll eligible veterans. The requirement of a minimum enrollment of students not wholly or partially subsidized by the Veterans' Administration was a way of protecting veterans by allowing the free market mechanism to operate.

"The price of the course was also required to respond to the general demands of the open market as well as to those with available Federal moneys to spend. A minimal number of nonveterans were required to find the course worthwhile and valuable or the payment of Federal funds to veterans who enrolled would not be authorized." S. Rep. No. 94–1243, 94th Cong., 2d Sess., 88 (1976).

These same considerations prompted extension of the requirement in 1974 to courses not leading to a standard college degree offered by *accredited* institutions. § 203 (3) of Pub. L. 93–508, 88 Stat. 1582. See also S. Rep. No. 94–1243, *supra*, at 88.

In 1976 the 85–15 requirement was further extended to courses leading to a standard college degree. The Veterans Administration had found increased recruiting by institutions within this category "directed exclusively at veterans." In recommending approval of the extension, the Senate Veterans' Affairs Committee agreed with the Veterans' Administration that "'if an institution of higher learning cannot attract sufficient nonveteran and nonsubsidized students to its programs, it presents a great potential for abuse of our GI educational programs.'" S. Rep. No. 94–1243, *supra*, at 89.

The Committee further noted that, in view of the magnitude of the expenditures under the GI Bill, it was essential "to limit those situations in which substantial abuse could occur." *Ibid.* Finally, the Committee emphasized that "the requirement that no more than 85 percent of the student body be in receipt of VA benefits is not onerous particularly given the fact that under today's GI Bill . . . veterans do not comprise a major portion of those attending institutions of higher learning . . ." *Ibid.*[7]

The two-year rule is also a product of Congress' judgment regarding potential abuses of the veterans' educational assistance program based upon experience with administration of earlier versions of the GI Bill. Thus, following World War II schools and courses developed "which were almost exclusively aimed at veterans eligible for GI bill payments." S. Rep. No. 94–1243, *supra*, at 128. In response, the first version of the rule was enacted. It barred the payment of benefits to veterans attending institutions in operation less than one year. Pub. L. 81–266, 63 Stat. 653. As with the 85–15 requirement, the rule "was a device intended by Congress to allow the free market mechanism to operate and weed out those institutions who could survive only by the heavy influx of Federal payments." S. Rep. No. 94–1243, *supra*, at 128.

Following the Korean War, Congress amended the rule to cover courses that had not been in operation for at least two years. Section 227 of the Korean Conflict GI Bill, Pub. L. 82–550, 66 Stat. 667. In its report accompanying the amendment, the House Veterans' Affairs Committee characterized the rule as "a real safeguard to assure sound training for veterans at reasonable cost by seasoned institutions" and observed that had the rule been in effect during the administration of the World War II GI Bill "considerable savings would have resulted and much better training would have resulted in many areas." H.R. Rep. No. 1943, 82d Cong., 2d Sess., 30 (1952).

In 1976, Congress again amended the two-year rule, making it applicable to, among other institutions, branches of private institutions such as appellee that are located beyond the normal commuting distance from the main institution. The considerations underlying the extended coverage are fully set forth in the report of the Senate Veterans' Affairs Committee accompanying the legislation. S. Rep. No. 94–1243, *supra*. There had been a "spectacular" rise in both the number of institutions establishing branch campuses and in the veteran enrollment at those extensions. These institutions were entering into "extensive recruiting contracts directed almost exclusively at veterans." *Id.*, at 129. In a report dealing with the problems generated by these developments, the Veterans Administration had stated:

"[A] number of instances have been brought to our attention which represent abuse of our educational programs. Some of these cases involved contracting between nonprofit schools and profit schools or organizations whereby courses designed by the latter are offered by the nonprofit, accredited school on a semester or quarter-hour basis. In others, there are arrangements between nonprofit, accredited schools and outside profit firms whereby the latter, for a percentage of the tuition payment, perform recruiting services primarily for the establishing of these branch locations for the school. These recruiting efforts are aimed almost exclusively at veterans." *Ibid.*[8]

In recommending adoption of the amendment, the Committee concluded that the situation presented "great potential for abuse and in several instances that potential appear[ed] to have been realized." *Id.*, at 130.

II

As the legislative history demonstrates, the 85–15 requirement and the two-year rule are valid exercises of Congress' power. Experience with administration of the veterans' educational assistance program since World War II revealed a need for legislation that would minimize the risk that veterans' benefits would be wasted on educational programs of little value. It was not irrational for Congress to conclude that restricting benefits to established courses that have attracted a substantial number of students whose educations are not being subsidized would be useful in accomplishing this objective and "prevent charlatans from grabbing the veteran's education money." Both restrictions are based upon the rational assumption that if "the free market mechanism [were allowed] to operate," it would "weed out those institutions who could survive only by the heavy influx of Federal payments." S. Rep. No. 94–1243, *supra*, at 128.

The otherwise reasonable restrictions are not made irrational by virtue of their absence from other federal educational assistance programs. They were imposed in direct response to problems experienced in the administration of this Country's GI bills. There is no indication that identical abuses have been encountered in other federal grant programs. In any event, the Constitution does not require Congress to detect and correct abuses in the administration of all related programs before acting to combat those experienced in one. For, "[e]vils in the same field may be of different dimensions and proportions, requiring different remedies. Or so the legislature may think. Or the reform may take one step at a time, addressing itself to the phase of the problem which seems most acute to the legislative mind. The legislature may select one phase of one field and apply a remedy there, neglecting the others. The prohibition of the Equal Protection

[4] Other district courts have upheld the challenged restrictions. See (e.g., *Fielder* v. *Cleland*. 433 F. Supp. 115 (ED Mich. 1977); *Rolle* v. *Cleland*, 435 F. Supp. 260 (R.I. 1977).

[5] Joining appellee as plaintiffs in the District Court were four veterans who were students or former students at the National College of Business. The court held they lacked standing because they had not demonstrated how they would be affected by the restrictions. The court, however, held that appellee, who would suffer serious economic harm from application of the restrictions to its students, had standing under the *jus tertii* doctrine to assert the constitutional claims of its students. Neither of the court's standing rulings are challenged in this Court.

[6] Appellee advanced several other theories of unconstitutionality in the District Court and reasserts two of them in this Court: (1) the restrictions violate substantive due process because they interfere with freedom of educational choice, and (2) they violate procedural due process because the affected veterans are not afforded a hearing on the question whether the requirements should be applied or waived. The District Court characterized these contentions as less meritorious than the equal protection claim. We agree. Neither raises a substantial constitutional question.

The purpose of the requirement is not disputed:

[7] The 1976 amendments also changed the computation base of the 85–15 requirement, for the first time including students subsidized under other federal assistance programs within the 85 percent calculation. This change, however, was recently modified by Congress to exclude from the 85 percent quota students receiving federal assistance from sources other than the Veterans' Administration, until such time as the Administrator has completed a study regarding the need for and feasibility of including them within the 85 percent computation. Section 305(a) of the GI Bill Improvement Act of 1977, Pub. L. 95–202. This change has no bearing on this case because appellee has a veteran enrollment of more than 85 percent.

[8] The Administrator amplified on these problems in testimony before Congress. See S. Rep. No. 94–1243, *supra*, at 129–130.

Clause [generally] goes no further . . . ." *Williamson* v. *Lee Optical Co.*, 348 U.S. 483, 489.

When tested by their rationality, therefore, the 85–15 requirement and the two-year rule are plainly proper exercises of Congress' authority. While agreeing that the restrictions were rationally related to legitimate legislative objectives, the District Court concluded that veterans' educational benefits approach "fundamental and personal rights" and therefore a more "elevated standard of review" was appropriate. Subjecting the 85–15 and two-year requirements to this heightened scrutiny, the court observed that they were not precisely tailored to prevent federal expenditures on courses of little value. Since some quality courses would be affected by the restrictions, the court held them unconstitutional.

The District Court's error was not its recognition of the importance of veterans' benefits but its failure to give appropriate deference to Congress' judgment as to how best to combat abuses that had arisen in the administration of those benefits. Legislative precision has never been constitutionally required in cases of this kind.[9]

"The basic principle that must govern an assessment of any constitutional challenge to a law providing for governmental payments of monetary benefits is well established. Governmental decisions to spend money to improve the general public welfare in one way and not another are 'not confided to the courts. The discretion belongs to Congress, unless the choice is clearly wrong, a display of arbitrary power, not an exercise of judgment.' . . . In enacting legislation of this kind a government does not deny equal protection 'merely because the classifications made by its laws are imperfect. If the classification has some "reasonable basis" it does not offend the Constitution simply because the classification "is not made with mathematical nicety or because in practice it results in some inequality." ' *Dandridge* v. *Williams*, 397 U.S. 471, 485. *Mathews* v. *DeCastro*, 429 U.S. 181, 185.

Since it was rational for Congress to conclude that established courses with a substantial enrollment of nonsubsidized students were more likely to be quality courses, the 85–15 and two-year requirements satisfy "the constitutional test normally applied in cases like this." *Califano* v. *Jobst*, — U.S. —, —.

The judgment is reversed.

[9] Appellee contends that the challenged restrictions will completely deprive some veterans—those who live in areas where there are no programs which satisfy the two requirements—of veterans' educational assistance. While the restrictions on their face simply channel veterans toward courses which Congress has determined are more likely to be worthwhile, they may in fact operate to make benefits functionally unavailable to some veterans not living in close proximity to schools offering qualified programs and unwilling or unable to move to take advantage of the federal assistance. Nevertheless, the fact that Congress' judgment may deprive some veterans of the opportunity to take full advantage of the benefits made available to veterans by Congress is not a sufficient basis for greater judicial oversight of that judgment. As the Court noted in *San Antonio Independent School District* v. *Rodriguez*, 411 U. S. 1, 35, "the undisputed importance of education will not alone cause this Court to depart from the usual standard for reviewing . . . social and economic legislation."

MAX CLELAND, ADMINISTRATOR OF THE VETERANS ADMINISTRATION, ET AL *v.* NATIONAL COLLEGE OF BUSINESS

ON APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF SOUTH DAKOTA

[No. 77–716. Decided March 20, 1978]

MR. JUSTICE MARSHALL.

I believe that substantial constitutional questions are presented by appellee's due process claims (See *ante*, n. 6), as well as by its equal protection claim. I would therefore note probable jurisdiction and set this case for oral argument.●

## THE ROLE OF NAVAL FORCES IN SUPPORT OF THE NATIONAL STRATEGY

● Mr. TOWER. Mr. President, the Secretary of the Navy recently convened the annual current strategy forum at the Naval War College in Newport, R.I. This is a gathering of individuals from the Armed Forces, Government, industry, the media, academic institutions, and other parts of the private sector for the purpose of discussing issues relating to the maritime interests of the United States and the role of our naval forces in support of the national strategy.

Several distinguished speakers were given the opportunity to address the current strategy forum. Though I was unable to attend, the remarks offered by the two top civilian leaders of our Navy have been commended to me for the concise yet eloquent manner in which they address very timely issues concerning our future plans for the U.S. Navy.

I recently addressed the Senate on April 6, 1978, concerning my observations as to some of the current discussions affecting our future naval planning. In this same vein, I would like to commend to the attention of my colleagues the remarks delivered at the current strategy forum last month by the Honorable W. Graham Claytor, Jr., Secretary of the Navy, and the Honorable R. James Woolsey, Under Secretary of the Navy. I request that the text of their comments be printed in the RECORD.

The statements follow:

REMARKS BY HON. W. GRAHAM CLAYTOR, JR.

It is a great privilege and pleasure for me to be here at the Current Strategy Forum again this year. In my year as Secretary of the Navy, I have developed a very solid appreciation of the really important work that goes on all year in Newport. It is here that the Navy trains its leaders of the future. This Forum is a key part of their learning process. Just as important, the Forum seeks to inform visiting civilian leaders about major policy issues facing the naval service. We seek your opinions in our three days of discussions because we know that an informed, active, participating citizenry is this country's greatest reservoir of military strength.

Since I took office after a thirty year absence from the Navy, I've had a chance to visit our sailors, aviators, submariners and marines at various ships and installations around the world. It has been an inspiring experience. The men and women who are the heart of the naval service are a dedicated, professional collection of Americans—people with whom I am proud to serve. I have found that a sense of doing an important job and doing it well exists all across the fleet—from the flight deck of the NIMITZ in the Mediterranean to Marine Corps desert maneuvers at 29 Palms, California.

I can report at the outset of this Forum that our Navy-Marine Corps team is in good shape. You can be proud of it, as I am.

Yet, being a part of this team today is an extremely challenging assignment. That the Current Strategy Forum has chosen the theme "The Navy and National Strategy" is consistent with our concerns for the important problems facing not only the Navy but the United States as a whole. Our theme touches the two guiding precepts of the War College—advancing the professionalism of the naval officer community, and assessing the broader issues of naval strategy as it relates to national policy.

Much of your individual and collective work over the next several days will be centered around two recent studies. I hope these studies will have a major, long-term impact on American military posture.

The first of these, the Sea-Based Air Platform Study, was requested by Congress and was forwarded to Capitol Hill last month.

Its objective was to provide a thorough evaluation of the costs and combat effectiveness of aircraft capable ships at sea, both in the near and the long terms. A highly technical analysis, it looks at a number of platforms: from the nuclear powered aircraft carriers—designated CVN—to the prospective smaller Vertical and Short Take-Off and Landing (V/STOL support ship—VSS—to the existing surface ships that might be modified to take V/STOL aircraft.

The key finding of the Sea-Based Air Platform Assessment is that sea based tactical aviation will continue to play a major role in virtually all military scenarios. The study found that no single platform—from the recently commissioned CVN EISENHOWER, down to an air capable modification of the SPRUANCE class destroyer—is likely to be the best system in all cases. It did verify the potential advantages of increased numbers of less costly and less individually capable platforms. Furthermore, the study determined that while development of V/STOL aircraft will be costly and time consuming, they have potential advantages at sea due to their increased flight deck efficiency and dispersal capability.

My judgment is that the Sea-Based Air Platform Study provides a sound basis for the selection of additional sea-based air platforms. Simply put, we need to start building another carrier of some kind in the near future.

What kind to build is a matter of judgment. My personal view has been expressed many times to Congress. It is that we need more and better dispersed platforms for sea-based aviation in the future. We already have operating or building four nuclear-powered carriers. With the budget we see for Navy shipbuilding in the future, I think the next carrier authorized should be a medium sized carrier, conventionally powered, that is still large enough to operate all the aircraft in our current inventory. The Sea-Based Air Study indicates that we could build 3 of these for about the same cost as two *Nimitz* class CVNs; the saving of a billion dollars on one ship in our very tight shipbuilding budget seems compelling as a practical matter.

Admiral Holloway, our Chief of Naval Operations, has testified before Congress that he would prefer to have one more nuclear-powered carrier. To me, the difference is not a critical one; the key point to remember is that we need sea-based aviation in the future if we are to maintain maritime supremacy. As Secretary of the Navy, I will build with enthusiasm any kind of aircraft carrier authorized and directed to be built by law. I

hope your discussions at this Forum will address the question of the future of sea-based aviation.

In step with the technical evaluation made by the Sea-Based Air Study, a second more wide ranging work was carried out: The Naval Force Planning Study. This Study, which is the most important single project I have been associated with as Secretary of the Navy, had significant inputs from the Naval War College, and was directed by Professor Bing West of the Naval War College faculty. Therefore, it is very appropriate that I am able to discuss some aspects of the genesis, objectives, methodology and results of this Study—called SEAPLAN 2000—for the first time in public here today.

Early in the current administration, President Carter chartered a major study to assess the posture of military forces in this country.

While this was a "thinking effort" on the part of the various military staffs and not intended to be a policy making study, it became apparent as the effort progressed that there were serious differences of opinion about naval strategy. The most crucial differences arose over the perceived utility and requirement for sea-based air forces. To some of us, it appeared clear that any significant decrease in the strength of our aircraft carrier battle groups and other surface forces would seriously reduce the flexibility of America's leaders. It has been this country's experience that naval forces afloat provide the most immediate and direct response possible in the majority of situations likely to occur. Furthermore, naval forces have the ability to remain on station for extended periods of time, ready to take instant action, with virtually no requirement for supporting forces. This inherent capability is simply not available through other measures.

Yet studies have a way of setting things in concrete, especially in large organizations. Staffs grow defensive about programs, and tend to resist change after the problems have been thought through as of the moment. Thus it was felt that the very real possibility that our Navy might be called upon to maintain control of critical sea lanes over an extended time period needed further analysis. I personally was concerned that we not create the naval equivalent of the Maginot Line—in effect sizing our naval strength against a single scenario without regard for the uncertainty of the world in the years ahead.

Many of us in the Navy Department considered that a major naval force structure assessment was imperative. Last August Secretary of Defense Brown authorized the Navy Department to take the lead in a joint Navy-Marine Corps-Department of Defense Study.

This Naval Force Planning Study was completed and forwarded to the Secretary of Defense last Tuesday, March 20. The Study had two objectives. The first was to examine what the most probable range of tasks for naval forces is likely to be for the balance of this century. The second was to determine how well we would be able to perform these tasks with naval forces of different sizes.

The Study aimed at a top-down approach. To produce a credible report it was agreed that the methodology would center around determining the linkages between national interests and national policies, on the one hand, and U.S. naval force structures on the other. From there, it could be determined which combination of naval forces, force deployments and strategies best supports U.S. policy. The Study concludes with an analysis of options that the Secretary of Defense, the National Security Council, and the President can consider in making crucial decisions about the future of the Navy.

The study involved extensive and thorough analytical work, the results of which appear in numerous graphs, tables and summaries. To the uninitiated, these can appear both more definite and more conclusive than is really the case. One of the most frustrating things I have encountered in this job has been a tendency on the part of some staff people to use systems analysis as a cover for what is really subjective judgment. It is easy to argue against a personal opinion, but if it can be hidden behind hard numbers, an unsophisticated opponent can be overwhelmed. I am determined not to let what is essentially a helpful tool become an overriding force in driving decisions.

Professor West has included this caveat in our Study, and it is so well stated—and so important—that I would like to quote it to you. In discussing the Study's results and conclusions, he said:

". . . it is important to understand what they [that is, the results and conclusions of the Study] are and what they are not. Numbers have the unfortunate property of specificity, which in turn inflates the credibility of guesses. Like other studies, this report is replete with tables summarizing the results of hypothetical warfighting engagements. Based on these naval engagements, conclusions about naval programs are reached and some options developed. The models used are basically deterministic conditional probability sequences, using expected value inputs. While they have been checked by respected authorities, in the end these analyses are judgments. We have not fought the wars we are talking about."

Now, building a framework for programs extending into the twenty-first century is not a trivial task. Before becoming Secretary of the Navy, I gave very little thought to the year 2000 and beyond. But we must think about that time frame now, or our citizens of that era will judge us harshly, and with good reason. We cannot be the "now" generation or the "me" generation. We must, as Americans did in the past, make some tough decisions and some sacrifices to benefit those who follow us.

Seaplan 2000 tells me that planning naval forces is far more like getting ready for the Lewis and Clark expedition than it is like planning a Cook's Tour. In recent years it has become fashionable to try to design naval forces for one or two set-piece scenarios or specific missions, such as World War II's battle of the Atlantic revisited, or Vietnam, and to assume that if these scenarios can be met, everything else of interest can automatically be taken care of. This is Cook's Tour: tomorrow is Tuesday, so I'll be in Belgium. But the ships of the Navy we authorize today will deliver in the early or mid 1980's and spend nearly—or in some cases, more than—half their service life in the twenty-first century. We must plan a balanced force that is capable of a full range of possible naval missions and must keep one important thing in mind: we intend to follow a very old U.S. Navy tradition, and that is to go in harm's way. We must plan to have the greatest possible flexibility, as Lewis and Clark did—to take along whatever we might need for a whole range of unforeseen contingencies. It would be a mistake to do otherwise because we just don't understand the wars we haven't fought yet, especially the ones in the twenty-first century.

Rather than comparing force structures and capabilities with the conventional set of scenarios, the study group accordingly took a different tack and examined national policies with regard to geographic areas—for example, the Atlantic/Mediterranean/European area, and the Pacific/Indian Ocean Basin. The logic used in the examination was straightforward for any given region:

Examine our national security interests in the region.

Qualitatively set forth the contributions that naval forces make.

Establishing a measure of these contributions and the trends in naval participation.

Assign a dollar cost and a likelihood of success in meeting the policy with a certain force structure.

Using this approach, we felt that we could determine why one does or does not want certain kinds of forces. A reasonable force mix—and by this I mean an affordable and effective naval force structure—should be maintained under the only guidelines that really matter: national policy, the threat to be faced, and the contribution that the Navy can make to national policy in the face of that threat.

Addressing the broad spectrum of the overall maritime defense structure as it does, SEAPLAN 2000 provides a clear and compelling rationale for naval forces in terms of their contribution to our nation's defense. I derived a number of other valuable insights from the Study. Specifically, these included:

The ability of our naval forces to carry out their mission now and in the next 30 years is far more constrained than it has been for the past 30 years. The Navy faces a capable opponent at sea in the Soviet Navy. The Navy and Marine Corps will have to face these forces, as well as those of third countries, when they are called upon—not the forces of the past.

Also, it is evident that surface ships will become more, not less, survivable through the 1980's, largely through the introduction of the AEGIS anti-missile defense system and other new anti-ship missile defense and anti-submarine warfare systems that are the fruits of earlier developmental investments. Yet the Study also indicates that we must pursue actions now to counter the impressive potential air threat that will likely beset us in the 1990's.

In addition, the Study illustrates well the importance of having naval forces that are flexible and in balance for a wide range of demands. The value of maintaining an offensive option against the Soviets is evident, for it retains for the nation at least one means short of a nuclear exchange of carrying the war to them. An effective offensive threat will also help protect U.S. and allied sea lanes against an offensive directed at them, or against our friends and even our neighbors.

Finally, and of no less importance, the Study shows that naval forces permit the President to respond to crises with flexibility to the degree appropriate to our aims and policies. In coping with crisis situations around the world—which are deemed more likely than major war with the Soviets—the graduated presence or application of carrier and amphibious task forces is the best reassurance for our friends, and the best deterrence for would-be enemies. Weakness on our part may well invite aggression in the future, as it has in the case of other nations throughout history.

As the Sea-Based Air Platform Assessment did with respect to carriers, SEAPLAN 2000 provides a solid rationale which should be helpful in determining and justifying future shipbuilding and aircraft procurement plans. Coupled with the initiatives that have been underway to solve our claims problems, I am confident that we can both support our requests and manage them effectively when authorized. Indeed we must, because I believe we desperately need to maintain maritime superiority if this nation is to have the defense that it requires and deserves.

In conclusion, I think we are at a time of critical decisions about the role of naval forces in our future defense posture. I have tried to set the stage for your deliberations here by discussing the new studies that we believe give us assistance in making long range decisions. I welcome and encourage your thoughtful contributions to this national dialogue in the course of this Forum.

---

ADDRESS BY HON. R. JAMES WOOLSEY

Forty-three years ago the great economist John Maynard Keynes closed his General Theory with the following words:

". . . the ideas of economists and political philosophers, both when they are right and when they are wrong, are more powerful than is commonly understood. Indeed the world is ruled by little else. Practical men, who believe themselves to be quite exempt from any intellectual influences, are usually the slaves of some defunct economist. Madmen in authority, who hear voices in the air, are distilling their frenzy from some academic scribbler of a few years back. I am sure that the power of vested interests is vastly exaggerated compared with the gradual encroachment of ideas. Not, indeed, immediately, but after a certain interval; for in the field of economic and political philosophy there are not many who are influenced by new theories after they are twenty-five or thirty years of age, so that the ideas which civil servants and politicians and even agitators apply to current events are not likely to be the newest. But, soon or late, it is ideas, not vested interests, which are dangerous for good or evil."

Today I want you to consider with me, the implications that Keynes' principle—let's call it the principle of intellectual stagnation in the public service—has for naval forces, or at least for one conventional wisdom about naval forces. I say "one conventional wisdom" advisedly, because, if there is one thing that I've come to learn about naval forces in the last year, it's that the number of offices, institutions, and influential individuals in Washington with different, but firmly held, views about the proper future of the Navy is beginning to approach the number of ships in the fleet.

But the particular conventional wisdom about the Navy that I want to discuss, with Keynes' principle in mind, is a rather widely-held one: it is bottomed on two views. The first is an assumption about the future of technology It is that, due to projected improvements in anti-ship missiles and the difficulty of defending against them, surface ships over the next 20–30 years will become increasingly unable to survive at sea. The second basis of this particular conventional wisdom is a bit harder to describe. It is a set of views that I call quantitative policy analysis. It is the notion that military forces should be designed almost exclusively to yield favorable results from computer calculations of the outcomes of very specific military engagements, using complex models with many assumptions. The particular conventional wisdom produced by these views, as well as I can state it, runs something like this:

"Naval forces, particularly surface ships, are becoming increasingly obsolete. Ever since the Israeli destroyer, Eilat, was sunk in 1967 by a Soviet-made cruise missile, this trend has been clear and it becomes more so each year. Cruise missiles make surface ships increasingly vulnerable to attack by all sorts of platforms—submarines, other surface ships, and aircraft.

"The U.S. Navy has compounded this problem because it has become used to placing all its offensive power entirely in a single platform, the large-deck aircraft carrier. These ships are increasingly becoming so expensive that it is going to be difficult for the Navy to maintain very many of them, and they create the difficulty of having all of one's eggs in very few baskets.

"Vulnerability and few numbers mean that carriers and other surface ships could not prudently be risked in a major war in the future. This means that surface ships should primarily be used for specific purposes: showing the flag in peacetime and projecting power ashore in contingencies such as Korea or Vietnam, where they can operate from an ocean sanctuary against third world countries that lack the sophisticated naval forces of the Soviet Navy. But, for these peacetime and minor contingency purposes, the expense of operating carriers is unsupportably high. We could probably afford some reduction in large carriers and substitute, e.g., amphibious ships. Since many of them look large and impressive and roughly resemble carriers, they could be used for port visits and peacetime deployments.

"The Navy's main, and only vital, mission in a U.S.-Soviet War is to protect the sea lines of communication from the East Coast of the United States to Western Europe. A war in Europe would likely be over quite quickly since it would either turn nuclear or one or the other side would suffer significant defeat within the first thirty-odd days. Sealift might thus not be a particularly significant factor, but to hedge against the war lasting longer, some Navy for sea lane protection is necessary. This could primarily be done by land-based anti-submarine warfare aircraft such as the P–3, small surface ships such as frigates, and a few nuclear attack submarines. In a big war, any other mission for naval forces—such as conducting operations within range of Soviet land-based aircraft—is too dangerous to plan for, or at least too expensive to buy forces for."

Now, although I would not suggest to you that this particular conventional wisdom is wholly in error, nevertheless I believe it has some serious flaws for the reasons Keynes described. Let me turn first to its key technical judgment: that surface ships will become ever more vulnerable to anti-ship cruise missiles over the next two to three decades.

It is instructive to note that the people who lost the Eilat in 1967 have learned something. I have recently been on an Israeli patrol boat and reviewed their 100 percent successful tactics for avoiding hits by the large number of anti-ship missiles that were fired against them in the 1973 war. Suffice to say this is an area in which their, and our similar, advantages are far from irrelevant—e.g., skill with electronic countermeasures, innovative tactics, intelligent and well-trained crews, etc.

Moreover, even if a surface ship, particularly a large one, is hit by a conventionally-armed anti-ship missile, the probability of the ship being put out of action, much less sunk, is certainly not unity. Defending ships that can move and, in a conventional war, that can tolerate a small number of hits, is inherently an easier problem than perfectly defending a fixed land-based site in a strategic nuclear exchange—where the penalty for leakage is rather greater. It is true that, for a number of years in the 50's and 60's, we constructed ships in part under the assumption that any large-scale war would be nuclear and that therefore hardening or passive protection was not, ordinarily, worth the money. However, a new Sea-Based Air Platforms Assessment, done by the Navy at the request of Congress, indicates that substantial improvement in the survivability of carriers—large or small—is possible by constructing new ships with more armor and passive protection than has been used in recent years. Further, vertical and short takeoff and landing (V/STOL) aircraft significantly improve the capability of any carrier, of whatever size, to conduct its mission after suffering damage, because the aircraft can continue to operate even if the ship has been slowed (for that matter, if it is dead in the water) and even if the deck area, where catapults or arresting gear would normally be located, has been damaged.

More importantly, however, there are systems now coming into our naval forces which have been in development over the last decade and which will make very significant contributions toward reducing the number of missiles that might be able to penetrate—electronic warfare suits, the PHALANX Close-In-Weapon-System, and particularly the AEGIS area air defense system.

Further, we have either in the fleet, entering it soon, or in development, systems capable of destroying the platforms launching the incoming missiles so that we are not beaten by gradual attrition. The F–14 fighter and E–2C early warning aircraft give us a good capability today against aircraft launching anti-ship missiles, although that very difficult job is one on which we need to continue to work very hard in the future. Improvements in anti-submarine warfare forces—towed arrays, and others—make the job of engaging the missile-launching submarine a more reasonable enterprise than was the case a few years ago. And hostile surface ships can now be engaged by our carrier-based aircraft and soon by the HARPOON missile just coming into the fleet.

What about the problem of all our offensive eggs being locked into a few large carrier baskets? I believe there are two ways open to us for packing some of our offensive punch into a much larger number of platforms. They are not mutually exclusive. The first, of comparatively low cost, is to equip as large a number as possible of our combatant platforms with cruise missiles. I mentioned the HARPOON, for which the program is already under way to equip all surface combatants as well as a number of aircraft and submarines. Over the longer haul, our cruisers and destroyers could be equipped with the considerably longer range TOMAHAWK cruise missile as could our attack submarines—both for a conventional anti-surface-ship mission and for those conventional land-attack missions where it is possible to have a significant military impact by delivering only a relatively small number of very accurate conventional warhead weapons. This depends upon significant improvements in guidance for cruise missiles but it is by no means a far-fetched proposition.

The second way to spread out our offensive punch is to disperse our aviation eggs around in more baskets by developing V/STOL aircraft for deployment on small carriers and other air capable surface combatants. This may well prove expensive, but it is a road we should at least explore vigorously in research and development for a few years. We are going to have, even if we build no more of them, at least 12 large deck carriers in our naval forces virtually into the 21st century. The only investment required to ensure this is to conduct a set of very thorough overhauls, called the Service Life Extension Program, on the carriers, beginning in 1981. Because of this, any transition to V/STOL would not, and need not, be a sudden proposition. It is more akin to an evolving reliance on solar power in place of fossil fuels than it is akin to e.g., replacing one rifle with another.

"Well, all right," some of you may be saying. "Suppose surface ships are not becoming as vulnerable as the conventional wisdom might indicate, and suppose there are ways to spread our firepower on to more platforms than 12 large-deck carriers. You still haven't told me what you want to use the Navy for. Are you interested in power projection? Are you interested in sea control? You can't afford to do everything. Shouldn't we be concentrating, for example, on protecting the sea lines of communication in the event of a NATO war, using the most cost-effective systems possible? Tell me the scenario you want to operate in and I will help you design and size your force. I will help you discover 'how much is enough.' But the Navy has to get its act together and decide what war it wants to fight."

These sorts of questions, claims, and advice are the bread and butter of what I described earlier as "quantitative policy analysis": a method of decision-making that relies heavily, in the military field, on designing forces to cope with very specific scenarios, utilizing complex computer models dependent on numerous detailed assumptions. Since I'm going to spend the rest of my time this morning talking, in one way or another, about the limitations of such analysis, I want to try to be clear what I mean by it. Now some of you may be sitting there and saying "come on, if you mean systems analysis, just say so."

Well, I do and I don't. "Systems Analysis," the name of both the original office established in the Defense Department by Secretary McNamara and the decision-making methods it spawned throughout government, has become identified in many people's minds with a number of issues that I have no intention of addressing today. So, I'm not referring here to that office itself. Nor am I addressing the role of particular individuals who worked or work there. I used to work there myself and I have a high regard for many others who have, for those who have led it, and for those who lead it today. What I am describing is an admittedly rather single-minded attachment to a specific tool of decision-making: a single-mindedness I would attribute to no one all of the time, but to lots of us some of the time, and to some of us most of the time.

Now, one of the oldest and most honorable strains in the analytic discipline is the principle that one must always tell the client or decision-maker who asks the questions that set up the analysis, whether or not his questions are the right ones.

So it's in the spirit of suggesting that, essentially, "how much is enough" and its cousins may not be the right, or at least not the most important, questions that I want to proceed.

The first and most important reason such questions may well be the wrong, or at least not the major, ones that need to be asked has already been indicated by the Secretary of the Navy. Designing a Navy around specific scenarios requires one to look too far into the future to be realistic. Ships are platforms—more like capital investments than like specific weapons. Over 70% of the ships that will be in the fleet in the year 1990 already exist or have already been authorized. A carrier that we would authorize in the next year or two can well spend over half its service life in the 21st century. For an example, let's look at the year in which such a carrier (that would enter the fleet in the mid-80's) would just be entering middle age—that is, it would be coming out of its major service life extension overhaul and would be looking forward to another 15 years in the fleet. That would occur around the year 2010. Now, we have no better idea today what specific wars or crises we are going to have to deal with between now and 2010—32 years from now—than we had in 1946—32 years ago—about the crises of today. Who of you here foresaw in 1946, if you indeed had been born by then, that in 1978 our thinking about when and how we might need navy forces could be significantly influenced by, e.g., a commitment to Israel, the need to protect sea lines of communication to Persian Gulf oil, a split between a Communist China and the USSR, and U.S.-Soviet parity in strategic nuclear weapons? Do I need to point out that in 1946 the State of Israel did not exist, Persian Gulf oil was just being discovered, the PRC was just being born, and neither the U.S. nor the USSR had heard of an ICBM or an SLBM? What makes anyone even remotely confident that the national security problems of the early 21st century are any clearer to us today than the forces that drive naval planning in 1978 were clear in 1946?

It is neither lack of effort nor a temporary and remediable lack of willpower that leads to the Navy not being able to tell now just what sort of war it wants to fight in 30 years. As Secretary Claytor has said, assuming you can plan on such a basis is designing Cook's Tour: next month I'll be in Belgium and it will be March so I'll need a raincoat. Designing a Navy is much more like forming up the Lewis and Clark Expedition: we have to be prepared for a wide range of problems, so we have to design for flexibility.

How we can best do this is itself a massive subject. But three points are relevant. First, since ships are capital investments and last such a long time in peacetime, and since the pace of technological change for weapons and sensors—such as radars and sonars—is so rapid, we must design ships to be able to accommodate change and modernization readily. Carriers are inherently capable of doing this. As the suits of aircraft are changed the ship can thereby accommodate major alterations in missions. The carriers indeed have done this many times since World War II. Another way to promote flexibility is to build even small surface combatants to take some aircraft. Our destroyers and frigates took on important new capabilities when we put anti-submarine warfare helicopters aboard them a few years ago. They will evolve further as more advanced helicopters replace these in the 1980's. This interest in the flexibility provided by multiplying the number and types of platforms that can use aviation at sea is another key reason for our support for the development of V/STOL aircraft. A third way to make it easier for ships to accommodate change is to build surface ships in such a way that their weapons suits—guns, radars, missiles, etc.—can be changed far more readily and cheaply than is now possible as new weapons and sensors become available, almost as if one were changing modules. We are working hard on this promising concept, but there is still much to do.

In addition to the need to design a Navy for flexibility over a long period of time, there is another major reason why I would suggest rejecting the precise quantitative and scenario-dependent method of designing a Navy. It is that naval forces are particularly vital for dealing with the dynamic problem of the transition, a transition we want to prevent, from peace to war. Any specific scenario, whether it is protecting the sea lines of communication to Europe in the event of a NATO war, projecting power in a certain type of crisis in the third world in the absence of Soviet intervention, or any other, has to be a snapshot in time. One doesn't want to ask only the question convenient for quantitative policy analysis to answer: "what might things look like at a specific time"? but the much harder question: "what are the problems of going to or being forced from one position to another, and how can I control that process to avoid risk?" The President and his advisers need to know what sort of forces can best help them manage the perennial danger of crises escalating into war, and to manage them in such a way that the other side will know that at each step of the road we are in control. Unfortunately for the analyst, it is in the complexity of evolving and dynamic situations, of peace threatening to evolve into war, that naval forces are most relevant. That makes them messy to analyze in one- or two-mission or one- or two- scenario formats. Naval forces are highly relevant to this delicate transition from peace to war because they can do three things: (1) they can help maintain stability in peacetime through forward deployments and perceptions of their potential power if used, (2) they can help contain or manage crises as they evolve, and (3) they can help deter general war by being clearly better able to fight it than their foreseeable adversaries. These tasks are, in a very real sense, a seamless web. Let me walk through them briefly.

Naval forces can help maintain stability in peacetime by forward deployment. We maintain today two carrier task groups, battle groups we call them, in the Mediterranean, two in the Western Pacific, and several Marine amphibious units deployed in both areas as well. Since 1945, the U.S. has used such sea power as a means of affecting the behavior of decision-makers in other nations in peacetime. These forward deployments are intended to demonstrate U.S. interest and resolve, to reassure our allies, to deter our enemies, and to ensure quick response. So one important question in designing a Navy is, how do force structure decisions have an effect on these forward deployments? For the issue is not whether a permanent reduction in our naval forces would affect our forward deployment and therefore our foreign policy, but rather in what ways.

Another part of the picture of assessing the overall contribution of naval forces to peacetime stability is the perception of the Soviet-U.S. naval balance. It is not inevitable that the U.S. concede to the Soviets parity in all military capabilities. They do not enjoy it now. The forward strategy linking the U.S. to other continents requires use of the seas, and makes any perception that the Soviets could deny the U.S. control of the seas particularly damaging. Such perception is not warranted by the projected trends in technology, if we have the will and the skill, and the money, to proceed to deploy what has been developed.

Another major task that national decision-makers must face in the spectrum between peace and war is the containment or management of local crises. In some crises a President may wish to commit U.S. troops immediately to preempt certain potential moves by an adversary, to evacuate Americans in jeopardy, or to ferry supplies rapidly to a friend or ally. Naval forces aren't the only possible means. The quick response of airlift provides the President with a valuable tool, for example. But airlift has limitations and in a number of cases, naval forces may be preferred for good reason. For example, naval forces can be deployed to a crisis area without being committed to battle and without committing allies. Such demonstrations manifest both U.S. concern and capabilities. In over 200 crises, large and small, since 1945 in which the U.S. was involved, U.S. Navy and Marine forces were deliber-

ately employed in 177 cases, while U.S. land-based air or ground forces alone were demonstrated in fewer than 90 cases.

Naval forces may be the most acceptable form of military presence in crisis situations. They can convey, if the policy maker chooses, calculated ambiguity and calibrated response. Their presence does not irrevocably commit the United States to a given course of action. They do, however, seriously complicate the calculations of opposing parties. U.S. fighting forces can be assembled for action without using bases in other nations. Indeed naval forces help make us comparatively indifferent to the vicissitudes of other nations' policies about base rights, whether for us or for hostile countries, and Naval forces thus help make us more able to tolerate shifts in political winds without feeling our vital interests are injured. If a crisis is resolved satisfactorily, naval forces can be withdrawn with limited fanfare. In sum, naval forces provide a policy maker with important flexibility and a tool for orchestrating events.

To be able to successfully support U.S. policy in a crisis, our naval forces require several things. They must have the striking power to affect events ashore.

They must have local superiority over potential adversaries. The benefit of naval superiority is that it signals to the Soviets and others that their adventurism occurs against the backdrop of U.S. forces that are capable of fighting and winning, and both sides must know this. In a crisis we want it to be the other commander on the scene, not our own, who is forced to tell his superiors that he must back down or risk escalation.

There must be sufficient forces to permit coverage of different crisis areas, so that responding to a crisis in one area does not involve a risk of being unable to deal quickly with a new outbreak somewhere else. This does not imply that we must be everywhere all the time. It does mean that reductions in our force levels will increasingly constrain our credibility.

Most of all, we must always bear in mind the possibility that a crisis could escalate to actual fighting, with some losses to U.S. forces. Our forces are becoming more, rather than less, capable of responding to a sudden attack. Nevertheless, prudent planning requires that we recognize the possibility of some initial losses. We need to consider, in light of this, what total forces we need to maintain our position.

Continuing along the spectrum from peace to war, another major task for national decision makers is the deterrence of a major war. We must recognize that the deterrence of conflict will depend upon a credible warfighting capability. Maintaining such a capability is complex and difficult for a whole series of reasons, but two are salient. First, our Allies are overseas—many of the most important ones close to the borders of the Soviet Union. If there is effective sea denial, by both sides, we lose. We have to be able to use the seas to maintain our alliances and our security. Second, it is no longer the case that the threat to our use of the seas occurs only in the near-coastal waters of the Soviet Union. The increasingly-capable blue-water Soviet Navy, and particularly the long-range Backfire bomber going into the Soviet Naval Aviation forces, makes all the world's waters of interest a potential theatre of conflict. The Backfire, for example, can range from Soviet bases to the environs of the Azores in the Atlantic and Pearl Harbor in the Pacific. Should deterrence fail, we must be able to fight and win.

One of our most immediate concerns in deterrence and warfighting must be the defense of our vital sea lanes. No matter what the scenario—minimum warning or long warning; short war or extended war—we must be able to move large amounts of material by sea. This is usually viewed strictly in the context of the North Atlantic. But we cannot forget that we must continue to support Hawaii and our Western Pacific allies by sea, as well as ensure a continuing flow of vital overseas resources—particularly petroleum products—to ourselves and our allies to sustain our economy and industry.

Naval forces contribute to deterrence and to the ability to fight a global war by a clear demonstration of an ability to support allies or strategic friends on the flanks of the Soviet Union. Sea lane defense, by itself, does not protect flanks. NATO is a collective alliance, relying upon the commitment of all its members to the common defense. If any of these members doubted America's commitment or capability to support them, it could generate serious pressures on alliance cohesion.

Then, in a general U.S.-Soviet war our Naval forces must be capable of flexible options worldwide. A major conflict will almost certainly be conducted on a global scale. We must be able to destroy Soviet forces wherever we find them and complicate Soviet planning, forcing them into a defensive posture. Whether or not a national leader chose to exercise the option, the capability to conduct offensive operations against an enemy fleet is crucial in order for these forces to be useful to the nation. A predecessor of Jim Stockdale's as President of this War College, Alfred Thayer Mahan, hammers this point home throughout his famous "The Influence of Sea Power on History." An offensive capability, Mahan pointed out, was the central difference over the years between the British and French fleets, and the key to British success.

These needs for managing dynamic situations—for maintaining stability in peacetime, for providing the tools to manage crises, for deterring war by being able to fight it—require a range of types of naval forces. Managing stability, crises, and deterrence means being able to conduct military operations, where needed, one, under, above, and along the shores of 70% of the earth's surface. This is simply too complex a task to be accomplished by one or two specific types of platforms or systems.

I want to suggest a final reason—in addition to the need for flexibility over time and for balanced forces to help manage a dynamic reality—why it is unwise to design a Navy to prevail only in certain specific scenarios. This is, if anything, the most fundamental reason of all. It is that quantitative scenario-dependent analysis, used as a tool for designing and sizing naval forces, risks leading us into a fundamental misunderstanding of the nature of war. It is often said that such analysis focuses attention where it should be focused—at marginal changes. Now, at one level, concentrating on the margin—that is, on the costs and benefits of the next decision, not some overall historical average—is just common sense. Ignoring sunk costs is the first principle of most successful businessmen and all successful poker players. But a fixation on marginal change can be stultifying if it so narrows the analyst's imagination that he never moves his gaze from the bow-wave to the horizon. A focus on changes at the margin and on quantitative questions can too often produce an attitude that innovation is suspect and that the only changes of any interest are to buy several fewer of these or slightly increase the number of those—a sort of instinct for the capillaries.

Military breakthroughs don't come that way. They come by approaching things from a new perspective, by devising a different way, for example, to exploit the effect of mass or shock, a way to use surprise or concealment to accomplish what was previously accomplished by ponderous force, or a way to disperse and then concentrate for battle that confounds the enemy's planning. Quantitative scenario-specific analysis often misses this fundamental truth about military matters. It does not take each element, for example, of naval warfare—anti-air warfare, anti-surface warfare, anti-submarine warfare, and so on—and ask how in each type of combat we might most readily make a potential enemy's past investments in weapons worthless. Such analysis doesn't ask, "how can I exploit my advantages?" "How can I destroy the will of an enemy commander?" As the Chinese strategist Sun Tzu wrote long ago—the least desirable way to achieve victory is to destroy an enemy's cities; the next least desirable is to kill his soldiers; better is to destroy his alliances; but best of all is to destroy his plans and never have to fight at all. Only intellectual audacity permits this most humane type of victory, and intellectual audacity is not normally found at the margin.

I suppose another way to say it is that the reason why we should not become locked in to designing or sizing a Navy for one or two specific scenarios is because this capacity for asking the right question, this capacity for intellectual audacity, is not a talent that is foreign to totalitarian or aggressive societies. One needs only to recall Heinz Guderian's development of tank warfare and the blitzkrieg in Germany in the late 1930's to realize that we simply must not be the only one of two superpowers on this planet which is only asking, "how much is enough?" We must ask these many, many other questions too, or we risk ugly surprises. I want to close with a description of one example of such a surprise that occurred some time ago.

In the late 18th century, during the reevaluation that defeat always forces on a country's military establishment, French armorers discovered methods of casting cannon that improved accuracy and made artillery light enough to be pulled by horses rather than oxen. The implications of this development were not immediately clear. There was some experimenting, but most commanders used horse-drawn artillery as they had oxen-drawn—to make ponderous sorties from fixed forts and magazines and to fight in the rigid 18th century manner. Viewed in this context, horse-drawn artillery was a marginal improvement of sorts—I rather doubt that it was cost-effective. The development was only fully exploited during and after the French Revolution, in particular by a young Corsican artilleryman. Doubtless his success depended heavily on his own tactical genius and on the social effects of the French Revolution, which permitted the levee en masse—making possible the 19th century version of a human sea attack. But accurate horse-drawn artillery opened radical and unforeseen new possibilities of organization, mass, maneuver, and surprise that enabled his armies to shatter 18th Century concepts of warfare and the armies that practiced them. New units called "divisions" were formed under aggressive young commanders, and each was given its own artillery. Forts and magazines were bypassed, and the Alps crossed, in rapid marches; firepower was massed quickly to destroy opposing armies before they could concentrate on the battlefield. In other men's hands, a lighter cannon barrel had

been just a lighter cannon barrel. In his, it was a major element in the conquest of Europe.

So the risks of becoming rigid in our thinking about military forces—of designing forces to fight the way they've always fought, of concentrating only on how much is enough at the margin—are great. Together, we have to try, continually, to prove Keynes wrong, to show that we are not perpetually the slaves of vulnerability calculations of 1967 or analytical tools of 1963, that we can earn something after we're 25 or 30. The risks of doing otherwise are clear—we will learn, but much more painfully. For example, it took the rest of the European continent twenty years to learn enough from that artilleryman, turned Emperor, to defeat him. And, even then, as his ultimate conqueror said, it was a near-run thing.●

## BUDGET OFFICE COST ESTIMATE TABLE ON S. 2493, INADVERTENTLY OMITTED FROM COMMITTEE REPORT

● Mr. CANNON. Mr. President, when the Committee Report, 59–631, was printed on the Air Transportation Regulatory Reform Act of 1978, a table prepared by the Congressional Budget Office showing the estimated costs of the bill for fiscal years 1979 through 1983 was inadvertently omitted. In that this table is an integral part of the CBO's cost estimate prepared for this legislation, I ask that the entire CBO cost estimate for S. 2493 be printed in the RECORD.

The material follows:

CONGRESSIONAL BUDGET OFFICE,
*Washington, D.C., January 31, 1978.*

Hon. WARREN G. MAGNUSON,
*Chairman, Committee on Commerce, Science, and Transportation, Washington, D.C.*

DEAR MR. CHAIRMAN: Pursuant to Section 403 of the Congressional Budget Act of 1974, the Congressional Budget Office has prepared the attached cost estimate for the Air Transportation Regulatory Reform Act of 1978.

Should the Committee so desire, we would be pleased to provide further details on the attached cost estimate.

Sincerely,

ALICE M. RIVLIN,
*Director.*

---

COST ESTIMATE

1. Bill number: Not yet assigned.

2. Bill title: Air Transportation Regulatory Reform Act of 1978.

3. Bill status: Staff working draft, dated January 16, 1978.

4. Bill purpose: The Air Transportation Regulatory Reform Act of 1978 amends the Federal Aviation Act of 1958 in order to attain an air transportation system in which competitive market forces play a greater role in determining the nature and price of air services. The bill makes a number of significant changes pertaining to the issuance of certificates of public covenience and necessity, procedures for the disposition of applications for such certificates, the filing and establishing of tariffs indicating rates, fares and charges for air transportation, foreign and domestic mail service, and consolidation, merger and acquisition of air carriers. The bill revises the powers and duties of the Civil Aeronautics Board (CAB) with respect to such aspects of air transportation regulation, and creates a new federal subsidy program to ensure adequate air service to communities which require but cannot otherwise obtain access to the national air transportation system. The effective date of most sections of the bill is January 1, 1979.

5. Cost estimate: The following are the estimated costs of this bill for fiscal years 1979 through 1983:

[By fiscal years; in millions of dollars]

| | 1979 | 1980 | 1981 | 1982 | 1983 |
|---|---|---|---|---|---|
| CAB administrative costs | 2 | 3 | 3 | 3 | 3 |
| Subsidy program costs: | | | | | |
| Bill sec. 7 | 7 | 10 | 10 | 10 | 3 |
| Bill sec. 13 | 0 | 2 | 3 | 2 | 1 |
| Total | 9 | 15 | 16 | 15 | 7 |

These costs fall within budget function 400.

The short-term costs of this bill are not representative of the long-term effects, since they fall within the transition period from the existing regulatory system to a substantially modified one. Thus, by fiscal year 1986, all of the above additional costs will no longer be incurred, and it is expected that a significant reduction in air carrier subsidies (estimated at $26 million) will be realized.

The bill also creates some potential liabilities for the government. It extends the loan guarantee program for aircraft purchases, and broadens the program to include newly certificated small carriers, which are likely to be less financially secure. As a result, the government could incur additional contingent liabilities of up to $500 million during the next several years.

In addition, the bill includes an entitlement provision, which guarantees government payments to certain airline employees who suffer income losses due to layoffs or bankruptcies attributable to this bill. However, it is highly unlikely that such payments will ever be necessary, and no cost for this provision is included in this estimate.

6. Basis for estimate: The major potential cost impacts of this bill are in the areas of CAB administrative activities, air carrier subsidies, employee protection, and aircraft loan guarantees.

CAB administrative costs.—The bill would affect the administrative operations of the CAB in a number of ways. It mandates expedited procedures for processing applications, complaints or petitions (Section 20), creates a new class of carriers that may be certificated by the Board (Section 14), requires reapproval of certain intercarrier agreements (Section 10), and establishes a new subsidy program (Section 13), to be administered concurrently with the existing program through 1985. In addition, the bill places responsibility upon the Board to ensure that essential air service is provided to all points authorized for service on July 1, 1978 (Section 13), and to implement procedures for automatic carrier entry into new markets (Section 5). All of these requirements will place additional administrative burdens on the Board, particularly during the initial implementation period. On the other hand, the automatic entry provisions (Section 5), once fully implemented, the increased faresetting flexibility allowed carriers (Section 18), and the removal of the requirement of Board approval for all intercarrier agreements (Section 10) will alleviate some of the CAB's current regulatory workload, though not immediately.

Based on a comparison between current CAB procedures and those mandated in the bill, and on a review of the Board's estimates of additional workload attributable to the bill, CBO projects that CAB administrative expenses during most of the transition period will be increased by 10 to 15 percent ($2-3 million) as a result of this bill. This increase stems primarily from the requirement to operate two concurrent subsidy programs through 1985, and from the initial costs of phasing in the new rate and route procedures. (It is possible that in the absence of this bill, the Board would seek to implement some of these provisions administratively. In that case, some of these costs could be incurred in any event.) By 1986, CAB salaries and expenses under this bill are likely to be at or below the level that would be necessary under current law.

Subsidy program.—The Civil Aeronautics Board currently provides subsidies to seven local service carriers under a class rate system, and to two small, recently certificated carriers (Air New England and Air Midwest) and three Alaskan carriers under individual rates. The bill would change the current level of subsidy payments in two ways. The first stems from Section 7 of the bill, which amends Section 406 of the Federal Aviation Act of 1958, revising the criteria for subsidy determination under the existing subsidy program. Presently, the Board calculates the subsidy rates for local service carriers based on the needs of routes eligible for subsidy, and then deducts an offset reflect profits on other portions of a carrier's system. Under the modified criteria in this bill, the CAB, in determining rates of compensation for air carriers for the first four years of the seven-year transition, would no longer be able to offset the costs of subsidized services by any carrier profits on unsubsidized routes. Instead, the Board will be required to consider only the cost of the subsidized service itself. This provision would be in force from the effective date of the bill (January 1, 1979) to January 1, 1983. At that time, the CAB would again be permitted to consider carrier revenue from unsubsidized services, until the present Section 406 subsidy program terminates on January 1, 1986.

The elimination of the offset from subsidy determination will increase the subsidy necessary to maintain existing levels of service, as mandated by the bill. Based on a review of historic subsidy payment levels, these additional costs are estimated to average approximately $10 million a year, beginning in January 1979 and phasing out early in fiscal year 1983.

The second major impact on the subsidy program results from Section 13 of the bill, which creates a new Section 419 of the Federal Aviation Act of 1958. This section creates a new subsidy program, including local air carriers certificated under Section 420. Under this program, the CAB is directed to insure that essential air service is provided, until January 1, 1989, to points which on January 1, 1979, were listed on a certificate issued under Section 401, regardless of whether authority to serve such points has been suspended by the Board. In addition, after January 1, 1983, any certificated carrier may apply to replace service subsidized pursuant to Section 406 with service eligible for compensation under the new program. The Board has compiled a list of 61 points most likely to require subsidy support under this section. A gradual phase-in was assumed, whereby approximately 12 new points would be added each year to this new subsidy program. The Board expects that during the phase-in of this new subsidy program 73 points currently receiving subsidized service by certificated carriers under Section 406 would be phased out of that program, resulting in decreased costs for the present subsidy program. Based on a review of CAB projections, the net effect of added costs under the new subsidy program and the savings under the present program is estimated as follows:

PROJECTED SHORT-TERM SUBSIDY COST OF NEW SMALL COMMUNITY SERVICE PROGRAM

| Fiscal year | Points subsidized under sec. 419 | Subsidy increase, sec. 419 (millions) | Points no longer subsidized under sec. 406 | Subsidy reduction, sec. 406 (millions) | Net additional subsidy (millions) |
|---|---|---|---|---|---|
| 1979 | 12 | $2 | 16 | $2 | $0 |
| 1980 | 24 | 10 | 32 | 8 | 2 |
| 1981 | 36 | 14 | 43 | 11 | 3 |
| 1982 | 48 | 18 | 54 | 16 | 2 |
| 1983 | 60 | 19 | 64 | 18 | 1 |

It is expected that after the transition from the existing 406 program to the new 419 compensation is completed in 1986, a net overall savings in subsidy costs will be realized, resulting from greater use of smaller, more economical aircraft to serve small communities. A CAB small community task force has estimated that the net subsidy reduction in the first year after termination of the 406 program would be approximately $26 million.

Employee protection program.—Section 22 of the bill provides for government payments, under certain conditions, to employees of air carriers who lose their jobs or suffer a loss of compensation as the result of a bankruptcy or major contraction of an air carrier attributable to this act. In order to be covered by the provision, the air carrier must be certificated under Section 401, and the dislocation must involve a workforce reduction of at least 15 percent within a 12-month period and must occur within 10 years of the enactment of this bill. Furthermore, the major cause of the dislocation must be determined by the CAB to be the change in regulatory structure mandated by this act. Only persons who have been employed for at least 4 years by a carrier certificated under Section 401 are covered by this provision.

It is highly unlikely that any payments will be necessary under this provision, and therefore no cost has been included in this estimate. A dislocation of the required magnitude has been historically rare in the airline industry. While the change in the regulatory environment will result in some changes in the nature of the industry, there is no evidence that major dislocations will occur. Rather, the opportunity for greater pricing and service flexibility is likely to result in increases in airline traffic and in the number of airline jobs. Further, the carefully structured transition period should allow the existing carriers to adapt gradually to the new environment.

Although CBO does not anticipate payments under this provision, the potential government liability has been estimated for a sample case for carriers of three different sizes (large trunk, small trunk, and local service carrier), as shown in the table below.

POTENTIAL GOVERNMENT LIABILITY—WORK FORCE REDUCTION OF 20 PERCENT

| Type of carrier | Total domestic employees | Total employees laid-off | Eligible employees laid-off | Estimated payments (millions) |
|---|---|---|---|---|
| Large trunk | 35,000 | 7,000 | 3,500 | $30 |
| Small trunk | 10,000 | 2,000 | 1,000 | 9 |
| Local service | 4,000 | 800 | 400 | 3 |

In each case, a 20 percent reduction is assumed in the number of employees. Based on actual data from a large trunk carrier, it is estimated that at least half of the employees losing their jobs in such a situation would not be eligible for coverage. The estimated payments are based on a full reimbursement of lost salary at an annual rate of $20,000 (less unemployment compensation) and an average payment period of 6 months. (The requirement that Section 401 carriers give first preference in hiring to affected employees is likely to keep the average payment period well below the 3-year maximum.) The estimate also includes payment of moving expenses ($3,000) for one-third of the affected employees. Based on these assumptions, the estimated cost to the government would range from $3 million for a local service carrier to $30 million for a large trunk.

*Loan guarantee program.*—The guarantee program for aircraft purchase loans created by Public Law 85-207 expired on September 7, 1977. Section 23 of this bill extends the program until September 7, 1982, increases the total amount of the loans of one carrier that can be guaranteed from $30 million to $100 million, and increases the maximum term of loans eligible for guarantee from 10 to 15 years. In addition, the bill would allow carriers newly certificated under Section 420 to qualify for loan guarantees. Presently there are commitments under this program totaling $213 million for 24 loans, covering 158 aircraft and 17 airlines. There have been no defaults experienced in the program to date, although the amounts guaranteed have become substantial only within the past few years. Guarantee fee receipts have exceeded FAA administrative costs by over $600,000 during the past 20 years. (Administrative costs are estimated to be $42,000 for the FAA in fiscal year 1978, compared to approximately $500,000 in guarantee fee receipts.) Thus, past experience would indicate that there is little likelihood of losses on these guarantees. The raising of the loan limit and the extension of eligibility to newly certificated carriers, which may be less financially secure than existing carriers, add additional elements of risk to the program; however, there is no basis for determining a likely default rate for the extended program. Any additional loan guarantees will also increase the amount of fees collected, and the Secretary of Transportation may adjust the fee to compensate for the additional risk. Consequently, no allowance for losses is included in this estimate. However, with the possibility of dozens of newly certificated small carriers seeking loan guarantees, the government could incur additional contingent liabilities of up to $500 million during the next several years.

*Other potential cost or budget impacts.*—The safety studies and reports to Congress required in Section 4 to be performed by the Secretary of Transportation fall within the current responsibilities of the Department of Transportation. It is estimated that no significant additional cost will be incurred in carrying out the purposes of this section.

Another less certain impact on the subsidy program results from Section 7 of the bill. This provision requires the CAB, in establishing subsidy levels under Section 406, to consider the need of each carrier for compensation sufficient to enable it to continue to provide air service of at least the same extent, character and quality as that provided during the year ending June 30, 1977. This would prevent the Board from decreasing the number of subsidy-eligible points, as it apparently intends to do in the absence of this legislation. The subsidy reductions anticipated by the Board (without new legislation) are estimated to be $6 million in fiscal year 1979, increasing to $15 million in fiscal year 1982, for a net subsidy reduction of $59 million over five years. If the bill prevents the Board from decreasing subsidy payments, the cost of the bill would include the amount of savings not realized. It is uncertain, however, whether or to what extent such subsidy reductions would be obtained if this bill is not passed. Therefore, these potential subsidy reductions are not included in the above estimate of the cost of this legislation.

The bill may also have an indirect impact on federal tax revenues. At present, the Airport and Airway Trust Fund receives revenues from taxes on aviation fuels, transportation by air and use of civil aircraft, and tires and tubes of the types used on aircraft. To the extent that the changes in the regulatory system stemming from this bill may affect traffic volume, there will be an effect on trust fund income. The FAA projects trust fund revenues under existing law to be $1.4 billion in fiscal year 1978 and rising to $1.9 billion by fiscal year 1983. Of these amounts, approximately 75 percent is estimated to be derived from the 8 percent excise tax on passenger fares. If, as is likely, the new entry provisions and increased fare flexibility result in increased traffic volumes and higher carrier revenues, federal tax income will also increase. While it is not possible to predict the changes in traffic volume that may result from implementation of this bill, an increase in passenger revenues of about 1 percent would produce additional tax revenue equal to the added federal costs projected for the first 5 years.

7. Estimate comparison: None.

8. Previous CBO estimate: None.

9. Estimate prepared by: Patrick J. McCann (225-7760)

10. Estimate approved by:

JAMES L. BLUM,
*Assistant Director for Budget Analysis.*●

## IOWANS TESTIFY ON BRIDGES

Mr. CULVER. Mr. President, on April 3 I chaired a hearing of the Senate Transportation Subcommittee at which several Iowans testified about my State's deficient bridge problems. The witnesses included Raymond Kassel, who is director of the Iowa Department of Transportation, and Dean Kleckner, president of the Iowa Farm Bureau Federation. In addition, four county engineers from Iowa, Clarence Perry of Lucas County, Wesley Smith of Hamilton County, Milton Johnson of Clayton County, and Charles Hales of Pottawattamie County, presented testimony.

The Federal Highway Administration places Iowa fifth among the 50 States according to the number of obsolete and defective bridges on the Federal highway system. In addition, Iowa may have the highest number of unsafe bridges on local roads in the Nation. To help rectify this growing problem, last year I introduced S. 394, the Bridge Replacement and Rehabilitation Act, which authorizes $600 million for this program and would also provide Federal assistance for bridges off the Federal system.

The seriousness of this critical problem was thoroughly explained by these witnesses. They talked about spans which threaten the lives of children riding in school buses and which seriously impede firetrucks and farm equipment. Their testimony further convinced me that funding for the special bridge replacement program must be increased significantly and must be made partially available for local, off-system structures.

Mr. President, I ask that the following excerpts from testimony given at the April 3 hearing be printed in the RECORD.

The excerpts follow:

TESTIMONY BY RAYMOND L. KASSEL, DIRECTOR, IOWA DEPT. OF TRANSPORTATION

The Iowa bridge problem has two aspects, one internal and the other associated with Iowa's navigable border rivers.

It is the normally abundant rainfall on the fertile soil that makes Iowa agriculture so tremendously productive, and at the same time demands an extensive road system with many bridges to serve both the land and industry. The 113,000-mile public road network requires more than 34,000 structures with a 12-foot span or greater. Why such an extensive network? Ninety-five percent of the State's land is in agricultural production. Each acre annually requires movement of more than 2 tons of produce and production supplies. This equates annually to the movement of nearly 600 tons of produce and production supplies to and from the typical farm.

In terms of importance to our national economy and balance of foreign exchange, export of Iowa agricultural products annually yield $2 billion with an additional $1.3 billion being earned from the export of Iowa industrial production.

A particularly difficult aspect of our problem, shared with our adjacent states, is associated with the border rivers. In effect, we have two "coasts" formed by the broad Mississippi and wide Missouri. Every day there are 278,000 trips to and from Iowa across these waterways. These rivers might as well be real "oceans" when we and our neighbors seek ways and means to replace the bridges.

The are now 31 border river bridges on the Arterial System. Nine are toll facilities not owned by the states and will be very expensive to replace. Structurally deficient bridges (those incapable of carrying a legal load or subject to other loading restrictions) now exist at Dubuque and Burlington. Functionally obsolete bridges (narrow or low) cross the Mississippi River at Keokuk, Lansing, Sabula, Davenport, and Ft. Madison; the Missouri River at Missouri Valley, Council Bluffs, Glenwood, and Sidney; and the Des Moines River at Keokuk. The problems at Keokuk, Davenport and Ft. Madison are compounded by growing river traffic because these bridges still open for barges. For example, the bridge at Keokuk has opened more than 2,500 times per year during the past five years, with a peak of more than 4,500 during the high water year of 1974. Each opening requires at least 15 minutes. The scope of replacement costs for the border bridges can be measured by the $35 million needed for the bridge at Dubuque and the 15 million for the bridge at Keokuk, our number 1 and 2 priorities. The scope of the border bridge problem is shown in Table 1 and is estimated to be as follows:

| | Structurally deficient | | Functionally obsolete | |
|---|---|---|---|---|
| | Number | millions | Number | Millions |
| Estimated replacement costs | [1] 2 | $55 | 10 | $165 |

[1] Dubuque and Burlington.

BRIDGES INSIDE THE STATE

Summary figures below show the estimated size of the "Interior" bridge problem. For reference, the typical annual bridge replacement expenditures are: state—$20 million, county—$22 milion and city—$4 million.

| Jurisdiction | Miles | Total bridges (12 ft span) | Structurally deficient | | Functionally obsolete | |
|---|---|---|---|---|---|---|
| | | | Number | Amount (millions) | Number | Amount (millions) |
| State | 10,000 | 4,200 | 110 | $43 | 1,110 | $440 |
| County | 90,000 | 29,000 | 11,400 | 674 | 13,000 | 780 |
| City | 13,000 | 1,400 | 300 | 18 | 600 | 60 |
| Total | 113,000 | 34,600 | 11,810 | 735 | 14,700 | 1,280 |

TESTIMONY BY WESLEY D. SMITH, COUNTY ENGINEER, HAMILTON COUNTY, IOWA

Needs studies are performed in Iowa at certain intervals to determine the amount of money necessary over the ensuing 20 years to bring our highways and streets to a safe, efficient and economical level. At present, the total 20 years needs for all Iowa counties amounts to $7,280,000,000 or an average need of $364,000,000 per year. Our total available revenue, from *all* possible sources amounts to approximately $180,000,000 per year. In other words, we are able to fund only 50 percent of our needs.

We are falling farther behind every year and at an increasing rate. At present we are reconstructing 1 mile of road for every 3 miles that wear out.

The present bridge problem on the county level merely points out additional evidence that solutions to our situation are impossible with only state and county funding being used.

What the counties desperately need are large amounts of federal aid, much greater amounts than mentioned in S. 394, which are specifically earmarked for use on county highways. Further, the County funds must be available for use on both the FAS and off-system county highways. The necessity of this is pointed out dramatically by the recent mileage reduction in the FAS system. Iowa was cut from approx. 33,000 miles of FAS routes, down to 13,000 miles. A vast amount of our annual needs of $364,000,000 thus has shifted from FAS routes to off-system routes. The effect on our county bridge prob'em alone is dramatic.

We have a definition problem I would like to clear up before we start discussing bridge statistics. When the bridge survey was compiled from which the following numbers were obtained, the Iowa definition of a bridge was twelve feet span or greater. The Federal definition, and the current Iowa definition is 20 feet span or greater. As you can imagine, this difference in definition has quite an impact on both the total numbers of county bridges and on the number of deficient bridges in Iowa. However, it makes little difference to the travelling public, or to us for that matter, whether the posted structure we are approaching is between twelve feet and nineteen feet in span, or is twenty feet or greater. In either case the problem is there and something must be done about it. Please bear in mind the following figures all relate to bridge lengths of twelve feet or greater.

Prior to the FAS cutback, 2,772 of the 9,986 bridges on the FAS system were required to be posted at less than legal highway loads. (About 28%). We also had 8,598 of the 19,207 bridges on our off system roads that could not carry legal loads. (About 45%).

We now have 39.4 percent of the FAS mileage we did have. Therefore, an approximate total number of posted bridges on the FAS system would be 1,092. The approximate total number of posted bridges on the off-system has increased to 10,278. Therefore, at the present time approximately 10 percent of our posted bridges are on the FAS system and 90 percent are on the off-system. The total cost of replacing the posted bridges on the FAS system would be approximately $80,800,000 while the total cost on the off-system would be approximately $593,200,000. Our bridge needs alone are over $512,000,000 greater on the off-system than on FAS. This fact alone demonstrates the need for large amounts of federal aid direct to the counties for use on any county highway.

Combining the bridges on the FAS system and the off-system, we arrive at the total county bridge problem in Iowa. And we must look at it as a total problem. This is the way our people look at it. If a bridge is posted so they are blocked off between their field and farm, or between the farm and market, or if a school bus cannot reach their farm lane to pick up their children, the people couldn't care less whether the posted bridge is on one particular system of highway or another. We do have a total of 29,193 county bridges in Iowa most of which have been inspected and rated. We do have 11,370 county bridges which are, or will be posted, for less than a legal tandem axle truck loading. In other words, approximately 40 percent of all the county bridges in Iowa will be closed, or posted at ratings anywhere from 1 ton through 22 tons. 339 bridges will be closed or rehabilitated in some manner so they may carry more than a zero rating. We do have 4,490 county bridges a loaded school bus cannot cross. Others, a bus can cross if the children get out and walk across. The cost of replacing these 4,490 county bridges that prohibit a loaded school bus is approximately $300,000,000. The total cost to replace all posted county bridges is approximately $674,000,000.

The following table gives an indication of the extent and range of the county bridge problem:

| Tons posted rating | Number of bridges | Estimated replacement cost, each category (millions) | Accumulated replacement cost (millions) |
|---|---|---|---|
| 0 [1] | 339 | 23.3 | 23.3 |
| 1 to 3 [1] | 707 | 50.1 | 73.4 |
| 4 to 6 [1] | 1,619 | 116.5 | 189.9 |
| 7 to 9 [1] | 1,825 | 109.8 | 299.7 |
| 10 to 12 | 2,854 | 150.6 | 450.3 |
| 13 to 15 | 1,805 | 98.7 | 549.0 |
| 16 to 18 | 1,323 | 70.9 | 619.9 |
| 19 to 22 | 898 | 53.8 | 673.7 |

[1] School buses prohibited.

TESTIMONY BY CLARENCE C. PERRY, COUNTY ENGINEER, LUCAS COUNTY, IOWA

Today in Iowa we are facing what many have termed as a crises in bridge replacement. The crises has gained nation wide attention due to the Federal Bridge Inspection law. I would like to compliment the federal government for seeing the need for bridge inspections. It shouldn't be said that local governments were not inspecting bridges prior to the law. We have always inspected bridges but most people were making visual inspections. You have made us look at these bridges "in depth" using the FHWA criteria. These "in depth" inspections have revealed some startling facts. It has forced us to realize that our bridges are in worse shape than we expected. Nation wide more and more load limits are being posted. I feel the inspection law has been good for us; it has given us the tool to begin a long range comprehensive program of replacement. Through an "in depth" inspection we are able to program the critical bridges first.

The inspection procedure has carried over to the "off system" and has pointed out another startling fact. We have 9½ times more bridges posted for load on the off system then on the Federal Aid System. This fact would give rise for someone to say the counties have been negligent on the local roads. The fact of the matter is that the Federal Aid System was the most important network of roads in the county due to direct access to communities and heavier traffic counts. As a result the FAS system had a top priority and bridges were constructed on this system first. It was not the nominal amount of federal funds we receive that built the FAS

bridges. It was vast amounts of local funds as well as state funds that completed these structures. We feel it is now time for some federal funds to be spent on the off systems bridges. This is why we like Senate Bill 394. It guarantees the expenditure of at least 15 percent of the funds authorized to the state to be spent on bridges under county jurisdiction.

I would like to visit with you about my own county where I have personal experience. Lucas County is in southern Iowa and has a population of 10,163. Our primary product is agriculture with an emphasis on livestock. We have 647 miles of county highway and 253 bridges using a twelve foot length as the definition of a bridge. I might point out that when statewide information on bridges was compiled, Iowa was using a twelve foot length criteria. All my data is based on a minimum length of twelve feet. A total of 175 of our bridges rate less than legal load capacity. This is 69 percent of all our bridges. Breaking this down to FAS routes, 7 of 22 bridges or 32 percent are posted for load. The local system has 168 of 231 bridges or 73 percent that rate less than legal.

Lucas County has launched a bridge replacement program and 50 bridges have been replaced or vacated during the past five years.

We estimate it would cost 8¾ million dollars to replace those remaining bridges that rate less than legal, another 2¾ million dollars to replace those bridges that are obsolete due to width.

I would like to close by saying Lucas County has had experience with bridges collapsing. During the past 10 years, eight of our bridges have collapsed. I have had three bridges collapse during the time I have served as a County Engineer. I cannot describe to you the sinking feeling you experience when the first reports of these failures are received.

---

TESTIMONY BY CHARLES E. HALES, COUNTY ENGINEER, POTTAWATTAMIE COUNTY, IOWA

Pottawattamie County, Iowa, with 1400 miles of road and some 560 bridges, represents the largest figure in both categories of any county in Iowa. At the present time, we are essentially in full compliance with the National Bridge Inspection requirements. Under these inspection requirements, which I often refer to as "OSHA" applied to bridges, we post load limits according to physical condition. Pottawattamie County load limit signs start at 21 tons and range down to 4 tons. Any bridges less than 4 tons are closed immediately.

At the close of the first inspection compliance date of July 1, 1974, more than 90 percent of our structures were deficient. Technically, by definition, only those bridges with a 20 foot span or longer were examined. We do have many shorter spans, which are being replaced with steel culvert pipes.

Eighteen percent of all legally defined bridges were restricted to the lowest category of 4 tons. Four ton, of course, will accommodate only passenger cars and light vehicles. No school buses, no trucks, and very little farm machinery.

On July 1, 1976, two years later, the next compliance date for reinspection, the four ton limit number had increased from 18 percent to 21 percent. This was in the face of a "crisis" construction program plus making use of Revenue Sharing Funds. This indicates that our bridges are deteriorating at a faster rate than we can repair and rebuild under the present level of funding. Historically, Pottawattamie County has tried to be a self-sufficient county, evidenced by the fact that we have replaced 250 deficient bridges with new permanent, steel and concrete structures in the last five years, that's 50 bridges per year. For years now, we have levied the maximum local tax that Iowa law permits for county roads. In addition to that we allocated Federal Revenue funds in the amount of $400,000 in 1977 and $1,200,000 in 1978 for bridges. Six out of ten of our county bridges are still wooden structures and seven out of ten are posted with load limits. Our latest bridge need study in Pottawattamie County alone, based on 1975 dollars, amounted to $24,000,000. Today, that figure is probably close to $30,000,000. You are aware that in 1975 the Congress did not help our bridge problem when a law was enacted permitting states to set higher weight limits for trucks. This set the stage for the truck lobby to pressure the states; result, some 40 states have raised the weight limits to the federal standard of 20,000 lbs. per axle, 34,000 lbs. per 2-axle tandem and 80,000 lbs. maximum overall weight.

Iowa is not one of these 40 states. We along with our neighbor states of Illinois and Missouri are known as bridge states. No doubt, we will soon fall victim to the powerful truck lobby and our present position of being listed in the top 5 (five) in the United States with deficient bridges will be even more secure.

The present bridge problem on the county level points out the fact that we are not going to solve the situation without further federal help. Proposed federal legislation such as Congressman Harkin's "Bridge Safety Act of 1977" and Senator Culver's "Bridge Replacement and Rehabilitation Act of 1977" are steps in the right direction.

While many of the bridges in the agricultural area of the Midwest are not considered as high volume traffic structures, they do carry a very vital commodity, namely foodstuff. It has been pointed out that one American farmer now provides food for some 56 people. Twenty years ago, he fed only 23 people. Needless to say, in Iowa, the farmer and his demands on the rural road system receive an almost sacred priority, bridges are the weakest link.

Hundreds upon hundreds of these bridges are rotting wood and rusting steel, not only incapable of carrying a legal load, but also much too narrow for today's agricultural machinery. Exhibit "A" attached as a part of this testimony is a picture, not uncommon, of an Iowa farmer using a 320 horse power, four wheel drive farm tractor pulling a 54½ foot wide cultivator. Last summer I was called out into the county where two of our narrow, all wood bridges, about 1000 feet apart had the entire railing and posts missing from one side. There is little doubt in my mind but what this was a result of a frustrated farmer using a chain saw to redesign two of our not very valuable bridges to accommodate his wide equipment.

Most of you are probably aware of the dangers to our school children riding school buses over the bad bridges. Many of these buses are of the 72 passenger size. Again the economy has forced the schools in the same direction as the farmer and the trucker—bigger and bigger.

---

TESTIMONY BY MILTON L. JOHNSON, COUNTY ENGINEER, CLAYTON COUNTY, IOWA

There are some estimates out that I believe are conservative, that show the Federal Aid system having a bridge need of about 12.4 billion dollars and the Off System with a bridge need of 10.6 billion. Using the 10.6 billion for Off System and assuming that the 600 million dollar figure in Senator Culver's bill is used along with the 15 percent being designated for county use on Off System, then it would take some hundred and eighteen years to fulfill this need. Further, assuming that local government would fund two-thirds of this deficit, this would bring the time down to somewhere in the neighborhood of forty years and of course by that time the needs would have further compounded.

All of these figures are on the conservative side. First of all we know that the 10.6 billion dollar need in Off System is an old figure and that we have further inventories that show that this need is greater. Secondly, we are assuming that local government can finance two-thirds of this deficiency when in fact many local governments are at the statutory limit of their taxation and will come no where near meeting that need. Thirdly, we are assuming no inflation in projecting these figures. Fourthly, we are not addressing the problem of the bridges on the Federal Aid system that are under county jurisdiction.

What brought about this sudden crises? Actually the crises has not come about suddenly and many of us have been trying to do something about averting this for many years, however, we all know that the disastrous failure of the bridge in Ohio several years ago brought the bridge problem to national attention. There are a number of factors contributing to the present dilemma.

Many of the bridges were built in the late 1800's. These of course were built for horses and wagons. We've all seen pictures of some of these bridges after they collapsed under the load of a 6 to 8 ton steam engine and possibly a 4 to 5 ton threshing machine. Then during the 20's and 30's many new bridges were built and some of the 1800's vintage bridges were replaced to accommodate the new fangled machines called automobiles and the trucks which were grossing out at 6 to 7 tons.

Then in the 50's, 60's and 70's the railroads closed many branch lines forcing farmers to haul further, thus making larger trucks more practical. School consolidations were taking place also and school buses became more common and bigger up to the point that many of the present buses are at or near the maximum legal axle loads.

During this same period farming methods were rapidly changing also, with farms becoming larger and with more specialization causing large quantities of material such as fertilizers and feeds to be trucked to farms in larger and larger trucks and the farm products, grain, stock, milk, etc. being sent to the market also in large trucks.

All of this is coupled with the pressure of the federal government to increase the axle load of from 18,000 to 20,000 for single axles and 32,000 to 34,000 for tandems compounds the problem.

I believe that the situation that we have in Clayton County, Iowa, is fairly typical of many of the counties across the nation. In the last several years, many of the smaller deficient structures in Clayton County have been replaced with large diameter pipe culverts and some with short span bridges. This has enabled more of the bridges to be replaced than if we had concentrated our funds on one large structure. We have thus been able to remove the weight restrictions from more of the roads leaving a smaller number of posted bridges. This was done because of the shortage of money and inability to raise any more by taxation locally as we have been at the statutory taxing limit for many years. The Board of Supervisors and I felt that we could help more people with less money this way than any other way we could go.

What is happening now obviously is that the bridges that still need to be replaced are the bigger and more expensive ones, consequently we are able to replace fewer and fewer each year.

---

TESTIMONY BY DEAN KLECKNER, PRESIDENT, IOWA FARM BUREAU FEDERATION

Iowa farmers sell about $7.0 billion worth of crops and livestock annually—$3.0 billion in crops and $4.0 billion in livestock. These are the second largest farm marketings in the nation.

It is estimated that more than 90 percent of the sales of crops, livestock and livestock products in Iowa are moved by trucks to markets in Iowa and surrounding states. Truck transportation is vital to the movement of farm products to market and needed farm supplies to farms. Most of these movements require transporting these products over secondary roads in Iowa.

There is a serious problem generally in maintaining secondary roads in satisfactory condition and a critical problem with bridges.

Recent reports by the USDA's Statistical Reporting Service indicated more than three-fifths of all farm feeder roads are said to be deficient, while half the feeder roads in U.S. rural areas are thought to be unsuited to steady, heavy truck traffic. Yet rural areas not only keep producing more farm, forest and mine products, but also depend more and more on trucks to get these goods to market.

As of 1975, Iowa had almost 14,000 county bridges posted for less than legal loads. This amounts to 46 percent of all our bridges. Almost 4,500 county bridges will be posted for less than 8 tons. This means there will be 4,500 county bridges a school bus cannot cross. It would cost an estimated $300,000,000 to replace just those bridges impossible for school buses. It would cost an estimated $800,000,000 to replace all bridges so legal loads could be carried. No other jurisdiction has a bridge problem of this magnitude.

It is obvious by these projected cost estimates that Iowa will have extreme difficulty financing the bridge repair and replacement program needed. Iowa's gasoline tax is presently at 7 cents a gallon. Property taxes are about $1.50 per acre for secondary roads which is about as much as farmland can be expected to carry for local roads. For a 300 acre farm this means a $450 tax for county secondary roads.

In view of the local financing problems we have outlined, we would support an increase in authorization for the Special Bridge Replacement Program. This would make it possible for the federal government to contribute a larger share of funds to finance the bridge repair program. States are considering raising gasoline taxes and property valuations are increasing annually which will result in more state and county funds also. Additional funds from all three sources should enable the states to move ahead in correcting their bridge deficiencies.

We also support the requirement that not less than 15 percent of such funds be used for work on bridges under the sole jurisdiction of counties. A large majority of the bridge deficiencies are on the secondary roads not included in the federal secondary system.

## STATEMENT ON THE PANAMA CANAL TREATY

Mr. GOLDWATER. Mr. President, I believe it was a treaty poorly conceived, poorly negotiated and consummated in a manner, in my opinion, that is not going to help Panama. It will help a lot of bankers who loaned Panama money, but it will not help them to raise the funds necessary to keep the canal open.

It flaunts the Constitution and the so-called leadership clause added to this treaty clearly does not alter the DeConcini reservation one bit. It makes a joke of this treaty.

It is my opinion that within 5 years of turning the canal over to the Republic of Panama the United States will be running the canal again or it will not be running at all. There is no question, in my mind, but that the Panamanians can operate the canal, but operating it and running it from a business standpoint are two different matters, and I doubt that the instability the Government of Panama has always shown will permit the businesslike operation of the canal. Following are a few brief opinions of mine, after having listened to, and participated in this debate for such a long time. Therefore, I ask that these opinions be printed at this point in my remarks.

The opinions follow:

OPINIONS

1. Cost to the U.S. Public.

a. Secretary of State Vance himself conceded in a statement to Congress, dated February 10th, that giving up the Panama Canal will cost U.S. taxpayers hundreds of millions of dollars. The total appropriation over 21 years will be approximately $350 million, according to Secretary Vance.

The cost of the new treaty to be funded by the Treasury includes relocation of defense installations and an early retirement program for Panama Canal enterprise employees.

b. In addition, the Carter Administration will recommend that the Treasury stop collecting annual interest payments from the Canal Company, which are currently averaging $18 to $20 million. The total loss to the Treasury from this proposal, which would not be incurred if the treaty is not ratified, has been estimated by the General Accounting Office at $505 million.

c. There also is the loss to the American public of the value of property given to Panama. The State Department's own estimate of replacement value is $9.8 billion, including the Canal itself, the Company, and military assets.

d. A separate economic and military aid package to Panama of $345 million is planned by the Administration. Although not required by the Treaty, this aid package is clearly in connection with it. If Panama, which already pays 37 percent of its total income in order to service large foreign debts, should fail to repay these loans or guarantees, the taxpayer could become liable to make good the losses.

e. Toll increases, which are needed to cover new payments to Panama required by the Treaty, may add up to $1.2 billion in costs borne by U.S. consumers and shippers during the life of the Treaty.

f. Although the Treaty calls for several new payments to Panama out of Canal operating revenues, rather than from the Treasury, it appears Congress would have to make up operating deficits should they occur. This follows from the fact that the Panama Canal Commission, which is obligated by the Treaty to make the payments, is in actual fact, an agency of the United States. Thus, the obligations of the Commission are in effect the obligations of the United States. Moreover, the United States Government is required by the Treaty to turn the Canal over to Panama debt-free in the year 2000.

2. Usurpation of Legislative Powers

The primary trouble with the State Department position is that they fail to observe the distinction between making a treaty and implementing a treaty. It really is quite simple.

The Constitution sets up the President with the Senate as the treaty-making authority. The President negotiates treaties with foreign powers and ratifies them after receiving the advice and consent of the Senate. Congress cannot do this. Congress, as a separate entity, cannot enter into agreements with a foreign nation. Thus it takes a treaty to make an agreement with another country.

However, when that treaty is a contract to perform a specified act, which falls within one of the press powers delegated to Congress, then it is Congress who must perform that act. In other words, a treaty which touches on legislative power needs implementing legislation to carry it out, either in the form of prior authorization or subsequent enactment of authority.

Otherwise where is the end to the treaty power? For example, Congress can declare war. Does this mean a treaty alone can put the nation in a war upon the occurrence of a specified condition, without any subsequent voice in the entire Congress? Senators who supported the War Powers Act as a means of securing a role for Congress in going to war might ponder that question.

Congress has power to provide for coinage and currency. Does this mean a treaty can declare the German mark the currency of the United States? Remember, the Administration is already seriously considering the issuance of Government Bonds in a foreign denomination.

Congress has power to regulate commerce. Does this mean a treaty can embargo all exports of tobacco? The Senators from tobacco-producing States might ask themselves whether it would be Constitutional for a treaty to by-pass any role of the House of Representatives if that treaty, in the name of international health, should outlaw the export of tobacco.

Congress has the power to establish courts and to make exceptions to the appellate jurisdiction of the Supreme Court. Does this mean a treaty alone can create international courts having jurisdiction over our citizens in certain situations, a court which is free of review of our own Supreme Court?

If a treaty can exercise concurrent powers with Congress, all of these results, which may seem absurd now, may happen in the future.

Whatever the State Department may have discovered in the way of claimed precedents, it is the Constitution that is at issue, not precedents.

And, the Constitution is clear. As Historian Arthur Bestor concluded recently in his deep study of this specific issue, the power to dispose of the territory or property belonging to the United States is "a power that the framers expected to be exercised by act of Congress, according to the legislative procedure minutely specified in the Constitution."

## ADMINISTRATION POLICY THREATENS URBAN FLOODING PROGRAMS, INCLUDING CHICAGO'S "DEEP TUNNEL"

Mr. PERCY. Mr. President, after consulting with the White House Office of Management and Budget, the Army Corps of Engineers has prepared, and shortly expects to announce, a policy change that could significantly impair the economic well-being, the esthetics, and the public health of many of our Nation's older cities.

Over 600 towns and cities throughout the Nation are presently served, in part, by outmoded combined sewer systems. Major affected cities include Philadelphia, New York, Boston, and Providence in the North; Charleston and Wheeling, W. Va., Greenville, Miss., and Atlanta in the South; Chicago, St. Louis, and Milwaukee in the Midwest; and Sacramento, San Francisco, and Santa Barbara in the Far West. Because most of our Nation's largest cities were designed in the 1800's, sanitary waste from households is combined with stormwater runoff in a single sewer system, rather than being separated as in more modern systems.

The magnitude of the Nation's sewer crisis is increasingly being recognized by America's urban experts. A recent article in the New York Times stated:

A rash of recent failures in (subterranean facilities), which had been neglected for decades as cities struggled to deal with an overwhelming social and financial burden, has focused attention on the threat that they represent and raised the prospect of new demands on the Federal treasury by municipalities around the nation.

The Joint Economic Committee, made up of distinguished Senators and Representatives from every sector of this Nation, recently issued a report stating that neglect of urban facilities "appears to be the single greatest problem facing our Nation's cities."

The economic deterioration of America's great commercial and cultural centers will likely be the most critical domestic issue of the 1980's. It makes no sense to pour billions of dollars into urban mass transit systems, housing rehabilitation, industrial relocation, or any other desperately needed urban development program if the very infrastructures of our cities are literally crumbling beneath our feet.

The shortcomings of inadequate sewer systems are chillingly revealed by the present plight of Chicago. As metropolitan Chicago has urbanized over the past several decades, thousands of acres of suburban meadows and parklands have been paved over with roads, parking lots, businesses, schools, houses, apartment complexes, and other hard surfaces. Rainwater that normally would have harmlessly seeped into natural greenbelts now runs off roadways, rooftops, commercial plazas, and recreational blacktops and flows into the combined sewer system.

The sewers of metropolitan Chicago were never designed to handle the enormous runoff from 377 square miles of highly developed urban sprawl. When summer rains hit, Chicago-area residents brace for the onslaught of severe flash floodwaters.

As many as 100 times a year—once every 4 days—rainstorms overload the metropolitan Chicago sewer systems, causing the raw sewage from nearly one million residents to spew from some 640 sewer overflow points along Chicago waterways. During most of these storms, water pressure becomes so intense in local sewer systems that raw sanitary sewage and stormwater runoff are forced into hundreds of thousands of residential basements. Millions of gallons of rain water flood local streets and viaducts, slowing traffic and intracity commerce.

During the most severe of these storms, the Chicago River locks must be opened to Lake Michigan to prevent devastating overbank flooding. Such backflows into Lake Michigan of toxic wastes and sewer discharges create a serious environmental and public health hazard, since millions of residents receive their drinking water from the lake. Beaches must be closed to bathers until the wastes are fully diluted, and additional chemicals must be added to the drinking water in order to keep it safe. The Army Corps of Engineers, in a statement before the House Appropriations Committee, estimated annual flood damages at over $470 million for the Chicago metropolitan area.

It has been estimated that some 800,000 homes are plagued by basement backups. Nearly a million homeowners and their families must bear the financial, environmental, and social burden of having billions of gallons of raw sewage and filth-ridden highway runoff forced into their homes.

Thousands upon thousands of family hours are spent bailing out workshops, dens, and laundry rooms. Carpets are ruined; furniture is destroyed. Precious family documents are swamped in basement safes and files. And for weeks after the cleanup process is completed, residual odors from the untreated sludge permeate the entire household.

Mr. President, many of the 53 local Chicago communities most affected by urban flooding have taken bold and innovative measures to deal with the flooding problem. For two decades, some of our Nation's most respected engineers and urban planners have attempted to devise an urban flood and pollution control plan for the areas of Chicago served by combined sewer systems. In 1972 a task force made up of hydraulic experts, State and local officials, and others recommended to the Governor of Illinois the massive tunnel and reservoir project (TARP) for Chicago.

In 1974 the Senate Committee on Environment and Public Works and the House Committee on Public Works and Transportation requested the Corps of Engineers to study the Federal interest in TARP. The Office of Management and Budget (OMB) asked the Environmental Protection Agency (EPA) to determine which parts of the project would qualify for water pollution control funds under Public Law 92–500, the Water Pollution Control Act Amendments of 1972.

The joint efforts of the Metropolitan Sanitary District of Greater Chicago (MSDGC) and the task force established by the Governor of Illinois, in conjunction with Congress, the OMB, the Corps, and EPA, led to the 1975 TARP plan that is presently under construction.

TARP is divided into two parts. Phase I, the pollution control phase, consists of 110 miles of 18- to 30-foot diameter tunnels bored 150 to 290 feet below the ground. These deep tunnels will be connected to the 640 overflow points along the Chicago waterways by a series of dropshafts. The "first flush," or the first quarter inch of rainfall that would normally spew into local rivers and canals will be drained off into the deep tunnels. The tunnels will act as both a reservoir and a conveyor so that this highly polluted first flush can be detained until local treatment plants can process the sewage during a nonstorm period.

Phase I TARP is expected to reduce the Chicago pollutant load on local waterways by 85 percent. It will reduce the number of times that the locks to Lake Michigan have to be opened from an average of once a year to about once every 7 years. Phase I, which is now well under construction, is expected to cost $1.9 billion, with 75 percent of those funds coming from EPA under Public Law 92–500.

Phase II TARP is the flood control phase, and would have the greatest economic impact on Chicago. As presently designed, it would consist of 20 additional miles of deep tunnels and four reservoirs. The increased carrying and storage capacity brought about by phase II would make the TARP system capable of "bottling" the rainfall of the largest Chicago-area storm period on record.

If phase II were completed, Chicago and 52 suburban communities could immediately begin upgrading their combined sewer systems. With the conveyance and storage capacity offered by phase II, localities could be confident that sewer improvements would provide immediate relief to local homeowners, motorists, and commerical property owners. Without phase II, sewer upgrading is virtually meaningless, just as it would be senseless to build a six lane highway down a dead end street: local sewer improvements can relieve localized flooding only if endline capacity is sufficient to carry off the floodwaters.

For now, the village of Morton Grove, among others, has suffered the deep frustration of installing expensive modern sewer systems in much of the community, only to have its system back up, because the MSD sewer main is too charged with combined wastewater. Manholes literally become fountainheads for sewage as back pressures reach critical intensity.

Mr. President, when the MSDGC first began construction of TARP, many engineers and public officials from across the United States were carefully assessing the project as a national model for our Nation's older cities. The MSDGC has had some of the finest engineers and urban policymakers in this country working on this project. Under the outstanding leadership of President Nicholas Melas, MSDGC consulted dozens of State and Federal agencies in designing what was and still is considered the most ambitious and innovative public works project in our Nation's history. The EPA committed itself to funding 75 percent of the cost of the pollution control phase (phase I), and it was understood that the corps would fund 100 percent of the cost of phase II, presently estimated at about $900 million.

The new OMB-corps draft policy statement, however, seriously threatens the future of any federally assisted flood control plan for Chicago. Indeed, it jeopardizes the future of flood control plans for every American city with a combined sewer system.

Flood control and pollution control are intimately linked problems for any city with a combined sewer system. Yet, the new OMB-corps policy states that—

Man-made structures that convey sanitary sewage or storm runoff, or a combination of sanitary and storm sewage, to a treatment facility will not be classified as flood damage reduction works.

Such a policy position, so carefully designed by OMB and the corps, places our urban policymakers in a no-win position. Faced with an inseparable flood-pollution crisis, in effect, planners are told

they can either design a pollution-control program that will be assisted by EPA, or they can design a flood-control plan for which corps assistance is available. If they try to solve the twin problems simultaneously, the Federal Government turns its back.

Mr. President, if Federal assistance is not forthcoming for Chicago, which suffers serious economic hardship from flooding, then Chicago cannot ameliorate its flooding crisis. But Chicago is not alone in this dilemma. The vicious cycle—from outmoded sewer systems to urban flight to economic depression—cannot be broken without Federal assistance. Left to fend for themselves, our cities are fighting a hopeless cause.

Several communities and organizations in the Chicago area have designed and put into effect certain immediate, small-scale means of providing relief for the millions of area homeowners who suffer from basement flooding. Some aggressively innovative communities, including Lincolnwood, Skokie, Lansing, Evanston, and several others, have tried interim stopgap measures. Some are disconnecting direct rooftop-to-sewer downspouts to encourage stormwater percolation through the soil to natural groundwater aquifers. Others are inserting rubber and concrete flow constrictors in catch basins to detain water on streets rather than forcing it into basements.

The TARP impacts project (TIP), a highly respected coalition of Chicago-area university professors, urban planning experts, and community groups, is working on a study of progressive small-scale means to deal with the urban flooding dilemma. I have been very favorably impressed by the sincere, professional efforts of Nancy Philippi, the very capable director of TIP, and her organization. A leading public spokesman for TIP, Prof. Stanley Hallett of Northwestern University, has had probably the most positive individual role in the TARP debates to date. Dr. Hallett has courageously faced up to those who would rather build miraculous engineering monuments than design efficient, cost-effective means for solving Chicago's flooding problem.

The Better Government Association (BGA) of Chicago, under the spirited and constructive direction of Mr. Terrence Brunner, has also played a vital role in the debate surrounding TARP. When it became evident that the long-term TARP construction project would not bring flooding relief until the 1990's, BGA responsibly called for some form of immediate relief. BGA insisted that TARP be reviewed once again to be absolutely certain that the most efficient, cost-effective means be used to relieve local flooding.

The combined efforts of BGA, TIP, MSDGC, the 53 communities, and so many other local organizations, demonstrate the concern over the flooding issue of Metropolitan Chicago citizens. Area residents have undertaken all they can possibly do on their own. It is time for the Federal Government to extend its technical, financial, and moral support for one of the Nation's oldest, yet most progressive cities as it endeavors to seek out both immediate and long-range alternatives to its inadequate wastewater management system.

The entire Illinois congressional delegation, at a meeting this past week arranged by Representative DAN ROSTENKOWSKI, went on record in support of $1 million in funding for a design study by the corps to develop a viable flood control plan for Metroplitan Chicago. I am personally contacting the Department of Housing and Urban Development, the corps, the Environmental Protection Agency, and the Economic Development Administration in the Department of Commerce to assist localities with their peculiar wastewater management problems. Aggressive measures must be taken on all fronts by the Federal Government, for Chicago is not alone in its urban flooding problems. Urban flooding and pollution control is a matter of national concern. Federal officials should take progressive, preventative measures now, before we witness a further deterioration of public health, the environment and personal and public property—to the point of irreversible damage—in so many cities across the Nation.

I am particularly concerned that the Federal effort focus on small-scale, inexpensive technologies to relieve flooding and pollution. Progressive, innovative ideas—not truckloads of hard-earned taxpayer dollars—will save America's cities. We should focus on domestic jobs and economic development, not gargantuan, energy-intensive projects that principally benefit foreign oil producers.

Source control technologies are probably the most cost-effective means available for curbing flooding and pollution, according to a major EPA publication. These technologies encourage rainwater to filter through soil to groundwater supplies or detain urban runoff in reservoirs until the sewer system and treatment plants can handle the storm load. Some alternative means of controlling runoff, in addition to those already being used in Chicago, include:

1. Ponding on vacant urban land and in parks;

2. Greenbelts located on cleared-off areas of the central city so that runoff would drain into the groundwater supplies. Such greenbelts increase land values, beautify the environment, raise the level of groundwater supplies which suffer severe depletion from urban development, and create jobs, for instance, for ground maintenance crews.

3. Berms and swales. These are slight mounds and depressions around residential and park areas intended to prevent stormwaters from running off lots and entering storm-sewer systems.

4. Rooftop reservoirs. Building code regulations in some areas of Chicago already require that flat-roofed structures be able to support at least six inches of standing water. Flow regulators could be installed on downspouts to retain water on rooftops during storms and release the accumulation slowly after the storm has subsided. Reinforcing older buildings for rooftop detention could be a very promising technique.

5. Parking lot reservoirs. This technique is presently used in Canada and France and is being tested in Denver and St. Louis. Truck parking lots are being built with six- to eight-inch dams around the perimeters. This level of water has no adverse effects on the trucks because water-sensitive portions are far above the water level. Stormwater is detained in the parking lot resrevoir until storms subside. The water is then released slowly into the sewer system.

6. Porous pavement. EPA is presently conducting tests on porous pavement to determine its feasibility for use in urban roadways, sidewalks, and parking lots. Preliminary tests reportedly show that stability, durability, and freeze-thaw characteristics are positive, and that costs may not significantly exceed those of conventional surfaces. This pavement has been shown to allow over 70 inches of water per hour to percolate through. Clogging, due to fine street particles, may prove to be a problem, but regular street cleaning could eliminate the clogging problem.

7. Plaza ponding. Large shopping centers or office building plazas can install depressed sodded areas. These could be aesthetically attractive for fair weather enjoyment. During a storm, these depressed areas would fill with water that would slowly seep into the planted area after the storm. This technique is presently in use in Denver and elsewhere.

8. Conservation in the home. For cities like Chicago with a combined sewer system, reducing the amount of water that enters from residential units during storms can reduce much of the sewer overload problems. Putting bricks in toilets and flow regulators on showers, I understand, was very effective in the San Francisco Bay area in 1977 in reducing water consumption. So-called "flushless" toilets are currently on the market and many firms are investing funds to improve that technology. Other techniques are being devised to recycle water from wash basins and showers into toilets and to re-use detergent water from clothes washers and dishwashing machines.

In addition to source control technologies, improved maintenance of existing facilities may provide relief. For example, periodic street sweeping and vacuuming could reduce the amount of street debris that reaches storm sewers and clogs them, or in some way reduces their optimal flow. Periodic flushing during nonstorm periods can help increase the capacity of storm sewers by eliminating clogs.

Outlet solutions could improve stormwater management. Outlet waterways could be dredged to lower the normal water level and thereby increase the peak load capacity.

Secondary small-scale solutions to basement flooding should also be investigated. These might include:

1. Backflow regulators. Small one-way regulators might be installed in basement drains to prevent backflow into basements. Cost, including installation, is probably under $25 per unit.

2. Basement bladders. During a backflow, the bladder unfolds and fills with sewer water After the storm, the homeowner simply presses the water back into the drain and folds the bladder into place.

3. Widespread use of sump pumps to control and limit basement flooding.

The national scope of the urban sewer crisis, in my own view, warrants a comprehensive review by Congress Office of Technology Assessment. OTA was established by Congress in 1972 to research promising advanced technology to deal with complex national problems. The Director of OTA is Dr. Russell Peterson, whose incomparable credentials and outstanding character has easily won

Congress admiration and respect. At his direction, an impressive cadre of professional engineers could offer much-needed technical assistance to urban planners around the country.

I am hopeful that OTA will recognize the national impact of the sewer crisis and will assist our efforts in rehabilitating America's cities.

Mr. President, I ask unanimous consent that documents relating to the urban flood and pollution control debate in Chicago be printed in the RECORD. I also ask unanimous consent that an article appearing in the New York Times, dated April 9, 1978, be inserted. The Times article only begins to illustrate the immense scope of America's urban sewer crisis.

Many American cities anxiously await the outcome of the Chicago TARP debate. The actions that Congress and the administration take now will affect the future of the Nation's greatest urban centers.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the New York Times, Apr. 9, 1978]

BENEATH THE STREETS, OLD CITIES CRUMBLE AND DECAY

(By John Herbers)

America's large, old cities are facing a hidden and largely ignored problem under their streets—an uncharted maze of aging water mains, sewer lines and other subterranean facilities that have deteriorated to the point where they threaten public health and safety.

A rash of recent failures in such systems, which had been neglected for decades as cities struggled to deal with an overwhelming social and financial burden, has focused attention on the threat that they represent and raised the prospect of new demands on the Federal treasury by municipalities around the nation.

Boston is losing half its fresh water through leaky pipes at a cost of $7 million a year. New York and other cities have had serious water main breaks. Inadequate sewers in San Francisco resulted in 80 overflow incidents last year in which raw sewage was flushed into the bay in violation of Federal law.

Ground water seeps into the sanitary sewers of Baltimore, overloading treatment facilities. A few months ago, a small Philadelphia boy drowned in an underpass where the storm sewers were not sufficient to handle the runoff.

Many billions of dollars would be required to update the antiquated network of pipes, cables, tunnels and manholes that strain to support an increasingly technological society.

The Joint Economic Committee of Congress, noting a decline in capital expenditures for such urban networks as streets and bridges, said in a recent report that the neglect "appears to be the single greatest problem facing our nation's cities." The new urban policy announced last month by President Carter, which called for more "targeting" of Federal funds into the central cities, was based in part on the emerging realization that new outlays are needed to rebuild the urban underground.

However, the extent of the need is not yet known nationally because many cities do not know what is in the complex of wires, pipes, cables, tunnels, and conduits under their busiest arteries or exactly where that complex is. The original plans have been lost in some cases and have grown inaccurate in others as facilities were expanded haphazardly. The condition of some systems becomes known only when trouble bubbles to the surface.

To assess the problem nationally, the Department of Housing and Urban Development has commissioned the Urban Institute in Washington to conduct an 18-month study and to report its findings as it proceeds.

CITIES ON "TIME BOMBS"

George E. Peterson, director of finances for the institute and the head of its study, said that the extremes range from East St. Louis, Ill., where the state took over the dilapidated city infrastructure, to Dallas, where computers are used to find failures before they happen. In between, he said, are a lot of cities sitting on "a time bomb."

A spot check of some large and intermediate cities around the country by The New York Times disclosed that the trouble has been building for a long time. In most of the nation's larger cities, sewer and water lines were laid in the 19th century or early in the 20th century, and some of them had a life expectancy of 50 to 75 years.

In the 1930's, when modernization should have started, the Depression struck. In the 1940's there was World War II. In the 1950's the cities began developing financial trouble as the white middle-class started moving to the suburbs. In the 1960's the demands were for solutions to social problems, and in this decade the emphasis has been on the employment of the poor and on public works projects usually unrelated to the infrastructure.

The extent of the neglect is suggested in a report issued last year by the Twentieth Century Fund for the City of New York, where facilities both above and below ground have reached a critical stage. For example, the report said that in addition to extensive work needed on streets and bridges, the city had 1,000 miles of deteriorating sewers that should be replaced over 20 years. It suggested that 1,500 miles of new sewers be built at a cost of $310 million a year. The list of problems with other facilities was similar.

WATER MAINS

Many cities have cast iron water mains that have been weakened over the years by electrolysis or by acid in the soil. Boston, which began laying iron water mains in the 1840's, has a system that carries 150 million gallons of water a day, but loses 78 million gallons a day through leakage. Charles Scales, chairman of the water and sewer commission, said that the entire system should have been replaced, "ideally, yesterday." But because of its financial situation the city can replace only 10 miles, or about one percent of the 1,100-mile system each year.

Houston, a newer city where pipes were laid after the turn of the century, is better off. It loses only 20 to 30 percent of its purified water, but that still totals more than 70 million gallons a day. And because it is low and flat, Houston has received about 3,600 water-damage complaints this year—complaints that leaks have destroyed lawns, undermined sidewalks and caused driveways to cave in.

"In this neighborhood, if there isn't a leak somewhere, we wonder," said Stanley Gafner, who lives in a middle class section of southwestern Houston.

Then there are the spectacular breaks, such as the one that occurred last January at 63d Street and First Avenue in New York City, closing the Franklin D. Roosevelt Drive. In Cleveland, a similar break in a February snowstorm left an area of several blocks of the city isolated for several days.

SEWERS

San Francisco, like a number of other cities, has a combined sewage system—one pipe for both rainwater and human waste. In a storm the flow can grow to 50 times the normal rate. S. Myron Tatarian, director of public works, said that when there is heavy rain, water and raw sewage pour directly into the ocean and bay, bypassing even primary treatment.

"This city ignored changing technology for 30 years," he said. "Bacteria levels in the bay are enormous."

San Francisco is building a system of conduits to hold the sewage in heavy rains and is planning more treatment plants; but in Providence, R.I., which also has a combined system, there is another kind of difficulty and no solution in sight. In recent years low-lying areas of the city have been flooding after every rainstorm and the city is unable even to clean the sewers to obtain maximum flow.

"It would take 10 years to clean up all the sewers in the city," said Joseph Vileno, an official in the Mayor's office.

SEWERS CANNOT HANDLE RUNOFF

Baltimore has had flooding, too, because its storm sewers, which serve the entire metropolitan area, cannot handle the runoff that has resulted from extensive development in the suburbs, according to Frank Kuchta, director of public works. It is a problem common to many cities that supply their suburbs with water and sewage disposal.

"When those sewers were built," said Philadelphia's Water Commissioner, Carmen Guarino, "you didn't have all the blacktop all over. Now, there's no place for the water to permeate. It all winds up in the sewers, and we haven't kept pace."

Deterioration of the sewer lines is an additional difficulty. In Boston, the main interceptor, where the pipes meet, has collapsed four times since 1961. There has been a gaping hole more than 20 feet wide in Massachusetts Avenue since the last collapse, in October.

THE MAZE

More than money is involved in correcting the difficulties. Major disruptions of urban life would be required to repair some of the decay, partly because of underground congestion.

Only one major city, Memphis, is reported to be attempting to keep in one place maps of all its underground facilities. In the oldest cities it would be impossible because of what Charles Borruso of New England Telephone Company in Boston called "the morass of congestion."

"A guy couldn't crawl through there," he said. "If you took all the dirt out, it would look like a set of monkey bars."

GROUND X-RAY MACHINE NEEDED

Theodore Andriotes, head of the bureau of operations for Baltimore, said, "I often thought if someone would invent a ground X-ray machine so we could see what all we have down there, he would clean up."

Under New York and Boston there are abandoned pipes and cables from the last century. In some places, steam pipes that heat up nearby telephone cables and cause trouble. In many manholes, there is not enough room for cables to expand and contract. In Pittsburgh, contractors on a new office building had to weave the foundation around an unused railroad tunnel and an underground spur of the long abandoned Pennsylvania Barge Canal. In Boston, there are sealed off subway tunnels, including a circuitous one known as the Burma Road.

FEDERAL AID

Not all cities are overburdened by troubles underground. Dallas, in addition to using its computerized system to forecast failures, has established a regular replacement and maintenance program. Such cities as Chicago, Detroit and Dayton, Ohio, which have multiple social problems above ground, have reasonably efficient infrastructures. But over-all, Federal and local officials say, replacement and repair are not moving fast enough.

"Out of sight, out of mind," said Mr. Guarino of Philadelphia.

Most Federal aid has gone for other purposes. Since 1972, the Environmental Protection Agency has spent more than $17 billion on sewage treatment plants but little to repair or replace the lines leading to the plants.

AGENCY PUSHES FOR IMPROVEMENTS

The agency is using leverage to push the cities into financing their own improve-

ments. For example, it has been holding up the financing for a plant in the southeastern section of Philadelphia until the city agrees to provide sewer lines that would end the infiltration of ground water, which requires additional capacity at the treatment plant. The city says it would take 10 years to make the requested repairs on its sewers, and the dispute has not been resolved.

President Carter's new urban policy is designed to provide some help. It calls for redirecting some funds from rural and suburban areas to help cities with their infrastructure. But at best, this would be only a fraction of what is needed, and the city officials are looking for help.

"Unless significant additional amounts of state and Federal aid can be obtained," said David Rossman, the former New York City budget director who headed the Twentieth Century Fund study, "the city faces a decade of serious deterioration in its vital physical support systems."

---

DEPARTMENT OF THE ARMY, OFFICE OF THE CHIEF OF ENGINEERS

[Regulation No. 1165-2-21 Supersedes ER 1165-2-21]

WATER RESOURCES POLICIES AND AUTHORITIES: FLOOD DAMAGE REDUCTION MEASURES IN URBAN AREAS

(Excerpts)

1. Purpose. This regulation provides policies and guidance for Corps of Engineers participation in urban flood damage reduction projects and establishes criteria to distinguish between improvements to be accomplished by the Corps under its flood control authorities and storm sewer systems to be accomplished by local interests.

4. Definitions.

c. "Storm sewer systems" are the facilities in urban areas designed to collect and convey runoff from rainfall or snowmelt in the urban area to natural water courses or to previously modified natural waterways. They include storm drains, inlets, manholes, pipes, culverts, conduits, sewers and sewer appurtenances, on-site storage and detention basins, curbs and gutters, and other small drainageways that remove or help to manage runoff in urban areas. Storm sewer systems are designed to solve storm drainage problems, which are typified by excessive accumulation of runoff in depressions; overland sheet flow resulting from rapid snowmelt or rainfall; and excessive accumulation of water at the facilities listed in this paragraph because of their limited capacity.

6. General Policy:

a. Satisfactory resolution of water damage problems in urban areas often involves cooperation between local non-Federal interests and the Federal flood control agencies. In urban or urbanizing areas, provision of a basic drainage system to collect and convey the local runoff to a stream is a non-Federal responsibility. This regulation should not be interpreted to extend the flood damage reduction program into a system of pipes traditionally recognized as storm drainage systems. Flood damage reduction works generally address discharges that represent a serious threat to life and property. The decision criteria outlined below therefore exclude from consideration under flood control authorities small streams and ditches with carrying capacities typical of storm sewer pipes. Location of political boundaries will not be used as a basis for specifying project responsibility. Project responsibilities can be specified as follows:

(1) Flood damage reduction works, as defined in this regulation, may be accomplished by the Corps of Engineers.

(2) Construction of storm sewer systems and components thereof will be a non-Federal responsibility. Non-Federal interests have a responsibility to design storm sewer systems so that residual damages are reduced to an acceptable level.

(b) Consideration will be given to the objectives and requirements of Executive Order 11988 (reference 3a) and the general guidelines therefor by the U.S. Water Resources Council (reference 3b).

7. Decision Criteria for Participation:

(a) Flood control. Water damage problems associated with natural streams or modified natural waterways may be addressed under the flood control authorities downstream from the point where the flood discharge is greater than 800 cubic feet per second for the 10-percent flood (one chance in ten of being equalled or exceeded in any given year) under conditions expected to prevail during the period of analysis. Drainage areas of less than 1.5 square miles shall be assumed to lack adequate discharge to meet the above criterion. Flood damage reduction works must conform to the definition in paragraph 4b and must be justified based on Corps of Engineers evaluation procedures in use at the time the evaluation is made.

(b) Storm sewer system. Water damage problems not consistent with the above criteria for flood control will be considered to be a part of local storm drainage to be addressed as part of the consideration of an adequate storm sewer system. The purpose of this system is to collect and convey to a natural stream or modified natural waterway the runoff from rainfall or snowmelt in the urbanized area.

(c) Man-made conveyance structures:

(1) Man-made conveyance structures will be assumed to be a part of storm sewer systems except when: (a) A natural stream has been or is to be conveyed in the man-made structure; or (b) The man-made structure is a cost-effective alternative to improvement of a natural stream for flood damage reduction purposes or is an environmentally preferable and economically justified alternative. Water damages associated with inadequate carrying capacity of man-made structures should be designated as a flood problem or a local drainage problem in a manner consistent with the structure's classification as flood damage reduction works or a part of a storm sewer system.

(2) Man-made structures that convey sanitary sewage or storm runoff, or a combination of sanitary and storm sewage, to a treatment facility will not be classified as flood damage reduction works. Flows discharged into a natural or previously modified natural waterway for the purpose of conveying the water away from the urbanized area will be assumed to be a part of the flow thereof regardless of quality characteristics.

---

[The Metropolitan Sanitary District of Greater Chicago]

PROGRESS REPORT FOR THE TUNNEL AND RESERVOIR PLAN

(Part I: The tunnel and reservoir plan)

THE PROBLEM

Like every other urban center in the country, Chicago long has faced two increasingly serious and closely related problems: pollution of the waterways, and flooding. As the population grows and construction expands, more wastewater is produced while at the same time absorbent ground surfaces are covered over, forcing great quantities of stormwater to run off into sewers and streams. The result is often flooding in areas with *separated* sanitary and storm sewer lines, and flooding and pollution in older areas where rainwater is collected in *combined* sewers. Combined sewers collect both household, commercial and industrial wastes as well as stormwater runoff.

The Metropolitan Sanitary District's large interceptor sewers connect into local sanitary and combined sewer systems and carry wastewater to the District's sewage treatment plants for purification before it is discharged into the waterways. However, heavy rains flowing into these local sewers now exceed by many times their designed capacity. Consequently, in separate sewered areas, rainwater which cannot enter the filled sewers floods highway underpasses, streets, and low-lying ground surfaces.

In the 375 square miles of the combined sewer area, which includes Chicago and 53 neighboring communities, the problem is more complicated. Local sewers in this area were designed to relieve overloading by bypassing interceptors and disgorging their mixture of stormwater and raw sewage directly into the waterways at 640 overflow points. These overflows pollute waterways and cause water levels to rise. The mixture can cause flooding and can back up from filled sewers into basements.

During especially heavy storms, even the swollen rivers must be relieved. At such times, the controlling locks on the Chicago and Calumet Rivers and the North Shore Channel may be opened, allowing polluted water to pour into Lake Michigan. Beaches may be closed and the area's drinking water supply could be threatened.

The Metropolitan Sanitary District of Greater Chicago (MSDGC) serves an area of 860 square miles, consisting of the City of Chicago and about 120 surrounding municipalities. It services a population of 5.5 million and an industrial complex with service demands for the equivalent of another 5.5 million population.

The District is responsible for: (1) collecting, treating and disposing of the wastewater generated within its boundaries; (2) protecting the waterways from pollution; (3) maintaining waterways that carry stormflow; and (4) maintaining waterways for navigation.

The District's major treatment plants—West-Southwest, Calumet and North Side—for decades have been providing primary and secondary treatment of wastewater, yielding an effluent with 90 percent of the impurities removed. Recently, chlorination has been added as a final step before treated water is released to the waterways. The newer plants—John E. Egan, Hanover Park, Lemont and O'Hare—provide tertiary treatment, producing an effluent of 99 percent purity. Tertiary facilities or their equivalent will be added to the older plants in coming years.

Industrial wastes which cannot be treated normally at the plants must be pre-treated by the dischargers. Pollution control officers monitor industrial discharges to make sure no pollutants are entering the waterways or sewer system, and they are empowered to issue citations to violators.

Flood control is being provided to separate sewered areas through the Chicago Metropolitan Area Floodwater Management Plan, co-sponsored by the District and the U.S. Soil Conservation Service. Flood retention reservoirs are being constructed which will divert and hold stormflow until it can be released safely to the waterways. This plan is expected to eliminate 90 percent of the flooding in separate sewered areas and save $6 million in flood damages annually.

THE LAW: P.L. 92-500

The Federal Water Pollution Control Act Amendments of 1972—commonly called The Clean Water Act—mandated the restoration of the nation's waterways to a "swimmable, fishable" condition by 1983. The Law's objective, as stated, was to "restore and maintain the chemical, physical and biological integrity of the Nation's waterways."

In order to comply with Federal law, the District adopted its Facilities Plan in 1975. The Plan encompasses the upgrading of the treatment plants, construction of new plants, floodwater retention facilities in the separate sewered areas, new methods of sludge disposal, and the introduction of instream aeration to raise the levels of dissolved oxygen in the waterways.

But a large part of the Facilities Plan is TARP.

THE TUNNEL AND RESERVOIR PLAN [TARP]

*How it works*

The Tunnel and Reservoir Plan is a complex of tunnels, drop shafts, connecting structures and reservoirs that will minimize the pollution from combined sewer overflows and drastically reduce flooding in the combined sewer area. Overflows of mixed sewage and rainwater will be intercepted and dropped into tunnels carved out of solid rock 200 to 300 feet below ground. The tunnels will convey the flow to reservoirs. There it will be held until the storm has passed. Later, when treatment plants can accept it, the wastewater will be pumped to them for treatment and released into the waterways as purified water.

TARP is divided into four systems paralleling major waterways: Mainstream, Des Plaines, Upper DesPlaines and Calumet. The whole project will consist of 125 miles of tunnels, 256 drop shafts, 645 near-surface connecting structures, 4 pumping stations, and 3 reservoirs with a storage capacity of 126,000 acre-feet.

The Mainstream System extends from the southwest suburb of McCook along the Sanitary and Ship Canal, past the Chicago Loop and up along the north branch of the Chicago River and North Shore Channel to Wilmette. A major branch of the tunnel reaches northwest along the North Branch to Niles and Morton Grove.

The DesPlaines System follows the DesPlaines River from the Northwest suburbs to McCook.

The flow from both of these systems will be treated at the West-Southwest Plant.

The Upper DesPlaines System serves the O'Hare Basin of the DesPlaines River. Its flow will be treated at the O'Hare Plant.

The Calumet System follows the Calumet-Sag Channel in the southeastern section of the area. The Calumet Plant will treat the flow from this tunnel system.

The tunnels range in diameter from 10 to 36 feet. Flows in them will be pumped to the reservoirs, which inturn will be agitated constantly by aeration pumps to prevent odors. Solids which settle to the bottom will be removed from time to time and disposed of as fertilizer.

TARP will be constructed in two phases. Phase I consists of most of the tunnels and deals with eliminating pollution of the waterways by combined sewer overflows. Construction has begun on Phase I, which will intercept about 80 percent of the pollution caused by overflows on the combined sewer area. Phase I is eligible for federal assistance and, in fact, 75 percent of its $1.7 billion cost will be paid for by grants from the U.S. Environmental Protection Agency (USEPA).

Phase II consists of more tunnels (principally another tunnel extending from McCook to the junction of the North Branch and North Shore Channel) and all the reservoirs and is meant to control flooding. It will capture all of the remaining stormwater in the area. Expected to cost about $800 million, it is not now eligible for pollution control grants. The District hopes to interest the U.S. Army Corps of Engineers in 100 percent funding and construction of this part of TARP. Congress has passed favorable legislation to enable the Corps to proceed, but has not yet budgeted funds.

*The benefits*

As a result of TARP's implementation, the quality of area waterways will be greatly improved, Lake Michigan will be saved from pollution by swollen rivers, and flooding will be significantly reduced. The recreational potential of the waterways will be enhanced, as will property values.

Moreover, in 1972 a Technical Advisory Committee of engineers representing local, state and federal governments recommended TARP as the most cost effective way to meet federal water quality standards. TARP will save an estimated $300 million in local sewer improvements. By regulating flows, it will make possible more efficient use of wastewater treatment plants, eliminating the need for an estimated $1 billion in plant expansion. And with the elimination of flooding and subsequent flood damages, the Army Corps of Engineers concluded after its examination of the Plan that TARP would yield $1.57 in benefits for every $1.00 spent.

Finally, the Corps projects that with the improved quality of area waterways, less water would have to be diverted from Lake Michigan to dilute the flow of previously polluted waterways. The Lake water then could be made available to municipalities that need it, without increasing the rate of diversion.

PART II: PROGRESS REPORT

TARP is the largest tunneling program in the history of the metropolitan Chicago area. During 1975 and 1976, the Metropolitan Sanitary District of Greater Chicago awarded 4 contracts for 17.63 miles of rock tunnels ranging in diameter from 9 feet to 30 feet and having a total bid price of $122,945,694.

Between July 1, 1977 and December 1, 1977, the District awarded 4 additional contracts for 22.41 miles of rock tunnel ranging in diameter from 9 feet to 35 feet and having a total bid price of $372,572,895.

In addition, the District awarded eight connecting structure contracts totalling $17,216,980 in bid price. This brings the total value of TARP contracts under construction since 1975 to $512,735,569.

In the remainder of the period from December 2, 1977 through 1978, the District will advertise contracts for rock tunnels, connecting structures and pumping stations having an estimated construction cost of approximately $668 million.

In *the Mainstream Tunnel System*, the northern most Addison-to-Wilmette Tunnel and the southerly 59th-to-Central-Avenue segment are under construction. USEPA grants have been received and the bidding process is underway for the four remaining tunnel and shaft contracts between Central Avenue and Addison Street and for the 31 contracts for the shallow connecting structures between Damen Avenue and Addison Street. To place the 59th-to-Wilmette Mainstream System into operation, additional grants are needed for the Mainstream Dewatering Pumping Station, and the 59th-to-Damen and Addison-to-Wilmette connecting structures. This latter contract also includes the concrete lining of the drop shafts. Grants are anticipated to be received in 1978, depending upon additional appropriations by Congress.

The grant application for the North Branch Tunnel has been submitted but it is not likely that sufficient funds will be available to the USEPA to fund this contract in 1978. This 1st phase system could be operational in 1983, with the necessary funding.

The Mainstream Reservoir and the 2nd Phase Mainstream Tunnel are 2nd phase work with funding through the Corps of Engineers. Although the Corps has prepared a favorable report and Congress has passed favorable legislation, no action is now being taken by the Corps since no appropriations have been included in their operating budget.

*The DesPlaines Tunnel System* will connect with the Mainstream System Pumping Station and Reservoir and is part of the 1st phase tunnel system. Plans for the major part of the tunnels have been completed and construction grant applications made. No grants for this system are anticipated to be received in 1978.

*The Upper DesPlaines Tunnel System* provides for relief of the existing intercepting sewers serving the O'Hare Basin and transporting daily dry weather sewage to the O'Hare Water Reclamation Plant now under construction. The tunnels also provide for capture of the combined sewer overflows now discharging to Weller Creek and Feehansville Ditch. The tunnels themselves have sufficient storage volume to capture the runoff from the smaller storms and the first flush of the larger storms. The net effect is to reduce the number of overflows from 100 to 10 and reduce the pollution load to the area's waterways by 92%.

The collection/storage tunnel system and the treatment plant are scheduled to be in operation by June 1979. These construction contracts are funded by the USEPA. The Upper DesPlains Reservoir which is needed to provide storage for the remainder of the pollution discharges to the waterways and primarily to provide the outlet for flood waters is not now funded by grants and is a 2nd phase facility to be funded as a flood control project through the Corps of Engineers.

The first tunnel of the *Calumet System* along the Calumet-Sag Channel is under construction. This tunnel was selected first since it provides much needed relief for the existing interceptors which services the City of Chicago and the westerly and southwesterly areas of the Calumet Basin. Plans have been prepared and grant applications made for the connecting structures and the Calumet Pumping Station needed to place this tunnel into operation. Grants are anticipated in 1978. The Calumet Plant Expansion is also needed in order that additional flow can be treated.

Plans have been prepared for the remainder of the 1st phase Calumet Tunnels and construction grant applications have been submitted. It is not anticipated that grants will be received in 1978 and there may not be sufficient funds available to the USEPA to construct these tunnels for some years to come. Once construction begins, it will take approximately five years for construction and placing the system into operation.

The 2nd phase Calumet Tunnel and the Reservoir are part of Phase II with construction through the Corps of Engineers. The O'Brien Pumping Station is listed as part of Phase I but grant funding for preparation of plans has not been received. This pumping station is needed to eliminate overflows to the Calumet River on the Lake side of the O'Brien Locks and to provide an outlet for additional sewers and growth.

In summary, approximately 40 miles of tunnels totalling $513 million are under construction as of December 1, 1977. Grants have been received for 8 additional miles totalling $213 million. Construction grant applications have been submitted to the EPA for additional 1st phase tunnels totaling 56 miles and $1.1 billion. Congress is considering legislation that would authorize additional funds for the USEPA. Funding for the Corps to continue work on the 2nd phase system is also needed.

APPENDIX

*Combined sewer overflow: average overflow event every fourth day*

Rainfall, 0.33 inches.
Run-off, 0.11 inches.
Average rate, 4140 M.G.D.
Hydraulic equivalent, 11,400,000 people.
Organic equivalent, 3,900,000 people.
Overflow duration, 15 hours.

---

(From the Chicago Tribune, Feb. 19, 1978)

DEEP TUNNEL DRAINS BILLIONS, STILL FALLS SHORT

(By Ray Moseley and Chuck Neubauer)

Chicago's multibillion-dollar Deep Tunnel —called the most expensive public works project ever devised—apparently will not achieve the flood control and pollution goals for which it was designed.

Intended to eliminate flooding of basements and streets and to clean up polluted

Chicago waterways, the project has run into funding problems and probably never will be completed.

If this is the case, the Deep Tunnel will not reduce pollution enough to meet federal clean water standards, and it will not solve the problem for which it was originally conceived—the basement flooding that plagues thousands of Chicago area homeowners.

The part that will be completed will cost at least $3 billion and principally will achieve two things: It will reduce drastically the amount of raw sewage entering the Chicago waterways, and it will clean up a 75-mile stretch of the Illinois River about 50 miles southwest of Chicago that is now polluted by Chicago's sewage.

Chicago-area residents, whose sewer taxes will go up nearly 52 per cent over the next 12 years to pay for the tunnel, will derive these modest advantages from the project. A more pleasant environment for picnicking and boating along the Chicago waterways; some limited fishing in the waterways; and swimming and fishing in a short stretch of the Illinois River.

These are the major conclusions of a month-long examination of Deep Tunnel by The Tribune and the Better Government Association. Federal and state officials, Metropolitan Sanitary District commissioners and engineers, and other sources familiar with the project were interviewed.

The Deep Tunnel—known formally as the Tunnel and Reservoir Plan (TARP)—involves construction of 132 miles of tunnels more than 200 feet underground to trap rainwater and sewage so that it can be processed in treatment plants before it is released into the waterways.

Begun in 1975, the first phase of the project—and the only part likely to be built—deals with pollution control and is scheduled for completion in 1980. The second phase concerns flood control.

The Chicago Metropolitan Sanitary District, which conceived the project, continues to hail it as one of the engineering wonders of the world, the largest public works project in American history, and a model for other cities with similar problems.

But the sanitary district's chances of getting the necessary federal funding for the flood-control part of the project now appear to be virtually nil, with both the Carter administration and Congress reluctant to finance it.

Opposition to the project in Chicago also is growing, with some citizens complaining that blasting is damaging their homes, others objecting to rising costs, and some contending that cheaper alternatives are available. One outspoken critic, architect Harry Weese, who has experience in underground work as designer of the Washington D.C., subway, calls Deep Tunnel "a single-purpose project by single-minded people who are very good at getting every cent of federal money possible for the most useless thing in the world."

The Tribune and BGA examination has produced the following findings:

After completion of the current phase of the project, the Chicago waterways will still be too polluted for human contact and will not support most fish life. But most of the solid waste will be eliminated and odors will be reduced.

Most homeowners whose basements flood after a rainstorm will continue to face the same problem.

The project could pollute underground water sources that help provide the area's drinking water.

Contrary to the expectations of most suburban officials, virtually no funding is available for an estimated $1.4 billion worth of sewer upgrading in 52 communities outside Chicago. Without this work, the suburbs will not be able to take full advantage of Deep Tunnel.

Costs of the project have more than doubled in six years and may go higher still. The project originally was projected to cost $1.2 billion and the sanitary district last May increased that to $2.6 billion. The congressional General Accounting Office, which includes the cost of upgrading suburban sewers and other related work in its estimate, puts the price at $7.3 billion. The work that actually will be done, if only the first phase of the Deep Tunnel and related work are carried out, will cost $3 billion.

Sanitary district taxes will go up 51.7 per cent between now and 1990 to pay for it. The current tax rate of 58 cents per $100 of assessed property value will rise 2.5 cents annually starting next year, pushing taxes on a home assessed at $10,000 from $58 to $88 a year.

Deep Tunnel was conceived by the sanitary district as the answer to flooding and pollution problems caused by the fact that sewer lines in the area are not adequate to cope with heavy rains.

The lines carry both sewage and storm water runoff, and on about 100 days out of every year the sewers back up and dump raw sewage and storm water into the Chicago, Calumet, and Des Plaines rivers and the Sanitary and Ship Canal.

Sometimes even these waterways are inadequate to contain the runoff; 21 times in the past 30 years, sewage has backed up into Lake Michigan, forcing the temporary closing of beaches.

Under the sanitary district's plan, storm water and sewage will flow into the tunnels. From there it will be pumped into three huge underground reservoirs, then pumped into treatment plants, cleaned up, and released gradually into the waterways.

If completed, the project would enable the sanitary district to eliminate basement flooding problems and to meet federal clean water standards. The district hoped to achieve this by having the federal government pay most of the bills.

But the Office of Management and Budget [OMB] in Washington has so far stymied that plan. It decreed that the project would be divided into two segments—Phase 1, involving construction of a network of 110 miles of tunnels under Chicago and some suburbs, for pollution control; and Phase 2, involving construction of the three reservoirs and 22 more miles of tunnels, for flood control.

At the federal level, Phase I was assigned to the Environmental Protection Agency, which pays 75 per cent of the cost of pollution control projects. Phase 2 was assigned to the Army Corps of Engineers, which pays 100 per cent of the cost of flood control work it undertakes.

OMB's division of the project is somewhat arbitrary, because the full pollution control benefits of the project cannot be achieved without Phase 2. For example, without the reservoirs there will continue to be 10 overflows a year of raw sewage into the waterways, and overflows into Lake Michigan on the average of four times every 26 years.

Phase 1 is being funded, but Congress and OMB have blocked any money for Phase 2. The General Accounting Office, in a recent report highly critical of TARP, concluded that future financing of Phase 2 is doubtful.

In 1976 Congress authorized the Corps of Engineers to begin a study of the project, but it did not appropriate the $10 million to 12 million needed to carry it out.

This year, OMB declined to include this money in President Carter's budget, making it highly unlikely the money will be voted this year. Every year of delay means that costs go up, increasing the prospect that Phase 2 never will be built.

One reason for the Carter administration's evident lack of enthusiasm is that TARP has implications far beyond Chicago alone. If TARP is completed, federal officials are aware that there will be heavy pressure from other cities with similar problems to get federal money for more TARPs.

In fact, Milwaukee and San Francisco already are working on TARP projects. Some federal officials have estimated that TARPs in all cities with problems similar to Chicago's could cost $200 billion.

Thus TARP represents a classic contradiction in federal policies. On the one hand, the government has ordered the cities to meet its standard for clean water. On the other hand, it declines to give them the money with which to do it on the ground that the cost is too high.

Many critics argue that there are two fundamental mistakes underlying this dilemma:

Congress set unrealistic standards in decreeing that all of the nation's waterways be made fishable and swimmable by 1985 without considering the costs involved and without considering whether such a standard makes sense for every waterway.

The Chicago Metropolitan Sanitary District, which has a history of doing things on a big scale, opted for a big, expensive engineering solution without seriously considering the feasibility of cheaper and less spectacular technology that might achieve the same ends.

Concerning the federal water standards, Chicago architect Weese observed that these were based on recommendations made in 1972 by the President's Advisory Committee on Environmental Quality, headed by Laurence Rockefeller.

"David Rockefeller bankrupted lower Manhattan with his World Trade Center," Weese said. "Nelson Rockefeller bankrupted the State of New York with his policies as governor. And Laurence is going to bankrupt the country with these water standards."

Fortune magazine has estimated the cost of meeting the standards could hit $670 billion, especially if other cities adopt the TARP scheme. "It's hard to escape the conclusion that there's got to be a better way," Fortune said.

A state official called the congressional goal of fishable and swimmable waters everywhere "a load of nonsense" and said, "Who would want to swim in the Chicago waterways? The barges would run them down. And if these waters were fishable, how many would want to fish there?"

Joanne H. Alter, one of the nine sanitary district commissioners, called last week for a temporary halt to TARP. She has had apparent difficulty in deciding where she stands.

In an earlier interview with The Tribune for this article, she said, "I have accepted this approach [TARP] and I support it. Do you want clean water any less because it costs more?"

She said TARP would have "great recreational benefits" because it would make possible canoeing on the North Branch of the Chicago River.

Several days later, she phoned a Tribune reporter and said, "It's too expensive and we should reassess it." She gave no reason for her change of mind, but later issued a public statement urging a moratorium on the project pending a review of federal financing and possible alternatives to TARP.

In the interview with The Tribune, she said the project still would be valid even if the flood-control portion is not carried out. But in her public statement she cited the lack of federal financing for flood control as one reason why a review is needed.

Other persons who have studied the project expressed more decided views.

One was Vinton Bacon, who originally introduced the idea of Deep Tunnel when he was general superintendent of the sanitary district in 1962–70. Now a professor of civil engineering at the University of Wisconsin

in Milwaukee, Bacon said the project is of questionable value if only Phase 1 is built.

"Unless the tunnels and reservoirs are both built, you don't have a solution," he said. "The two parts have got to go together."

Bacon said Deep Tunnel was conceived primarily as a flood-control project. "We saw the antipollution effect as a side benefit that made the project even more worthwhile, but the flood storage had to be there to make the whole thing work," he said.

Bacon said he would still support the project if the reservoirs could somehow be funded. But he saw no prospect of that and said he was "broken-hearted" over the way things have gone.

"They [the sanitary district] have priced themselves out of the market by waiting too long," he said. "Inflation has drowned them."

A key state official said he has "serious reservations" as to whether Deep Tunnel is worth the money it will cost. He asked that his name not be used, saying he did not want to get into a public feud with other agencies that would expose him to attack and possibly cost him his job.

He suggested the project might be stopped once the "mainstream" tunnel section has been completed. So far about $500 million has been funded for the main tunnels and another $347 million will be needed to complete this section, he said.

His proposal would exclude tunnels under the Calumet and Des Plaines rivers that have not yet been funded. But he said the main tunnel section alone would provide all the pollution benefits that can be obtained from Phase 1.

Jacob D. Dumelle, chairman of the Illinois Pollution Control Board, said it was uncertain if TARP would meet the board's water standards if only Phase 1 is completed.

"You are going to still have some sewage overflows into the waterways," he said.

If only Phase 1 is built and water standards are not met, he said, the board may have to lower its standards.

Weese, one of the city's best-known architects, suggested that the main tunnels be completed and used as an underground water reservoir. But he said the rest of the project should be canceled.

Among other things, he argues from his experience in building the Washington subway that the sanitary district will not be able to prevent seepage of sewage from the tunnels into the water-bearing strata of rock that contributes to the area's drinking water supply.

The district plans to deal with this problem by grouting—that is, patching over cracks in the rock with cement. "Well, we put leak-proof grouted systems in the Washington subway, and they leak like hell," Weese said. "They will leak in the tunnels too."

Stanley Hallett of Northwestern University's Center for Urban Affairs goes beyond many critics and says TARP should be stopped now before any more money is spent.

"If you're going down the wrong road, the faster you turn around the better," he said. He described TARP as "just old, outmoded technology" and "an engineering and chemical response to a biological problem."

Hallett, Weese, and other critics attack TARP on the ground that it is a capital-intensive project which contributes few jobs to the Chicago area and that it seeks to get rid of sewage wastes rather than making use of them.

Hallett said "surprising" amounts of methane—natural gas—can be extracted from sewage and it also can be used for fertilizers.

He is one of a number of persons from Northwestern and various civic groups who have formed the TARP Impacts Project. They are looking at alternatives to TARP which they believe were not seriously considered by the sanitary district, and within the next month, they say, they will issue a series of reports spelling out the details.

Hallett said the proposals would involve small- and medium-scale technology that would be less expensive than TARP and would focus on "ways to improve the environment in city neighborhoods rather than just digging holes under them."

He declined to discuss the proposals, but his group is known to be considering such projects as water-retention systems atop office buildings, green belts in the western part of the city that would enable some rainwater to be absorbed into the ground rather than running off into sewers, and small ponds that also would absorb rainwater and serve a recreational purpose.

At sanitary district offices at 100 E. Erie St., President Nicholas Melas and other officials strongly defend TARP and contend that such alternatives either would not do the job alone, would-be too costly, or are already being implemented in part.

"There is a whole bunch of academic solutions to the problem," said Frank Dalton, the engineer in charge of TARP. "But when the professors talk about them, they never factor in the costs."

At a meeting with Tribune reporters, district officials seemed to be unable to agree among themselves on what TARP would achieve if only Phase 1 is built.

Dalton said federal water quality standards would be met if Phase 1 is completed, sewage treatment plants are expanded, and in-stream aeration is carried out. In-stream aeration—an "egg beater," in the words of one expert—is a system of stirring up polluted waters to get oxygen back into the water so fish and plants can survive there.

But Bart T. Lynam, general superintendent of the district, said these projects together will "do nothing" for aquatic life in the waterways. "You are not going to fish in there because of Phase 1," he said.

Lynam said Phase 1 would eliminate 75 to 85 per cent of the raw sewage in the waterways. Other officials estimated 90 per cent.

George Alexander, director of the Chicago office of the federal Environmental Protection Agency, and Michael Mauzy, acting director of the Illinois EPA, agreed that the projects mentioned by Dalton would bring the waters up only to secondary contact standards.

This means they would be suitable for boating but not safe for human contact—such as swimming.

Alexander described this as a "tremendous improvement." He said rough fish, such as catfish, would be able to live in the waters, and "smells and unsightly objects" would be eliminated. He also said the project would make downstream waters now polluted by Chicago sewage fishable and swimmable.

Mauzy said the additional swimmable and fishable waters would be in a 75-mile stretch below the point where the Kankakee and Des Plaines rivers join to form the Illinois River, about 50 miles southwest of Chicago.

---

WHO PAYS? FIFTY-TWO TOWNS, UNITED STATES AT ODDS

Fifty-two communities in the Chicago area must improve their sewers to relieve pollution problems and take full advantage of the Metropolitan Sanitary District's Deep Tunnel project. But no one has told them where they are to get the $1.4 billion required to do it.

Most of the suburbs cannot raise the money from their own resources. But a survey of suburban officials by The Tribune found that some aren't particularly worried because they assume the federal government will pay most of the costs.

The federal Environmental Protection Agency, however, said it will fund only a fraction of the cost. Although much of the sewer upgrading is related to flood control, which is usually handled by the Army Corps of Engineers, the corps said it is "not authorized by law to fund sewer upgrading."

The sanitary district, which made the $1.4 billion cost estimate, is aware of the lack of federal funding. But suburban officials said the district has told them nothing, and few of them have bothered to find out on their own.

"Judging from the reactions I see from a lot of mayors, they just don't understand the problem," one state official said.

The 52 communities have combined sewer systems—that is, sewers that carry both sewage and stormwater runoff. Under the federal Clean Water Act, Congress has mandated them to improve their sewer systems to eliminate overflows of raw sewage into the Chicago waterways during rainstorms.

The Deep Tunnel is intended to do part of the job for them. But for their own part, the suburbs must put in larger sewer lines to handle a heavier flow of rainwater and sewage than present sewers can accommodate. This will not merely eliminate overflows into the waterways, but will help to eliminate basement flooding if the second phase of Deep Tunnel is built.

The federal EPA said it would pay 75 percent of the cost of planning studies by the suburbs and of the cost of hookups to the Deep Tunnel system. But for design and construction work, the agency will pay only for the portion that it determines is needed to check pollution.

"What we anticipate in many instances is that flood control and urban land runoff will be the major part of what they do," an EPA official said. "My guess is that we would therefore fund only a small portion of these costs."

The Illinois EPA has $215 million still unspent from a 1970 bond issue of $750 million, and acting Director Michael Mauzy said this money is potentially available for local sewer upgrading.

"But it won't go far," he said. "The prospect of all the upgrading being carried out is remote. But I would like to think that the federal government eventually will fund this. It may well be that the matter will have to be adjudicated."

Mauzy said one of more suburban communities might bring suit to try to compel federal funding.

Both he and sanitary district officials said it was incongruous that the federal EPA should consider sewage in waterways as pollution but not sewage in basements.

Some suburban officials contacted by The Tribune were unaware that federal funding for the sewer upgrading is in doubt. Others said they were not far enough along with the planning to know what the funding situation is. In fact, few of the communities have applied for or obtained federal EPA grants for the initial planning studies.

Several suburban official said the sanitary district has told them nothing about the funding problems.

"We're being left in the dark," said Maywood Village President James Parrilli, "and I hear the same thing from other mayors."

"There undoubtedy will be federal funding," said Evanston City Engineer Joseph Yi. "There has to be federal funding available because the municipalities can't do it themselves."

He said sewer upgrading in Evanston will cost $45 million.

Wilmette Village Manager Stan Kennedy said he assumed the federal government will fund part of the costs the suburbs are facing.

"The Federal government made mandatory the upgrading sewers," he said. "If they refuse to pay for it, they've got a big problem on their hands in this country."

Rhett Bilek, administrative assistant to Brookfield Mayor Phillip Hollinger, said sewer work there will cost $4 million to $5 million and, thought federal funding "will come to pass."

Richard Nuzzo, Elmwood Park village manager, said he expects to get federal funding of all phases of sewer upgrading work.

"It depends on how serious the government is about the problem," he said. "I think they will find the funds."

But Park Ridge City Manager Herman C. Spahr said he has talked to EPA officials and "I have no reason to think federal money will be available."

He said sewer upgrading in Park Ridge may cost $16 million. "I don't know where the money is coming from," he said.

Ald. Dick Ward of Des Plaines said, "There are no foreseeable funds for the reservoirs [the second phase of Deep Tunnel] and no money to upgrade the sewer systems."

He said the sanitary district has gotten most of the federal money available for pollution control and the municipalities "have not gotten in line" for the funding.

The suburbs, he said, will have to "wait years" to get funds for sewer upgrading.

---

TESTIMONY BEFORE THE SUBCOMMITTEE ON PUBLIC WORKS, COMMITTEE ON APPROPRIATIONS, HOUSE OF REPRESENTATIVES, U.S. CONGRESS, APRIL 12, 1978

My name is Nancy Philippi and I am speaking for the Tarp Impacts Projects, a group of Chicago professionals and community representatives concerned about the public interest implications of the Metropolitan Sanitary District of Greater Chicago's Tunnel and Reservoir Plan (TARP).

I am here today to ask you to postpone any funding action on the Phase I design memorandum stage of the Chicagoland Underflow Plan (also known as the Tunnel and Reservoir Plan) until the Congressional authorization has been broadened to direct the Corps of Engineers to address the problem of Chicagoland storm sewer backup without bias in favor of the Underflow Plan promulgated by the Flood Control Coordinating Committee in 1972. It is in violation of the best interests of the Chicago metropolitan area, as well as with the traditional planning process of the U.S. Corps of Engineers, that this massive, ill-conceived and expensive project be thrust upon the federal government for implementation.

We believe that the Corps itself recognizes the adverse implications of the wording of the current authorization. In an August 1977 communication from General Robert L. Moore of the North Central Division he describes the cost increases that the pollution abatement portion of the project, presently funded by USEPA, has experienced, and urges:

"2. In view of the above, it is considered that the Corps planning on the authorized project should be in the nature of a "reformation" type Phase I GDM instead of an "affirmation" type Phase I GDM. Such reformation would consider new alternatives in addition to review of alternatives previously considered by the MSDGC. The scope of work would include a verification of previous engineering studies and designs, a detailed review of hydrologic, hydraulic and economic studies, alternative designs for reservoir sites, and alternative proposals in lieu of tunnels (flood control) and reservoirs"

Colonel Tilford Creel responded:

"concur that report should be of the reformation type and of the scope outlined in paragraph 2 of basic letter"

We likewise, concur with General Moore and Colonel Creel and believe that anything short of the scope of work described by General Moore would be a mistake. We further believe that the wording of the current authorization unequivocably restricts the Corps activity to developing the engineering and design of the old preplanned reservoirs. Section 108 of the Conference Report supplementing the Water Resources Development Act of 1976 states very simply:

"The Secretary of the Army, acting through the Chief of Engineers, is authorized to undertake the Phase I design memorandum stage of advanced engineering and design of the Chicagoland Underflow Plan project for flood control and other purposes . . ."

There is no possible way that such wording could be comfortably adapted to a "reformulation" type study, and it is unreasonable to expect the Corps to make such an attempt without the clear support of Congress. Congress should, therefore, modify the authorization wording to more consistently reflect the "reformation" intent of the Corps.

We at "TIP" have several reasons for taking this position:

1. Costs of the project have indeed escalated beyond reasonable expectations. Not only have the construction costs of the pollution abatement tunnels increased by more than 25% in the period of one year, but also the costs of the overall project, including all associated components necessary to secure the benefits, have been estimated recently in a report by the U.S. General Accounting Office to exceed seven billion dollars and, according to Colonel Creel in testimony before Congress in 1976, these costs can reasonably be expected to double by the time the project is completed.

2. It is doubtful whether all the flood control purposes of the reservoirs in the Underflow Plan could ever be achieved, since a substantial portion of the reservoir storage is assigned to receive flows from 53 Chicago metropolitan communities in the combined sewer area that will be unable to finance the sewer upgrading necessary to take advantage of that storage capacity.

3. There are serious negative impacts of the proposed TARP that we believe have not been given proper attention in the published Environmental Impact Statements, the most significant of which is the potential for exfiltration of polluted waters into important groundwater aquifers adjacent to certain segments of the system.

4. The TARP project, designed in the early 70's inappropriately depends heavily upon energy consumption and generates comparatively few jobs: operations and maintenance costs, estimated in 1977 by the MSDGC to be $13.6 million annually, are ⅔ energy and ⅓ manpower costs.

5. The planning process of the Flood Control Coordinating Committee concentrated almost exclusively on the technologies of underground conveyance and storage systems and gave little attention to surface retention, preventive and corrective strategies, which we believe could and should be incorporated into the Corps planning process.

These, we believe, are serious deficiencies in the present TARP plan, deficiencies which could be perhaps overcome by the formulation, by the Corps, of a more comprehensive, cost effective and environmentally appropriate solution to the urban flooding problems of the Chicago metropolitan area.

---

STATEMENT BY J. TERRENCE BRUNNER, EXECUTIVE DIRECTOR OF THE BETTER GOVERNMENT ASSOCIATION, FEBRUARY 20, 1978

Nine months ago the BGA launched a detailed investigation of the Metropolitan Sanitary District's $7.3 billion "Deep Tunnel" project, the most expensive public works program in the nation. The project is enmeshed in a confusing tangle of federal, state and local regulations—but one thing is clear, "Deep Tunnel" promises to be a political, financial and environmental fiasco.

This morning, the BGA and Chicago Tribune revealed that the primary beneficiaries of "Deep Tunnel" are politically connected contractors. The Sanitary District has already awarded $70 million in non-bid consulting work for the project. Former public officials such as Ben Sosewitz (who was MSD's General Superintendent), Earl Deutsch (a former MSD Commissioner), and former U.S. Attorney Thomas Foran have benefitted from this non-bid consulting work.

Since 1975, other "Deep Tunnel" contractors have contributed more than $150,000 to various political campaigns, including the campaign of MSD president Nicholas Melas.

It is now well-known that "Deep Tunnel" is a financial disaster. Costs have escalated from $1.6 billion estimated by the Sanitary District in 1972 to $7.3 billion, now projected by the Government Accounting Office (GAO).

What will Chicago area residents receive in return? Pollution in the area's rivers will be reduced but, according to GAO, they will remain unsafe for human contact.

The Sanitary District has sold "Deep Tunnel" as the answer to the problem of basement flooding. Yet there is no federal commitment to fund the flood control portion of the program.

And despite this massive expenditure of $7 billion, "Deep Tunnel" will create fewer than 1,000 new jobs.

The project itself may be environmentally unsafe. Experts contend that seepage from the tunnel could pollute the water table, Chicago areas' underground source of drinking water.

Unfortunately, the Sanitary District's decision to build Deep Tunnel has important national implications. The project has been promoted as a model for the nation. But if cities with sanitation problems similar to Chicago's adopted the "Deep Tunnel" approach, it could cost the country over $600 billion.

The costs are so high that the nation's commitment to reduce water pollution could be jeopardized.

Therefore, the BGA recommends:

Futher construction of Deep Tunnel should be halted.

The U.S. Environmental Protection Agency should thoroughly review the project and carefully consider less expensive, more realistic alternatives.

Congressional hearings on "Deep Tunnel" should be held. Citizens from the Chicago area should have the opportunity to appear and participate in developing alternatives to the Deep Tunnel project.

---

POLLUTION AND FLOOD CONTROL PROGRAM: METROPOLITAN SANITARY DISTRICT OF GREATER CHICAGO

We believe that the assertion that the Metropolitan Sanitary District of Greater Chicago (MSDGC) pollution and flood control program is too expensive to complete, and that even if completed the goals for which the program was designed will not be achieved, does not accurately portray what the facts are.

With respect to the assertion that the Metropolitan Sanitary District of Greater Chicago's pollution and flood control program cost understates cost according to an analysis made oy the General Accounting Office of the United States, the MSDGC states that the analysis is faulty and, after reviewing the figures, The Civic Federation agrees. The GAO addresses its analysis to the tunnel and reservior plan (TARP) but includes also plant expansion and improvement costs. GAO's analysis is also unclear as to whether their cost analysis covers the entire 10-year capital improvement program from 1972 through 1982. Their cost analysis includes $1,431 million for upgrading local sewers which the MSDGC has not included in its program cost since it is not responsible for this cost. They have assisted local cities and villages and have estimated what they believe the cost will be to these municipalities. Furthermore, the GAO has included $1,728 million for interest cost of capital in the construction program presumably for the 10-year period. As far as we are aware, interest cost on the use of capital has never entered into the costing of capital improvement programs either for the State government or local governments. It has been used extensively in the cost-benefit studies of Corps of Engineers capital improvement programs. After deleting these two costs, $3,156 million

from $7,326 million, the total GAO estimated cost of the MSDGC program is $4,170 million. The MSDGC's estimate of cost from 1972 through 1982 is approximately $4,900 million.

The criticism that the MSDGC's contract bids are much higher than District estimates implies that the bids should have been lower. This criticism seems to be refuted by a statement attributed to Mr. Mauzy, acting director of the Illinois Environmental Protection Agency, that the cost of MSDGC contracts appears to be "not that much out of line with pollution projects elsewhere in the state." There is an informal system of checks and balances on contract cost by virtue of the requirement that the State and Federal governments must first approve MSDGC contracts before payment is made. Also, the limited number of construction firms available to bid on contracts of this nature could be the reason for a large spread between estimated cost and bids.

The MSDGC does not have the technical staff to design and draw up the large volume of construction plans necessary to letting contracts out for bid. Much of this work has had to be let on contract to engineering companies where the supply and demand situation has also resulted in increased cost. The MSDGC does use its engineers and technical staff in the field to inspect construction work.

The Civic Federation has followed the planning for cleaning up pollution and flood control from 1965 to the present time. In November, 1967, our comments on the 1968 MSDGC budget was that the "Deep Tunnel Plan" was tremendously expensive. We reminded the District that flood control, which was a factor in the solution of the problem, was primarily a State responsibility and, therefore, there should be State participation in funding the construction program. We recommend also that appropriations for construction should be limited to those improvements relating to sewage treatment plants and intercepting sewers that would be necessary regardless of which pollution and flood control plan might eventually be adopted. There had been little or no discussion of the best plan, but only of individual plans. It was our opinion that if construction work was started on the basis of the deep tunnel plan, the Distirct would be too committed to it to change.

In 1968, the Governor of Illinois appointed a Flood Control Coordinating Committee to examine the alternative plans to meet the basic criteria for:

(1) Prevention of backflow to Lake Michigan for all storms of record, and

(2) To meet the applicable waterway standards established by the State Pollution Control Board and the MSDGC.

On January 1, 1972, the Technical Advisory Committee which was given the task of evaluating the many alternative solutions to determine the most economical method of meeting the basic criteria, reported a plan to the Flood Control Coordinating Committee which was referred to as the "Chicago Underflow Plan." This plan was a composite of the several alternatives that had been proposed. It was unanimously accepted by the Coordinating Committee as it was less costly and it would be more environmentally acceptable to the community than any of the other plans.

The Chicago Underflow Plan consisted of 120 miles of conveyance tunnels intercepting 640 sewer overflow points in the 375 square mile area served by the combined sewers. Combined sewer overflow water, it was anticipated, would remain in storage for up to 50 days for the largest storm periods of record. The water from most of the storms could be handled in from 2 to 10 days. The detailed explanation of the development of the Chicago Underflow Plan for the Chicagoland area is contained in the 111-page summary of technical reports dated August, 1972. It covered all of the considerations and safeguards that might arise. The Flood Control Coordinating Committee and Technical Advisory Committee participants are shown on page 5.

Funding of the pollution and flood control program involves allocation of funds from local, state and federal sources. This includes 75 percent participation by the Federal government in the pollution control aspects of the program. The tunnel and reservoir portion (TARP) of the whole program is divided into Phase I which includes pollution control construction and Phase II, the flood control portion of TARP. In addition to funding 75 percent of the pollution cost of Phase I, it is expected that 100 percent of the cost of Phase II will be covered by the U.S. Corps of Engineers. The State of Illinois' participation is expected to cover 75 percent of the cost of drawing up plans and specifications. This funding will come from a $750 million State antipollution bond issue. The MSGDC's funding will be from the $380 million general obligation bonds authorized by the State Legislature plus additional bonds that they may issue without referendum.

We question whether the MSDGC could halt its pollution and flood control program as requested by opponents to the program without approval from the Illinois EPA and United States EPA. The District would have to have an extension beyond 1982 or the District would be subject to a fine of $10,000 for every day after 1982 and possible imprisonment of officials in the District responsible for violations of the United States Water Pollution Control Act as amended in 1977.

---

WASHINGTON, D.C.,
*March 9, 1978.*

Hon. ELMER B. STAATS,
*Comptroller General of the United States, General Accounting Office, Washington, D.C.*

DEAR MR. STAATS: As a follow-up to the proposed GAO draft report on "Chicago's Acquisition of a Tunnel and Reservoir System: Status and Problems To Be Resolved," I would like to request your staff to undertake such further research as is necessary to enable it to report back to me on:

Where interior flooding is most concentrated in the area affected by the proposed Metropolitan Sanitary District of Chicago Tunnel and Reservoir Project (TARP). I would like to have identified, as precisely as possible, the geographic boundaries of each of the most severely-affected areas.

Those streets, expressways, and viaducts that most frequently have experienced flooding in the affected TARP area.

The frequency of flooding incidents in the most severely affected areas during the last 20 years; the amount of damage sustained; and the number of persons injured or killed.

An analysis of the small-scale technology available to solve Chicago's flooding problems in lieu of completion of Phase II, the flood control segment, of TARP.

Sincerely,

CHARLES H. PERCY,
*U.S. Senator.*

---

## EDUCATION DAY, U.S.A.

Mr. MATHIAS. Mr. President, on April 13, 1978 the Senate passed H.J. Res. 770, authorizing the President to issue a proclamation designating today as "Education Day, U.S.A." As a Marylander, I am particularly happy to observe Education Day, U.S.A. because the State of Maryland has been in the vanguard of American education since colonial times.

During the colonial period there were few public schools. More often schools were private with strict admission policies. Only a few schools were philanthropic, established to educate the poor.

In colonial Maryland the practice of supporting education for the poor was highly regarded. In Baltimore, for example, the Benevolent Society for the Education of the Female Poor pioneered in the field of women's education.

Maryland's approach to paying for education began with a tax on banks, soon expanded to include property levies which produced revenue for schooling the poor. King William's School, founded in Annapolis in 1696, was the first free public school to use these tax funds.

Today, between 35 and 37 percent of Maryland's total general fund money is expended for education.

Maryland has also been in the forefront of the development of the university concept. While other States were still formulating plans for State universities, the University of Maryland opened the doors of its college of medicine in 1808. The law school was founded only 15 years later. The first dental college in the United States was established in Maryland in 1840, and the first full-time pharmacy professorship was established in 1844 at the Maryland College of Pharmacy. This later became part of the University of Maryland. The School of Hygiene and Public Health at Johns Hopkins was founded in 1916. It was the first of its kind in the world. This school continues to enjoy an unsurpassed international reputation.

Enrollment in postsecondary education has grown dramatically. Total public and private enrollment in Maryland institutions more than doubled between 1964 and 1974, from 84,237 to 186,670 students.

These numerous accomplishments speak for the State of Maryland's contributions in the realm of education. I am proud to salute Maryland as I underscore the merit of Education Day, U.S.A.

---

## "HOLOCAUST" STIRS PAINFUL MEMORIES OF GENOCIDE

Mr. PROXMIRE. Mr. President, this past week an excellent show has been on TV depicting the emotional and physical horrors which were visited upon the Jews in Nazi Germany during World War II. It is especially shocking to realize that this atrocity occurred just a little over 3 decades ago. We conceive of ourselves as living in a modern world, and yet our grip on civilization sometimes seems so tenuous.

On April 16, an article appeared in the Washington Post entitled "A Time to Remember the Holocaust." The article relates some of the memories of those who survived the holocaust, and I found it to be a very moving and vivid portrayal of life in Nazi Germany. I may not agree with all of the conclusions reached in the article, but the article certainly serves as an excellent reminder of how terrible a crime genocide truly is.

I hope that the Senate will not continue to delay. The Genocide Convention was written after the "holocaust" in Nazi Germany for the express purpose of try-

ing to insure that genocide would never happen again. This treaty makes the commission of genocide an international crime, and 82 countries have ratified its provisions. For reasons which have been shown again and again to be groundless, a few opponents of this noble treaty have worked to block its passage. Perhaps those Senators will be stirred by the "Holocaust" program, and will finally realize the urgent need which exists for the Convention. I urge the Senate to ratify the Genocide Convention as soon as possible. I also ask unanimous consent that the Post article appear in full immediately following my remarks.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

A TIME TO REMEMBER THE HOLOCAUST

(By Myra MacPherson and Rob Warden)

SKOKIE, Ill.—When the first shot of Buchenwald flashed on the TV screen, David murmured with savage irony, "my *dear* camp."

And then the memories began to tumble out.

"My older brother died at the start. We were five days without food. We were locked up in tents, we couldn't look out. On the fifth day of the fast he passed away.

"One day the SS man promised a loaf of bread to an inmate who could find a mouse alive. One man caught a mouse. The SS man injected it with gasoline. The mouse died. And from that day on he made himself a picnic.

"Every day he picked five Jews, injected gasoline into their bloodstream. And they died.

"This went on for quite a long time."

David was sitting in a comfortable pine-paneled den where he and another camp survivor and some friends were watching the first night of the NBC miniseries "Holocaust."

He had spent the afternoon at a large ecumenical worship rally in this heavily Jewish Chicago suburban community where the Nazi party is attempting to win the right to march.

In fact David asked that his last name not be used because he fears Nazi reprisals against his family.

David, now 55, was 17 when he was taken into Buchenwald in 1939. Liberated in 1945, he weighed 62 pounds. He now weighs 155 pounds and stands 5 feet 7. Both his mother and his father and a sister and a younger brother went to the gas chambers at Treblinka. Two sisters survived.

Another survivor sitting in the Skokie den, Erna Gans, spoke up bitterly at one point in the show. "When the SS officer in the film says that there were only 36 deaths as the result of one raid on the Jews, and that 'the foreign press will not make a fuss over that' [Gans pointed to the TV set] See? That is the crux of the matter. No one spoke up."

Gans' blue eyes were expressionless as she recited her litany of death.

Gans, who was 16 in 1939, remembers "walking the streets," posing as a non-Jew, "because it was safer than staying at home." One day as she returned home, she noticed a truck full of prisoners. In it were her mother and her little brother. "I went toward it—but my mother motioned that I should not come close. I never saw them again. Later, my father and I were put in camps, I was the only one who survived." Afterwards she went back to her home town, hoping she could find someone she knew.

"But they were all gone . . . all gone."

Last night watching the re-creation of that bygone era, both Gans and David praised the show.

"It will show the world you cannot be silent," said Gans.

"It's magnificent," said David. "It's nothing but the truth."

---

Earlier yesterday Abe Fraiman and Mark Weinberg shivered in the brilliant but chilling 39-degree sunlight as they haltingly sang the unfamiliar words of a Christian psalm. The Jeannie Gump, a Catholic mother of 12, listened while the Jews around her sang in Hebrew as the cantor's voice wafted over the high-school football field in this middle American village-suburb of Chicago.

They and 2,700 other Christians and Jews huddled together, all wearing yellow Star-of-David armbands—the sign of persecution that the Nazis forced Jews to wear in World War II—yesterday at the first of 100 solidarity worship rallies that will be held across the country. These services are dedicated to the memory of the Holocaust, when 6 million Jews were exterminated by the Nazis in World War II. The rallies all began in Skokie by concerned citizens as a response to a threatened march here by a Chicago Nazi group that planned to wear swastikas and storm trooper uniforms.

For Fraiman and Weinberg, just the mention of the Nazi party brings angry tears. They pull up the sleeves of their jackets, unbutton their shirt cuffs, roll up the sleeves and point to the numbers tatooed on their arms—indelible reminders of their years at Auschwitz, the worst death camp of all, where 1 million to 2 million Jews were exterminated.

Last night, after the rally, Fraiman and Weinberg—like most of the estimated 7,000 concentration-camp survivors who have clustered together to live in Skokie, watched the first of the four-part series, "Holocaust."

"It is painful—but it has to be watched," said Fraiman. "This is to remind the Americans. The new generation doesn't know anything about it. When we survivors are gone our children shouldn't be living in fear that this can happen again."

From a distance, huddled with blankets in the stadium, the crowd could have been enjoying the innocent pleasure of a football rally. But then the words came and the tears coursed down many cheeks as they heard a rabbi quote from the concentration-camp memories, "A Selection From Night," by Elie Wiesel. "The three necks were placed at the same moment within nooses. 'Long live liberty,' cried the two adults . . . but the child was silent. Three chairs toppled over. Total silence throughout the camp . . . the two adults were no longer alive, but the third rope was still moving. The body was so light, the child was still alive. For nearly half an hour he struggled between life and death."

Fraiman, now 57, said, "I was 29 when they took me to Auschwitz. I lost two children. They took away from me a daughter 8 years and a son 11 years old They make the sign with the thumb—this group goes left, this group goes right. My son and daughter went to one side, I never saw them again. It is too hard to talk," he said, and could not finish.

As painful as the memories are, holocaust survivors in this village, spurred by the recent anti-Semitic actions of a small band of Nazi, insist that it is their duty to remind the world. Skokie has nine synagogues and one of the largest clusters of Jews in the country—an estimated 40,000 out of a population of 70,000. They migrated here by the thousands in the 1950s because Skokie was a new suburb that provided reasonably priced housing for those Jews who wanted to leave Chicago's congested West Side.

Said one Buchenwald survivor, "It's not a conscious decision (that so many survivors were living in Skokie). We just wanted to be very close to each other. We were all living together in one neighborhood in Chicago and when we started to move out we started to move out together."

More than a year ago the Nazi party decided to target Skokie because the Martin Luther King Jr. movement had won the right to hold open-housing marches on the southwest side of Chicago where the Nazis have their headquarters.

In a nationally publicized controversy over whether the Nazis have the right to march in Skokie they were represented by the American Civil Liberties Union. This action resulted in a loss of 30 percent of the Illinois division of the ACLU membership.

In recent weeks both state and federal courts have upheld the right of the Nazis to march in Skokie in their storm trooper uniforms with swastika armbands. The Nazis will hold the march on June 25 unless the lower courts are reversed, which is considered unlikely. This incenses Skokie's Jews. "The Swastika is the symbol of genocide. We are all for freedom but this is disabusing freedom when they say they have the right to march through our streets and say 'we want to kill you,'" said a Buchenwald survivor. He asked that his name not be used because of obscene anti-Semitic phone calls his wife received after one published interview.

For those at yesterday's rally the Nazi party threat in one way seemed to be a blessing as Rabbi Neil Brief of the Niles Township Jewish Congregation said, "This gathering shows the spirit of Skokie responding to the First Amendment values of freedom of religions and freedom to be free of fear—and not saying that freedom of speech is absolute and separate from those other freedoms.

"This shows that we are one people under God," said Skokie village president Albert J. Smith. Mrs. Stephanie Jaye, a "born-again" Christian, said as she pulled on her Star-of-David armband, "I think this has brought about better understanding; the Nazis have brought us together because they have to be stopped."

For the young, who stood about wearing blue jeans and braces, there was some bewilderment about what it all meant. The Skokie high school plans to run lectures on the "Holocaust" series this week. And one man who has already given lectures in high school is Mark Weinberg. The words tumble fast as he says, "I tell them my story so that they will know a little bit about a very real and terrible history. They arrested me in 1943. They beat me up. I hang myself but they got me well. Then the Gestapo took me again. I was beaten very badly. They wanted to know who sabotaged the train.

"I was in 16 camps and jails, Auschwitz, Buchenwald . . . In the last summer, they brought in the Hungarian Jews; they killed between 12,000 and 15,000 daily. The gas chamber was huge. Then they dug three big holes and they piled it—corpses, wood, corpses, wood. Children. Women. One officer made this one woman disrobe and then he shot her," said Weinberg, pointing to the back of his neck. "The child was on the ground. They shoot the child. The shooting was better. In a gas chamber it took from three to 15 minutes to die."

Then Weinberg walked across the football field, arm-in-arm with another survivor friend.

Across the way high-school students laughed and shouted as they played football.

Last night in nearby Evanston Titus Trevor, a 56-year-old Polish-born engineer, once imprisoned at Auschwitz, watched "Holocaust" in his book-lined apartment. He showed little emotion, at one point shrugging, "You don't guide your life by what happened so long ago."

But Trevor said that his experience at Auschwitz had made him a pacifist and an atheist. A Polish Roman Catholic arrested in Warsaw during the 1943 ghetto uprising. he said that he had been devout and had prayed regularly when first imprisoned.

But he said the experience contradicted everything he's been taught about religion. "A hair can't fall from your head unless it is God's will, and here whole families were

going to death. I saw whole families being systematically murdered, and whatever I had learned about God, didn't make sense anymore."

For years after he was liberated he said, he was frightened every time he saw a uniformed policeman—even in the United States. "Once you are broken, that carries on for a long time, and you have no self assurance."

## RECESS UNTIL 11:30 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I move that the Senate stand in recess until the hour of 11:30 tomorrow morning.

The motion was agreed to; and at 6:16 p.m. the Senate recessed until tomorrow, Wednesday, April 19, 1978, at 11:30 a.m.

# EXTENSIONS OF REMARKS

## HOUSE ACTION ON BEHALF OF FORMER WESTERN FLIGHT ENGINEERS

### HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, April 18, 1978*

● Mr. ANDERSON of California. Mr. Speaker, today the House will consider my bill for the relief of 123 former flight engineers of Western Airlines. House Resolution 83 seeks to refer H.R. 1394 and all accompanying papers to the U.S. Court of Claims for recommendations.

I urge the Members of the House to read my attached letter to Chairman GEORGE DANIELSON and to support House Resolution 83:

OCTOBER 13, 1977.

Hon. GEORGE E. DANIELSON,
*Chairman, Administrative Law and Governmental Relations Subcommittee, Committee on the Judiciary, Washington, D.C.*

DEAR MR. CHAIRMAN: I thank you for allowing me this opportunity to submit my views on H.R. 1394 and H. Res. 83, two bills that I have introduced for the relief of Western Airlines employees.

I introduced these two bills on the first day of this session of Congress. Last session, I introduced two other bills for the same purpose (H.R. 9027 and H. Res. 662). I have been very interested in this matter for many years now and in fact have in my files correspondence dated as early as 1974.

In 1961, Western Airlines discharged 123 flight engineers who did not return to work after going on strike in protest against a National Mediation Board ruling which was viewed as a threat to their jobs. The flight engineers of six other airlines had struck their employees at the same time and were later reinstated, but Western has refused since 1961 to rehire its discharged flight engineers.

I sponsored this legislation mentioned earlier since all other avenues of recourse have been exhausted. I believe that the dispute extends back to the changes during the late 1950's and early 1960's.

As chairman of our aviation subcommittee, I feel that I can speak to this aspect of the problem with some degree of knowledge. This time period was marked by a trend to replace non-pilot trained flight engineers with pilot-qualified engineers in jet aircraft crews. Under pressure from the pilot's union, Western Airlines, in January 1961, announced a policy requiring all flight engineers on jet aircraft to possess pilot qualifications and instrument ratings, effective July 1, 1961. The Western flight engineers reluctantly agreed to take the flight training even though they feared their jobs to be threatened.

In February 1961, the National Mediation Board, issued a ruling which triggered a national strike of flight engineers. The Board was empowered by section 2, Ninth, of the Railway Labor Act, 45 U.S.C. 152(9), to resolve disputes among the employees of an air carrier as to who are the representatives of the employees. The Air Lines Pilots Association (ALPA) and the Flight Engineers Association (FEA) had contended for the right to represent the flight engineers employed by United Air Lines. The Board's report pointed out the necessity, in the operation of up-to-date aircraft carrying many persons, of each person in the cockpit being able to do the work of every other person in the cockpit in an emergency, including the piloting of the aircraft. The Board concluded that all persons in the cockpit constituted one "craft or class" for representation under the Act.

Until 1961, flight engineers were treated as a "class;" the pilots were considered a separate "class." The Board's ruling would have forced all of the engineers and pilots at an airline to vote for a single representative. Since pilots outnumbered engineers substantially, the flight engineers feared that they would be swallowed up by a larger pilots union which represented the interest of pilots more than engineers.

To the flight engineers, the ruling appeared to doom their jobs, their craft, and their union. In reaction, the flight engineers on seven airlines, including Western, walked off their jobs on February 17, 1961. Western requested their flight engineers to return to work at the regular scheduled time; a total of 123 who refused to return were discharged.

It is for these 123 discharged flight engineeds that H.R. 1384 and H. Res. 83 is intended.

Even though President Kennedy on February 21, 1961 issued an Executive Order establishing a Commission to examine the controversy and the Secretary of Labor secured the assurances that the effected carriers would not be disciplined if they returned to work, Western Airlines still refused to rehire its discharged employees. This made the other flight engineers reluctant to return to work unless the Western engineers were included.

Possibly because of this action by President Kennedy and Labor Secretary Goldberg, no grievances were filed by the engineers in accordance with their collective bargaining agreement within the seven day time limit provided in that agreement.

On October 30, 1961, the Secretary of Labor appointed Professor Feinsinger to investigate the dispute and to make a report.

Issued four years later, this report stated:

Despite Western's claim to the contrary, the strike caused it no more difficulties than the strike on the other six airlines to the carriers involved. Yes . . . of the seven airlines involved, only Western refused to honor the request of the Secretary of Labor to reinstate the striking flight engineers. Had all the seven struck airlines acted as did Western, the strike might have been prolonged considerably, causing grave inconvenience to the traveling public. As it was, only Western ignored the Secretary of Labor's request to maintain or restore the status quo. As a result of Western's recalcitrance, however, and the reluctance of the other FEIA chapters to abandon their colleagues on Western, the strike on the six other airlines was prolonged for several days during the Government's unsuccessful attempts to persuade Western to change its position, thus causing not only grave inconvenience to the traveling public but serious financial loss to the other carriers involved.

In brief, Western's refusal to reinstate the flight engineers, pending a study of the underlying problem by a Presidential Commission, causing grave hardship on the families of the discharged employees, was not consistent with the overriding public interest in uninterrupted service on the nation's airlines, nor with standards of conduct observed by American employees generally in similar situations.

Professor Feinsinger recommended that, the cases of the 123 flight engineers be reviewed individually to determine if any were unable to meet the company's deadline because of special circumstances, that a preferential hiring list be established for the engineers in the order of their seniority, and that representatives of the company and union meet to implement his recommendations.

Western Airlines rejected these recommendations and has consistently refused to reinstate or rehire the flight engineers. On September 14, 1971, the Assistant Secretary of Labor informed the flight engineers, on behalf of the White House, that the dispute was considered a closed matter.

This background information brings us to the two pending bills before the committee. Though the constitutional authority for the enactment of private claim bills by the Congress rests upon the power to pay the debts of the United States, this power is not restricted to the payment of those obligations which are legally binding on the government, but also extends to the creation of such obligations in recognition of claims that are merely moral or honorary.

In fact the United States Supreme Court, in *Pope* v. *United States,* 323 U.S. 1,9 (1944), said:

It is conceded that indeed it cannot be questioned that the debts are not limited to those which are evidenced by some written obligation or to those which are otherwise of a strictly legal character. The term 'debts' includes those debts or claims which rest upon a merely equitable or honorary obligation, and which would not be recoverable in a court of law if existing against an individual.

The nation, speaking broadly, owes a 'debt' to an individual when his claim grows out of general principles of right and justice; when, in other words, it is based upon considerations of a moral or merely honorary nature, such as are binding on the conscience or the honor of an individual, although the debt could obtain no recognition in a court of law.

The power of Congress extends at least as far as the recognition and payment of claims against the government which are thus founded. To no other branch of the government than Congress could any application be successfully made on the part of the owners of such claims or debts for the payment thereof. Their recognition depends solely upon Congress, and whether it will recognize

claims thus founded must be left to the discretion of that body. . . . Some of the acts were based upon considerations of pure charity.

I can provide for the committee examples of this power. I urge the committee to decide the facts of this case and recognize the equitable and moral considerations that must be based on the principles of right and justice.

Such a decision in support of this legislation will rarely, if ever, be subject to judicial review. Your committee's very rules provide that "when called upon to decide whether relief should be granted persons seeking redress of grievances, the subcommittee is guided by principles of equity and justice."

I strongly feel that there is a moral obligation on the part of the United States towards the discharged flight engineers. I base this on the fact that the flight engineers of the six other airlines finally returned to work on the understanding that the government would do all in its power for the relief of the Western flight engineers, even though there was no commitment.

It is clear that the flight engineers' strike by the seven struck airlines enabled them to exert enormous leverage as long as they remained unified.

The continuing national strike, together with the government efforts towards settlement, could well have placed strong pressure on Western to relent and to reinstate its strikers. Once the other strikers returned to work, however, the pressure on Western to compromise or settle the dispute was removed.

In return for the government's promise to do all in its power to secure relief for the striking Western employees, the strikers removed this pressure. And since the return of these strikers to work was based on the government's promise to do all in its power to secure relief, one must ask, how did the government fulfill its promise?

By appointing merely a Presidential Commission?

By recommending that the Western employees be on a preferential hiring list?

I strongly feel that the government did not live up to its obligation to do "all in its power," because the Commission did not hold conferences with Western Airlines on this matter until two years after Professor Feinsinger had been appointed. One can hardly call this "pressure."

This long, unexplained delay in the issuance of the Feinsinger Report and a lack of any pressure from the government thereafter to persuade Western Airlines to adopt the compromise suggested by Professor Feinsinger signals that this legislation is indeed appropriate and necessary to carry out of the government's 1961 promise.

I thank you for allowing me this opportunity to submit my views concerning this matter. I hope the committee will report this legislation, H.R. 1394 or H. Res. 83, to the full Committee on the Judiciary and recommend that the bill be favorably acted upon by the full House of Representatives.

Best regards.

Sincerely,

GLENN M. ANDERSON, M.C.●

## DISAPPOINTMENT OVER RULE GRANTED H.R. 1, THE ETHICS IN GOVERNMENT ACT

### HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, April 18, 1978*

● Mr. MAZZOLI. Mr. Speaker, I am disappointed that the House Rules Committee wrote a rule for the consideration of H.R. 1, the Ethics in Government Act, allowing a floor amendment to strike the limit on outside earnings of Members of Congress.

The limitations on outside earnings was a key part of the ethical reform package adopted as House Rules in March of 1977. Now, barely 1 year later, the House could nullify this key element of the package.

Is it any surprise, Mr. Speaker, that the public's confidence in the House continues to plummet?

Mr. Speaker, I know you and leadership on both sides of the aisle will not permit the outside earnings limitation to be removed. Removal would be a serious mistake.●

## PRESIDENT CANUTE

### HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, April 18, 1978*

● Mr. McDONALD. Mr. Speaker, on March 8, 1978, the Wall Street Journal published a very perceptive editorial on the decline of the U.S. dollar. It very correctly pointed out that all the rantings and ravings of President Carter against cost of oil imports, plus his wailing over our trade deficit does not go to the heart of the problem. What is needed is to stop our deficit spending and slow down the press printing dollars. This sort of fiscal self-discipline will restore the confidence of the world in the dollar and in the long run restore the U.S. economy to a healthy state. The editorial follows:

[From the Wall Street Journal, Mar. 8, 1978]

PRESIDENT CANUTE

I've spent a lot of time studying about the American dollar, its value in international monetary markets, the causes for the recent deterioration as it relates to other major currencies. I can say with complete assurance that the basic principles of monetary values are not being adequately assessed on the current international monetary market.

Thus at his last press conference President Carter lectured the financial markets, an enterprise one step up, if that, from lecturing the tides. Markets are in fact marvelously efficient systems for collecting information, and as such their judgments are not stupid but smart. Time and again markets have demonstrated their ability to outwit Wall Street hotshots, central bankers, economic advisers and especially politicians. Instead of lecturing the markets about the dollar, Mr. Carter ought to be trying to figure out what they are trying to tell him.

Especially so since this administration obviously has a lot to learn. The problem is not really President Carter but his economic advisers and beyond them the intellectual traditions on which they draw. The rest of Mr. Carter's press conference remarks reflect the poverty of those traditions. He offered three reasons why the dollar should now improve: The "rapidly increasing" attractiveness of investment in the U.S. economy, due to high nominal interest rates. An end to growth in oil imports. And a decline in the disparity between real economic growth here and abroad.

If we imported less oil, we would of course be better off in many ways. Mr. Carter ought for any number of reasons to offer up an energy program that maximizes incentives for domestic production of energy, instead of one that would tax the production of energy in order to subsidize its consumption through heating oil rebates. If the administration sees energy as the taproot of the dollar problem, it ought to get serious about its energy proposals.

The U.S. economy has been growing faster than the European ones, and this does mean a larger trade deficit. Rapidly growing economies use more of the available resources, and this shows up in the trade figures. Despite the nonsense being mouthed in and out of the administration, though, this does not normally lead to a depreciation of the growing economy's currency. As Germany, Japan, Italy and Britain have shown over the years, a sick currency is normally the sign of a sick economy, and healthy currency the sign of a healthy one.

Normally what happen is that a growing economy attracts investment, and capital movements offset the larger trade deficit. The problem with the dollar is that this is not happening. The trade figures have relatively little to do with the problem; the crisis is in the capital accounts. What the market is trying to tell Mr. Carter is that instead of "rapidly increasing," the attractiveness of investment in the American economy has fallen out of bed.

Consider what was changing when the dollar started to fall last summer. Final figures are not in, but a preliminary Commerce Department release is instructive. It shows a trade deficit of $16.4 billion in the second half, up from $14.9 billion in the first half. Meanwhile, items reflecting the movement of private capital swung to an outflow of $6.6 billion in the second half, from an inflow of $2.9 billion in the first half. The administration frets about a $1.5 billion blip in the trade account and manages to ignore a $9.5 billion hemorrhage in the capital accounts.

This flight from the dollar is a massive vote of no confidence in the policies of the administration and the Federal Reserve. Dollar-denominated assets are being marked down because the markets see that the dollar's value is eroding both at home and in relation to other currencies abroad. Over the past year the rate of inflation has declined in Germany, Japan and even the United Kingdom. In the U.S. it accelerated, and now shows every sign of even more rapid growth ahead. Yet the administration continues to project growing budget deficits, and the Federal Reserve continues to pump reserves into the banking system in order to meet the resulting credit demands.

The best way to understand the dollar crisis is the simplest one: Exchange rates are a monetary phenomenon. The dollar does not decline in value because we import too much oil or grow too fast. The dollar declines in value because we print too many dollars. Unless you understand this, you will be raging at the tides with your drowning breath.●

## RALPH "ABIE" MILLER OF TORONTO, OHIO, KILLED

### HON. DOUGLAS APPLEGATE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, April 18, 1978*

● Mr. APPLEGATE. Mr. Speaker, so very often, Members of Congress include into this section of the RECORD good news about a person, groups of persons, or an event in their district. But every so often, it will be used to tell of some bad news. This, regretfully, is my purpose today. I feel it necessary to do this though to explain to you and my colleagues in the House of Representatives what kind of a human being Mr. Ralph "Abie" Miller of Toronto, Ohio, was.

For 35 years, Abie served on the To-

ronto Police Force, and like so many other men in blue, gave more of himself than was called for. He enjoyed the love and respect of not only his fellow officers, but nearly the entire town as well. He was dedicated to his profession beyond what was to be expected and so often helped others without concern for himself.

While trying to stop a fleeing motorist with a roadblock on March 16, Abie Miller was hit by the car and died, leaving Toronto very sad and without the benefits of his care, concerns, dedication, and love any longer. The report that was included in the police logbok said it all:

He was one hell of a cop and one hell of a man.

Mr. Speaker, those people who knew Ralph "Abie" Miller were more fortunate than they perhaps realize. Needless to say, Toronto, Ohio, will never be the same.●

## VIETNAM VETS HEALTH ENDANGERED BY EXPOSURE TO AGENT ORANGE

### HON. FORTNEY H. (PETE) STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, April 18, 1978*

● Mr. STARK. Mr. Speaker, I am submitting for the record a copy of a recent article which appeared in the Stars and Stripes, the national veterans' newspaper, warning all Vietnam-era veterans of the possible damage to their health caused by exposure to the chemical TCDD Dioxin, found in great concentrations in the defoliant Agent Orange.

TCDD Dioxin, which is also contained in many widely used herbicides in the United States, has now been linked to cancer, skin rashes, reduced sexual activity, spontaneous abortions, and birth defects, among other things. The Environmental Protection Agency currently considers levels of up to 1 part per million safe. Recent laboratory tests, however, indicate that there may be no safe level of TCDD Dioxin. Dr. James R. Allen, of the University of Wisconsin, has found that as little as 500 parts per trillion (a trillion equals one million times one million) fed daily to rhesus monkeys kills half of them in 9 months or less. This level is 2,000 times less than that currently allowed in the United States.

I urge my colleagues to read this article and alert the Vietnam veterans in their districts who were exposed to Agent Orange to file disability claims with the Veterans' Administration if they are suffering from any unaccountable medical problems.

The article follows:

[From the Stars and Stripes, Apr. 13, 1978]

NACV URGES VE VETS FILE CLAIM

The need for all 8.5 million Vietnam-Era veterans to initiate disability compensation claims with the Veterans Administration for medical after-effects of Agent Orange and other chemicals used by the U.S. Military has been unanimously supported by the newly created Health Care Committee of the National Association of Concerned Veterans at the 11th Annual National Convention held in Baltimore last week.

Recent media coverage of the harmful residual effects of biological-chemical agents in the Vietnam war, including cancer, rashes, aborted pregnancies and birth defects in children, has raised serious concern among the delegates to the National Convention and young veterans nationwide.

"All Vietnam-Era veterans should apply to their local VA offices for possible disabilities from all biological and chemical agents employed by the U.S. Military in the Vietnam-Era," a spokesperson for the Committee stated.

"By this method we can convey to the VA bureaucracy our deep concern about the possible effects of all known and unknown agents.

"Also, this action will open a claim with the government which can be substantiated by present or subsequent medical conditions and later medical research."

The currently identified biochemical agents include dioxin used in the defoliant Agent Orange and dapsone used in anti-malaria medication.●

## CAPITAL FORMATION

### HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, April 18, 1978*

● Mr. PICKLE. Mr. Speaker, I am today introducing a bill which could materially assist in dealing with the problem of capital formation. This bill also represents a logical step in the direction of reducing the impact of double taxation of corporate earnings distributed as dividends.

My bill provides for the deferral of any current Federal tax on dividends reinvested in original issue stock under a qualified dividend reinvestment plan. The stock received on reinvestment of such dividend would, instead, be regarded as the equivalent of a stock dividend and taxed on the same basis as a conventional stock dividend.

Dividend reinvestment plans for original issue stock have been adopted by over 80 capital-intensive companies having a continual need to obtain additional common stock to finance new capital facilities. Such plans have demonstrated a potential for making a significant contribution to the problem of obtaining common stock capital. The dividends reinvested under these plans become immediately available to the company for its capital needs.

My bill will encourage increased participation in such plans and materially increase the common stock capital which can be raised through this source. It has been estimated that, with such encouragement, as much as 40 percent of all new common stock equity needs of U.S. industry could be provided under dividend reinvestment plans for new issue stock.

Such encouragement of the formation of common stock capital will facilitate the financing of capital facilities which would not otherwise be built. It would therefore provide an important stimulus to construction, employment opportunities, and a healthier economy.

Deferment of a tax on dividends reinvested in new issues stock is also a modest step in the direction of reducing the double tax on dividend income. There is particular logic in deferring any tax at the stockholder level under these circumstances since the stockholder is not receiving the cash dividend but is, instead, increasing his equity interest in the corporation. Moreover the cash is being plowed back into the corporation where, if invested profitably, it would lead to additional taxable earnings, at the corporate level.

While there would be some current revenue loss, such loss would be offset by taxes payable when the stock were sold at a price in excess of the adjusted cost basis and, more importantly, by the revenue gains associated with the encouragement of increased capital facilities and employment.●

## A HOLOCAUST IN OUR TIME; THE DEATH OF HUMAN RIGHTS IN CAMBODIA

### HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, April 18, 1978*

● Mr. DORNAN. Mr. Speaker, one of our national television networks is currently broadcasting a brilliantly written and produced screenplay, "Holocaust." It depicts one of the greatest, one of the most horrifying, defilements of the human spirit in all of history. It reminds all of us that only a few decades ago, the death camps, the repressions, and mass exterminations of fellow human beings were all too real.

A program like "Holocaust" is important, and is useful in teaching the next generation what must never happen again. Tragically, though, that very horror is happening again—now. It is happening in Cambodia where a systematic experimentation of millions of people takes place against a backdrop of silence and inaction by the Western world, and the United States in particular.

In my opinion, the Carter administration is correct in criticizing and attempting to see reformed instances of human rights violations in several Latin American and African countries. But I would like to see similar demonstrations of outrage or at least a semblance of similar enthusiasm by the White House and its State Department in attacking the holocaust currently plaguing Cambodia. The relative silence by President Carter as well as many other influential opinion leaders, for example, the top executives in our news media, is deadening. This silence compromises the integrity of our country's foreign policy as it has been redefined since the beginning of the human rights campaign. It compromises it in the sense that it is difficult to be convincingly righteous when lambasting Brazil for throwing 300 people in jail for 6 months, when we are absolutely silent about Cambodia's systematic extermination of 3 million of its citizens and the confiscation of their property and lands.

There are few journalists as able, and no one more experienced in media watching, than Mr. Patrick Buchanan. In a recent syndicated column, he analyzes our country's silent establishment about human rights violations in countries like Cambodia. It is not a happy item to read, though a hard view of reality is so often

melancholy. I hope that everyone reading this will think about those who are safe though silent in the face of another holocaust. I hope that they will begin calling those who for the sake of their own souls should be silent no longer in order to halt this satanic slaughter.

The column follows:

[From TV Guide, Mar. 18, 1978]

WHY DO NETWORKS PLAY DOWN NEWS FROM CAMBODIA

(By Patrick Buchanan)

"And there were many macabre incidents . . . the starving people who ate the flesh of dead bodies during this acute famine. I will now tell you a story that I lived myself . . . a teacher who ate the flesh of her own sister. She was later caught, she was beaten from morning to night until she died, under the rain, in front of the whole village as an example, and her child was crying beside her, and the mother died at the evening."

This was lifted verbatim from the Washington press conference on Pin Yathay, a civil engineer who survived 26 months in Communist Cambodia.

Yathay's story, in his own words, is one of unimagined horror. Of starving neighbors practicing cannibalism. Of suicides, executions and persecution on a scale unexcelled in this bloodiest of centuries. Of seeing his entire family perish:

". . . I lost all my family, my three children, and my wife; also my mother, my father, my two sisters, another brother, my brother-in-law, my nephew and . . . about 18 persons. Now I am alone in this world." He had escaped by going hand-over-hand across a river 200 meters wide.

Yet, at that Jan. 20 press conference, to which all three networks were invited by the American Security Council, not one sent a correspondent. The AP ran an excellent article, carried by The Washington Star. The Washington Post reporter walked out, midway, asserting she had heard enough of this "junk."

Only Jack Anderson, the syndicated columnist, put the Yathay story on network television. Taping an interview with the Cambodian refugee, Anderson ran an excellent and extended piece March 6 on *Good Morning America.*

Perusing abstracts from the Vanderbilt Television News Archive—of the network evening news—from Jan. 20 to Feb. 10, this writer could not find a single mention of Pin Yathay's story.

Compare the indifference to this tale of horror and miraculous escape to the excited, extensive coverage given the fleeing of editor Donald Woods from South Africa.

On Jan. 2, both ABC and CBS ran extended stories of how editor Woods, banned from publishing in South Africa, had escaped into Lesotho. On Jan. 6, NBC devoted Segment 3 to Woods' escape, his family's harrassment, his scathing judgment of South African justice.

On Jan. 8, ABC, which could not send a correspondent three blocks to hear Pin Yathay in Washington, dispatched its *Issues and Answers* team 3000 miles to interview Donald Woods in London. It was a testimonial.

Twice in his introduction, Bob Clark, Issues and Answers' chief correspondent, referred to Woods' "daring escape" and "dramatic escape." During the questioning, Clark returned again, with unconcealed admiration:

Clark: And you literally swam a river to get across the border?

Woods: Yes, but it was just a small stream. The river-swimming story must not appear too heroic.

(Indeed, according to South African sources, where Woods crossed the "tiny Thele river" is something on the scale of Washington, D.C.'s Rock Creek after a light rain.)

No matter. Woods' nighttime crossing to Lesotho (where the indigenous press is severly restricted) cannot remotely compare in drama and risk with Pin Yathay's months-long suicidal effort to escape the human abattoir that is Communist Cambodia.

Yet, Woods is first-rate news copy, while Yathay is ignored by the networks—with the exception of Jack Anderson and "Good Morning America." Two networks report on Woods' address to the United Nations Security Council, while Yathay returns, unnoticed, to Europe. Woods gets a Nieman Fellowship to Harvard, an appearance before the National Press Club and a lengthy, favorable interview in The Washington Post.

How is the unequal treatment to be explained?

Is it because Woods is white and Yathay is not? But that cannot be the sole reason. When Steve Biko died in a South African prison, his funeral got TV coverage in the United States and Biko was black.

Is the human-rights situation in segregated South Africa somehow worse than Cambodia? But that is like saying the segregated white American South in the '40s was a greater offense against morality and human rights than Hitler's death camps. Here is a slice of Jack Anderson's introduction to the Pin Yathay story on "Good Morning America."

*"This is the most important human rights story of the decade.* It is a stark, cruel story of mass slaughter in Cambodia under the Communist dictator Pol Pot. I want you to remember that name, Pol Pot. It belongs in the halls of infamy alongside the names of Adolf Hitler and Joseph Stalin" (emphasis added).

". . . The most important human-rights story of the decade," according to a columnist who has roasted right-wing regimes from Chile to South Korea.

During the course of the ABC Issues and Answers interview, Peter Jennings noted that the death in captivity of Steve Biko "electrified and stunned much of the world." True. But why are the nations of the West, the networks, the national press not "electrified and stunned" by the eradication of hundreds of thousands of people in Southeast Asia?

Why does genocide against a whole people not evoke the same outrage as the death of a single man?

During the '40s, the "most important human rights story of the decade," was the extermination of millions in the concentration camps of occupied Europe. Many say now that if only we knew, we would have acted sooner. But we know now what is going on in Cambodia. And the world does nothing. Why?

Why do the networks largely ignore the national atrocity transpiring in Southeast Asia to focus their cameras and concerns on the inequalities in South Africa?

An unpleasant answer suggests itself.

Today, in the United States, the war against Asian Communism, conducted over 10 years, is judged by many to have been a mistake, a tragedy, or even a sustained act of immorality. Many network newsmen and executives point proudly to the role they played in reversing American opinion. Perhaps the network news would prefer that the American people not know, or not see, too much of what they helped to produce in Southeast Asia.●

## EXPLANATION ON MISSED VOTE

### HON. LEO J. RYAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, April 18, 1978*

● Mr. RYAN. Mr. Speaker, on March 13, I was witnessing the annual Canadian-Norwegian Harp seal hunt off the coast of Newfoundland and Labrador. I have been an opponent of this hunt for years and have been actively protesting it. Because I was in Canada, I missed the vote on H.R. 7814, the Federal Employees Flexible and Compressed Work Schedules Act of 1978 (Roll No. 132). Had I been present, I would have voted "yes" on suspending the rules for this bill, which I have cosponsored.●

## TAX CONSISTENCY ACT OF 1978

### HON. DAVE STOCKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, April 18, 1978*

● Mr. STOCKMAN. Mr. Speaker, today I am introducing the Tax Consistency Act of 1978. The purpose of this bill is to stimulate investment, encourage economic growth, and create new employment by providing a more rational and equitable framework for the taxation of corporate income.

Our country first imposed a corporate income tax 62 years ago. Although it began as a simple revenue-raising measure, the corporate income tax soon became a complex tool for directing private investment into areas favored by Government policy. Today fully one-third of potential corporate income tax receipts are permitted to remain in the hands of the taxpayers in the form of special tax treatment of certain types of business income and expenses.

Many of the special tax incentives available to corporations came into being under vastly different circumstances than prevail today. The presumed benefits to the Nation that justified their existence 30, 40, or 50 years ago no longer exist. Credits for once struggling enterprises now go to well-established firms without rhyme or reason.

The Tax Consistency Act of 1978 would eliminate from the tax code in one sweep all of the most inefficient, inequitable, and outdated special treatments of particular kinds of business investment. In their place it would substitute the principle that all corporate income should be treated equally.

Apart from removing the express special treatments of corporate income that lace the tax code, the Tax Consistency Act of 1978 would also address a far more pervasive but subtle problem; the inequities produced by inflation.

All corporate assets must be valued at their acquisition cost for the purpose of calculating depreciation deductions. As a result, the tax code makes no allowance for the fact that the dollars used to purchase an asset 10 years ago were worth 75 percent more than the dollars generated by that asset today. Inflated income dollars are compared to uninflated expense dollars; income is thus seriously overstated. This effect does not apply equitably to all corporations of course, since the age of corporate assets varies widely from company to company and from industry to industry.

An even larger disparity is produced by the relative importance of depreciable

assets as a share of expenses incurred to produce income. Capital-intensive industries—such as steel—suffer far more than labor-intensive or service industries—such as banking. If allowance is made for the effect of inflation on the value of their assets, in 1976 the largest steel companies had an effective tax rate at least four times the rate paid by major banking firms.

Great Britain, Canada and Australia have already recognized the importance of calculating corporate income using methods that compensate for inflation. These countries are moving rapidly toward adoption of the "current cost" profit calculation into their tax policies.

The Tax Consistency Act of 1978 would end the inequities caused by inflation through adoption of indexed depreciation expense. Corporations would be permitted to adjust the value of their depreciation deductions in accordance with an index that reflected the change in the value of the dollar produced by inflation. While indexed depreciation falls short of full "replacement cost" or "current cost" accounting, which would be the most accurate reflection of expenses, its benefit is its simplicity of administration—no small consideration when it comes to tax policy.

Once we cure the anomalies and inequities in investment generated by special tax preferences and inflation, we must address the more fundamental problem of simply inadequate amounts of investment. Expressed in constant 1978 dollars, total net investment in plants and equipment declined from $60.5 billion in 1969 to only $27.3 billion in 1977. This low level of investment is impairing our efforts to improve productivity and compete with foreign suppliers, as well as impairing the ability of corporations to invest in pollution control and safety equipment required by new government regulatory policies.

The Tax Consistency Act of 1978 would encourage investment by reducing the maximum tax rate on corporate income from 48 percent to 40 percent. The tax on small corporations would be reduced from 22 percent to 18 percent. Because of the revenue gains from eliminating tax expenditures, the net revenue loss would be $8.7 billion—assuming no growth in corporate income. In fact, the actual revenue loss would be far less, since the real growth rate for GNP could be expected to rise substantially, with a corresponding increase in tax collections.

A summary of the major provisions of the bill appears below:

SUMMARY OF THE TAX CONSISTENCY ACT OF 1978

Section 1: Brief Title.

Section 2: Reduces corporate tax rates to 16 percent on first $25,000 of income; 18 percent on income between $25,000 and $50,000; and 40 percent on income over $50,000.

Section 3: Repeals investment tax credit.

Section 4: Repeals exclusion from gross income of interest on certain industrial development bonds issued by state and local governments.

Section 5: Ends allowance for certain special methods of computing depreciation.

Section 6: Repeals permission to amortize certain pollution control facilities in 60 months without regard to useful life.

Section 7: Repeals expense deduction for intangible drilling and development costs.

Section 8: Eliminates more rapidly the present percentage method of determining bad debt reserve deduction for financial institutions.

Section 9: Repeals percentage depletion allowance for certain mineral production activities.

Section 10: Repeals special capital gains treatment of income from certain timber, coal, and iron ore operations.

Section 11: Repeals special deduction for Western Hemisphere Trade Corporations that permits income earned by such corporations to be deferred for tax purposes.

Section 12: Repeals special treatment of income produced by Domestic International Sales Corporations (DISC) that permits such income to be deferred for tax purposes.

Section 13: Repeals Capital Construction fund allowance for domestic shipping companies that permits them to exclude from income amounts used for the construction of new vessels.

Section 14: Retains existing tax credit for employee stock ownership plans as an incentive to increased productivity and capital formation. (Technical amendment necessitated by repeal of investment tax credit).●

## TRIBUTE TO HAROLD M. McCLURE, JR.

### HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, April 18, 1978*

● Mr. CEDERBERG. Mr. Speaker, a few weeks ago, Michigan had the misfortune of losing one of its truly outstanding citizens, Harold M. McClure, Jr.

During his lifetime, Harold was one of Michigan's most active and imaginative individuals. His contributions in both business and civic affairs have been tremendous, and will long serve as a living monument to his achievements.

Harold McClure's remarkable career began at an early age. Coming from an oil family, he energetically entered the drilling business as a teenager. Harold was successfully involved in several business ventures, and has been a leading figure in Michigan's energy industry. To say that he has been instrumental in developing the oil and gas resources of Michigan would be a modest understatement.

In addition to his outstanding career achievements, Harold has been deeply involved in a long list of civic activities. He generously donated his time and resources to local, State, and national causes which have benefited significantly from his contributions. Notably, Harold's early career was interrupted during World War II when he served his country for 3 years in the U.S. Army Air Force.

Mr. Speaker, I could go on much further detailing the accomplishments of Harold McClure. But nothing I could say can adequately describe his energetic and personable character. Rare is a person with a record of success and achievement to match that of Harold McClure. Rarer still is a person who has matched his career success with outstanding contributions to community, political, and church affairs.

To those who knew Harold, I can add no words which will add to our respect of this unique individual. To those who did not, I can only say that you have missed the rewards of his personality, but will continue to enjoy the rewards of his lasting contributions to Michigan and the Nation.●

## WHO SPEAKS FOR SAUDI ARABIA?

### HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, April 18, 1978*

● Mr. ROSENTHAL. Mr. Speaker, the administration is pulling out all the stops in its campaign to sell Saudi Arabia 60 of our most advanced fighter-bombers, the F–15 Eagle.

The administration recognizes that this deal is so difficult to justify on nearly every basis that it has tied it to the sale of aircraft to Israel and Egypt in the hopes of making the Saudi portion veto-proof.

In its desire to serve the Saudi demands, the administration is even willing to violate the intention of our arms transfer law. Under section 36(b) of the Arms Export Control Act, each arms transaction is to be treated separately and independently. But the administration has said it is lumping the Egyptian, Israeli, and Saudi sales together and if any one—meaning the Saudi deal—is turned down by the Congress, the others will be withdrawn.

Administration spokesmen, hard put to justify the sale on military grounds, are calling the Saudi sale a "touchstone" of our relationship, and the hints and news leaks are already in circulation that our oil supply could be endangered if the Congress does not jump through the hoop.

I do not know which is more disturbing—that our State Department acts like an extension of the Saudi Government or that it continues to disseminate misleading and false information on the entire issue.

In an unprecedented step, the State Department has been distributing a half-inch-thick volume title "Middle East Aircraft Package" and subtitled "Reference Papers." Known as the "green book," it sets forth the administration case for the arms sales package.

One section is headed "Saudi Statement on Terrorism." It contains a single page, which is on the letterhead of the Royal Embassy of Saudi Arabia; dated March 14, 1978, it bears a brief statement beginning, "Saudi Arabia condemns terrorism in all its forms."

Its genesis is most interesting. Three days earlier, PLO terrorists killed 37 Israeli civilians on the coastal road north of Tel Aviv. That event has come to be known as the Sabbath Massacre, and I fear it might not have been possible without the aid and support of the Saudi Government.

The Saudis reportedly gave the PLO's military arm, Al Fatah, $45 million in 1976 as part of its continuing high level of assistance to the Palestinians.

The Sabbath Massacre has been condemned by civilized persons around the globe, though certainly not universally. It is significant that Egypt spoke out forcefully against the murders. But it is distressing when supposedly pro-Western allies like Jordan, Kuwait, and Saudi Arabia praise the terrorists.

Most disturbing was the reaction of the Saudi Government, which is buying billions of dollars worth of U.S. arms for itself and the other front-line Arab States and possibly for the PLO as well.

Shortly after the terrorist killings, Saudi Arabia's state-controlled radio broadcast high praise for the Sabbath Massacre. According to press reports, Riyadh radio called the murders a "courageous operation" that has "a noble aim—to let the world remember that the Palestinians do exist and that no peace talks will succeed without their participation."

Two days later an official of the U.S. State Department called my office, apparently on behalf of the Saudi Government, to clarify the press reports. The Saudi Embassy, according to our State Department, felt the broadcast was inaccurate. There was no denial of the broadcast's substance, only an attempt to explain that the proper translation should have been "bold operation," not "courageous operation."

When it apparently saw that response to the Saudi statement would not help it in selling its aircraft sales package to the Congress and the public, the State Department reportedly advised the Saudi Embassy to issue a more conciliatory statement. In no time at all it was in the mail to congressional and other offices.

"All reasonable people deplore acts of terrorism without regard to the purpose or victims," declared the new Saudi statement, which went on to express support for "the legitimate aspirations of the Palestinian people."

This more moderate position and the one voiced in the statement distributed by the State Department in its "green book" are apparently for American consumption only. I have been checking transcripts of Radio Riyadh as published by the Foreign Broadcast Information Service of the U.S. Department of Commerce. The original broadcast praising "the bold fedayeen operation" was never retracted or contradicted or revised, to the best of my knowledge. The Saudi/State Department version was never released to the Saudi people or anywhere in the Arab world—it was strictly for U.S. relations.

No doubt this was part of the recently announced ambitious Saudi public relations campaign to improve that country's image in the United States and win approval for its arms purchases. The Saudis have hired a public relations firm headed by a close associate of our Ambassador to Riyadh, John C. West.

Perhaps on the advice of its new image-makers or on its own volition, the Saudi Embassy distributed to Members of Congress last week a special section of the Financial Times of London about Saudi Arabia. In a mimeographed attachment from the embassy, a few key quotes were highlighted. Perhaps most interesting and revealing was an acknowledgement of Saudia's high level of aid for the PLO and a veiled threat to push the PLO and Syria closer to Libya:

> One of Saudi Arabia's techniques is to provide countries such as Syria with comparatively limited supplies to ensure, as it were, good behavior. . . . But in the present mood of discontent and disarray in the Arab world, there are limits to this approach, too. It remains a possibility that in the absence of Saudi aid either President Assad or Mr. Yasser Arafat, the PLO leader, might be tempted to turn to the more radical Libyans for assistance.

It should be noted that these are the words of the Financial Times, but it was the Saudi Government that chose to emphasize, reprint, and distribute them.

Many Members of the Congress are alarmed by growing Saudi financial power over the United States Government and economy. People are asking whether anyone would seriously consider selling that Government 60 of the world's finest fighter-bombers were it not holding over our heads the threats of economic chaos and oil embargo.

Another source of great concern is the immense Saudi arms acquisitions and the buildup of its air bases and military forces near Israel's borders. That is not the conduct one would expect of a country that the State Department repeatedly refers to as "a force for moderation and stability and peace" in the most explosive corner of the world today.

It was most distressing to me, Mr. Speaker, to read press reports that our Ambassador to Saudi Arabia has said the United States has never asked the Saudis to stop their financial support for the PLO. Subsequently, State Department officials, while not denying the essence of Ambassador West's statement, have said the subject has been "discussed" with the Saudis. I would hope that our Government would have the courage to do more than merely "discuss" with the Saudis their support for terrorism and attempt to do something positive to eradicate this cancer on mankind.●

## FRAUD IN FEDERAL AID PROGRAMS

### HON. BARRY M. GOLDWATER, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, April 18, 1978*

● Mr. GOLDWATER. Mr. Speaker, reports in Sunday's New York Times that fraud in Federal aid programs amounts to $12, perhaps $15 or $25 billion a year is timely news on the eve of the filing deadline for our tax returns.

Documented cases of rip-off artists are deserving of the most expeditious Justice Department action: The Department of Transportation employee who embezzled hundreds of thousands of dollars from a mass-transit program; the doctor who billed HEW for seven tonsillectomies on the same patient; the daughter of a war veteran who continued to collect "widow's benefits" for 20 years after her mother died. Details of the case involving the dentist who extracted healthy teeth from economically disadvantaged children so he could collect fees under medicaid, are nauseating.

Are Government programs that irresponsibly managed that $5 million in VA approved education assistance funded a "barber's school" whose students never attended classes? Talk of collusion between recipients of Government grants and agency administrators who dole them out, raises suspicion in my mind as to the magnitude of such practices. Is Government oversight that weak that a defense contractor was able to use building materials of a quality inferior to those specified in his contract?

Indeed, such swindling is not limited to our welfare programs, and other Government services which extend generous "hand-outs."

A word of commendation is in order for those officials who successfully prosecuted individuals who have already defrauded the Government of millions of dollars. But taxpayers in the congressional district I represent are certainly not going to tolerate this widespread level of cheating the system.

By all means, Congress should provide the resources to head off such abuses and discipline the offenders. This Times report points up another reason why I have consistently been skeptical of Federal assistance programs. Unless thoroughly effective accounting procedures and tough audit control standards are built in to the system, I will continue to be nonsupportive of expenditures for Federal aid.●

## OPPOSITION TO ELIMINATING MOTTO "IN GOD WE TRUST"

### HON. C. W. BILL YOUNG

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, April 18, 1978*

● Mr. YOUNG of Florida. Mr. Speaker, certain parties in our Nation are attempting to have the national motto, "In God We Trust," declared unconstitutional and removed from American coins and currency. In behalf of the many citizens in the Sixth Congressional District of Florida and of our Nation who are appalled at these efforts, I express my strong opposition to Mrs. Madalyn Murray O'Hair's activities.

It is ironic that she should try to push her anti-God views on the vast majority of Americans who feel that a belief in a Supreme Being is vitally important to our Nation's strength especially since our country was actually founded by people seeking freedom to worship God and on the principle of a strong belief in God. Our freedom has continued because Americans were willing to stand up to protect this right. Of course, Mrs. O'Hair does have a legal right to dissent, but I also have the right to object to her dissent and I do. Therefore, I am introducing measures today which state that it is

the sense of the House that the national motto of the United States will be continued on our coins and currency and that the phrase "Under God" shall remain in the Pledge of Allegiance to the Flag.

The Congress officially established "In God We Trust" as our national motto in 1956. but the history of its use goes back for more than 100 years. In 1864, 2-cent bronze pieces were minted with this motto on them for the first time. Our National Anthem, "the Star-Spangled Banner," contains the phrase, "And this be our motto—'In God is our trust'" in one of its stanzas.

The Congress and the overwhelming majority of patriotic and religious Americans feel that this motto is of great spiritual and psychological value to our country. America needs a clearly designated national motto of inspirational quality and there could not be a better one than one that proclaims our trust in God. No nation can be strong except in the strength of God, or safe except in His defense. I urge my colleagues to support these measures.

Resolution follows:

RESOLUTION

*Resolved,* That it is the Sense of the House that the national motto, "In God We Trust", shall be reaffirmed and shall continue to be engraved and printed on our coins and currency.

---

RESOLUTION

*Resolved,* That it is the Sense of the House that the phrase, "Under God", shall be reaffirmed and shall continue to be part of the Pledge of Allegiance to the Flag of the United States of America.●

## PASSOVER AND "THE HOLOCAUST"

### HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, April 18, 1978*

● Mr. ANDERSON of California. Mr. Speaker, beginning this Friday at sundown, the Jewish holiday of Pesach, or Passover, will be celebrated in households across this Nation, and the world.

It is a festive occasion, making a joyous event; the exodus of Jewish slaves from ancient Egypt. Of course, non-Jews have always been able to appreciate the significance of this holiday. This year, however, it will be more meaningful to millions of Americans, Jews, and gentiles alike.

The National Broadcasting Co. televised, on four consecutive nights, the story of "The Holocaust." Passover celebrates the Jewish escape from Egypt centuries ago. "Holocaust" tells a story, and illustrates horrors from only a few decades past; a time that most of us here can well remember, as who can ever forget those first photographs from Auschwitz and Buchenwald?

And this television show has taken us beyond the gates of those death camps. It has taken us to the streets of Warsaw, Prague, and Berlin, and Babi-Yar. It has not pulled punches in showing us how terrible death, and life, can be. It has shown how a nation, a cultured nation that produced Schubert and Mozart and Beethoven, could allow this to happen. And it has also shown us how the rest of the world could stand idly by and do nothing.

This Passover we should all think about prejudice and bigotry. And none of us should congratulate ourselves on being personally free of these ugly vices. Because bigotry and prejudice still exist. And as long as they exist, we must fight them wherever they may be found. The world can no longer stand idly by.

Let us all pause this Friday evening, before the Passover candles are lit, before we go out to our parties, or settle down for a quiet night with our loved ones. Let us think about human rights at home and abroad. Let us think about prejudice and hatred. And let us consider how the complacency of many can allow the hatred of a few to reign. That, to me, is the lesson of the "Holocaust."

It is not a lesson that the world has yet learned. President Carter should be commended for helping to heighten our awareness of the global struggle for human rights. Clearly, it is an onging struggle that must still be fought on every continent.

This being the commemoration of Passover, let us consider the plight of Jews in the Soviet Union. Because they cannot, for the most part, openly celebrate this holiday. And so long as they cannot, the celebrations here at home will be less festive. All people must be made aware of the labor camps and psychiatric hospitals in that country that are filled with prisoners and "patients", whose only crimes or illnesses, are those of piety. And once we are aware, none of us can afford the luxury of resting until the fight for human rights is won.

Because if we do rest, we will all be guilty of the next holocaust.●

## "IT'S THE PEOPLE WHO GET HURT AS NEW YORK TIGHTENS ITS BELT"

### HON. FREDERICK W. RICHMOND

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, April 18, 1978*

● Mr. RICHMOND. Mr. Speaker, last Sunday, Susan Jacoby of New York City wrote an open letter to Senator Proxmire and Treasury Secretary Blumenthal about New York's fiscal problems. In her letter, which appeared in the Washington Post, April 16, 1978, Ms. Jacoby painfully outlines how the people of New York are bearing the brunt of cutbacks in city services, and how New Yorkers and their government have made many sacrifices to solve their monetary woes.

But the impact of these sacrifices on individual New Yorkers has been devastating. And saddest of all, the longer the problem continues, the harder it will be to recover our tax base, modernize our subways, rebuild burnt-out housing, and provide new opportunities for our young people.

As we approach the time when Congress will be considering loan guarantee legislation for New York, I commend this article to my colleagues, especially my friends from rural areas. I believe it will help illustrate that the people of New York deserve our best.

The article follows:

IT'S THE PEOPLE WHO GET HURT AS NEW YORK TIGHTENS ITS BELT

NEW YORK, N.Y.

W. MICHAEL BLUMENTHAL,
*Secretary of the Treasury.*
Sen. WILLIAM PROXMIRE,
*Committee on Banking, Housing and Urban Affairs, Washington, D.C.*

I see by my morning paper that New York City is, once again, in trouble with Washington. In a letter to our mayor, Mr. Blumenthal said New York has almost no chance of receiving loan guarantees from the federal government unless the city and its unions reach a "reasonable" labor settlement long before the expiration date of the union contracts. This short-circuiting of the normal collective bargaining process is supposed to give Sen. Proxmire and his colleagues time to consider the loan guarantee legislation. Unfortunately for New York, the senator has said he doubts Congress will approve the guarantees with or without a "reasonable" labor agreement.

Words like "outrageous" and "incredible" have been floating around Capitol Hill since the announcement of a tentative pact that averted a New York City bus and subway strike scheduled for April Fool's Day. This "incredible" settlement guarantees the city transit workers a 6 percent pay raise over a two-year period, with the possibility of an additional 3 percent in cost-of-living increases, to be paid for through increased productivity. No one is in a better position than the secretary of the treasury and the chairman of the Senate Banking Committee to realize that such a settlement will not even begin to keep pace with inflation.

According to the Bureau of Labor Statistics, New York is the third most expensive metropolitan area in the country (topped only by Honolulu and Boston.) In the fall of 1976, the Bureau set an "Intermediate budget" for a family of four at $18,866. The comparable figure for Washington was $16,950.

In spite of what it costs to live here, New York's municipal workers—including the men and women who keep subways and buses running—are not "the highest paid in the nation." This accusation has been leveled so often and so loudly that it has achieved the status of a Big Lie.

In total compensation—which includes employer pension contributions, health insurance and overtime as well as basic salaries—New York bus drivers rank 6th among their counterparts in the nation's largest cities. Police officers and firemen also rank 6th, while computer operators rank 9th. The purchasing power of these workers is, of course, much lower because New York is so much more expensive than most other cities. When wages are adjusted to take the cost of living into account, a New York bus driver ranks 16th and a computer operator ranks 22nd.

Let's take a look at the maximum compensation for an ordinary white-collar municipal worker—a computer operator—in cities with more than half a million people. New York ranks 9th, with total compensation of $17,736. That includes an annual employer pension contribution of $3,776, and health insurance of $794. Just for the record, the computer operator receiving the biggest package, including a pension contribution of

$4,901, works in Washington. His compensations totals $23,114.

You two gentlemen are, of course, familiar with these figures: They appear in a meticulous report submitted in December to Sen. Proxmire's committee by Program Planners, Inc. Program Planners is a highly respected New York consulting firm with clients that include businesses, unions and municipal governments throughout the country. The statistics in the report, current as of last December, are drawn from city governments, the Bureau of Labor Statistics, the Census Bureau and other appropriate federal agencies. The figures check out.

I mention the salaries of Washington bus drivers not because I think they are making too much but because I am tired of seeing the working people of New York—those who use city services and those who provide them—depicted as a bunch of big spenders and freeloaders. There has been a great deal of fire and brimstone surrounding the debate over New York's fiscal crisis by Washington officials who ought to know better. According to this line of thought, New York has sinned and been wasteful and New Yorkers must quit gorging themselves in order to be saved.

I don't think this misconception stems as much from ill will as it does from an understandable difficulty that arises when Washington residents try to envision daily life in New York. I spent half of my adult life in Washington, and I found when I moved to New York that there could scarcely be two more different cities within an hour's shuttle flight of each other. This difference was underlined for me by a conversation with a congressional aide before the April 1 transit strike deadline. "Of course a strike would hurt you," he said, "but you could double up in cars. After all, we got along in Washington before there was a subway."

This comment embodies a fundamental misperception of New York's daily reality. Washington, like most areas of the United States, is a place where nearly every middle-class person owns a car. New York is the only city in the nation in which substantial numbers of middle-class residents depend entirely on public transportation for access to jobs, schools and cultural institutions. If we all owned cars, business and traffic would come to a standstill on the island of Manhattan. Two million of us ride the subways every day. A transit strike is not merely an inconvenience in this city; it is a social and economic disaster.

The day before the transit strike deadline, I was trapped for about 15 minutes in a train beneath Lexington Avenue. The Lexington Avenue line, opened in 1904, is the oldest in the city; the wonder is not that the subway breaks down so often, but that it usually runs on time. As we were waiting for the train to lurch forward, a woman next to me began to cry. I though at first that she was just afraid, a victim of the claustrophobia that his some subway riders when a train is stuck.

But no, she told me, she was terrified that there was going to be a transit strike the next day. She lived in the Bronx and worked a 4 p.m. to midnight shift as a nurse's aide at a hospital in Brooklyn, an hour and a half subway commute from her home. She wept softly and said, "I'm supporting my three kids. Where will I find a car pool to take me home at midnight? The mayor says every city worker's supposed to be on the job, strike or not. How I will get there? What will I do if I lose a week's pay?"

The same sort of misconception that underrated the dangers of a transit strike has been applied to New York's overall fiscal crisis by most Washington analysts. Of course there has been (and continues to be) waste and mismanagement by the city—just as there is waste and mismanagement in federal agencies and large corporations. Bookkeeping gimmickry and overly generous labor settlements under the administration of former mayor John Lindsay and Comptroller (subsequently mayor) Abraham Beame were part of what led New York to the brink of bankruptcy at the end of 1974. The most important element in the crisis has not been as widely publicized. That is the steady decline in the quality of life for the middle class and for the "working poor" who aspire to middle-class status for themselves and their children. The decline is related to a complicated interaction of federal, state, and city policies.
